So much he shall bestow.

HISTORICAL DISCOURSE

FELLOW CITIZENS: The town of Concord begins, this day, the third century of its history. By a common consent, the people of New England, for a few years past, as the second centennial anniversary of each of its early settlements arrived, have seen fit to observe the day. You have thought it becoming to commemorate the planting of the first inland town. The sentiment is just, and the practice is wise. Our ears shall not be deaf to the voice of time. We will review the deeds of our fathers, and pass that just verdict on them we expect from posterity on our own.

And yet, in the eternity of Nature, how recent our antiquities appear! The imagination is impatient of a cycle so short. Who can tell how many thousand years, every day, the clouds have shaded these fields with their purple awning? The river, by whose banks most of us were born, every winter, for ages, has spread its crust of ice over the great meadows which, in ages, it had formed. But the little society of men who now, for a few years, fish in this river, plough the fields it washes, mow the grass and reap the corn, shortly shall hurry from its banks as did their forefathers. "Man's life," said the Witan to the Saxon king, "is the sparrow that enters

at a window, flutters round the house, and flies out at another, and none knoweth whence he came, or whither he goes."²⁵⁵¹ The more reason that we should give to our being what permanence we can;—that we should recall the Past, and expect the Future.

Yet the race survives whilst the individual dies. In the country, without any interference of the law, the agricultural life favors the permanence of families. Here are still around me the lineal descendants of the first settlers of this town. Here is Blood, Flint, Willard, Meriam, Wood, Hosmer, Barrett, Wheeler, Jones, Brown, Buttrick, Brooks, Stow, Hoar, Heywood, Hunt, Miles,—the names of the inhabitants for the first thirty years; and the family is in many cases represented, when the name is not. If the name of Bulkeley is wanting, the honor you have done me this day, in making me your organ, testifies your persevering kindness to his blood.²⁵⁵²

I shall not be expected, on this occasion, to repeat the details of that oppression which drove our fathers out hither. Yet the town of Concord was settled by a party of non-conformists, immediately from Great Britain. The best friend the Massachusetts colony had, though much against his will, was Archbishop Laud in England. In consequence of his famous proclamation setting up certain novelties in the rites of public worship, fifty godly ministers were suspended for contumacy, in the course of two years and a half. Hindered from speaking, some of these dared to print the reasons of their dissent, and were punished with imprisonment or mutilation.²⁵⁵³ This severity brought some of the best men in England to overcome that natural repugnance to emigration which holds the serious and moderate of every nation to their own soil. Among the silenced clergymen was a distinguished minister of Woodhill, in Bedfordshire, Rev. Peter Bulkeley, descended from a noble family, honored for his own virtues, his learning and gifts as a preacher, and adding to his influence the weight of a

large estate.²⁵⁵⁴ Persecution readily knits friendship between its victims. Mr. Bulkeley, having turned his estate into money and set his face towards New England, was easily able to persuade a good number of planters to join him. They arrived in Boston in 1634.²⁵⁵⁵ Probably there had been a previous correspondence with Governor Winthrop, and an agreement that they should settle at Musketaquid. With them joined Mr. Simon Willard, a merchant from Kent in England. They petitioned the General Court for a grant of a township, and on the 2d of September, 1635, corresponding in New Style to 12th September, two hundred years ago this day, leave to begin a plantation at Musketaquid was given to Peter Bulkeley, Simon Willard, and about twelve families more.²⁵⁵⁶ A month later, Rev. John Jones and a large number of settlers destined for the new town arrived in Boston.²⁵⁵⁷

The grant of the General Court was but a preliminary step. The green meadows of Musketaquid or *Grassy Brook* were far up in the woods, not to be reached without a painful and dangerous journey through an uninterrupted wilderness. They could cross the Massachusetts or Charles River, by the ferry at Newtown; they could go up the river as far as Watertown. But the Indian paths leading up and down the country were a foot broad. They must then plunge into the thicket, and with their axes cut a road for their teams, with their women and children and their household stuff, forced to make long circuits too, to avoid hills and swamps. Edward Johnson of Woburn has described in an affecting narrative their labors by the way. "Sometimes passing through thickets where their hands are forced to make way for their bodies' passage, and their feet clambering over the crossed trees, which when they missed, they sunk into an uncertain bottom in water, and wade up to their knees, tumbling sometimes higher, sometimes lower. At the end of this, they meet a scorching plain,

yet not so plain but that the ragged bushes scratch their legs foully, even to wearing their stockings to their bare skin in two or three hours. Some of them, having no leggins, have had the blood trickle down at every step. And in time of summer, the sun casts such a reflecting heat from the sweet fern, whose scent is very strong, that some nearly fainted."²⁵⁵⁸ They slept on the rocks, wherever the night found them. Much time was lost in travelling they knew not whither, when the sun was hidden by clouds; for "their compass miscarried in crowding through the bushes," and the Indian paths, once lost, they did not easily find.

Johnson, relating undoubtedly what he had himself heard from the pilgrims, intimates that they consumed many days in exploring the country, to select the best place for the town. Their first temporary accommodation was rude enough. "After they have found a place of abode, they burrow themselves in the earth for their first shelter, under a hillside, and casting the soil aloft upon timbers, they make a fire against the earth, at the highest side. And thus these poor servants of Christ provide shelter for themselves, their wives and little ones, keeping off the short showers from their lodgings, but the long rains penetrate through, to their great disturbance in the night season. Yet in these poor wigwams they sing psalms, pray and praise their God, till they can provide them houses, which they could not ordinarily, till the earth, by the Lord's blessing, brought forth bread to feed them. This they attain with sore travail, every one that can lift a hoe to strike into the earth standing stoutly to his labors, and tearing up the roots and bushes from the ground, which, the first year, yielded them a lean crop, till the sod of the earth was rotten, and therefore they were forced to cut their bread very thin for a long season. But the Lord is pleased to provide for them great store of fish in the spring-time, and especially, alewives, about the bigness of a herring."²⁵⁵⁹ These

served them also for manure. For flesh, they looked not for any, in those times, unless they could barter with the Indians for venison and raccoons. "Indian corn, even the coarsest, made as pleasant meal as rice."²⁵⁶⁰ All kinds of garden fruits grew well, "and let no man," writes our pious chronicler, in another place, "make a jest of pumpkins, for with this fruit the Lord was pleased to feed his people until their corn and cattle were increased."²⁵⁶¹

The great cost of cattle, and the sickening of their cattle upon such wild fodder as was never cut before; the loss of their sheep and swine by wolves; the sufferings of the people in the great snows and cold soon following; and the fear of the Pequots; are the other disasters enumerated by the historian.

The hardships of the journey and of the first encampment are certainly related by their contemporary with some air of romance, yet they can scarcely be exaggerated. A march of a number of families with their stuff, through twenty miles of unknown forest, from a little rising town that had not much to spare, to an Indian town in the wilderness that had nothing, must be laborious to all, and for those who were new to the country and bred in softness, a formidable adventure. But the pilgrims had the preparation of an armed mind, better than any hardihood of body. And the rough welcome which the new land gave them was a fit introduction to the life they must lead in it.

But what was their reception at Musketaquid? This was an old village of the Massachusetts Indians. Tahattawan, the Sachem, with Waban his son-in-law, lived near Nashawtuck, now Lee's Hill.²⁵⁶² Their tribe, once numerous, the epidemic had reduced. Here they planted, hunted and fished. The moose was still trotting in the country, and of his sinews they made their bowstring. Of the pith elder, that still grows beside our brooks, they made their arrow. Of the Indian hemp they spun their nets and lines for summer angling,

and, in winter, they sat around holes in the ice, catching salmon, pickerel, breams and perch, with which our river abounded.²⁵⁶³ Their physical powers, as our fathers found them, and before yet the English alcohol had proved more fatal to them than the English sword, astonished the white men.²⁵⁶⁴ Their sight was so excellent, that, standing on the seashore, they often told of the coming of a ship at sea, sooner by one hour, yea, two hours' sail, than any Englishman that stood by, on purpose to look out.²⁵⁶⁵ Roger Williams affirms that he has known them run between eighty and a hundred miles in a summer's day, and back again within two days. A little pounded parched corn or no-cake sufficed them on the march. To his bodily perfection, the wild man added some noble traits of character. He was open as a child to kindness and justice. Many instances of his humanity were known to the Englishmen who suffered in the woods from sickness or cold. "When you came over the morning waters," said one of the Sachems, "we took you into our arms. We fed you with our best meat. Never went white man cold and hungry from Indian wigwam."

The faithful dealing and brave good will, which, during the life of the friendly Massasoit, they uniformly experienced at Plymouth and at Boston, went to their hearts. So that the peace was made, and the ear of the savage already secured, before the pilgrims arrived at his seat of Musketaquid, to treat with him for his lands.

It is said that the covenant made with the Indians, by Mr. Bulkeley and Major Willard, was made under a great oak, formerly standing near the site of the Middlesex Hotel.²⁵⁶⁶ Our Records affirm that Squaw Sachem, Tahattawan, and Nimrod did sell a tract of six miles square to the English, receiving for the same, some fathoms of Wampumpeag, hatchets, hoes, knives, cotton cloth and shirts. Wibbacowet, the husband of Squaw Sachem, received a suit of cloth, a hat, a white linen band, shoes, stockings and a greatcoat;

and, in conclusion, the said Indians declared themselves satisfied, and told the Englishmen they were welcome. And after the bargain was concluded, Mr. Simon Willard, pointing to the four corners of the world, declared that they had bought three miles from that place, east, west, north and south.²⁵⁶⁷

The Puritans, to keep the remembrance of their unity one with another, and of their peaceful compact with the Indians, named their forest settlement CONCORD. They proceeded to build, under the shelter of the hill that extends for a mile along the north side of the Boston road, their first dwellings. The labors of a new plantation were paid by its excitements. I seem to see them, with their pious pastor, addressing themselves to the work of clearing the land. Natives of another hemisphere, they beheld, with curiosity, all the pleasing features of the American forest. The landscape before them was fair, if it was strange and rude. The little flower which at this season stars our woods and roadsides with its profuse blooms, might attract even eyes as stern as theirs with its humble beauty. The useful pine lifted its cones into the frosty air. The maple, which is already making the forest gay with its orange hues, reddened over those houseless men. The majestic summits of Wachusett and Monadnoc towering in the horizon, invited the steps of adventure westward.

As the season grew later, they felt its inconveniences. "Many were forced to go barefoot and bareleg, and some in time of frost and snow, yet were they more healthy than now they are."²⁵⁶⁸ The land was low but healthy; and if, in common with all the settlements, they found the air of America very cold, they might say with Higginson, after his description of the other elements, that "New England may boast of the element of fire, more than all the rest; for all Europe is not able to afford to make so great fires as New England. A poor servant, that is to possess but fifty acres,

may afford to give more wood for fire as good as the world yields, than many noblemen in England."²⁵⁶⁹ Many were their wants, but more their privileges. The light struggled in through windows of oiled paper,²⁵⁷⁰ but they read the word of God by it. They were fain to make use of their knees for a table, but their limbs were their own. Hard labor and spare diet they had, and off wooden trenchers, but they had peace and freedom, and the wailing of the tempest in the woods sounded kindlier in their ear than the smooth voice of the prelates, at home, in England. "There is no people," said their pastor to his little flock of exiles, "but will strive to excel in something. What can we excel in, if not in holiness? If we look to number, we are the fewest; if to strength, we are the weakest; if to wealth and riches, we are the poorest of all the people of God through the whole world. We cannot excel nor so much as equal other people in these things; and if we come short in grace and holiness too, we are the most despicable people under heaven. Strive we, therefore, herein to excel, and suffer not this crown to be taken away from us."²⁵⁷¹ The sermon fell into good and tender hearts; the people conspired with their teacher. Their religion was sweetness and peace amidst toil and tears. And, as we are informed, "the edge of their appetite was greater to spiritual duties at their first coming, in time of wants, than afterwards."

The original Town Records, for the first thirty years, are lost. We have records of marriages and deaths, beginning nineteen years after the settlement; and copies of some of the doings of the town in regard to territory, of the same date. But the original distribution of the land, or an account of the principles on which it was divided, are not preserved. Agreeably to the custom of the times, a large portion was reserved to the public, and it appears from a petition of some newcomers, in 1643, that a part had been divided among the first settlers without price, on the single condition of improving

it.²⁵⁷² Other portions seem to have been successively divided off and granted to individuals, at the rate of sixpence or a shilling an acre. But, in the first years, the land would not pay the necessary public charges, and they seem to have fallen heavily on the few wealthy planters. Mr. Bulkeley, by his generosity, spent his estate, and, doubtless in consideration of his charges, the General Court, in 1639, granted him 300 acres towards Cambridge; and to Mr. Spencer, probably for the like reason, 300 acres by the Ale-wife River. In 1638, 1200 acres were granted to Governor Winthrop, and 1000 to Thomas Dudley, of the lands adjacent to the town, and Governor Winthrop selected as a building spot the land near the house of Captain Humphrey Hunt.²⁵⁷³ The first record now remaining is that of a reservation of land for the minister, and the appropriation of new lands as commons or pastures to some poor men. At the same date, in 1654, the town having divided itself into three districts, called the North, South and East quarters, ordered, "that the North quarter are to keep and maintain all their highways and bridges over the great river, in their quarter, and, in respect of the greatness of their charge thereabout, and in regard of the ease of the East quarter above the rest, in their highways, they are to allow the North quarter £3."²⁵⁷⁴

Fellow citizens, this first recorded political act of our fathers, this tax assessed on its inhabitants by a town, is the most important event in their civil history, implying, as it does, the exercise of a sovereign power, and connected with all the immunities and powers of a corporate town in Massachusetts. The greater speed and success that distinguish the planting of the human race in this country, over all other plantations in history, owe themselves mainly to the new subdivisions of the State into small corporations of land and power. It is vain to look for the inventor. No man made them. Each of the parts of that perfect structure grew out

of the necessities of an instant occasion. The germ was formed in England. The charter gave to the freemen of the Company of Massachusetts Bay the election of the Governor and Council of Assistants. It moreover gave them the power of prescribing the manner in which freemen should be elected; and ordered that all fundamental laws should be enacted by the freemen of the colony. But the Company removed to New England; more than one hundred freemen were admitted the first year, and it was found inconvenient to assemble them all.²⁵⁷⁵ And when, presently, the design of the colony began to fulfil itself, by the settlement of new plantations in the vicinity of Boston, and parties, with grants of land, straggled into the country to truck with the Indians and to clear the land for their own benefit, the Governor and freemen in Boston found it neither desirable nor possible to control the trade and practices of these farmers. What could the body of freemen, meeting four times a year, at Boston, do for the daily wants of the planters at Musketaquid? The wolf was to be killed; the Indian to be watched and resisted; wells to be dug; the forest to be felled; pastures to be cleared; corn to be raised; roads to be cut; town and farm lines to be run. These things must be done, govern who might. The nature of man and his condition in the world, for the first time within the period of certain history, controlled the formation of the State. The necessity of the colonists wrote the law. Their wants, their poverty, their manifest convenience made them bold to ask of the Governor and of the General Court, immunities, and, to certain purposes, sovereign powers. The townsmen's words were heard and weighed, for all knew that it was a petitioner that could not be slighted; it was the river, or the winter, or famine, or the Pequots, that spoke through them to the Governor and Council of Massachusetts Bay. Instructed by necessity, each little company organized itself after the pattern of the larger town, by appointing

its constable, and other petty half-military officers. As early as 1633,²⁵⁷⁶ the office of townsman or *selectman* appears, who seems first to have been appointed by the General Court, as here, at Concord, in 1639. In 1635, the Court say, "whereas particular towns have many things which concern only themselves, it is Ordered, that the freemen of every town shall have power to dispose of their own lands, and woods, and choose their own particular officers."²⁵⁷⁷ This pointed chiefly at the office of constable, but they soon chose their own selectmen, and very early assessed taxes; a power at first resisted,²⁵⁷⁸ but speedily confirmed to them.

Meantime, to this paramount necessity, a milder and more pleasing influence was joined. I esteem it the happiness of this country that its settlers, whilst they were exploring their granted and natural rights and determining the power of the magistrate, were united by personal affection. Members of a church before whose searching covenant all rank was abolished, they stood in awe of each other, as religious men. They bore to John Winthrop, the Governor, a grave but hearty kindness. For the first time, men examined the powers of the chief whom they loved and revered. For the first time, the ideal social compact was real. The bands of love and reverence held fast the little state, whilst they untied the great cords of authority to examine their soundness and learn on what wheels they ran. They were to settle the internal constitution of the towns, and, at the same time, their power in the commonwealth. The Governor conspires with them in limiting his claims to their obedience, and values much more their love than his chartered authority. The disputes between that forbearing man and the deputies are like the quarrels of girls, so much do they turn upon complaints of unkindness, and end in such loving reconciliations. It was on doubts concerning their own power, that, in 1634, a committee repaired to him for counsel, and he advised,

seeing the freemen were grown so numerous, to send deputies from every town once in a year to revise the laws and to assess all monies.²⁵⁷⁹ And the General Court, thus constituted, only needed to go into separate session from the Council, as they did in 1644,²⁵⁸⁰ to become essentially the same assembly they are this day.

By this course of events, Concord and the other plantations found themselves separate and independent of Boston, with certain rights of their own, which, what they were, time alone could fully determine; enjoying, at the same time, a strict and loving fellowship with Boston, and sure of advice and aid, on every emergency. Their powers were speedily settled by obvious convenience, and the towns learned to exercise a sovereignty in the laying of taxes; in the choice of their deputy to the house of representatives; in the disposal of the town lands; in the care of public worship, the school and the poor; and, what seemed of at least equal importance, to exercise the right of expressing an opinion on every question before the country. In a town-meeting, the great secret of political science was uncovered, and the problem solved, how to give every individual his fair weight in the government, without any disorder from numbers. In a town-meeting, the roots of society were reached. Here the rich gave counsel, but the poor also; and moreover, the just and the unjust. He is ill informed who expects, on running down the Town Records for two hundred years, to find a church of saints, a metropolis of patriots, enacting wholesome and creditable laws. The constitution of the towns forbid it. In this open democracy, every opinion had utterance; every objection, every fact, every acre of land, every bushel of rye, its entire weight. The moderator was the passive mouth-piece, and the vote of the town, like the vane on the turret overhead, free for every wind to turn, and always turned by the last and strongest breath. In these assemblies,

the public weal, the call of interest, duty, religion, were heard; and every local feeling, every private grudge, every suggestion of petulance and ignorance, were not less faithfully produced. Wrath and love came up to town-meeting in company. By the law of 1641, every man—freeman or not—inhabitant or not—might introduce any business into a public meeting. Not a complaint occurs in all the volumes of our Records, of any inhabitant being hindered from speaking, or suffering from any violence or usurpation of any class. The negative ballot of a ten-shilling freeholder was as fatal as that of the honored owner of Blood's Farms or Willard's Purchase. A man felt himself at liberty to exhibit, at town-meeting, feelings and actions that he would have been ashamed of anywhere but amongst his neighbors. Individual protests are frequent. Peter Wright [1705] desired his dissent might be recorded from the town's grant to John Shepard.²⁵⁸¹ In 1795, several town-meetings are called, upon the compensation to be made to a few proprietors for land taken in making a bridle-road; and one of them demanding large damages, many offers were made him in town-meeting, and refused; "which the town thought very unreasonable." The matters there debated are such as to invite very small considerations. The ill-spelled pages of the Town Records contain the result. I shall be excused for confessing that I have set a value upon any symptom of meanness and private pique which I have met with in these antique books, as proof that justice was done; that if the results of our history are approved as wise and good, it was yet a free strife; if the good counsel prevailed, the sneaking counsel did not fail to be suggested; freedom and virtue, if they triumphed, triumphed in a fair field. And so be it an everlasting testimony for them, and so much ground of assurance of man's capacity for self-government.

It is the consequence of this institution that not a school-house, a public pew, a bridge, a pound, a mill-dam, hath been set up, or

pulled down, or altered, or bought, or sold, without the whole population of this town having a voice in the affair. A general contentment is the result. And the people truly feel that they are lords of the soil. In every winding road, in every stone fence, in the smokes of the poor-house chimney, in the clock on the church, they read their own power, and consider, at leisure, the wisdom and error of their judgments.

The British government has recently presented to the several public libraries of this country, copies of the splendid edition of the Domesday Book, and other ancient public records of England. I cannot but think that it would be a suitable acknowledgment of this national munificence, if the records of one of our towns,—of this town, for example,—should be printed, and presented to the governments of Europe; to the English nation, as a thank-offering, and as a certificate of the progress of the Saxon race; to the Continental nations as a lesson of humanity and love. Tell them, the Union has twenty-four States, and Massachusetts is one. Tell them, Massachusetts has three hundred towns, and Concord is one; that in Concord are five hundred ratable polls, and every one has an equal vote.

About ten years after the planting of Concord, efforts began to be made to civilize the Indians, and "to win them to the knowledge of the true God." This indeed, in so many words, is expressed in the charter of the colony as one of its ends; and this design is named first in the printed "Considerations,"²⁵⁸² that inclined Hampden, and determined Winthrop and his friends, to come hither. The interest of the Puritans in the natives was heightened by a suspicion at that time prevailing that these were the lost ten tribes of Israel. The man of the woods might well draw on himself the compassion of the planters. His erect and perfect form, though disclosing some irregular virtues, was found joined to a dwindled soul. Master of

all sorts of wood-craft, he seemed a part of the forest and the lake, and the secret of his amazing skill seemed to be that he partook of the nature and fierce instincts of the beasts he slew. Those who dwelled by ponds and rivers had some tincture of civility, but the hunters of the tribe were found intractable at catechism. Thomas Hooker anticipated the opinion of Humboldt, and called them "the ruins of mankind."

Early efforts were made to instruct them, in which Mr. Bulkeley, Mr. Flint, and Captain Willard, took an active part. In 1644, Squaw Sachem, the widow of Nanepashemet, the great Sachem of Concord and Mystic, with two sachems of Wachusett, made a formal submission to the English government, and intimated their desire, "as opportunity served, and the English lived among them, to learn to read God's word, and know God aright;" and the General Court acted on their request.²⁵⁸³ John Eliot, in October, 1646, preached his first sermon in the Indian language at Noonantum; Waban, Tahattawan, and their sannaps, going thither from Concord to hear him. There under the rubbish and ruins of barbarous life, the human heart heard the voice of love, and awoke as from a sleep. The questions which the Indians put betray their reason and their ignorance. "Can Jesus Christ understand prayers in the Indian language?" "If a man be wise, and his sachem weak, must he obey him?" At a meeting which Eliot gave to the squaws apart, the wife of Wampooas propounded the question, "Whether do I pray when my husband prays, if I speak nothing as he doth, yet if I like what he saith?"—"which questions were accounted of by some, as part of the whitenings of the harvest toward."²⁵⁸⁴ Tahattawan, our Concord sachem, called his Indians together, and bid them not oppose the courses which the English were taking for their good; for, said he, all the time you have lived after the Indian fashion, under the power of the higher sachems, what did they care for

you? They took away your skins, your kettles and your wampum, at their own pleasure, and this was all they regarded. But you may see the English mind no such things, but only seek your welfare, and instead of taking away, are ready to give to you. Tahattawan and his son-in-law Waban, besought Eliot to come and preach to them at Concord, and here they entered, by his assistance, into an agreement to twenty-nine rules, all breathing a desire to conform themselves to English customs.²⁵⁸⁵ They requested to have a town given them within the bounds of Concord, near unto the English. When this question was propounded by Tahattawan, he was asked, why he desired a town so near, when there was more room for them up in the country? The sachem replied that he knew if the Indians dwelt far from the English, they would not so much care to pray, nor could they be so ready to hear the word of God, but would be, all one, Indians still; but dwelling near the English, he hoped it might be otherwise with them then. We, who see in the squalid remnants of the twenty tribes of Massachusetts, the final failure of this benevolent enterprise, can hardly learn without emotion the earnestness with which the most sensible individuals of the copper race held on to the new hope they had conceived, of being elevated to equality with their civilized brother. It is piteous to see their self-distrust in their request to remain near the English, and their unanimous entreaty to Captain Willard, to be their Recorder, being very solicitous that what they did agree upon might be faithfully kept without alteration. It was remarkable that the preaching was not wholly new to them. "Their forefathers," the Indians told Eliot, "did know God, but after this, they fell into a deep sleep, and when they did awake, they quite forgot him."²⁵⁸⁶

At the instance of Eliot, in 1651, their desire was granted by the General Court, and Nashobah, lying near Nagog Pond, now partly in Littleton, partly in Acton, became an Indian town, where

a Christian worship was established under an Indian ruler and teacher. Wilson relates that, at their meetings, "the Indians sung a psalm, made Indian by Eliot, in one of our ordinary English tunes, melodiously."²⁵⁸⁷ Such was, for half a century, the success of the general enterprise, that, in 1676, there were five hundred and sixty-seven praying Indians, and in 1689, twenty-four Indian preachers, and eighteen assemblies.

Meantime, Concord increased in territory and population. The lands were divided; highways were cut from farm to farm, and from this town to Boston. A military company had been organized in 1636. The Pequots, the terror of the farmer, were exterminated in 1637. Captain Underhill, in 1638, declared, that "the new plantations of Dedham and Concord do afford large accommodation, and will contain abundance of people."²⁵⁸⁸ In 1639, our first selectmen, Mr. Flint, Lieutenant Willard, and Richard Griffin were appointed. And in 1640, when the colony rate was £1200, Concord was assessed £50.²⁵⁸⁹ The country already began to yield more than was consumed by the inhabitants.²⁵⁹⁰ The very great immigration from England made the lands more valuable every year, and supplied a market for the produce. In 1643, the colony was so numerous that it became expedient to divide it into four counties, Concord being included in Middlesex.²⁵⁹¹ In 1644, the town contained sixty families.

But, in 1640, all immigration ceased, and the country produce and farm-stock depreciated.²⁵⁹² Other difficulties accrued. The fish, which had been the abundant manure of the settlers, was found to injure the land.²⁵⁹³ The river, at this period, seems to have caused some distress now by its overflow, now by its drought.²⁵⁹⁴ A cold and wet summer blighted the corn; enormous flocks of pigeons beat down and eat up all sorts of English grain; and the crops suffered much from mice.²⁵⁹⁵ New plantations and better land had been

opened, far and near; and whilst many of the colonists at Boston thought to remove, or did remove to England, the Concord people became uneasy, and looked around for new seats. In 1643, one seventh or one eighth part of the inhabitants went to Connecticut with Reverend Mr. Jones, and settled Fairfield. Weakened by this loss, the people begged to be released from a part of their rates, to which the General Court consented. Mr. Bulkeley dissuaded his people from removing, and admonished them to increase their faith with their griefs. Even this check which befell them acquaints us with the rapidity of their growth, for the good man, in dealing with his people, taxes them with luxury. "We pretended to come hither," he says, "for ordinances; but now ordinances are light matters with us; we are turned after the prey. We have among us excess and pride of life; pride in apparel, daintiness in diet, and that in those who, in times past, would have been satisfied with bread. *This is the sin of the lowest of the people.*"²⁵⁹⁶ Better evidence could not be desired of the rapid growth of the settlement.

The check was but momentary. The earth teemed with fruits. The people on the bay built ships, and found the way to the West Indies, with pipe-staves, lumber and fish; and the country people speedily learned to supply themselves with sugar, tea and molasses. The college had been already gathered in 1638. Now the school-house went up. The General Court, in 1647, "to the end that learning may not be buried in the graves of our forefathers, Ordered, that every township, after the Lord had increased them to the number of fifty house-holders, shall appoint one to teach all children to write and read; and where any town shall increase to the number of one hundred families, they shall set up a Grammar school, the masters thereof being able to instruct youth so far as they may be fitted for the University." With these requirements

Concord not only complied, but, in 1653, subscribed a sum for several years to the support of Harvard College.²⁵⁹⁷

But a new and alarming public distress retarded the growth of this, as of the sister towns, during more than twenty years from 1654 to 1676. In 1654, the four united New England Colonies agreed to raise 270 foot and 40 horse, to reduce Ninigret, Sachem of the Niantics, and appointed Major Simon Willard, of this town, to the command.²⁵⁹⁸ This war seems to have been pressed by three of the colonies, and reluctantly entered by Massachusetts. Accordingly, Major Willard did the least he could, and incurred the censure of the Commissioners, who write to their "loving friend Major Willard," "that they leave to his consideration the inconveniences arising from his non-attendance to his commission."²⁵⁹⁹ This expedition was but the introduction of the war with King Philip. In 1670, the Wampanoags began to grind their hatchets, and mend their guns, and insult the English. Philip surrendered seventy guns to the Commissioners in Taunton Meeting-house,²⁶⁰⁰ but revenged his humiliation a few years after, by carrying fire and the tomahawk into the English villages. From Narragansett to the Connecticut River, the scene of war was shifted as fast as these red hunters could traverse the forest. Concord was a military post. The inactivity of Major Willard, in Ninigret's war, had lost him no confidence. He marched from Concord to Brookfield, in season to save the people whose houses had been burned, and who had taken shelter in a fortified house.²⁶⁰¹ But he fought with disadvantage against an enemy who must be hunted before every battle. Some flourishing towns were burned. John Monoco, a formidable savage, boasted that "he had burned Medfield and Lancaster, and would burn Groton, Concord, Watertown and Boston;" adding, "what me will, me do." He did burn Groton, but before he had executed the

remainder of his threat he was hanged, in Boston, in September, 1676.²⁶⁰²

A still more formidable enemy was removed, in the same year, by the capture of Canonchet, the faithful ally of Philip, who was soon afterwards shot at Stonington. He stoutly declared to the Commissioners that "he would not deliver up a Wampanoag, nor the paring of a Wampanoag's nail," and when he was told that his sentence was death, he said "he liked it well that he was to die before his heart was soft, or he had spoken anything unworthy of himself."²⁶⁰³

We know beforehand who must conquer in that unequal struggle. The red man may destroy here and there a straggler, as a wild beast may; he may fire a farm-house, or a village; but the association of the white men and their arts of war give them an overwhelming advantage, and in the first blast of their trumpet we already hear the flourish of victory. I confess what chiefly interests me, in the annals of that war, is the grandeur of spirit exhibited by a few of the Indian chiefs. A nameless Wampanoag who was put to death by the Mohicans, after cruel tortures, was asked by his butchers, during the torture, how he liked the war?—he said, "he found it as sweet as sugar was to Englishmen."²⁶⁰⁴

The only compensation which war offers for its manifold mischiefs, is in the great personal qualities to which it gives scope and occasion. The virtues of patriotism and of prodigious courage and address were exhibited on both sides, and, in many instances, by women. The historian of Concord has preserved an instance of the resolution of one of the daughters of the town. Two young farmers, Abraham and Isaac Shepherd, had set their sister Mary, a girl of fifteen years, to watch whilst they threshed grain in the barn. The Indians stole upon her before she was aware, and her brothers were slain. She was carried captive into the Indian country, but, at

night, whilst her captors were asleep, she plucked a saddle from under the head of one of them, took a horse they had stolen from Lancaster, and having girt the saddle on, she mounted, swam across the Nashua River, and rode through the forest to her home.²⁶⁰⁵

With the tragical end of Philip, the war ended. Beleaguered in his own country, his corn cut down, his piles of meal and other provision wasted by the English, it was only a great thaw in January, that, melting the snow and opening the earth, enabled his poor followers to come at the ground-nuts, else they had starved. Hunted by Captain Church, he fled from one swamp to another; his brother, his uncle, his sister, and his beloved squaw being taken or slain, he was at last shot down by an Indian deserter, as he fled alone in the dark of the morning, not far from his own fort.²⁶⁰⁶

Concord suffered little from the war. This is to be attributed no doubt, in part, to the fact that troops were generally quartered here, and that it was the residence of many noted soldiers. Tradition finds another cause in the sanctity of its minister. The elder Bulkeley was gone. In 1659,²⁶⁰⁷ his bones were laid at rest in the forest. But the mantle of his piety and of the people's affection fell upon his son Edward,²⁶⁰⁸ the fame of whose prayers, it is said, once saved Concord from an attack of the Indian.²⁶⁰⁹ A great defence undoubtedly was the village of Praying Indians, until this settlement fell a victim to the envenomed prejudice against their countrymen. The worst feature in the history of those years, is, that no man spake for the Indian. When the Dutch, or the French, or the English royalist disagreed with the Colony, there was always found a Dutch, or French, or tory party,—an earnest minority,—to keep things from extremity. But the Indian seemed to inspire such a feeling as the wild beast inspires in the people near his den. It is the misfortune of Concord to have permitted a disgraceful outrage

upon the friendly Indians settled within its limits, in February, 1676, which ended in their forcible expulsion from the town.²⁶¹⁰

This painful incident is but too just an example of the measure which the Indians have generally received from the whites. For them the heart of charity, of humanity, was stone. After Philip's death, their strength was irrecoverably broken. They never more disturbed the interior settlements, and a few vagrant families, that are now pensioners on the bounty of Massachusetts, are all that is left of the twenty tribes.

"Alas! for them—their day is o'er
Their fires are out from hill and shore,
No more for them the wild deer bounds,
The plough is on their hunting grounds;
The pale man's axe rings in their woods,
The pale man's sail skims o'er their floods,
Their pleasant springs are dry."²⁶¹¹

I turn gladly to the progress of our civil history. Before 1666, 15,000 acres had been added by grants of the General Court to the original territory of the town,²⁶¹² so that Concord then included the greater part of the towns of Bedford, Acton, Lincoln and Carlisle.

In the great growth of the country, Concord participated, as is manifest from its increasing polls and increased rates. Randolph at this period writes to the English government, concerning the country towns; "The farmers are numerous and wealthy, live in good houses; are given to hospitality; and make good advantage by their corn, cattle, poultry, butter and cheese."²⁶¹³ Edward Bulkeley was the pastor, until his death, in 1696. His youngest brother, Peter, was deputy from Concord, and was chosen speaker of the house

of deputies in 1676. The following year, he was sent to England, with Mr. Stoughton, as agent for the Colony; and on his return, in 1685, was a royal councillor. But I am sorry to find that the servile Randolph speaks of him with marked respect.²⁶¹⁴ It would seem that his visit to England had made him a courtier. In 1689, Concord partook of the general indignation of the province against Andros. A company marched to the capital under Lieutenant Heald, forming a part of that body concerning which we are informed, "the country people came armed into Boston, on the afternoon (of Thursday, 18th April) in such rage and heat, as made us all tremble to think what would follow; for nothing would satisfy them but that the governor must be bound in chains or cords, and put in a more secure place, and that they would see done before they went away; and to satisfy them he was guarded by them to the fort."²⁶¹⁵ But the Town Records of that day confine themselves to descriptions of lands, and to conferences with the neighboring towns to run boundary lines. In 1699, so broad was their territory, I find the selectmen running the lines with Chelmsford, Cambridge and Watertown.²⁶¹⁶ Some interesting peculiarities in the manners and customs of the time appear in the town's books. Proposals of marriage were made by the parents of the parties, and minutes of such private agreements sometimes entered on the clerk's records.²⁶¹⁷ The public charity seems to have been bestowed in a manner now obsolete. The town lends its commons as pastures, to poor men; and "being informed of the great present want of Thomas Pellit, gave order to Stephen Hosmer to deliver a town cow, of a black color, with a white face, unto said Pellit, for his present supply."²⁶¹⁸

From the beginning to the middle of the eighteenth century, our records indicate no interruption of the tranquillity of the inhabitants, either in church or in civil affairs. After the death

of Rev. Mr. Estabrook, in 1711, it was propounded at the town-meeting, "whether one of the three gentlemen lately improved here in preaching, namely, Mr. John Whiting, Mr. Holyoke and Mr. Prescott, shall be now chosen in the work of the ministry? Voted affirmatively."²⁶¹⁹ Mr. Whiting, who was chosen, was, we are told in his epitaph, "a universal lover of mankind." The charges of education and of legislation, at this period, seem to have afflicted the town; for they vote to petition the General Court to be eased of the law relating to providing a schoolmaster; happily, the Court refused; and in 1712, the selectmen agreed with Captain James Minott, "for his son Timothy to keep the school at the school-house for the town of Concord, for half a year beginning 2d June; and if any scholar shall come, within the said time, for larning exceeding his son's ability, the said Captain doth agree to instruct them himself in the tongues, till the above said time be fulfilled; for which service, the town is to pay Captain Minott ten pounds."²⁶²⁰ Captain Minott seems to have served our prudent fathers in the double capacity of teacher and representative. It is an article in the selectmen's warrant for the town-meeting, "to see if the town will lay in for a representative not exceeding four pounds." Captain Minott was chosen, and after the General Court was adjourned received of the town for his services, an allowance of three shillings per day. The country was not yet so thickly settled but that the inhabitants suffered from wolves and wildcats, which infested the woods; since bounties of twenty shillings are given as late as 1735, to Indians and whites, for the heads of these animals, after the constable has cut off the ears.²⁶²¹

Mr. Whiting was succeeded in the pastoral office by Rev. Daniel Bliss, in 1738. Soon after his ordination, the town seems to have been divided by ecclesiastical discords. In 1741, the celebrated Whitfield preached here, in the open air, to a great congregation.²⁶²²

Mr. Bliss heard that great orator with delight, and by his earnest sympathy with him, in opinion and practice, gave offence to a part of his people. Party and mutual councils were called, but no grave charge was made good against him. I find, in the Church Records, the charges preferred against him, his answer thereto, and the result of the Council. The charges seem to have been made by the lovers of order and moderation against Mr. Bliss, as a favorer of religious excitements. His answer to one of the counts breathes such true piety that I cannot for bear to quote it. The ninth allegation is "That in praying for himself, in a church-meeting, in December last, he said, 'he was a poor vile worm of the dust, that was allowed as Mediator between God and this people.'" To this Mr. Bliss replied, "In the prayer you speak of, Jesus Christ was acknowledged as the only Mediator between God and man; at which time, I was filled with wonder, that such a sinful and worthless worm as I am, was allowed to represent Christ, in any manner, even so far as to be bringing the petitions and thank-offerings of the people unto God, and God's will and truths to the people; and used the word Mediator in some differing light from that you have given it; but I confess I was soon uneasy that I had used the word, lest some would put a wrong meaning thereupon."²⁶²³ The Council admonished Mr. Bliss of some improprieties of expression, but bore witness to his purity and fidelity in his office. In 1764, Whitfield preached again at Concord, on Sunday afternoon; Mr. Bliss preached in the morning, and the Concord people thought their minister gave them the better sermon of the two. It was also his last.²⁶²⁴

The planting of the colony was the effect of religious principle. The Revolution was the fruit of another principle,—the devouring thirst for justice. From the appearance of the article in the Selectmen's warrant, in 1765, "to see if the town will give the

Representative any instructions about any important affair to be transacted by the General Court, concerning the Stamp Act,"²⁶²⁵ to the peace of 1783, the Town Records breathe a resolute and warlike spirit, so bold from the first as hardly to admit of increase.

It would be impossible on this occasion to recite all these patriotic papers. I must content myself with a few brief extracts. On the 24th January, 1774, in answer to letters received from the united committees of correspondence, in the vicinity of Boston, the town say:

"We cannot possibly view with indifference the past and present obstinate endeavors of the enemies of this, as well as the mother country, to rob us of those rights, that are the distinguishing glory and felicity of this land; rights, that we are obliged to no power, under heaven, for the enjoyment of; as they are the fruit of the heroic enterprises of the first settlers of these American colonies. And though we cannot but be alarmed at the great majority, in the British parliament, for the imposition of unconstitutional taxes on the colonies, yet, it gives life and strength to every attempt to oppose them, that not only the people of this, but the neighboring provinces are remarkably united in the important and interesting opposition, which, as it succeeded before, in some measure, by the blessing of heaven, so, we cannot but hope it will be attended with still greater success, in future.

"Resolved, That these colonies have been and still are illegally taxed by the British parliament, as they are not virtually represented therein.

"That the purchasing commodities subject to such illegal taxation is an explicit, though an impious and sordid resignation of the liberties of this free and happy people.

"That, as the British parliament have empowered the East India Company to export their tea into America, for the sole purpose of raising a revenue from hence; to render the design abortive, we will not, in this town, either

by ourselves, or any from or under us, buy, sell, or use any of the East India Company's tea, or any other tea, whilst there is a duty for raising a revenue thereon in America; neither will we suffer any such tea to be used in our families.

"That all such persons as shall purchase, sell, or use any such tea, shall, for the future, be deemed unfriendly to the happy constitution of this country.

"That, in conjunction with our brethern in America, we will risk our fortunes, and even our lives, in defence of his majesty, King George the Third, his person, crown and dignity; and will, also, with the same resolution, as his free-born subjects in this country, to the utmost of our power, defend all our rights inviolate to the latest posterity.

"That, if any person or persons, inhabitants of this province, so long as there is a duty on tea, shall import any tea from the India House, in England, or be factors for the East India Company, we will treat them, in an eminent degree, as enemies to their country, and with contempt and detestation.

"That we think it our duty, at this critical time of our public affairs, to return our hearty thanks to the town of Boston, for every rational measure they have taken for the preservation or recovery of our invaluable rights and liberties infringed upon; and we hope, should the state of our public affairs require it, that they will still remain watchful and persevering; with a steady zeal to espy out everything that shall have a tendency to subvert our happy constitution."²⁶²⁶

On the 27th June, near three hundred persons, upwards of twenty-one years of age, inhabitants of Concord, entered into a covenant, "solemnly engaging with each other, in the presence of God, to suspend all commercial intercourse with Great Britain, until the act for blocking the harbor of Boston be repealed; and neither to buy nor consume any merchandise imported from Great Britain, nor to deal with those who do."²⁶²⁷

In August, a County Convention met in this town, to deliberate upon the alarming state of public affairs, and published an admirable report.²⁶²⁸ In September, incensed at the new royal law which made the judges dependent on the crown, the inhabitants assembled on the common, and forbade the justices to open the court of sessions. This little town then assumed the sovereignty. It was judge and jury and council and king. On the 26th of the month, the whole town resolved itself into a committee of safety, "to suppress all riots, tumults, and disorders in said town, and to aid all untainted magistrates in the execution of the laws of the land." It was then voted, to raise one or more companies of minute-men, by enlistment, to be paid by the town whenever called out of town; and to provide arms and ammunition, "that those who are unable to purchase them themselves, may have the advantage of them, if necessity calls for it." In October, the Provincial Congress met in Concord. John Hancock was President. This body was composed of the foremost patriots, and adopted those efficient measures whose progress and issue belong to the history of the nation.²⁶²⁹

The clergy of New England were, for the most part, zealous promoters of the Revolution. A deep religious sentiment sanctified the thirst for liberty. All the military movements in this town were solemnized by acts of public worship. In January, 1775, a meeting was held for the enlisting of minute-men. Reverend William Emerson, the chaplain of the Provincial Congress, preached to the people. Sixty men enlisted and, in a few days, many more. On 13th March, at a general review of all the military companies, he preached to a very full assembly, taking for his text, 2 Chronicles xiii. 12, "And, behold, God himself is with us for our captain, and his priests with sounding trumpets to cry alarm against you."²⁶³⁰ It is said that all the services of that day made a deep impression on the people, even to the singing of the psalm.

A large amount of military stores had been deposited in this town, by order of the Provincial Committee of Safety. It was to destroy those stores that the troops who were attacked in this town, on the 19th April, 1775, were sent hither by General Gage.

The story of that day is well known. In these peaceful fields, for the first time since a hundred years, the drum and alarm-gun were heard, and the farmers snatched down their rusty firelocks from the kitchen walls, to make good the resolute words of their town debates. In the field where the western abutment of the old bridge may still be seen, about half a mile from this spot, the first organized resistance was made to the British arms. There the Americans first shed British blood. Eight hundred British soldiers, under the command of Lieutenant-Colonel Francis Smith, had marched from Boston to Concord; at Lexington had fired upon the brave handful of militia, for which a speedy revenge was reaped by the same militia in the afternoon. When they entered Concord, they found the militia and minute-men assembled under the command of Colonel Barrett and Major Buttrick. This little battalion, though in their hasty council some were urgent to stand their ground, retreated before the enemy to the high land on the other bank of the river, to wait for reinforcement. Colonel Barrett ordered the troops not to fire, unless fired upon. The British following them across the bridge, posted two companies, amounting to about one hundred men, to guard the bridge, and secure the return of the plundering party. Meantime, the men of Acton, Bedford, Lincoln and Carlisle, all once included in Concord, remembering their parent town in the hour of danger, arrived and fell into the ranks so fast, that Major Buttrick found himself superior in number to the enemy's party at the bridge. And when the smoke began to rise from the village where the British were burning cannon-carriages and military stores, the Americans resolved to force

their way into town. The English beginning to pluck up some of the planks of the bridge, the Americans quickened their pace, and the British fired one or two shots up the river (our ancient friend here, Master Blood,²⁶³¹ saw the water struck by the first ball); then a single gun, the ball from which wounded Luther Blanchard and Jonas Brown, and then a volley, by which Captain Isaac Davis and Abner Hosmer of Acton were instantly killed. Major Buttrick leaped from the ground, and gave the command to fire, which was repeated in a simultaneous cry by all his men. The Americans fired, and killed two men and wounded eight. A head-stone and a foot-stone, on this bank of the river, mark the place where these first victims lie.²⁶³² The British retreated immediately towards the village, and were joined by two companies of grenadiers, whom the noise of the firing had hastened to the spot. The militia and minute-men—every one from that moment being his own commander—ran over the hills opposite the battle-field, and across the great fields, into the east quarter of the town, to waylay the enemy, and annoy his retreat. The British, as soon as they were rejoined by the plundering detachment, began that disastrous retreat to Boston, which was an omen to both parties of the event of the war.

In all the anecdotes of that day's events we may discern the natural action of the people. It was not an extravagant ebullition of feeling, but might have been calculated on by any one acquainted with the spirits and habits of our community. Those poor farmers who came up, that day, to defend their native soil, acted from the simplest instincts. They did not know it was a deed of fame they were doing. These men did not babble of glory. They never dreamed their children would contend who had done the most. They supposed they had a right to their corn and their cattle, without paying tribute to any but their own governors. And as they had no fear of man, they yet did have a fear of God. Captain

Charles Miles, who was wounded in the pursuit of the enemy, told my venerable friend who sits by me, that "he went to the services of that day, with the same seriousness and acknowledgment of God, which he carried to church."²⁶³³

The presence of these aged men who were in arms on that day seems to bring us nearer to it. The benignant Providence which has prolonged their lives to this hour gratifies the strong curiosity of the new generation. The Pilgrims are gone; but we see what manner of persons they were who stood in the worst perils of the Revolution. We hold by the hand the last of the invincible men of old, and confirm from living lips the sealed records of time.

And you, my fathers, whom God and the history of your country have ennobled, may well bear a chief part in keeping this peaceful birthday of our town. You are indeed extraordinary heroes. If ever men in arms had a spotless cause, you had. You have fought a good fight. And having quit you like men in the battle, you have quit yourselves like men in your virtuous families; in your cornfields; and in society. We will not hide your honorable gray hairs under perishing laurel-leaves, but the eye of affection and veneration follows you. You are set apart—and forever—for the esteem and gratitude of the human race. To you belongs a better badge than stars and ribbons. This prospering country is your ornament, and this expanding nation is multiplying your praise with millions of tongues.²⁶³⁴

The agitating events of those days were duly remembered in the church. On the second day after the affray, divine service was attended, in this house, by 700 soldiers. William Emerson, the pastor, had a hereditary claim to the affection of the people, being descended in the fourth generation from Edward Bulkeley, son of Peter. But he had merits of his own. The cause of the Colonies was so much in his heart that he did not cease to make it the subject of

his preaching and his prayers, and is said to have deeply inspired many of his people with his own enthusiasm. He, at least, saw clearly the pregnant consequences of the 19th April. I have found within a few days, among some family papers, his almanac of 1775, in a blank leaf of which he has written a narrative of the fight;²⁶³⁵ and at the close of the month, he writes, "This month remarkable for the greatest events of the present age." To promote the same cause, he asked, and obtained of the town, leave to accept the commission of chaplain to the Northern army, at Ticonderoga, and died, after a few months, of the distemper that prevailed in the camp.²⁶³⁶

In the whole course of the war the town did not depart from this pledge it had given. Its little population of 1300 souls behaved like a party to the contest. The number of its troops constantly in service is very great. Its pecuniary burdens are out of all proportion to its capital. The economy so rigid, which marked its earlier history, has all vanished. It spends profusely, affectionately, in the service. "Since," say the plaintive records, "General Washington, at Cambridge, is not able to give but 24s. per cord for wood, for the army; it is Voted, that this town encourage the inhabitants to supply the army, by paying two dollars per cord, over and above the General's price, to such as shall carry wood thither;"²⁶³⁷ and 210 cords of wood were carried. A similar order is taken respecting hay. Whilst Boston was occupied by the British troops, Concord contributed to the relief of the inhabitants, £70, in money; 225 bushels of grain; and a quantity of meat and wood. When, presently, the poor of Boston were quartered by the Provincial Congress on the neighboring country, Concord received 82 persons to its hospitality. In the year 1775, it raised 100 minute-men, and 74 soldiers to serve at Cambridge. In March, 1776, 145 men were raised by this town to serve at Dorchester Heights.²⁶³⁸

In June, the General Assembly of Massachusetts resolved to raise 5000 militia for six months, to reinforce the Continental army. "The numbers," say they, "are large, but this Court has the fullest assurance that their brethren, on this occasion, will not confer with flesh and blood, but will, without hesitation, and with the utmost alacrity and despatch, fill up the numbers proportioned to the several towns."²⁶³⁹ On that occasion, Concord furnished 67 men, paying them itself, at an expense of £622. And so on, with every levy, to the end of the war. For these men it was continually providing shoes, stockings, shirts, coats, blankets and beef. The taxes, which, before the war, had not much exceeded £200 per annum, amounted, in the year 1782, to \$9544, in silver.²⁶⁴⁰

The great expense of the war was borne with cheerfulness, whilst the war lasted; but years passed, after the peace, before the debt was paid. As soon as danger and injury ceased, the people were left at leisure to consider their poverty and their debts. The Town Records show how slowly the inhabitants recovered from the strain of excessive exertion. Their instructions to their representatives are full of loud complaints of the disgraceful state of public credit, and the excess of public expenditure. They may be pardoned, under such distress, for the mistakes of an extreme frugality. They fell into a common error, not yet dismissed to the moon, that the remedy was, to forbid the great importation of foreign commodities, and to prescribe by law the prices of articles. The operation of a new government was dreaded, lest it should prove expensive, and the country towns thought it would be cheaper if it were removed from the capital. They were jealous lest the General Court should pay itself too liberally, and our fathers must be forgiven by their charitable posterity, if, in 1782, before choosing a representative, it was "Voted, that the person who should be chosen representative to the General Court should receive 6s. per day, whilst in actual

service, an account of which time he should bring to the town, and if it should be that the General Court should resolve, that, their pay should be more than 6s., then the representative shall be hereby directed to pay the overplus into the town treasury."²⁶⁴¹ This was securing the prudence of the public servants.

But whilst the town had its own full share of the public distress, it was very far from desiring relief at the cost of order and law. In 1786, when the general sufferings drove the people in parts of Worcester and Hampshire counties to insurrection, a large party of armed insurgents arrived in this town, on the 12th September, to hinder the sitting of the Court of Common Pleas. But they found no countenance here.²⁶⁴² The same people who had been active in a County Convention to consider grievances, condemned the rebellion, and joined the authorities in putting it down.²⁶⁴³ In 1787, the admirable instructions given by the town to its representative are a proud monument of the good sense and good feeling that prevailed. The grievances ceased with the adoption of the Federal Constitution. The constitution of Massachusetts had been already accepted. It was put to the town of Concord, in October, 1776, by the Legislature, whether the existing house of representatives should enact a constitution for the State? The town answered No.²⁶⁴⁴ The General Court, notwithstanding, draughted a constitution, sent it here, and asked the town whether they would have it for the law of the State? The town answered No, by a unanimous vote. In 1780, a constitution of the State, proposed by the Convention chosen for that purpose, was accepted by the town with the reservation of some articles.²⁶⁴⁵ And, in 1788, the town, by its delegate, accepted the new Constitution of the United States; and this event closed the whole series of important public events in which this town played a part.

From that time to the present hour, this town had made a slow but constant progress in population and wealth, and the arts of peace. It has suffered neither from war, nor pestilence, nor famine, nor flagrant crime. Its population, in the census of 1830, was 2020 souls. The public expenses, for the last year, amounted to \$4290; for the present year, to \$5040.²⁶⁴⁶ If the community stints its expense in small matters, it spends freely on great duties. The town raises, this year, \$1800 for its public schools; besides about \$1200 which are paid, by subscription, for private schools. This year, it expends \$800 for its poor; the last year it expended \$900. Two religious societies, of differing creed, dwell together in good understanding, both promoting, we hope, the cause of righteousness and love.²⁶⁴⁷ Concord has always been noted for its ministers. The living need no praise of mine. Yet it is among the sources of satisfaction and gratitude, this day, that the aged with whom is wisdom, our fathers' counsellor and friend, is spared to counsel and intercede for the sons.²⁶⁴⁸

Such, fellow citizens, is an imperfect sketch of the history of Concord. I have been greatly indebted, in preparing this sketch, to the printed but unpublished History of this town, furnished me by the unhesitating kindness of its author, long a resident in this place. I hope that History will not long remain unknown. The author has done us and posterity a kindness, by the zeal and patience of his research, and has wisely enriched his pages with the resolutions, addresses and instructions to its agents, which from time to time, at critical periods, the town has voted.²⁶⁴⁹ Meantime, I have read with care the Town Records themselves. They must ever be the fountains of all just information respecting your character and customs. They are the history of the town. They exhibit a pleasing picture of a community almost exclusively agricultural, where no man has much time for words, in his search after things; of a

community of great simplicity of manners, and of a manifest love of justice. For the most part, the town has deserved the name it wears. I find our annals marked with a uniform good sense. I find no ridiculous laws, no eavesdropping legislators, no hanging of witches, no ghosts, no whipping of Quakers, no unnatural crimes. The tone of the Records rises with the dignity of the event. These soiled and musty books are luminous and electric within. The old town clerks did not spell very correctly, but they contrive to make pretty intelligible the will of a free and just community. Frugal our fathers were,—very frugal,—though, for the most part, they deal generously by their minister, and provide well for the schools and the poor. If, at any time, in common with most of our towns, they have carried this economy to the verge of a vice, it is to be remembered that a town is, in many respects, a financial corporation. They economize, that they may sacrifice. They stint and higgie on the price of a pew, that they may send 200 soldiers to General Washington to keep Great Britain at bay. For splendor, there must somewhere be rigid economy. That the head of the house may go brave, the members must be plainly clad, and the town must save that the State may spend. Of late years, the growth of Concord has been slow. Without navigable waters, without mineral riches, without any considerable mill privileges, the natural increase of her population is drained by the constant emigration of the youth. Her sons have settled the region around us, and far from us. Their wagons have rattled down the remote western hills. And in every part of this country, and in many foreign parts, they plough the earth, they traverse the sea, they engage in trade and in all the professions.²⁶⁵⁰

Fellow citizens; let not the solemn shadows of two hundred years, this day, fall over us in vain. I feel some unwillingness to quit the remembrance of the past. With all the hope of the new I feel

that we are leaving the old. Every moment carries us father from the two great epochs of public principle, the Planting, and the Revolution of the colony. Fortunate and favored this town has been, in having received so large an infusion of the spirit of both of those periods. Humble as is our village in the circle of later and prouder towns that whiten the land, it has been consecrated by the presence and activity of the purest men. Why need I remind you of our own Hosmers, Minotts, Cumings, Barretts, Beattons, the departed benefactors of the town? On the village green have been the steps of Winthrop and Dudley; of John Eliot, the Indian apostle, who had a courage that intimidated those savages whom his love could not melt; of Whitfield, whose silver voice melted his great congregation into tears; of Hancock, and his compatriots of the Provincial Congress; of Langdon, and the college over which he presided. But even more sacred influences than these have mingled here with the stream of human life. The merit of those who fill a space in the world's history, who are borne forward, as it were, by the weight of thousands whom they lead, sheds a perfume less sweet than do the sacrifices of private virtue. I have had much opportunity of access to anecdotes of families, and I believe this town to have been the dwelling-place, in all times since its planting, of pious and excellent persons, who walked meekly through the paths of common life, who served God, and loved man, and never let go the hope of immortality. The benediction of their prayers and of their principles lingers around us. The acknowledgment of the Supreme Being exalts the history of this people. It brought the fathers hither. In a war of principle, it delivered their sons. And so long as a spark of this faith survives among the children's children so long shall the name of Concord be honest and venerable.

III. LETTER

TO MARTIN VAN BUREN, PRESIDENT OF THE UNITED STATES

A PROTEST AGAINST THE REMOVAL OF THE CHEROKEE INDIANS FROM
THE STATE OF GEORGIA

"SAY, WHAT is Honour? 'T is the finest sense
Of justice which the human mind can frame,
Intent each lurking frailty to disclaim,
And guard the way of life from all offence,
Suffered or done."

WORDSWORTH.

LETTER

TO MARTIN VAN BUREN, PRESIDENT OF THE UNITED STATES

CONCORD, Mass., April 23, 1838.

SIR: THE seat you fill places you in a relation of credit and nearness to every citizen. By right and natural position, every citizen is your friend. Before any acts contrary to his own judgment or interest have repelled the affections of any man, each may look with trust and living anticipation to your government. Each has the highest right to call your attention to such subjects as are of a public nature, and properly belong to the chief magistrate; and the good magistrate will feel a joy in meeting such confidence. In this belief and at the instance of a few of my friends and neighbors, I crave of your patience a short hearing for their sentiments and my own: and the circumstance that my name will be utterly unknown to you will only give the fairer chance to your equitable construction of what I have to say.

Sir, my communication respects the sinister rumors that fill this part of the country concerning the Cherokee people. The interest always felt in the aboriginal population—an interest naturally

growing as that decays—has been heightened in regard to this tribe. Even in our distant State some good rumor of their worth and civility has arrived. We have learned with joy their improvement in the social arts. We have read their newspapers. We have seen some of them in our schools and colleges. In common with the great body of the American people, we have witnessed with sympathy the painful labors of these red men to redeem their own race from the doom of eternal inferiority, and to borrow and domesticate in the tribe the arts and customs of the Caucasian race. And notwithstanding the unaccountable apathy with which of late years the Indians have been sometimes abandoned to their enemies, it is not to be doubted that it is the good pleasure and the understanding of all humane persons in the Republic, of the men and the matrons sitting in the thriving independent families all over the land, that they shall be duly cared for; that they shall taste justice and love from all to whom we have delegated the office of dealing with them.

The newspapers now inform us that, in December, 1835, a treaty contracting for the exchange of all the Cherokee territory was pretended to be made by an agent on the part of the United States with some persons appearing on the part of the Cherokees; that the fact afterwards transpired that these deputies did by no means represent the will of the nation; and that, out of eighteen thousand souls composing the nation, fifteen thousand six hundred and sixty-eight have protested against the so-called treaty. It now appears that the government of the United States choose to hold the Cherokees to this sham treaty, and are proceeding to execute the same. Almost the entire Cherokee Nation stand up and say, "This is not our act. Behold us. Here are we. Do not mistake that handful of deserters for us;" and the American President and the Cabinet, the Senate and the House of Representatives, neither

hear these men nor see them, and are contracting to put this active nation into carts and boats, and to drag them over mountains and rivers to a wilderness at a vast distance beyond the Mississippi. And a paper purporting to be an army order fixes a month from this day as the hour for this doleful removal.

In the name of God, sir, we ask you if this be so. Do the newspapers rightly inform us? Men and women with pale and perplexed faces meet one another in the streets and churches here, and ask if this be so. We have inquired if this be a gross misrepresentation from the party opposed to the government and anxious to blacken it with the people. We have looked in the newspapers of different parties and find a horrid confirmation of the tale. We are slow to believe it. We hoped the Indians were misinformed, and that their remonstrance was premature, and will turn out to be a needless act of terror.

The piety, the principle that is left in the United States, if only in its coarsest form, a regard to the speech of men,—forbid us to entertain it as a fact. Such a dereliction of all faith and virtue, such a denial of justice, and such deafness to screams for mercy were never heard of in times of peace and in the dealing of a nation with its own allies and wards, since the earth was made. Sir, does this government think that the people of the United States are become savage and mad? From their mind are the sentiments of love and a good nature wiped clean out? The soul of man, the justice, the mercy that is the heart's heart in all men, from Maine to Georgia, does abhor this business.

In speaking thus the sentiments of my neighbors and my own, perhaps I overstep the bounds of decorum. But would it not be a higher indecorum coldly to argue a matter like this? We only state the fact that a crime is projected that confounds our understandings by its magnitude,—a crime that really deprives us as well as the

Cherokees of a country? for how could we call the conspiracy that should crush these poor Indians our government, or the land that was cursed by their parting and dying imprecations our country, any more? You, sir, will bring down that renowned chair in which you sit into infamy if your seal is set to this instrument of perfidy; and the name of this nation, hitherto the sweet omen of religion and liberty, will stink to the world.

You will not do us the injustice of connecting this remonstrance with any sectional and party feeling. It is in our hearts the simplest commandment of brotherly love. We will not have this great and solemn claim upon national and human justice huddled aside under the flimsy plea of its being a party act. Sir, to us the questions upon which the government and the people have been agitated during the past year, touching the prostration of the currency and of trade, seem but motes in comparison. These hard times, it is true, have brought the discussion home to every farmhouse and poor man's house in this town; but it is the chirping of grasshoppers beside the immortal question whether justice shall be done by the race of civilized to the race of savage man,—whether all the attributes of reason, of civility, of justice, and even of mercy, shall be put off by the American people, and so vast an outrage upon the Cherokee Nation and upon human nature shall be consummated.

One circumstance lessens the reluctance with which I intrude at this time on your attention my conviction that the government ought to be admonished of a new historical fact, which the discussion of this question has disclosed, namely, that there exists in a great part of the Northern people a gloomy diffidence in the *moral* character of the government.

On the broaching of this question, a general expression of despondency, of disbelief that any good will accrue from a

remonstrance on an act of fraud and robbery, appeared in those men to whom we naturally turn for aid and counsel. Will the American government steal? Will it lie? Will it kill?—We ask triumphantly. Our counsellors and old statesmen here say that ten years ago they would have staked their lives on the affirmation that the proposed Indian measures could not be executed; that the unanimous country would put them down. And now the steps of this crime follow each other so fast, at such fatally quick time, that the millions of virtuous citizens, whose agents the government are, have no place to interpose, and must shut their eyes until the last howl and wailing of these tormented villages and tribes shall afflict the ear of the world.

I will not hide from you, as an indication of the alarming distrust, that a letter addressed as mine is, and suggesting to the mind of the Executive the plain obligations of man, has a burlesque character in the apprehensions of some of my friends. I, sir, will not beforehand treat you with the contumely of this distrust. I will at least state to you this fact, and show you how plain and humane people, whose love would be honor, regard the policy of the government, and what injurious inferences they draw as to the minds of the governors. A man with your experience in affairs must have seen cause to appreciate the futility of opposition to the moral sentiment. However feeble the sufferer and however great the oppressor, it is in the nature of things that the blow should recoil upon the aggressor. For God is in the sentiment, and it cannot be withstood. The potentate and the people perish before it; but with it, and as its executor, they are omnipotent.

I write thus, sir, to inform you of the state of mind these Indian tidings have awakened here, and to pray with one voice more that you, whose hands are strong with the delegated power of fifteen

millions of men, will avert with that might the terrific injury which threatens the Cherokee tribe.

With great respect, sir, I am your fellow citizen,

RALPH WALDO EMERSON.

IV. ADDRESS

DELIVERED IN CONCORD ON THE ANNIVERSARY OF THE
EMANCIPATION OF THE NEGROES IN THE BRITISH WEST INDIES,
AUGUST 1, 1844.

THERE A captive sat in chains,
Crooning ditties treasured well
From his Afric's torrid plains.
Sole estate his sire bequeathed,—
Hapless sire to hapless son,—
Was the wailing song he breathed,
And his chain when life was done.

ADDRESS

EMANCIPATION IN THE BRITISH WEST INDIES

FRIENDS AND Fellow Citizens: We are met to exchange congratulations on the anniversary of an event singular in the history of civilization; a day of reason; of the clear light; of that which makes us better than a flock of birds and beasts; a day which gave the immense fortification of a fact, of gross history, to ethical abstractions. It was the settlement, as far as a great Empire was concerned, of a question on which almost every leading citizen in it had taken care to record his vote; one which for many years absorbed the attention of the best and most eminent of mankind. I might well hesitate, coming from other studies, and without the smallest claim to be a special laborer in this work of humanity, to undertake to set this matter before you; which ought rather to be done by a strict coöperation of many well-advised persons; but I shall not apologize for my weakness. In this cause, no man's weakness is any prejudice: it has a thousand sons; if one man cannot speak, ten others can; and, whether by the wisdom of its friends, or by the folly of the adversaries; by speech and by silence; by doing

and by omitting to do, it goes forward. Therefore I will speak,—or, not I, but the might of liberty in my weakness. The subject is said to have the property of making dull men eloquent.

It has been in all men's experience a marked effect of the enterprise in behalf of the African, to generate an overbearing and defying spirit. The institution of slavery seems to its opponent to have but one side, and he feels that none but a stupid or a malignant person can hesitate on a view of the facts. Under such an impulse, I was about to say, If any cannot speak, or cannot hear the words of freedom, let him go hence,—I had almost said, Creep into your grave, the universe has no need of you! But I have thought better: let him not go. When we consider what remains to be done for this interest in this country, the dictates of humanity make us tender of such as are not yet persuaded.²⁶⁵¹ The hardest selfishness is to be borne with. Let us withhold every reproachful, and, if we can, every indignant remark. In this cause, we must renounce our temper, and the risings of pride. If there be any man who thinks the ruin of a race of men a small matter, compared with the last decoration and completions of his own comfort,—who would not so much as part with his ice-cream, to save them from rapine and manacles, I think I must not hesitate to satisfy that man that also his cream and vanilla are safer and cheaper by placing the negro nation on a fair footing than by robbing them. If the Virginian piques himself on the picturesque luxury of his vassalage, on the heavy Ethiopian manners of his house-servants, their silent obedience, their hue of bronze, their turbaned heads, and would not exchange them for the more intelligent but precarious hired service of whites, I shall not refuse to show him that when their free-papers are made out, it will still be their interest to remain on his estate, and that the oldest planters of Jamaica are convinced that it is cheaper to pay wages than to own the slave.

The history of mankind interests us only as it exhibits a steady gain of truth and right, in the incessant conflict which it records between the material and the moral nature. From the earliest monuments it appears that one race was victim and served the other races. In the oldest temples of Egypt, negro captives are painted on the tombs of kings, in such attitudes as to show that they are on the point of being executed; and Herodotus, our oldest historian, relates that the Troglodytes hunted the Ethiopians in four-horse chariots. From the earliest time, the negro has been an article of luxury to the commercial nations. So has it been down to the day that has just dawned on the world. Language must be raked, the secrets of slaughter-houses and infamous holes that cannot front the day, must be ransacked, to tell what negro slavery has been. These men, our benefactors, as they are producers of corn and wine, of coffee, of tobacco, of cotton, of sugar, of rum and brandy; gentle and joyous themselves, and producers of comfort and luxury for the civilized world,—there seated in the finest climates of the globe, children of the sun,—I am heart-sick when I read how they came there, and how they are kept there. Their case was left out of the mind and out of the heart of their brothers. The prizes of society, the trumpet of fame, the privileges of learning, of culture, of religion, the decencies and joys of marriage, honor, obedience, personal authority and a perpetual melioration into a finer civility,—these were for all, but not for them. For the negro, was the slave-ship to begin with, in whose filthy hold he sat in irons, unable to lie down; bad food, and insufficiency of that; disfranchisement; no property in the rags that covered him; no marriage, no right in the poor black woman that cherished him in her bosom, no right to the children of his body; no security from the humors, none from the crimes, none from the appetites of his master: toil, famine, insult and flogging; and, when he sank in the

furrow, no wind of good fame blew over him, no priest of salvation visited him with glad tidings: but he went down to death with dusky dreams of African shadow-catchers and Obeahs hunting him.²⁶⁵² Very sad was the negro tradition, that the Great Spirit, in the beginning offered the black man, whom he loved better than the buckra, or white, his choice of two boxes, a big and a little one. The black man was greedy, and chose the largest. "The buckra box was full up with pen, paper and whip, and the negro box with hoe and bill; and hoe and bill for negro to this day."

But the crude element of good in human affairs must work and ripen, spite of whips and plantation laws and West Indian interest. Conscience rolled on its pillow, and could not sleep. We sympathize very tenderly here with the poor aggrieved planter, of whom so many unpleasant things are said; but if we saw the whip applied to old men, to tender women; and, undeniably, though I shrink to say so, pregnant women set in the treadmill for refusing to work; when, not they, but the eternal law of animal nature refused to work;—if we saw men's backs flayed with cowhides, and "hot rum poured on, superinduced with brine or pickle, rubbed in with a cornhusk, in the scorching heat of the sun;"—if we saw the runaways hunted with bloodhounds into swamps and hills; and, in cases of passion, a planter throwing his negro into a copper of boiling cane-juice,—if we saw these things with eyes, we too should wince. They are not pleasant sights. The blood is moral: the blood is anti-slavery: it runs cold in the veins: the stomach rises with disgust, and curses slavery. Well, so it happened; a good man or woman, a country boy or girl,—it would so fall out,—once in a while saw these injuries and had the indiscretion to tell of them. The horrid story ran and flew; the winds blew it all over the world. They who heard it asked their rich and great friends if it was true, or only missionary lies. The richest and greatest, the prime minister of England, the

king's privy council were obliged to say that it was too true. It became plain to all men, the more this business was looked into, that the crimes and cruelties of the slave-traders and slave-owners could not be overstated. The more it was searched, the more shocking anecdotes came up,—things not to be spoken. Humane persons who were informed of the reports insisted on proving them. Granville Sharpe was accidentally made acquainted with the sufferings of a slave, whom a West Indian planter had brought with him to London and had beaten with a pistol on his head, so badly that his whole body became diseased, and the man useless to his master, who left him to go whither he pleased. The man applied to Mr. William Sharpe, a charitable surgeon, who attended the diseases of the poor. In process of time, he was healed. Granville Sharpe found him at his brother's and procured a place for him in an apothecary's shop. The master accidentally met his recovered slave, and instantly endeavored to get possession of him again. Sharpe protected the slave. In consulting with the lawyers, they told Sharpe the laws were against him. Sharpe would not believe it; no prescription on earth could ever render such iniquities legal. 'But the decisions are against you, and Lord Mansfield, now Chief Justice of England, leans to the decisions.' Sharpe instantly sat down and gave himself to the study of English law for more than two years, until he had proved that the opinions relied on, of Talbot and Yorke, were incompatible with the former English decisions and with the whole spirit of English law. He published his book in 1769, and he so filled the heads and hearts of his advocates that when he brought the case of George Somerset, another slave, before Lord Mansfield, the slavish decisions were set aside, and equity affirmed.²⁶⁵³ There is a sparkle of God's righteousness in Lord Mansfield's judgment, which does the heart good. Very unwilling had that great lawyer been to reverse the late decisions;

he suggested twice from the bench, in the course of the trial, how the question might be got rid of: but the hint was not taken; the case was adjourned again and again, and judgment delayed. At last judgment was demanded, and on the 22nd June, 1772, Lord Mansfield is reported to have decided in these words:

"Immemorial usage preserves the memory of *positive law*, long after all traces of the occasion, reason, authority and time of its introduction, are lost; and in a case so odious as the condition of slaves, must be taken strictly (tracing the subject to *natural principles*, the claim of slavery never can be supported). The power claimed by this return never was in use here. We cannot say the cause set forth by this return is allowed or approved of by the laws of this kingdom; and therefore the man must be discharged."

This decision established the principle that the "air of England is too pure for any slave to breathe," but the wrongs in the islands were not thereby touched. Public attention, however, was drawn that way, and the methods of the stealing and the transportation from Africa became noised abroad. The Quakers got the story. In their plain meeting-houses and prim dwellings this dismal agitation got entrance. They were rich: they owned, for debt or by inheritance, island property; they were religious, tender-hearted men and women; and they had to hear the news and digest it as they could. Six Quakers met in London on the 6th of July, 1783,—William Dillwyn, Samuel Hoar, George Harrison, Thomas Knowles, John Lloyd, Joseph Woods, "to consider what step they should take for the relief and liberation of the negro slaves in the West Indies, and for the discouragement of the slave-trade on the coast of Africa." They made friends and raised money for the slave; they interested their Yearly Meeting; and all English and all American Quakers. John Woolman of New Jersey, whilst yet an apprentice, was uneasy

in his mind when he was set to write a bill of sale of a negro, for his master. He gave his testimony against the traffic, in Maryland and Virginia. Thomas Clarkson was a youth at Cambridge, England, when the subject given out for a Latin prize dissertation was, "Is it right to make slaves of others against their will?" He wrote an essay, and won the prize; but he wrote too well for his own peace; he began to ask himself if these things could be true; and if they were, he could no longer rest. He left Cambridge; he fell in with the six Quakers. They engaged him to act for them. He himself interested Mr. Wilberforce in the matter. The shipmasters in that trade were the greatest miscreants, and guilty of every barbarity to their own crews. Clarkson went to Bristol, made himself acquainted with the interior of the slave-ships and the details of the trade. The facts confirmed his sentiment, "that Providence had never made that to be wise which was immoral, and that the slave-trade was as impolitic as it was unjust;"²⁶⁵⁴ that it was found peculiarly fatal to those employed in it. More seamen died in that trade in one year than in the whole remaining trade of the country in two. Mr. Pitt and Mr. Fox were drawn into the generous enterprise. In 1788, the House of Commons voted Parliamentary inquiry. In 1791, a bill to abolish the trade was brought in by Wilberforce, and supported by him and by Fox and Burke and Pitt, with the utmost ability and faithfulness; resisted by the planters and the whole West Indian interest, and lost. During the next sixteen years, ten times, year after year, the attempt was renewed by Mr. Wilberforce, and ten times defeated by the planters. The king, and all the royal family but one, were against it. These debates are instructive, as they show on what grounds the trade was assailed and defended. Everything generous, wise and sprightly is sure to come to the attack. On the other part are found cold prudence, barefaced selfishness and silent votes. But the nation was aroused to enthusiasm. Every horrid

fact became known. In 1791, three hundred thousand persons in Britain pledged themselves to abstain from all articles of island produce. The planters were obliged to give way; and in 1807, on the 25th March, the bill passed, and the slave-trade was abolished.

The assailants of slavery had early agreed to limit their political action on this subject to the abolition of the trade, but Granville Sharpe, as a matter of conscience, whilst he acted as chairman of the London Committee, felt constrained to record his protest against the limitation, declaring that slavery was as much a crime against the Divine law as the slave-trade. The trade, under false flags, went on as before. In 1821, according to official documents presented to the American government by the Colonization Society, 200,000 slaves were deported from Africa. Nearly 30,000 were landed in the port of Havana alone. In consequence of the dangers of the trade growing out of the act of abolition, ships were built sharp for swiftness, and with a frightful disregard of the comfort of the victims they were destined to transport. They carried five, six, even seven hundred stowed in a ship built so narrow as to be unsafe, being made just broad enough on the beam to keep the sea. In attempting to make its escape from the pursuit of a man-of-war, one ship flung five hundred slaves alive into the sea. These facts went into Parliament. In the islands was an ominous state of cruel and licentious society; every house had a dungeon attached to it; every slave was worked by the whip. There is no end to the tragic anecdotes in the municipal records of the colonies. The boy was set to strip and flog his own mother to blood, for a small offence. Looking in the face of his master by the negro was held to be violence by the island courts. He was worked sixteen hours, and his ration by law, in some islands, was a pint of flour and one salt herring a day. He suffered insult, stripes, mutilation at the humor of the master: iron collars were riveted on their necks

with iron prongs ten inches long; capsicum pepper was rubbed in the eyes of the females; and they were done to death with the most shocking levity between the master and manager, without fine or inquiry. And when, at last, some Quakers, Moravians, and Wesleyan and Baptist missionaries, following in the steps of Carey and Ward in the East Indies, had been moved to come and cheer the poor victim with the hope of some reparation, in a future world, of the wrongs he suffered in this, these missionaries were persecuted by the planters, their lives threatened, their chapels burned, and the negroes furiously forbidden to go near them. These outrages rekindled the flame of British indignation. Petitions poured into Parliament: a million persons signed their names to these; and in 1833, on the 14th May, Lord Stanley, Minister of the Colonies, introduced into the House of Commons his bill for the Emancipation.

The scheme of the Minister, with such modification as it received in the legislature, proposed gradual emancipation; that on 1st August, 1834, all persons now slaves should be entitled to be registered as apprenticed laborers, and to acquire thereby all the rights and privileges of freemen, subject to the restriction of laboring under certain conditions. These conditions were, that the *prædials* should owe three fourths of the profits of their labor to their masters for six years, and the non-*prædials* for four years.²⁶⁵⁵ The other fourth of the apprentice's time was to be his own, which he might sell to his master, or to other persons; and at the end of the term of years fixed, he should be free.

With these provisions and conditions, the bill proceeds, in the twelfth section, in the following terms: "Be it enacted, that all and every person who, on the first August, 1834, shall be holden in slavery within any such British colony as aforesaid, shall upon and from and after the said first August, become and be to all

intents and purposes free, and discharged of and from all manner of slavery, and shall be absolutely and forever manumitted; and that the children thereafter born to any such persons, and the offspring of such children, shall, in like manner, be free, from their birth; and that from and after the first August, 1834, slavery shall be and is hereby utterly and forever abolished and declared unlawful throughout the British colonies, plantations, and possessions abroad."

The Ministers, having estimated the slave products of the colonies in annual exports of sugar, rum and coffee, at £1,500,000 per annum, estimated the total value of the slave property at 30,000,000 pounds sterling, and proposed to give the planters, as a compensation for so much of the slaves' time as the act took from them, 20,000,000 pounds sterling, to be divided into nineteen shares for the nineteen colonies, and to be distributed to the owners of slaves by commissioners, whose appointment and duties were regulated by the Act. After much debate, the bill passed by large majorities. The apprenticeship system is understood to have proceeded from Lord Brougham, and was by him urged on his colleagues, who, it is said, were inclined to the policy of immediate emancipation.

The colonial legislatures received the act of Parliament with various degrees of displeasure, and, of course, every provision of the bill was criticised with severity. The new relation between the master and the apprentice, it was feared, would be mischievous; for the bill required the appointment of magistrates who should hear every complaint of the apprentice and see that justice was done him. It was feared that the interest of the master and servant would now produce perpetual discord between them. In the island of Antigua, containing 37,000 people, 30,000 being negroes, these objections had such weight that the legislature rejected the

apprenticeship system, and adopted absolute emancipation. In the other islands the system of the Ministry was accepted.

The reception of it by the negro population was equal in nobleness to the deed. The negroes were called together by the missionaries and by the planters, and the news explained to them. On the night of the 31st July, they met everywhere at their churches and chapels, and at midnight, when the clock struck twelve, on their knees, the silent, weeping assembly became men; they rose and embraced each other; they cried, they sung, they prayed, they were wild with joy, but there was no riot, no feasting. I have never read anything in history more touching than the moderation of the negroes. Some American captains left the shore and put to sea, anticipating insurrection and general murder. With far different thoughts, the negroes spent the hour in their huts and chapels. I will not repeat to you the well-known paragraph, in which Messrs. Thome and Kimball, the commissioners sent out in the year 1837 by the American Anti-Slavery Society, describe the occurrences of that night in the island of Antigua. It has been quoted in every newspaper, and Dr. Channing has given it additional fame. But I must be indulged in quoting a few sentences from the pages that follow it, narrating the behavior of the emancipated people on the next day.²⁶⁵⁶

"The first of August came on Friday, and a release was proclaimed from all work until the next Monday. The day was chiefly spent by the great mass of the negroes in the churches and chapels. The clergy and missionaries throughout the island were actively engaged, seizing the opportunity to enlighten the people on all the duties and responsibilities of their new relation, and urging them to the attainment of that higher liberty with which Christ maketh his children free. In every quarter, we were assured, the day was like a Sabbath. Work had ceased. The hum of business

was still: tranquillity pervaded the towns and country. The planters informed us that they went to the chapels where their own people were assembled, greeted them, shook hands with them, and exchanged the most hearty good wishes. At Grace Hill, there were at least a thousand persons around the Moravian Chapel who could not get in. For once the house of God suffered violence, and the violent took it by force. At Grace Bay, the people, all dressed in white, formed a procession, and walked arm in arm into the chapel. We were told that the dress of the negroes on that occasion was uncommonly simple and modest. There was not the least disposition to gayety. Throughout the island, there was not a single dance known of, either day or night, nor so much as a fiddle played."

On the next Monday morning, with very few exceptions, every negro on every plantation was in the field at his work. In some places, they waited to see their master, to know what bargain he would make; but for the most part, throughout the islands, nothing painful occurred. In June, 1835, the Ministers, Lord Aberdeen and Sir George Grey, declared to the Parliament that the system worked well; that now for ten months, from 1st August, 1834, no injury or violence had been offered to any white, and only one black had been hurt in 800,000 negroes: and, contrary to many sinister predictions, that the new crop of island produce would not fall short of that of the last year.

But the habit of oppression was not destroyed by a law and a day of jubilee. It soon appeared in all the islands that the planters were disposed to use their old privileges, and overwork the apprentices; to take from them, under various pretences, their fourth part of their time; and to exert the same licentious despotism as before. The negroes complained to the magistrates and to the governor. In the island of Jamaica, this ill blood continually grew worse. The

governors, Lord Belmore, the Earl of Sligo, and afterwards Sir Lionel Smith (a governor of their own class, who had been sent out to gratify the planters), threw themselves on the side of the oppressed, and were at constant quarrel with the angry and bilious island legislature. Nothing can exceed the ill humor and sulkiness of the addresses of this assembly.

I may here express a general remark, which the history of slavery seems to justify, that it is not founded solely on the avarice of the planter. We sometimes say, the planter does not want slaves, he only wants the immunities and the luxuries which the slaves yield him; give him money, give him a machine that will yield him as much money as the slaves, and he will thankfully let them go. He has no love of slavery, he wants luxury, and he will pay even this price of crime and danger for it. But I think experience does not warrant this favorable distinction, but shows the existence, beside the covetousness, of a bitterer element, the love of power, the voluptuousness of holding a human being in his absolute control. We sometimes observe that spoiled children contract a habit of annoying quite wantonly those who have charge of them, and seem to measure their own sense of well-being, not by what they do, but by the degree of reaction they can cause. It is vain to get rid of them by not minding them: if purring and humming is not noticed, they squeal and screech; then if you chide and console them, they find the experiment succeeds, and they begin again. The child will sit in your arms contented, provided you do nothing. If you take a book and read, he commences hostile operations. The planter is the spoiled child of his unnatural habits, and has contracted in his indolent and luxurious climate the need of excitement by irritating and tormenting his slave.

Sir Lionel Smith defended the poor negro girls, prey to the licentiousness of the planters; they shall not be whipped with

tamarind rods if they do not comply with their master's will; he defended the negro women; they should not be made to dig the cane-holes (which is the very hardest of the field work); he defended the Baptist preachers and the stipendiary magistrates, who are the negroes' friends, from the power of the planter. The power of the planters, however, to oppress, was greater than the power of the apprentice and of his guardians to withstand. Lord Brougham and Mr. Buxton declared that the planter had not fulfilled his part in the contract, whilst the apprentices had fulfilled theirs; and demanded that the emancipation should be hastened, and the apprenticeship abolished. Parliament was compelled to pass additional laws for the defence and security of the negro, and in ill humor at these acts, the great island of Jamaica, with a population of half a million, and 300,000 negroes, early in 1838, resolved to throw up the two remaining years of apprenticeship, and to emancipate absolutely on the 1st August, 1838. In British Guiana, in Dominica, the same resolution had been earlier taken with more good will; and the other islands fell into the measure; so that on the 1st August, 1838, the shackles dropped from every British slave. The accounts which we have from all parties, both from the planters (and those too who were originally most opposed to the measure), and from the new freemen, are of the most satisfactory kind. The manner in which the new festival was celebrated, brings tears to the eyes. The First of August, 1838, was observed in Jamaica as a day of thanksgiving and prayer. Sir Lionel Smith, the governor, writes to the British Ministry, "It is impossible for me to do justice to the good order, decorum and gratitude which the whole laboring population manifested on that happy occasion. Though joy beamed on every countenance, it was throughout tempered with solemn thankfulness to God, and the

churches and chapels were everywhere filled with these happy people in humble offering of praise."

The Queen, in her speech to the Lords and Commons, praised the conduct of the emancipated population:²⁶⁵⁷ and in 1840 Sir Charles Metcalfe, the new governor of Jamaica, in his address to the Assembly expressed himself to that late exasperated body in these terms: "All those who are acquainted with the state of the island know that our emancipated population are as free, as independent in their conduct, as well conditioned, as much in the enjoyment of abundance, and as strongly sensible of the blessings of liberty, as any that we know of in any country. All disqualifications and distinctions of color have ceased; men of all colors have equal rights in law, and an equal footing in society, and every man's position is settled by the same circumstances which regulate that point in other free countries, where no difference of color exists. It may be asserted, without fear of denial, that the former slaves of Jamaica are now as secure in all social rights, as freeborn Britons." He further describes the erection of numerous churches, chapels and schools which the new population required, and adds that more are still demanded. The legislature, in their reply, echo the governor's statement, and say, "The peaceful demeanor of the emancipated population redounds to their own credit, and affords a proof of their continued comfort and prosperity."

I said, this event is signal in the history of civilization. There are many styles of civilization, and not one only. Ours is full of barbarities. There are many faculties in man, each of which takes its turn of activity, and that faculty which is paramount in any period and exerts itself through the strongest nation, determines the civility of that age: and each age thinks its own the perfection of reason. Our culture is very cheap and intelligible. Unroof any

house, and you shall find it. The well-being consists in having a sufficiency of coffee and toast, with a daily newspaper; a well glazed parlor, with marbles, mirrors and centre-table; and the excitement of a few parties and a few rides in a year. Such as one house, such are all. The owner of a New York manor imitates the mansion and equipage of the London nobleman; the Boston merchant rivals his brother of New York; and the villages copy Boston. There have been nations elevated by great sentiments. Such was the civility of Sparta and the Dorian race, whilst it was defective in some of the chief elements of ours. That of Athens, again, lay in an intellect dedicated to beauty. That of Asia Minor in poetry, music and arts; that of Palestine in piety; that of Rome in military arts and virtues, exalted by a prodigious magnanimity; that of China and Japan in the last exaggeration of decorum and etiquette. Our civility, England determines the style of, inasmuch as England is the strongest of the family of existing nations, and as we are the expansion of that people. It is that of a trading nation; it is a shopkeeping civility. The English lord is a retired shopkeeper, and has the prejudices and timidities of that profession. And we are shopkeepers, and have acquired the vices and virtues that belong to trade. We peddle, we truck, we sail, we row, we ride in cars, we creep in teams, we go in canals,—to market, and for the sale of goods. The national aim and employment streams into our ways of thinking, our laws, our habits and our manners. The customer is the immediate jewel of our souls. Him we flatter, him we feast, compliment, vote for, and will not contradict. It was, or it seemed the dictate of trade, to keep the negro down. We had found a race who were less warlike, and less energetic shopkeepers than we; who had very little skill in trade. We found it very convenient to keep them at work, since, by the aid of a little whipping, we could get their work for nothing but their board

and the cost of whips. What if it cost a few unpleasant scenes on the coast of Africa? That was a great way off; and the scenes could be endured by some sturdy, unscrupulous fellows, who could go, for high wages, and bring us the men, and need not trouble our ears with the disagreeable particulars. If any mention was made of homicide, madness, adultery, and intolerable tortures, we would let the church-bells ring louder, the church-organ swell its peal and drown the hideous sound. The sugar they raised was excellent: nobody tasted blood in it. The coffee was fragrant; the tobacco was incense; the brandy made nations happy; the cotton clothed the world. What! all raised by these men, and no wages? Excellent! What a convenience! They seemed created by Providence to bear the heat and the whipping, and make these fine articles.

But unhappily, most unhappily, gentlemen, man is born with intellect, as well as with a love of sugar; and with a sense of justice, as well as a taste for strong drink. These ripened, as well as those. You could not educate him, you could not get any poetry, any wisdom, any beauty in woman, any strong and commanding character in man, but these absurdities would still come flashing out,—these absurdities of a demand for justice, a generosity for the weak and oppressed. Unhappily, too, for the planter, the laws of nature are in harmony with each other: that which the head and the heart demand is found to be, in the long run, for what the grossest calculator calls his advantage. The moral sense is always supported by the permanent interest of the parties. Else, I know not how, in our world, any good would ever get done.²⁶⁵⁸ It was shown to the planters that they, as well as the negroes, were slaves; that though they paid no wages, they got very poor work; that their estates were ruining them, under the finest climate; and that they needed the severest monopoly laws at home to keep them from bankruptcy. The oppression of the slave recoiled on them.

They were full of vices; their children were lumps of pride, sloth, sensuality and rottenness. The position of woman was nearly as bad as it could be; and, like other robbers, they could not sleep in security. Many planters have said, since the emancipation, that, before that day, they were the greatest slaves on the estates. Slavery is no scholar, no improver; it does not love the whistle of the railroad; it does not love the newspaper, the mail-bag, a college, a book or a preacher who has the absurd whim of saying what he thinks; it does not increase the white population; it does not improve the soil; everything goes to decay. For these reasons the islands proved bad customers to England. It was very easy for manufacturers less shrewd than those of Birmingham and Manchester to see that if the state of things in the islands was altered, if the slaves had wages, the slaves would be clothed, would build houses, would fill them with tools, with pottery, with crockery, with hardware; and negro women love fine clothes as well as white women. In every naked negro of those thousands, they saw a future customer. Meantime, they saw further that the slave-trade, by keeping in barbarism the whole coast of eastern Africa, deprives them of countries and nations of customers, if once freedom and civility and European manners could get a foothold there. But the trade could not be abolished whilst this hungry West Indian market, with an appetite like the grave, cried, 'More, more, bring me a hundred a day;' they could not expect any mitigation in the madness of the poor African war-chiefs. These considerations opened the eyes of the dullest in Britain. More than this, the West Indian estate was owned or mortgaged in England, and the owner and the mortgagee had very plain intimations that the feeling of English liberty was gaining every hour new mass and velocity, and the hostility to such as resisted it would be fatal. The House of Commons would destroy the protection of island

produce, and interfere in English politics in the island legislation: so they hastened to make the best of their position, and accepted the bill.

These considerations, I doubt not, had their weight; the interest of trade, the interest of the revenue, and, moreover, the good fame of the action. It was inevitable that men should feel these motives. But they do not appear to have had an excessive or unreasonable weight. On reviewing this history, I think the whole transaction reflects infinite honor on the people and parliament of England. It was a stately spectacle, to see the cause of human rights argued with so much patience and generosity and with such a mass of evidence before that powerful people. It is a creditable incident in the history that when, in 1789, the first privy council report of evidence on the trade (a bulky folio embodying all the facts which the London Committee had been engaged for years in collecting, and all the examinations before the council) was presented to the House of Commons, a late day being named for the discussion, in order to give members time,—Mr. Wilberforce, Mr. Pitt, the Prime Minister, and other gentlemen, took advantage of the postponement to retire into the country to read the report. For months and years the bill was debated, with some consciousness of the extent of its relations, by the first citizens of England, the foremost men of the earth; every argument was weighed, every particle of evidence was sifted and laid in the scale; and, at last, the right triumphed, the poor man was vindicated, and the oppressor was flung out. I know that England has the advantage of trying the question at a wide distance from the spot where the nuisance exists; the planters are not, excepting in rare examples, members of the legislature. The extent of the empire, and the magnitude and number of other questions crowding into court, keep this one in balance, and prevent it from obtaining that ascendancy,

and being urged with that intemperance which a question of property tends to acquire. There are causes in the composition of the British legislature, and the relation of its leaders to the country and to Europe, which exclude much that is pitiful and injurious in other legislative assemblies. From these reasons, the question was discussed with a rare independence and magnanimity. It was not narrowed down to a paltry electioneering trap; and, I must say, a delight in justice, an honest tenderness for the poor negro, for man suffering these wrongs, combined with the national pride, which refused to give the support of English soil or the protection of the English flag to these disgusting violations of nature.

Forgive me, fellow citizens, if I own to you, that in the last few days that my attention has been occupied with this history, I have not been able to read a page of it without the most painful comparisons. Whilst I have read of England, I have thought of New England. Whilst I have meditated in my solitary walks on the magnanimity of the English Bench and Senate, reaching out the benefit of the law to the most helpless citizen in her world-wide realm, I have found myself oppressed by other thoughts. As I have walked in the pastures and along the edge of woods, I could not keep my imagination on those agreeable figures, for other images that intruded on me. I could not see the great vision of the patriots and senators who have adopted the slave's cause:—they turned their backs on me. No: I see other pictures,—of mean men; I see very poor, very ill-clothed, very ignorant men, not surrounded by happy friends,—to be plain,—poor black men of obscure employment as mariners, cooks or stewards, in ships, yet citizens of this our Commonwealth of Massachusetts,—freeborn as we,—whom the slave-laws of the States of South Carolina, Georgia and Louisiana have arrested in the vessels in which they visited those ports, and shut up in jails so long as the vessel remained in port,

with the stringent addition, that if the shipmaster fails to pay the costs of this official arrest and the board in jail, these citizens are to be sold for slaves, to pay that expense. This man, these men, I see, and no law to save them. Fellow citizens, this crime will not be hushed up any longer. I have learned that a citizen of Nantucket, walking in New Orleans, found a freeborn citizen of Nantucket, a man, too, of great personal worth, and, as it happened, very dear to him, as having saved his own life, working chained in the streets of that city, kidnapped by such a process as this. In the sleep of the laws, the private interference of two excellent citizens of Boston has, I have ascertained, rescued several natives of this State from these Southern prisons. Gentlemen, I thought the deck of a Massachusetts ship was as much the territory of Massachusetts as the floor on which we stand. It should be as sacred as the temple of God. The poorest fishing-smack that floats under the shadow of an iceberg in the Northern seas, or hunts whale in the Southern ocean, should be encompassed by her laws with comfort and protection, as much as within the arms of Cape Ann or Cape Cod. And this kidnapping is suffered within our own land and federation, whilst the fourth article of the Constitution of the United States ordains in terms, that, "The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States." If such a damnable outrage can be committed on the person of a citizen with impunity, let the Governor break the broad seal of the State; he bears the sword in vain.²⁶⁵⁹ The Governor of Massachusetts is a trifler; the State-House in Boston is a play-house; the General Court is a dishonored body, if they make laws which they cannot execute. The great-hearted Puritans have left no posterity. The rich men may walk in State Street, but they walk without honor; and the farmers may brag their democracy in the country, but they are disgraced men. If the State has no power to defend its own

people in its own shipping, because it has delegated that power to the Federal Government, has it no representation in the Federal Government?²⁶⁶⁰ Are those men dumb? I am no lawyer, and cannot indicate the forms applicable to the case, but here is something which transcends all forms. Let the senators and representatives of the State, containing a population of a million freemen, go in a body before the Congress and say that they have a demand to make on them, so imperative that all functions of government must stop until it is satisfied. If ordinary legislation cannot reach it, then extraordinary must be applied. The Congress should instruct the President to send to those ports of Charleston, Savannah and New Orleans such orders and such force as should release, forthwith, all such citizens of Massachusetts as were holden in prison without the allegation of any crime, and should set on foot the strictest inquisition to discover where such persons, brought into slavery by these local laws at any time heretofore, may now be. That first; and then, let order be taken to indemnify all such as have been incarcerated. As for dangers to the Union, from such demands!—the Union already is at an end when the first citizen of Massachusetts is thus outraged. Is it an union and covenant in which the State of Massachusetts agrees to be imprisoned, and the State of Carolina to imprison?²⁶⁶¹ Gentlemen, I am loath to say harsh things, and perhaps I know too little of politics for the smallest weight to attach to any censure of mine,—but I am at a loss how to characterize the tameness and silence of the two senators and the ten representatives of the State at Washington. To what purpose have we clothed each of those representatives with the power of seventy thousand persons, and each senator with near half a million, if they are to sit dumb at their desks and see their constituents captured and sold;—perhaps to gentlemen sitting by them in the hall? There is a scandalous rumor that has

been swelling louder of late years,—perhaps wholly false,—that members are bullied into silence by Southern gentlemen. It is so easy to omit to speak, or even to be absent when delicate things are to be handled. I may as well say, what all men feel, that whilst our very amiable and very innocent representatives and senators at Washington are accomplished lawyers and merchants, and very eloquent at dinners and at caucuses, there is a disastrous want of *men* from New England. I would gladly make exceptions, and you will not suffer me to forget one eloquent old man, in whose veins the blood of Massachusetts rolls, and who singly has defended the freedom of speech, and the rights of the free, against the usurpation of the slave-holder.²⁶⁶² But the reader of Congressional debates, in New England, is perplexed to see with what admirable sweetness and patience the majority of the free States are schooled and ridden by the minority of slave-holders. What if we should send thither representatives who were a particle less amiable and less innocent? I entreat you, sirs, let not this stain attach, let not this misery accumulate any longer. If the managers of our political parties are too prudent and too cold;—if, most unhappily, the ambitious class of young men and political men have found out that these neglected victims are poor and without weight; that they have no graceful hospitalities to offer; no valuable business to throw into any man's hands, no strong vote to cast at the elections; and therefore may with impunity be left in their chains or to the chance of chains,—then let the citizens in their primary capacity take up their cause on this very ground, and say to the government of the State, and of the Union, that government exists to defend the weak and the poor and the injured party; the rich and the strong can better take care of themselves. And as an omen and assurance of success, I point you to the bright example which England set you, on this day, ten years ago.

There are other comparisons and other imperative duties which come sadly to mind,—but I do not wish to darken the hours of this day by crimination; I turn gladly to the rightful theme, to the bright aspects of the occasion.

This event was a moral revolution. The history of it is before you. Here was no prodigy, no fabulous hero, no Trojan horse, no bloody war, but all was achieved by plain means of plain men, working not under a leader, but under a sentiment. Other revolutions have been the insurrection of the oppressed; this was the repentance of the tyrant. It was the masters revolting from their mastery. The slave-holder said, 'I will not hold slaves.' The end was noble and the means were pure. Hence the elevation and pathos of this chapter of history. The lives of the advocates are pages of greatness, and the connection of the eminent senators with this question constitutes the immortalizing moments of those men's lives. The bare enunciation of the theses at which the lawyers and legislators arrived, gives a glow to the heart of the reader. Lord Chancellor Northington is the author of the famous sentence, "As soon as any man puts his foot on English ground, he becomes free." "I was a slave," said the counsel of Somerset, speaking for his client, "for I was in America: I am now in a country where the common rights of mankind are known and regarded." Granville Sharpe filled the ear of the judges with the sound principles that had from time to time been affirmed by the legal authorities: "Derived power cannot be superior to the power from which it is derived:" "The reasonableness of the law is the soul of the law:" "It is better to suffer every evil, than to consent to any." Out it would come, the God's truth, out it came, like a bolt from a cloud, for all the mumbling of the lawyers. One feels very sensibly in all this history that a great heart and soul are behind there, superior to any man, and making use of each, in turn, and infinitely attractive to every

person according to the degree of reason in his own mind, so that this cause has had the power to draw to it every particle of talent and of worth in England, from the beginning. All the great geniuses of the British senate, Fox, Pitt, Burke, Grenville, Sheridan, Grey, Canning, ranged themselves on its side; the poet Cowper wrote for it: Franklin, Jefferson, Washington, in this country, all recorded their votes. All men remember the subtlety and the fire of indignation which the "Edinburgh Review" contributed to the cause; and every liberal mind, poet, preacher, moralist, statesman, has had the fortune to appear somewhere for this cause. On the other part, appeared the reign of pounds and shillings, and all manner of rage and stupidity; a resistance which drew from Mr. Huddleston in Parliament the observation, "That a curse attended this trade even in the mode of defending it. By a certain fatality, none but the vilest arguments were brought forward, which corrupted the very persons who used them. Every one of these was built on the narrow ground of interest, of pecuniary profit, of sordid gain, in opposition to every motive that had reference to humanity, justice, and religion, or to that great principle which comprehended them all." This moral force perpetually reinforces and dignifies the friends of this cause. It gave that tenacity to their point which has insured ultimate triumph; and it gave that superiority in reason, in imagery, in eloquence, which makes in all countries anti-slavery meetings so attractive to the people, and has made it a proverb in Massachusetts, that "eloquence is dog-cheap at the anti-slavery chapel."

I will say further that we are indebted mainly to this movement and to the continuers of it, for the popular discussion of every point of practical ethics, and a reference of every question to the absolute standard. It is notorious that the political, religious and social schemes, with which the minds of men are now most

occupied, have been matured, or at least broached, in the free and daring discussions of these assemblies. Men have become aware, through the emancipation and kindred events, of the presence of powers which, in their days of darkness, they had overlooked. Virtuous men will not again rely on political agents. They have found out the deleterious effect of political association. Up to this day we have allowed to statesmen a paramount social standing, and we bow low to them as to the great. We cannot extend this deference to them any longer. The secret cannot be kept, that the seats of power are filled by underlings, ignorant, timid and selfish to a degree to destroy all claim, excepting that on compassion, to the society of the just and generous. What happened notoriously to an American ambassador in England, that he found himself compelled to palter and to disguise the fact that he was a slave-breeder, happens to men of state. Their vocation is a presumption against them among well-meaning people. The superstition respecting power and office is going to the ground. The stream of human affairs flows its own way, and is very little affected by the activity of legislators. What great masses of men wish done, will be done; and they do not wish it for a freak, but because it is their state and natural end. There are now other energies than force, other than political, which no man in future can allow himself to disregard. There is direct conversation and influence. A man is to make himself felt by his proper force. The tendency of things runs steadily to this point, namely, to put every man on his merits, and to give him so much power as he naturally exerts,—no more, no less. Of course, the timid and base persons, all who are conscious of no worth in themselves, and who owe all their place to the opportunities which the older order of things allowed them, to deceive and defraud men, shudder at the change, and would fain silence every honest voice, and lock up every house where liberty

and innovation can be pleaded for. They would raise mobs, for fear is very cruel. But the strong and healthy yeomen and husbands of the land, the self-sustaining class of inventive and industrious men, fear no competition or superiority. Come what will, their faculty cannot be spared.

The First of August marks the entrance of a new element into modern politics, namely, the civilization of the negro. A man is added to the human family. Not the least affecting part of this history of abolition is the annihilation of the old indecent nonsense about the nature of the negro. In the case of the ship *Zong*, in 1781, whose master had thrown one hundred and thirty-two slaves alive into the sea, to cheat the underwriters, the first jury gave a verdict in favor of the master and owners: they had a right to do what they had done. Lord Mansfield is reported to have said on the bench, "The matter left to the jury is,—Was it from necessity? For they had no doubt—though it shocks one very much—that the case of slaves was the same as if horses had been thrown overboard. It is a very shocking case." But a more enlightened and humane opinion began to prevail. Mr. Clarkson, early in his career, made a collection of African productions and manufactures, as specimens of the arts and culture of the negro; comprising cloths and loom, weapons, polished stones and woods, leather, glass, dyes, ornaments, soap, pipe-bowls and trinkets. These he showed to Mr. Pitt, who saw and handled them with extreme interest. "On sight of these," says Clarkson, "many sublime thoughts seemed to rush at once into his mind, some of which he expressed;" and hence appeared to arise a project which was always dear to him, of the civilization of Africa,—a dream which forever elevates his fame. In 1791, Mr. Wilberforce announced to the House of Commons, "We have already gained one victory: we have obtained for these poor creatures the recognition of their human nature, which for

a time was most shamefully denied them." It was the sarcasm of Montesquieu, "it would not do to suppose that negroes were men, lest it should turn out that whites were not;" for the white has, for ages, done what he could to keep the negro in that hoggish state. His laws have been furies. It now appears that the negro race is, more than any other, susceptible of rapid civilization. The emancipation is observed, in the islands, to have wrought for the negro a benefit as sudden as when a thermometer is brought out of the shade into the sun. It has given him eyes and ears. If, before, he was taxed with such stupidity, or such defective vision, that he could not set a table square to the walls of an apartment, he is now the principal if not the only mechanic in the West Indies; and is, besides, an architect, a physician, a lawyer, a magistrate, an editor, and a valued and increasing political power. The recent testimonies of Sturge, of Thome and Kimball, of Gurney, of Philipppo, are very explicit on this point, the capacity and the success of the colored and the black population in employments of skill, of profit and of trust; and best of all is the testimony to their moderation. They receive hints and advances from the whites that they will be gladly received as subscribers to the Exchange, as members of this or that committee of trust. They hold back, and say to each other that "social position is not to be gained by pushing."

I have said that this event interests us because it came mainly from the concession of the whites; I add, that in part it is the earning of the blacks. They won the pity and respect which they have received, by their powers and native endowments. I think this a circumstance of the highest import. Their whole future is in it. Our planet, before the age of written history, had its races of savages, like the generations of sour paste, or the animalcules that wiggle and bite in a drop of putrid water. Who cares for these or for their wars? We do not wish a world of bugs or of birds;

neither afterward of Scythians, Caraibs or Feejees. The grand style of Nature, her great periods, is all we observe in them. Who cares for oppressing whites, or oppressed blacks, twenty centuries ago, more than for bad dreams? Eaters and food are in the harmony of Nature; and there too is the germ forever protected, unfolding gigantic leaf after leaf, a newer flower, a richer fruit, in every period, yet its next product is never to be guessed. It will only save what is worth saving; and it saves not by compassion, but by power. It appoints no police to guard the lion but his teeth and claws; no fort or city for the bird but his wings; no rescue for flies and mites but their spawning numbers, which no ravages can overcome. It deals with men after the same manner. If they are rude and foolish, down they must go. When at last in a race a new principle appears, an idea,—*that* conserves it; ideas only save races. If the black man is feeble and not important to the existing races, not on a parity with the best race, the black man must serve, and be exterminated.²⁶⁶³ But if the black man carries in his bosom an indispensable element of a new and coming civilization; for the sake of that element, no wrong nor strength nor circumstance can hurt him: he will survive and play his part. So now, the arrival in the world of such men as Toussaint, and the Haytian heroes, or of the leaders of their race in Barbadoes and Jamaica, outweighs in good omen all the English and American humanity. The anti-slavery of the whole world is dust in the balance before this,—is a poor squeamishness and nervousness: the might and the right are here: here is the anti-slave: here is man: and if you have man, black or white is an insignificance. The intellect,—that is miraculous! Who has it, has the talisman: his skin and bones, though they were of the color of night, are transparent, and the everlasting stars shine through, with attractive beams. But a compassion for that which is not and cannot be useful or lovely, is degrading and futile. All the

songs and newspapers and money subscriptions and vituperation of such as do not think with us, will avail nothing against a fact. I say to you, you must save yourself, black or white, man or woman; other help is none. I esteem the occasion of this jubilee to be the proud discovery that the black race can contend with the white: that in the great anthem which we call history, a piece of many parts and vast compass, after playing a long time a very low and subdued accompaniment, they perceive the time arrived when they can strike in with effect and take a master's part in the music. The civility of the world has reached that pitch that their more moral genius is becoming indispensable, and the quality of this race is to be honored for itself. For this, they have been preserved in sandy deserts, in rice-swamps, in kitchens and shoe-shops, so long: now let them emerge, clothed and in their own form.

There remains the very elevated consideration which the subject opens, but which belongs to more abstract views than we are now taking, this, namely, that the civility of no race can be perfect whilst another race is degraded. It is a doctrine alike of the oldest and of the newest philosophy, that man is one, and that you cannot injure any member, without a sympathetic injury to all the members. America is not civil, whilst Africa is barbarous.²⁶⁶⁴

These considerations seem to leave no choice for the action of the intellect and the conscience of the country. There have been moments in this, as well as in every piece of moral history, when there seemed room for the infusions of a skeptical philosophy; when it seemed doubtful whether brute force would not triumph in the eternal struggle. I doubt not that, sometimes, a despairing negro, when jumping over the ship's sides to escape from the white devils who surrounded him, has believed there was no vindication of right; it is horrible to think of, but it seemed so. I doubt not that sometimes the negro's friend, in the face of scornful and brutal

hundreds of traders and drivers, has felt his heart sink. Especially, it seems to me, some degree of despondency is pardonable, when he observes the men of conscience and of intellect, his own natural allies and champions,—those whose attention should be nailed to the grand objects of this cause, so hotly offended by whatever incidental petulances or infirmities of indiscreet defenders of the negro, as to permit themselves to be ranged with the enemies of the human race; and names which should be the alarums of liberty and the watchwords of truth, are mixed up with all the rotten rabble of selfishness and tyranny.²⁶⁶⁵ I assure myself that this coldness and blindness will pass away. A single noble wind of sentiment will scatter them forever. I am sure that the good and wise elders, the ardent and generous youth, will not permit what is incidental and exceptional to withdraw their devotion from the essential and permanent characters of the question. There have been moments, I said, when men might be forgiven who doubted. Those moments are past. Seen in masses, it cannot be disputed, there is progress in human society. There is a blessed necessity by which the interest of men is always driving them to the right; and, again, making all crime mean and ugly. The genius of the Saxon race, friendly to liberty; the enterprise, the very muscular vigor of this nation, are inconsistent with slavery. The Intellect, with blazing eye, looking through history from the beginning onward, gazes on this blot and it disappears. The sentiment of Right, once very low and indistinct, but ever more articulate, because it is the voice of the universe, pronounces Freedom. The Power that built this fabric of things affirms it in the heart; and in the history of the First of August, has made a sign to the ages, of his will.

V. WAR

THE ARCHANGEL Hope
Looks to the azure cope,
Waits through dark ages for the morn,
Defeated day by day, but unto Victory born.

WAR

IT HAS been a favorite study of modern philosophy to indicate the steps of human progress, to watch the rising of a thought in one man's mind, the communication of it to a few, to a small minority, its expansion and general reception, until it publishes itself to the world by destroying the existing laws and institutions, and the generation of new. Looked at in this general and historical way, many things wear a very different face from that they show near by, and one at a time,—and, particularly, war. War, which to sane men at the present day begins to look like an epidemic insanity, breaking out here and there like the cholera or influenza, infecting men's brains instead of their bowels,—when seen in the remote past, in the infancy of society, appears a part of the connection of events, and, in its place, necessary.

As far as history has preserved to us the slow unfoldings of any savage tribe, it is not easy to see how war could be avoided by such wild, passionate, needy, ungoverned, strong-bodied creatures. For in the infancy of society, when a thin population and improvidence make the supply of food and of shelter insufficient and very precarious, and when hunger, thirst, ague and frozen

limbs universally take precedence of the wants of the mind and the heart, the necessities of the strong will certainly be satisfied at the cost of the weak, at whatever peril of future revenge. It is plain, too, that in the first dawnings of the religious sentiment, *that* blends itself with their passions and is oil to the fire. Not only every tribe has war-gods, religious festivals in victory, but *religious wars*.

The student of history acquiesces the more readily in this copious bloodshed of the early annals, bloodshed in God's name too, when he learns that it is a temporary and preparatory state, and does actively forward the culture of man. War educates the senses, calls into action the will, perfects the physical constitution, brings men into such swift and close collision in critical moments that man measures man. On its own scale, on the virtues it loves, it endures no counterfeit, but shakes the whole society until every atom falls into the place its specific gravity assigns it.²⁶⁶⁶ It presently finds the value of good sense and of foresight, and Ulysses takes rank next to Achilles. The leaders, picked men of a courage and vigor tried and augmented in fifty battles, are emulous to distinguish themselves above each other by new merits, as clemency, hospitality, splendor of living. The people imitate the chiefs. The strong tribe, in which war has become an art, attack and conquer their neighbors, and teach them their arts and virtues. New territory, augmented numbers and extended interests call out new virtues and abilities, and the tribe makes long strides. And, finally, when much progress has been made, all its secrets of wisdom and art are disseminated by its invasions. Plutarch, in his essay *On the Fortune of Alexander*, considers the invasion and conquest of the East by Alexander as one of the most bright and pleasing pages in history; and it must be owned he gives sound reason for his opinion. It had the effect of uniting into one great interest the divided commonwealths of Greece, and infusing a new and more enlarged public spirit into

the councils of their statesmen. It carried the arts and language and philosophy of the Greeks into the sluggish and barbarous nations of Persia, Assyria and India. It introduced the arts of husbandry among tribes of hunters and shepherds. It weaned the Scythians and Persians from some cruel and licentious practices to a more civil way of life. It introduced the sacredness of marriage among them. It built seventy cities, and sowed the Greek customs and humane laws over Asia, and united hostile nations under one code. It brought different families of the human race together,—to blows at first, but afterwards to truce, to trade and to intermarriage. It would be very easy to show analogous benefits that have resulted from military movements of later ages.

Considerations of this kind lead us to a true view of the nature and office of war. We see it is the subject of all history; that it has been the principal employment of the most conspicuous men; that it is at this moment the delight of half the world, of almost all young and ignorant persons; that it is exhibited to us continually in the dumb show of brute nature, where war between tribes, and between individuals of the same tribe, perpetually rages. The microscope reveals miniature butchery in atomies and infinitely small biters that swim and fight in an illuminated drop of water; and the little globe is but a too faithful miniature of the large.

What does all this war, beginning from the lowest races and reaching up to man, signify? Is it not manifest that it covers a great and beneficent principle, which Nature had deeply at heart? What is that principle?—It is self-help. Nature implants with life the instinct of self-help, perpetual struggle to be, to resist opposition, to attain to freedom, to attain to a mastery and the security of a permanent, self-defended being; and to each creature these objects are made so dear that it risks its life continually in the struggle for these ends.

But whilst this principle, necessarily, is inwrought into the fabric of every creature, yet it is but *one* instinct; and though a primary one, or we may say the very first, yet the appearance of the other instincts immediately modifies and controls this; turns its energies into harmless, useful and high courses, showing thereby what was its ultimate design; and, finally, takes out its fangs. The instinct of self-help is very early unfolded in the coarse and merely brute form of war, only in the childhood and imbecility of the other instincts, and remains in that form only until their development. It is the ignorant and childish part of mankind that is the fighting part. Idle and vacant minds want excitement, as all boys kill cats. Bull-baiting, cockpits and the boxer's ring are the enjoyment of the part of society whose animal nature alone has been developed. In some parts of this country, where the intellectual and moral faculties have as yet scarcely any culture, the absorbing topic of all conversation is whipping; who fought, and which whipped? Of man, boy or beast, the only trait that much interests the speakers is the pugnacity.²⁶⁶⁷ And why? Because the speaker has as yet no other image of manly activity and virtue, none of endurance, none of perseverance, none of charity, none of the attainment of truth. Put him into a circle of cultivated men, where the conversation broaches the great questions that besiege the human reason, and he would be dumb and unhappy, as an Indian in church.

To men of a sedate and mature spirit, in whom is any knowledge or mental activity, the detail of battle becomes insupportably tedious and revolting. It is like the talk of one of those monomaniacs whom we sometimes meet in society, who converse on horses; and Fontenelle expressed a volume of meaning when he said, "I hate war, for it spoils conversation."

Nothing is plainer than that the sympathy with war is a juvenile and temporary state. Not only the moral sentiment, but trade,

learning and whatever makes intercourse, conspire to put it down. Trade, as all men know, is the antagonist of war. Wherever there is no property, the people will put on the knapsack for bread; but trade is instantly endangered and destroyed. And, moreover, trade brings men to look each other in the face, and gives the parties the knowledge that these enemies over sea or over the mountain are such men as we; who laugh and grieve, who love and fear, as we do. And learning and art, and especially religion weave ties that make war look like fratricide, as it is. And as all history is the picture of war, as we have said, so it is no less true that it is the record of the mitigation and decline of war. Early in the eleventh and twelfth centuries, the Italian cities had grown so populous and strong that they forced the rural nobility to dismantle their castles, which were dens of cruelty, and come and reside in the towns. The popes, to their eternal honor, declared religious jubilees, during which all hostilities were suspended throughout Christendom, and man had a breathing space. The increase of civility has abolished the use of poison and of torture, once supposed as necessary as navies now. And, finally, the art of war, what with gunpowder and tactics, has made, as all men know, battles less frequent and less murderous.

By all these means, war has been steadily on the decline; and we read with astonishment of the beastly fighting of the old times. Only in Elizabeth's time, out of the European waters, piracy was all but universal. The proverb was,—“No peace beyond the line;” and the seaman shipped on the buccaneer's bargain, “No prey, no pay.” The celebrated Cavendish, who was thought in his times a good Christian man, wrote thus to Lord Hunsdon, on his return from a voyage round the world: “Sept. 1588. It hath pleased Almighty God to suffer me to circumpass the whole globe of the world, entering in at the Strait of Magellan, and returning by the Cape of Buena

Esperança; in which voyage, I have either discovered or brought certain intelligence of all the rich places of the world, which were ever discovered by any Christian. I navigated along the coast of Chili, Peru, and New Spain, *where I made great spoils. I burnt and sunk nineteen sail of ships, small and great. All the villages and towns that ever I landed at, I burned and spoiled.* And had I not been discovered upon the coast, I had taken great quantity of treasure. The matter of most profit to me was a great ship of the king's, which I took at California," etc. And the good Cavendish piously begins this statement,—*"It hath pleased Almighty God."*

Indeed, our American annals have preserved the vestiges of barbarous warfare down to more recent times. I read in William's History of Maine, that "Assacombuit, the Sagamore of the Anagunticook tribe, was remarkable for his turpitude and ferocity above all other known Indians; that, in 1705, Vaudreuil sent him to France, where he was introduced to the king. When he appeared at court, he lifted up his hand and said, 'This hand has slain a hundred and fifty of your majesty's enemies within the territories of New England.' This so pleased the king that he knighted him, and ordered a pension of eight livres a day to be paid him during life." This valuable person, on his return to America, took to killing his own neighbors and kindred, with such appetite that his tribe combined against him, and would have killed him had he not fled his country forever.

The scandal which we feel in such facts certainly shows that we have got on a little. All history is the decline of war, though the slow decline. All that society has yet gained is mitigation: the doctrine of the right of war still remains.

For ages (for ideas work in ages, and animate vast societies of men) the human race has gone on under the tyranny—shall I so call it?—of this first brutish form of their effort to be men; that is, for

ages they have shared so much of the nature of the lower animals, the tiger and the shark, and the savages of the water-drop. They have nearly exhausted all the good and all the evil of this form: they have held as fast to this degradation as their worst enemy could desire; but all things have an end, and so has this.²⁶⁶⁸ The eternal germination of the better has unfolded new powers, new instincts, which were really concealed under this rough and base rind. The sublime question has startled one and another happy soul in different quarters of the globe,—Cannot love be, as well as hate? Would not love answer the same end, or even a better? Cannot peace be, as well as war?

This thought is no man's invention, neither St. Pierre's nor Rousseau's, but the rising of the general tide in the human soul,—and rising highest, and first made visible, in the most simple and pure souls, who have therefore announced it to us beforehand; but presently we all see it. It has now become so distinct as to be a social thought: societies can be formed on it. It is expounded, illustrated, defined, with different degrees of clearness; and its actualization, or the measures it should inspire, predicted according to the light of each seer.

The idea itself is the epoch; the fact that it has become so distinct to any small number of persons as to become a subject of prayer and hope, of concert and discussion,—*that* is the commanding fact. This having come, much more will follow. Revolutions go not backward. The star once risen, though only one man in the hemisphere 'has yet seen its upper limb in the horizon, will mount and mount, until it becomes visible to other men, to multitudes, and climbs the zenith of all eyes. And so it is not a great matter how long men refuse to believe the advent of peace: war is on its last legs; and a universal peace is as sure as is the prevalence

of civilization over barbarism, of liberal governments over feudal forms. The question for us is only *How soon?*

That the project of peace should appear visionary to great numbers of sensible men; should appear laughable even, to numbers; should appear to the grave and good-natured to be embarrassed with extreme practical difficulties,—is very natural. 'This is a poor, tedious society of yours,' they say: 'we do not see what good can come of it. Peace! why, we are all at peace now. But if a foreign nation should wantonly insult or plunder our commerce, or, worse yet, should land on our shores to rob and kill, you would not have us sit, and be robbed and killed? You mistake the times; you over-estimate the virtue of men. You forget that the quiet which now sleeps in cities and in farms, which lets the wagon go unguarded and the farmhouse unbolted, rests on the perfect understanding of all men that the musket, the halter and the jail stand behind there, ready to punish any disturber of it. All admit that this would be the best policy, if the world were all a church, if all the men were the best men, if all would agree to accept this rule. But it is absurd for one nation to attempt it alone.'²⁶⁶⁹

In the first place, we answer that we never make much account of objections which merely respect the actual state of the world at this moment, but which admit the general expediency and permanent excellence of the project. What is the best must be the true; and what is true—that is, what is at bottom fit and agreeable to the constitution of man—must at last prevail over all obstruction and all opposition. There is no good now enjoyed by society that was not once as problematical and visionary as this. It is the tendency of the true interest of man to become his desire and steadfast aim.

But, further, it is a lesson which all history teaches wise men, to put trust in ideas, and not in circumstances. We have all grown up

in the sight of frigates and navy-yards, of armed forts and islands, of arsenals and militia. The reference to any foreign register will inform us of the number of thousand or million men that are now under arms in the vast colonial system of the British Empire, of Russia, Austria and France; and one is scared to find at what a cost the peace of the globe is kept. This vast apparatus of artillery, of fleets, of stone bastions and trenches and embankments; this incessant patrolling of sentinels; this waving of national flags; this reveille and evening gun; this martial music and endless playing of marches and singing of military and naval songs seem to us to constitute an imposing actual, which will not yield in centuries to the feeble, deprecatory voices of a handful of friends of peace.

Thus always we are daunted by the appearances; not seeing that their whole value lies at bottom in the state of mind. It is really a thought that built this portentous war-establishment, and a thought shall also melt it away.²⁶⁷⁰ Every nation and every man instantly surround themselves with a material apparatus which exactly corresponds to their moral state, or their state of thought. Observe how every truth and every error, each a *thought* of some man's mind, clothes itself with societies, houses, cities, language, ceremonies, newspapers. Observe the ideas of the present day,—orthodoxy, skepticism, missions, popular education, temperance, anti-masonry, anti-slavery; see how each of these abstractions has embodied itself in an imposing apparatus in the community; and how timber, brick, lime and stone have flown into convenient shape, obedient to the master-idea reigning in the minds of many persons.²⁶⁷¹

You shall hear, some day, of a wild fancy which some man has in his brain, of the mischief of secret oaths. Come again one or two years afterwards, and you shall see it has built great houses of solid wood and brick and mortar. You shall see a hundred

presses printing a million sheets; you shall see men and horses and wheels made to walk, run and roll for it: this great body of matter thus executing that one man's wild thought. This happens daily, yearly about us, with half thoughts, often with flimsy lies, pieces of policy and speculation. With good nursing they will last three or four years before they will come to nothing. But when a truth appears,—as, for instance, a perception in the wit of one Columbus that there is land in the Western Sea; though he alone of all men has that thought, and they all jeer,—it will build ships; it will build fleets; it will carry over half Spain and half England; it will plant a colony, a state, nations and half a globe full of men.

We surround ourselves always, according to our freedom and ability, with true images of ourselves in things, whether it be ships or books or cannons or churches. The standing army, the arsenal, the camp and the gibbet do not appertain to man. They only serve as an index to show where man is now; what a bad, ungoverned temper he has; what an ugly neighbor he is; how his affections halt; how low his hope lies. He who loves the bristle of bayonets only sees in their glitter what beforehand he feels in his heart. It is avarice and hatred; it is that quivering lip, that cold, hating eye, which built magazines and powder-houses.

It follows of course that the least change in the man will change his circumstances; the least enlargement of his ideas, the least mitigation of his feelings in respect to other men; if, for example, he could be inspired with a tender kindness to the souls of men, and should come to feel that every man was another self with whom he might come to join, as left hand works with right. Every degree of the ascendancy of this feeling would cause the most striking changes of external things: the tents would be struck; the men-of-war would rot ashore; the arms rust; the cannon would become street-posts; the pikes, a fisher's harpoon; the marching

regiment would be a caravan of emigrants, *peaceful* pioneers at the fountains of the Wabash and the Missouri. And so it must and will be: bayonet and sword must first retreat a little from their ostentatious prominence; then quite hide themselves, as the sheriff's halter does now, inviting the attendance only of relations and friends; and then, lastly, will be transferred to the museums of the curious, as poisoning and torturing tools are at this day.

War and peace thus resolve themselves into a mercury of the state of cultivation. At a certain stage of his progress, the man fights, if he be of a sound body and mind. At a certain higher stage, he makes no offensive demonstration, but is alert to repel injury, and of an unconquerable heart.²⁶⁷² At a still higher stage, he comes into the region of holiness; passion has passed away from him; his warlike nature is all converted into an active medicinal principle; he sacrifices himself, and accepts with alacrity wearisome tasks of denial and charity; but, being attacked, he bears it and turns the other cheek, as one engaged, throughout his being, no longer to the service of an individual but to the common soul of all men.

Since the peace question has been before the public mind, those who affirm its right and expediency have naturally been met with objections more or less weighty. There are cases frequently put by the curious,—moral problems, like those problems in arithmetic which in long winter evenings the rustics try the hardness of their heads in ciphering out. And chiefly it is said,—Either accept this principle for better, for worse, carry it out to the end, and meet its absurd consequences; or else, if you pretend to set an arbitrary limit, a “Thus far, no farther,” then give up the principle, and take that limit which the common sense of all mankind has set, and which distinguishes offensive war as criminal, defensive war as just. Otherwise, if you go for no war, then be consistent, and give up self-defence in the highway, in your own house. Will you

push it thus far? Will you stick to your principle of non-resistance when your strong-box is broken open, when your wife and babes are insulted and slaughtered in your sight? If you say yes, you only invite the robber and assassin; and a few bloody-minded desperadoes would soon butcher the good.

In reply to this charge of absurdity on the extreme peace doctrine, as shown in the supposed consequences, I wish to say that such deductions consider only one half of the fact. They look only at the passive side of the friend of peace, only at his passivity; they quite omit to consider his activity. But no man, it may be presumed, ever embraced the cause of peace and philanthropy for the sole end and satisfaction of being plundered and slain. A man does not come the length of the spirit of martyrdom without some active purpose, some equal motive, some flaming love. If you have a nation of men who have risen to that height of moral cultivation that they will not declare war or carry arms, for they have not so much madness left in their brains, you have a nation of lovers, of benefactors, of true, great and able men. Let me know more of that nation; I shall not find them defenceless, with idle hands swinging at their sides. I shall find them men of love, honor and truth; men of an immense industry; men whose influence is felt to the end of the earth; men whose very look and voice carry the sentence of honor and shame; and all forces yield to their energy and persuasion. Whenever we see the doctrine of peace embraced by a nation, we may be assured it will not be one that invites injury; but one, on the contrary, which has a friend in the bottom of the heart of every man, even of the violent and the base; one against which no weapon can prosper; one which is looked upon as the asylum of the human race and has the tears and the blessings of mankind.

In the second place, as far as it respects individual action in difficult and extreme cases, I will say, such cases seldom or never occur to the good and just man; nor are we careful to say, or even to know, what in such crises is to be done. A wise man will never impawn his future being and action, and decide beforehand what he shall do in a given extreme event. Nature and God will instruct him in that hour.

The question naturally arises, How is this new aspiration of the human mind to be made visible and real? How is it to pass out of thoughts into things?

Not, certainly, in the first place, *in the way of routine and mere forms*,—the universal specific of modern politics; not by organizing a society, and going through a course of resolutions and public manifestoes, and being thus formally accredited to the public and to the civility of the newspapers. We have played this game to tediousness. In some of our cities they choose noted duellists as presidents and officers of anti-duelling societies. Men who love that bloated vanity called public opinion think all is well if they have once got their bantling through a sufficient course of speeches and cheerings, of one, two, or three public meetings; as if *they* could do anything: they vote and vote, cry hurrah on both sides, no man responsible, no man caring a pin. The next season, an Indian war, or an aggression on our commerce by Malays; or the party this man votes with have an appropriation to carry through Congress: instantly he wags his head the other way, and cries, Havoc and war!

This is not to be carried by public opinion, but by private opinion, by private conviction, by private, dear and earnest love. For the only hope of this cause is in the increased insight, and it is to be accomplished by the spontaneous teaching, of the cultivated soul, in its secret experience and meditation,—that it is now time that it

should pass out of the state of beast into the state of man; it is to hear the voice of God, which bids the devils that have rended and torn him come out of him and let him now be clothed and walk forth in his right mind.

Nor, in the next place, is the peace principle to be carried into effect by fear. It can never be defended, it can never be executed, by cowards. Everything great must be done in the spirit of greatness. The manhood that has been in war must be transferred to the cause of peace, before war can lose its charm, and peace be venerable to men.

The attractiveness of war shows one thing through all the throats of artillery, the thunders of so many sieges, the sack of towns, the jousts of chivalry, the shock of hosts,—this namely, the conviction of man universally, that a man should be himself responsible, with goods, health and life, for his behavior; that he should not ask of the state protection; should ask nothing of the state; should be himself a kingdom and a state; fearing no man; quite willing to use the opportunities and advantages that good government throw in his way, but nothing daunted, and not really the poorer if government, law and order went by the board; because in himself reside infinite resources; because he is sure of himself, and never needs to ask another what in any crisis it behooves him to do.²⁶⁷³

What makes to us the attractiveness of the Greek heroes? of the Roman? What makes the attractiveness of that romantic style of living which is the material of ten thousand plays and romances, from Shakspeare to Scott; the feudal baron, the French, the English nobility, the Warwicks, Plantagenets? It is their absolute self-dependence. I do not wonder at the dislike some of the friends of peace have expressed at Shakspeare. The veriest churl and Jacobin cannot resist the influence of the style and manners of these haughty lords. We are affected, as boys and barbarians are,

by the appearance of a few rich and wilful gentlemen who take their honor into their own keeping, defy the world, so confident are they of their courage and strength, and whose appearance is the arrival of so much life and virtue. In dangerous times they are presently tried, and therefore their name is a flourish of trumpets. They, at least, affect us as a reality. They are not shams, but the substance of which that age and world is made. They are true heroes for their time. They make what is in their minds the greatest sacrifice. They will, for an injurious word, peril all their state and wealth, and go to the field. Take away that principle of responsibility, and they become pirates and ruffians.²⁶⁷⁴

This self-subsistency is the charm of war; for this self-subsistency is essential to our idea of man. But another age comes, a truer religion and ethics open, and a man puts himself under the dominion of principles. I see him to be the servant of truth, of love and of freedom, and immovable in the waves of the crowd. The man of principle, that is, the man who, without any flourish of trumpets, titles of lordship or train of guards, without any notice of his action abroad, expecting none, takes in solitude the right step uniformly, on his private choice and disdaining consequences,—does not yield, in my imagination, to any man. He is willing to be hanged at his own gate, rather than consent to any compromise of his freedom or the suppression of his conviction. I regard no longer those names that so tingled in my ear. This is a baron of a better nobility and a stouter stomach.

The cause of peace is not the cause of cowardice. If peace is sought to be defended or preserved for the safety of the luxurious and the timid, it is a sham, and the peace will be base. War is better, and the peace will be broken. If peace is to be maintained, it must be by brave men, who have come up to the same height as the hero, namely, the will to carry their life in their hand, and stake

it at any instant for their principle, but who have gone one step beyond the hero, and will not seek another man's life;—men who have, by their intellectual insight or else by their moral elevation, attained such a perception of their own intrinsic worth that they do not think property or their own body a sufficient good to be saved by such dereliction of principle as treating a man like a sheep.

If the universal cry for reform of so many inveterate abuses, with which society rings,—if the desire of a large class of young men for a faith and hope, intellectual and religious, such as they have not yet found, be an omen to be trusted; if the disposition to rely more, in study and in action, on the unexplored riches of the human constitution,—if the search of the sublime laws of morals and the sources of hope and trust, in man, and not in books, in the present, and not in the past, proceed; if the rising generation can be provoked to think it unworthy to nestle into every abomination of the past, and shall feel the generous darings of austerity and virtue, then war has a short day, and human blood will cease to flow.

It is of little consequence in what manner, through what organs, this purpose of mercy and holiness is effected. The proposition of the Congress of Nations is undoubtedly that at which the present fabric of our society and the present course of events do point. But the mind, once prepared for the reign of principles, will easily find modes of expressing its will. There is the highest fitness in the place and time in which this enterprise is begun. Not in an obscure corner, not in a feudal Europe, not in an antiquated appanage where no onward step can be taken without rebellion, is this seed of benevolence laid in the furrow, with tears of hope; but in this broad America of God and man, where the forest is only now falling, or yet to fall, and the green earth opened to the

inundation of emigrant men from all quarters of oppression and guilt; here, where not a family, not a few men, but mankind, shall say what shall be; here, we ask, Shall it be War, or shall it be Peace?

VI. THE FUGITIVE SLAVE LAW

ADDRESS TO CITIZENS OF CONCORD 3 MAY, 1851

THE ETERNAL Rights,
Victors over daily wrongs:
Awful victors, they misguide
Whom they will destroy,
And their coming triumph hide
In our downfall, or our joy:
They reach no term, they never sleep,
In equal strength through space abide;
Though, feigning dwarfs, they crouch and creep,
The strong they slay, the swift outstride;
Fate's grass grows rank in valley clods,
And rankly on the castled steep,—
Speak it firmly, these are gods,
Are all ghosts beside.

THE FUGITIVE SLAVE LAW

FELLOW CITIZENS: I accepted your invitation to speak to you on the great question of these days, with very little consideration of what I might have to offer: for there seems to be no option. The last year has forced us all into politics, and made it a paramount duty to seek what it is often a duty to shun. We do not breathe well. There is infamy in the air. I have a new experience. I wake in the morning with a painful sensation, which I carry about all day, and which, when traced home, is the odious remembrance of that ignominy which has fallen on Massachusetts, which robs the landscape of beauty, and takes the sunshine out of every hour. I have lived all my life in this state, and never had any experience of personal inconvenience from the laws, until now. They never came near me to any discomfort before. I find the like sensibility in my neighbors; and in that class who take no interest in the ordinary questions of party politics. There are men who are as sure indexes of the equity of legislation and of the same state of public feeling, as the barometer is of the weight of the air, and it is a bad sign when these are discontented, for though they snuff oppression and dishonor at a distance, it is because they are more

impressionable: the whole population will in a short time be as painfully affected.

Every hour brings us from distant quarters of the Union the expression of mortification at the late events in Massachusetts, and at the behavior of Boston. The tameness was indeed shocking. Boston, of whose fame for spirit and character we have all been so proud; Boston, whose citizens, intelligent people in England told me they could always distinguish by their culture among Americans; the Boston of the American Revolution, which figures so proudly in John Adam's Diary, which the whole country has been reading; Boston, spoiled by prosperity, must bow its ancient honor in the dust, and make us irretrievably ashamed. In Boston, we have said with such lofty confidence, no fugitive slave can be arrested, and now, we must transfer our vaunt to the country, and say, with a little less confidence, no fugitive man can be arrested here; at least we can brag thus until to-morrow, when the farmers also may be corrupted.

The tameness is indeed complete. The only haste in Boston, after the rescue of Shadrach,²⁶⁷⁵ last February, was, who should first put his name on the list of volunteers in aid of the marshal. I met the smoothest of Episcopal Clergymen the other day, and allusion being made to Mr. Webster's treachery, he blandly replied, "Why, do you know I think *that* the great action of his life." It looked as if in the city and the suburbs all were involved in one hot haste of terror,—presidents of colleges, and professors, saints, and brokers, insurers, lawyers, importers, manufacturers: not an unpleasing sentiment, not a liberal recollection, not so much as a snatch of an old song for freedom, dares intrude on their passive obedience.

The panic has paralyzed the journals, with the fewest exceptions, so that one cannot open a newspaper without being disgusted by new records of shame. I cannot read longer even the local good

news. When I look down the columns at the titles of paragraphs, "Education in Massachusetts," "Board of Trade," "Art Union," "Revival of Religion," what bitter mockeries! The very convenience of property, the house and land we occupy, have lost their best value, and a man looks gloomily at his children, and thinks, "What have I done that you should begin life in dishonor?" Every liberal study is discredited,—literature and science appear effeminate, and the hiding of the head. The college, the churches, the schools, the very shops and factories are discredited; real estate, every kind of wealth, every branch of industry, every avenue to power, suffers injury, and the value of life is reduced. Just now a friend came into my house and said, "If this law shall be repealed I shall be glad that I have lived; if not I shall be sorry that I was born." What kind of law is that which extorts language like this from the heart of a free and civilized people?

One intellectual benefit we owe to the late disgraces. The crisis had the illuminating power of a sheet of lightning at midnight. It showed truth. It ended a good deal of nonsense we had been wont to hear and to repeat, on the 19th of April, the 17th of June, the 4th of July. It showed the slightness and unreliableness of our social fabric, it showed what stuff reputations are made of, what straws we dignify by office and title, and how competent we are to give counsel and help in a day of trial. It showed the shallowness of leaders; the divergence of parties from their alleged grounds; showed that men would not stick to what they had said, that the resolutions of public bodies, or the pledges never so often given and put on record of public men, will not bind them. The fact comes out more plainly that you cannot rely on any man for the defence of truth, who is not constitutionally or by blood and temperament on that side. A man of a greedy and unscrupulous selfishness may maintain morals when they are in fashion: but he will not stick.

However close Mr. Wolf's nails have been pared, however neatly he has been shaved, and tailored, and set up on end, and taught to say, "Virtue and Religion," he cannot be relied on at a pinch: he will say, morality means pricking a vein. The popular assumption that all men loved freedom, and believed in the Christian religion, was found hollow American brag; only persons who were known and tried benefactors are found standing for freedom: the sentimentalists went down-stream.²⁶⁷⁶ I question the value of our civilization, when I see that the public mind had never less hold of the strongest of all truths. The sense of injustice is blunted,—a sure sign of the shallowness of our intellect. I cannot accept the railroad and telegraph in exchange for reason and charity. It is not skill in iron locomotives that makes so fine civility, as the jealousy of liberty. I cannot think the most judicious tubing a compensation for metaphysical debility. What is the use of admirable law-forms, and political forms, if a hurricane of party feeling and a combination of monied interests can beat them to the ground? What is the use of courts, if judges only quote authorities, and no judge exerts original jurisdiction, or recurs to first principles? What is the use of a Federal Bench, if its opinions are the political breath of the hour? And what is the use of constitutions, if all the guaranties provided by the jealousy of ages for the protection of liberty are made of no effect, when a bad act of Congress finds a willing commissioner? The levity of the public mind has been shown in the past year by the most extravagant actions. Who could have believed it, if foretold that a hundred guns would be fired in Boston on the passage of the Fugitive Slave Bill? Nothing proves the want of all thought, the absence of standard in men's minds, more than the dominion of party. Here are humane people who have tears for misery, an open purse for want; who should have been the defenders of the poor man, are found his embittered

enemies, rejoicing in his rendition,—merely from party ties. I thought none, that was not ready to go on all fours, would back this law. And yet here are upright men, *compotes mentis*, husbands, fathers, trustees, friends, open, generous, brave, who can see nothing in this claim for bare humanity, and the health and honor of their native State, but canting fanaticism, sedition and “one idea.” Because of this preoccupied mind, the whole wealth and power of Boston—two hundred thousand souls, and one hundred and eighty millions of money—are thrown into the scale of crime: and the poor black boy, whom the fame of Boston had reached in the recesses of a vile swamp, or in the alleys of Savannah, on arriving here finds all this force employed to catch him. The famous town of Boston is his master’s hound. The learning of the universities, the culture of elegant society, the acumen of lawyers, the majesty of the Bench, the eloquence of the Christian pulpit, the stoutness of Democracy, the respectability of the Whig party are all combined to kidnap him.

The crisis is interesting as it shows the self-protecting nature of the world and of the Divine laws. It is the law of the world,—as much immorality as there is, so much misery. The greatest prosperity will in vain resist the greatest calamity. You borrow the succour of the devil and he must have his fee. He was never known to abate a penny of his rents. In every nation all the immorality that exists breeds plagues. But of the corrupt society that exists we have never been able to combine any pure prosperity. There is always something in the very advantages of a condition which hurts it. Africa has its malformation; England has its Ireland; Germany its hatred of classes; France its love of gunpowder; Italy its Pope; and America, the most prosperous country in the Universe, has the greatest calamity in the Universe, negro slavery.

Let me remind you a little in detail how the natural retribution acts in reference to the statute which Congress passed a year ago. For these few months have shown very conspicuously its nature and impracticability. It is contravened:

1. By the sentiment of duty. An immoral law makes it a man's duty to break it, at every hazard. For virtue is the very self of every man. It is therefore a principle of law that an immoral contract is void, and that an immoral statute is void. For, as laws do not make right, and are simply declaratory of a right which already existed, it is not to be presumed that they can so stultify themselves as to command injustice.

It is remarkable how rare in the history of tyrants is an immoral law. Some color, some indirection was always used. If you take up the volumes of the "Universal History," you will find it difficult searching. The precedents are few. It is not easy to parallel the wickedness of this American law. And that is the head and body of this discontent, that the law is immoral.

Here is a statute which enacts the crime of kidnapping,—a crime on one footing with arson and murder. A man's right to liberty is as inalienable as his right to life.

Pains seem to have been taken to give us in this statute a wrong pure from any mixture of right. If our resistance to this law is not right, there is no right. This is not meddling with other people's affairs: this is hindering other people from meddling with us. This is not going crusading into Virginia and Georgia after slaves, who, it is alleged, are very comfortable where they are:—that amiable argument falls to the ground: but this is befriending in our own State, on our own farms, a man who has taken the risk of being shot, or burned alive, or cast into the sea, or starved to death, or suffocated in a wooden box, to get away from his driver: and this man who has run the gauntlet of a thousand miles for his freedom,

the statute says, you men of Massachusetts shall hunt, and catch, and send back again to the dog-hutch he fled from.

It is contrary to the primal sentiment of duty, and therefore all men that are born are, in proportion to their power of thought and their moral sensibility, found to be the natural enemies of this law. The resistance of all moral beings is secured to it. I had thought, I confess, what must come at last would come at first, a banding of all men against the authority of this statute. I thought it a point on which all sane men were agreed, that the law must respect the public morality. I thought that all men of all conditions had been made sharers of a certain experience, that in certain rare and retired moments they had been made to see how man is man, or what makes the essence of rational beings, namely, that whilst animals have to do with eating the fruits of the ground, men have to do with rectitude, with benefit, with truth, with something which *is*, independent of appearances: and that this tie makes the substantiality of life, this, and not their ploughing, or sailing, their trade or the breeding of families. I thought that every time a man goes back to his own thoughts, these angels receive him, talk with him, and that, in the best hours, he is uplifted in virtue of this essence, into a peace and into a power which the material world cannot give: that these moments counterbalance the years of drudgery, and that this owning of a law, be it called morals, religion, or godhead, or what you will, constituted the explanation of life, the excuse and indemnity for the errors and calamities which sadden it. In long years consumed in trifles, they remember these moments, and are consoled. I thought it was this fair mystery, whose foundations are hidden in eternity, which made the basis of human society, and of law; and that to pretend anything else, as that the acquisition of property was the end of living, was to confound all distinctions, to make the world a greasy hotel, and, instead of

noble motives and inspirations, and a heaven of companions and angels around and before us, to leave us in a grimacing menagerie of monkeys and idiots. All arts, customs, societies, books, and laws, are good as they foster and concur with this spiritual element: all men are beloved as they raise us to it; hateful as they deny or resist it. The laws especially draw their obligation only from their concurrence with it.

I am surprised that lawyers can be so blind as to suffer the principles of Law to be discredited. A few months ago, in my dismay at hearing that the Higher Law was reckoned a good joke in the courts, I took pains to look into a few law-books. I had often heard that the Bible constituted a part of every technical law library, and that it was a principle in law that immoral laws are void.

I found, accordingly, that the great jurists, Cicero, Grotius, Coke, Blackstone, Burlamaqui, Montesquieu, Vattel, Burke, Mackintosh, Jefferson, do all affirm this. I have no intention to recite these passages I had marked:—such citation indeed seems to be something cowardly (for no reasonable person needs a quotation from Blackstone to convince him that white cannot be legislated to be black), and shall content myself with reading a single passage. Blackstone admits the sovereignty “antecedent to any positive precept, of the law of Nature,” among whose principles are, “that we should live on, should hurt nobody, and should render unto every one his due,” etc. “*No human laws are of any validity, if contrary to this.*” “Nay, if any human law should allow or enjoin us to commit a crime” (his instance is murder), “we are bound to transgress that human law; or else we must offend both the natural and divine.” Lord Coke held that where an Act of Parliament is against common right and reason, the common law shall control it, and adjudge it to be void. Chief Justice Hobart, Chief Justice Holt, and Chief Justice Mansfield held the same.

Lord Mansfield, in the case of the slave Somerset, wherein the *dicta* of Lords Talbot and Hardwicke had been cited, to the effect of carrying back the slave to the West Indies, said, "I care not for the supposed *dicta* of judges, however eminent, if they be contrary to all principle." Even the *Canon Law* says (*in malis promissis non expedit servare fidem*), "Neither allegiance nor oath can bind to obey that which is wrong."

No engagement (to a sovereign) can oblige or even authorize a man to violate the laws of Nature. All authors who have any conscience or modesty agree that a person ought not to obey such commands as are evidently contrary to the laws of God. Those governors of places who bravely refused to execute the barbarous orders of Charles IX. for the famous "Massacre of St. Bartholomew," have been universally praised; and the court did not dare to punish them, at least openly. "Sire," said the brave Orte, governor of Bayonne, in his letter, "I have communicated your majesty's command to your faithful inhabitants and warriors in the garrison, and I have found there only good citizens, and brave soldiers; not one hangman: therefore, both they and I must humbly entreat your majesty to be pleased to employ your arms and lives in things that are possible, however hazardous they may be, and we will exert ourselves to the last drop of our blood."²⁶⁷⁷

The practitioners should guard this dogma well, as the palladium of the profession, as their anchor in the respect of mankind. Against a principle like this, all the arguments of Mr. Webster are the spray of a child's squirt against a granite wall.

2. It is contravened by all the sentiments. How can a law be enforced that fines pity, and imprisons charity? As long as men have bowels, they will disobey. You know that the Act of Congress of September 18, 1850, is a law which every one of you will break on the earliest occasion. There is not a manly Whig, or a manly

Democrat, of whom, if a slave were hidden in one of our houses from the hounds, we should not ask with confidence to lend his wagon in aid of his escape, and he would lend it. The man would be too strong for the partisan.

And here I may say that it is absurd, what I often hear, to accuse the friends of freedom in the North with being the occasion of the new stringency of the Southern slave-laws. If you starve or beat the orphan, in my presence, and I accuse your cruelty, can I help it? In the words of Electra in the Greek tragedy, "'T is you that say it, not I. You do the deeds, and your ungodly deeds find me the words." Will you blame the ball for rebounding from the floor, blame the air for rushing in where a vacuum is made or the boiler for exploding under pressure of steam? These facts are after laws of the world, and so is it law, that, when justice is violated, anger begins. The very defence which the God of Nature has provided for the innocent against cruelty is the sentiment of indignation and pity in the bosom of the beholder. Mr. Webster tells the President that "he has been in the North, and he has found no man, whose opinion is of any weight, who is opposed to the law." Oh, Mr. President, trust not the information! The gravid old Universe goes spawning on; the womb conceives and the breasts give suck to thousands and millions of hairy babes formed not in the image of your statute, but in the image of the Universe; too many to be bought off; too many than they can be rich, and therefore peaceable; and necessitated to express first or last every feeling of the heart. You can keep no secret, for whatever is true some of them will unreasonably say. You can commit no crime, for they are created in their sentiments conscious of and hostile to it; and unless you can suppress the newspaper, pass a law against book-shops, gag the English tongue in America, all short of this is futile. This dreadful English Speech is saturated with songs, proverbs and

speeches that flatly contradict and defy every line of Mr. Mason's statute. Nay, unless you can draw a sponge over those seditious Ten Commandments which are the root of our European and American civilization; and over that eleventh commandment, "Do unto others as you would have them do to you," your labor is vain.

3. It is contravened by the written laws themselves, because the sentiments, of course, write the statutes. Laws are merely declaratory of the natural sentiments of mankind, and the language of all permanent laws will be in contradiction to any immoral enactment. And thus it happens here: Statute fights against Statute. By the law of Congress March 2, 1807, it is piracy and murder, punishable with death, to enslave a man on the coast of Africa. By law of Congress September, 1850, it is a high crime and misdemeanor, punishable with fine and imprisonment, to resist the reënsaving a man on the coast of America. Off soundings, it is piracy and murder to enslave him. On soundings, it is fine and prison not to reënsave. What kind of legislation is this? What kind of constitution which covers it? And yet the crime which the second law ordains is greater than the crime which the first law forbids under penalty of the gibbet. For it is a greater crime to reënsave a man who has shown himself fit for freedom, than to enslave him at first, when it might be pretended to be a mitigation of his lot as a captive in war.

4. It is contravened by the mischiefs it operates. A wicked law cannot be executed by good men, and must be by bad. Flagitious men must be employed, and every act of theirs is a stab at the public peace. It cannot be executed at such a cost, and so it brings a bribe in its hand. This law comes with infamy in it, and out of it. It offers a bribe in its own clauses for the consummation of the crime. To serve it, low and mean people are found by the groping of the government. No government ever found it hard to pick up tools

for base actions. If you cannot find them in the huts of the poor, you shall find them in the palaces of the rich. Vanity can buy some, ambition others, and money others. The first execution of the law, as was inevitable, was a little hesitating; the second was easier; and the glib officials became, in a few weeks, quite practised and handy at stealing men. But worse, not the officials alone are bribed, but the whole community is solicited. The scowl of the community is attempted to be averted by the mischievous whisper, "Tariff and Southern market, if you will be quiet: no tariff and loss of Southern market, if you dare to murmur." I wonder that our acute people who have learned that the cheapest police is dear schools, should not find out that an immoral law costs more than the loss of the custom of a Southern city.

The humiliating scandal of great men warping right into wrong was followed up very fast by the cities. New York advertised in Southern markets that it would go for slavery, and posted the names of merchants who would not. Boston, alarmed, entered into the same design. Philadelphia, more fortunate, had no conscience at all, and, in this auction of the rights of mankind, rescinded all its legislation against slavery. And the Boston "Advertiser," and the "Courier," in these weeks, urge the same course on the people of Massachusetts. Nothing remains in this race of roguery but to coax Connecticut or Maine to outbid us all by adopting slavery into its constitution.

Great is the mischief of a legal crime. Every person who touches this business is contaminated. There has not been in our lifetime another moment when public men were personally lowered by their political action. But here are gentlemen whose believed probity was the confidence and fortification of multitudes, who, by fear of public opinion, or through the dangerous ascendancy of Southern manners, have been drawn into the support of this

foul business. We poor men in the country who might once have thought it an honor to shake hands with them, or to dine at their boards, would now shrink from their touch, nor could they enter our humblest doors. You have a law which no man can obey, or abet the obeying, without loss of self-respect and forfeiture of the name of gentleman. What shall we say of the functionary by whom the recent rendition was made? If he has rightly defined his powers, and has no authority to try the case, but only to prove the prisoner's identity, and remand him, what office is this for a reputable citizen to hold? No man of honor can sit on that bench. It is the extension of the planter's whipping-post; and its incumbents must rank with a class from which the turnkey, the hangman and the informer are taken, necessary functionaries, it may be, in a state, but to whom the dislike and the ban of society universally attaches.

5. These resistances appear in the history of the statute, in the retributions which speak so loud in every part of this business, that I think a tragic poet will know how to make it a lesson for all ages. Mr. Webster's measure was, he told us, final. It was a pacification, it was a suppression, a measure of conciliation and adjustment. These were his words at different times: "there was to be no parleying more;" it was "irrepealable." Does it look final now? His final settlement has dislocated the foundations. The state-house shakes like a tent. His pacification has brought all the honesty in every house, all scrupulous and good-hearted men, all women, and all children, to accuse the law. It has brought United States swords into the streets, and chains round the court-house. "A measure of pacification and union." What is its effect? To make one sole subject for conversation and painful thought throughout the continent, namely, slavery. There is not a man of thought or of feeling but is concentrating his mind on it. There is not a clerk but

recites its statistics; not a politician but is watching its incalculable energy in the elections; not a jurist but is hunting up precedents; not a moralist but is prying into its quality; not an economist but is computing its profit and loss: Mr. Webster can judge whether this sort of solar microscope brought to bear on his law is likely to make opposition less. The only benefit that has accrued from the law is its service to education. It has been like a university to the entire people. It has turned every dinner-table into a debating-club, and made every citizen a student of natural law. When a moral quality comes into politics, when a right is invaded, the discussion draws on deeper sources: general principles are laid bare, which cast light on the whole frame of society. And it is cheering to behold what champions the emergency called to this poor black boy; what subtlety, what logic, what learning, what exposure of the mischief of the law; and, above all, with what earnestness and dignity the advocates of freedom were inspired. It was one of the best compensations of this calamity.

But the Nemesis works underneath again. It is a power that makes noonday dark, and draws us on to our undoing; and its dismal way is to pillory the offender in the moment of his triumph. The hands that put the chain on the slave are in that moment manacled. Who has seen anything like that which is now done? The words of John Randolph, wiser than he knew, have been ringing ominously in all echoes for thirty years, words spoken in the heat of the Missouri debate. "We do not govern the people of the North by our black slaves, but by their own white slaves. We know what we are doing. We have conquered you once, and we can and will conquer you again. Ay, we will drive you to the wall, and when we have you there once more, we will keep you there and nail you down like base money." These words resounding ever since from California to Oregon, from Cape Florida to Cape Cod, come down now like

the cry of Fate, in the moment when they are fulfilled. By white slaves, by a white slave, are we beaten.²⁶⁷⁸ Who looked for such ghastly fulfilment, or to see what we see? Hills and Halletts, servile editors by the hundred, we could have spared. But him, our best and proudest, the first man of the North, in the very moment of mounting the throne, irresistibly taking the bit in his mouth and the collar on his neck, and harnessing himself to the chariot of the planters.

The fairest American fame ends in this filthy law. Mr. Webster cannot choose but regret his law. He must learn that those who make fame accuse him with one voice; that those who have no points to carry that are not identical with public morals and generous civilization, that the obscure and private who have no voice and care for none, so long as things go well, but who feel the disgrace of the new legislation creeping like miasma into their homes, and blotting the daylight,—those to whom his name was once dear and honored, as the manly statesman to whom the choicest gifts of Nature had been accorded, disown him: that he who was their pride in the woods and mountains of New England is now their mortification,—they have torn down his picture from the wall, they have thrust his speeches into the chimney. No roars of New York mobs can drown this voice in Mr. Webster's ear. It will outwhisper all the salvos of the "Union Committees'" cannon. But I have said too much on this painful topic. I will not pursue that bitter history.²⁶⁷⁹

But passing from the ethical to the political view, I wish to place this statute, and we must use the introducer and substantial author of the bill as an illustration of the history. I have as much charity for Mr. Webster, I think, as any one has. I need not say how much I have enjoyed his fame. Who has not helped to praise him? Simply he was the one eminent American of our time, whom we could

produce as a finished work of Nature. We delighted in his form and face, in his voice, in his eloquence, in his power of labor, in his concentration, in his large understanding, in his daylight statement, simple force; the facts lay like the strata of a cloud, or like the layers of the crust of the globe. He saw things as they were, and he stated them so. He has been by his clear perceptions and statements in all these years the best head in Congress, and the champion of the interests of the Northern seaboard: but as the activity and growth of slavery began to be offensively felt by his constituents, the senator became less sensitive to these evils. They were not for him to deal with: he was the commercial representative. He indulged occasionally in excellent expression of the known feeling of the New England people: but, when expected and when pledged, he omitted to speak, and he omitted to throw himself into the movement in those critical moments when his leadership would have turned the scale. At last, at a fatal hour, this sluggishness accumulated to downright counteraction, and, very unexpectedly to the whole Union, on the 7th March, 1850, in opposition to his education, association, and to all his own most explicit language for thirty years, he crossed the line, and became the head of the slavery party in this country.

Mr. Webster perhaps is only following the laws of his blood and constitution. I suppose his pledges were not quite natural to him. Mr. Webster is a man who lives by his memory, a man of the past, not a man of faith or of hope. He obeys his powerful animal nature;—and his finely developed understanding only works truly and with all its force, when it stands for animal good; that is, for property. He believes, in so many words, that government exists for the protection of property. He looks at the Union as an estate, a large farm, and is excellent in the completeness of his defence of it so far. He adheres to the letter. Happily he was born late,—

after the independence had been declared, the Union agreed to, and the constitution settled. What he finds already written, he will defend. Lucky that so much had got well written when he came. For he has no faith in the power of self-government; none whatever in extemporizing a government. Not the smallest municipal provision, if it were new, would receive his sanction. In Massachusetts, in 1776, he would, beyond all question, have been a refugee. He praises Adams and Jefferson, but it is a past Adams and Jefferson that his mind can entertain.²⁶⁸⁰ A present Adams and Jefferson he would denounce. So with the eulogies of liberty in his writings,—they are sentimentalism and youthful rhetoric. He can celebrate it, but it means as much from him as from Metternich or Talleyrand. This is all inevitable from his constitution. All the drops of his blood have eyes that look downward. It is neither praise nor blame to say that he has no moral perception, no moral sentiment, but in that region—to use the phrase of the phrenologists—a hole in the head. The scraps of morality to be gleaned from his speeches are reflections of the mind of others; he says what he hears said, but often makes signal blunders in their use. In Mr. Webster's imagination the American Union was a huge Prince Rupert's drop, which, if so much as the smallest end be shivered off, the whole will snap into atoms. Now the fact is quite different from this. The people are loyal, law-loving, law-abiding. They prefer order, and have no taste for misrule and uproar.

The destiny of this country is great and liberal, and is to be greatly administered. It is to be administered according to what is, and is to be, and not according to what is dead and gone. The union of this people is a real thing, an alliance of men of one flock, one language, one religion, one system of manners and ideas. I hold it to be a real and not a statute union. The people cleave

to the Union, because they see their advantage in it, the added power of each.

I suppose the Union can be left to take care of itself. As much real union as there is, the statutes will be sure to express; as much disunion as there is, no statute can long conceal. Under the Union I suppose the fact to be that there are really two nations, the North and the South. It is not slavery that severs them, it is climate and temperament. The South does not like the North, slavery or no slavery, and never did. The North likes the South well enough, for it knows its own advantages. I am willing to leave them to the facts. If they continue to have a binding interest, they will be pretty sure to find it out: if not, they will consult their peace in parting. But one thing appears certain to me, that, as soon as the constitution ordains an immoral law, it ordains disunion. The law is suicidal, and cannot be obeyed. The Union is at an end as soon as an immoral law is enacted. And he who writes a crime into the statute-book digs under the foundations of the Capitol to plant there a powder-magazine, and lays a train.

I pass to say a few words to the question, What shall we do?

1. What in our federal capacity is our relation to the nation?
2. And what as citizens of a state?

I am an Unionist as we all are, or nearly all, and I strongly share the hope of mankind in the power, and therefore, in the duties of the Union; and I conceive it demonstrated,—the necessity of common sense and justice entering into the laws. What shall we do? First, abrogate this law; then, proceed to confine slavery to slave states, and help them effectually to make an end of it. Or shall we, as we are advised on all hands, lie by, and wait the progress of the census? But will Slavery lie by? I fear not. She is very industrious, gives herself no holidays. No proclamations will put her down. She got Texas and now will have Cuba, and

means to keep her majority. The experience of the past gives us no encouragement to lie by. Shall we call a new Convention, or will any expert statesman furnish us a plan for the summary or gradual winding up of slavery, so far as the Republic is its patron? Where is the South itself? Since it is agreed by all sane men of all parties (or was yesterday) that slavery is mischievous, why does the South itself never offer the smallest counsel of her own? I have never heard in twenty years any project except Mr. Clay's. Let us hear any project with candor and respect. Is it impossible to speak of it with reason and good nature? It is really the project fit for this country to entertain and accomplish. Everything invites emancipation. The grandeur of the design, the vast stake we hold; the national domain, the new importance of Liberia; the manifest interest of the slave states; the religious effort of the free states; the public opinion of the world;—all join to demand it.

We shall one day bring the States shoulder to shoulder and the citizens man to man to exterminate slavery. Why in the name of common sense and the peace of mankind is not this made the subject of instant negotiation and settlement? Why not end this dangerous dispute on some ground of fair compensation on one side, and satisfaction on the other to the conscience of the free states? It is really the great task fit for this country to accomplish, to buy that property of the planters, as the British nation bought the West Indian slaves. I say buy,—never conceding the right of the planter to own, but that we may acknowledge the calamity of his position, and bear a countryman's share in relieving him; and because it is the only practicable course, and is innocent. Here is a right social or public function, which one man cannot do, which all men must do. 'T is said it will cost two thousand millions of dollars. Was there ever any contribution that was so enthusiastically paid as this will be? We will have a chimney-tax. We will give up our

coaches, and wine, and watches. The churches will melt their plate. The father of his country shall wait, well pleased, a little longer for his monument; Franklin for his, the Pilgrim Fathers for theirs, and the patient Columbus for his. The mechanics will give, the needlewomen will give; the children will have cent-societies. Every man in the land will give a week's work to dig away this accursed mountain of sorrow once and forever out of the world.²⁶⁸¹

Nothing is impracticable to this nation, which it shall set itself to do. Were ever men so endowed, so placed, so weaponed? Their power of territory seconded by a genius equal to every work. By new arts the earth is subdued, roaded, tunnelled, telegraphed, gas-lighted; vast amounts of old labor disused; the sinews of man being relieved by sinews of steam. We are on the brink of more wonders. The sun paints; presently we shall organize the echo, as now we do the shadow. Chemistry is extorting new aids. The genius of this people, it is found, can do anything which can be done by men. These thirty nations are equal to any work, and are every moment stronger. In twenty-five years they will be fifty millions. Is it not time to do something besides ditching and draining, and making the earth mellow and friable? Let them confront this mountain of poison,—bore, blast, excavate, pulverize, and shovel it once for all, down into the bottomless Pit. A thousand millions were cheap.

But grant that the heart of financiers, accustomed to practical figures, shrinks within them at these colossal amounts, and the embarrassments which complicate the problem; granting that these contingencies are too many to be spanned by any human geometry, and that these evils are to be relieved only by the wisdom of God working in ages,—and by what instrument, whether Liberia, whether flax-cotton, whether the working out this race by Irish and Germans, none can tell, or by what sources God has guarded his law; still the question recurs, What must we

do? One thing is plain, we cannot answer for the Union, but we must keep Massachusetts true. It is of unspeakable importance that she play her honest part. She must follow no vicious examples. Massachusetts is a little state: countries have been great by ideas. Europe is little compared with Asia and Africa; yet Asia and Africa are its ox and its ass. Europe, the least of all the continents, has almost monopolized for twenty centuries the genius and power of them all. Greece was the least part of Europe. Attica a little part of that,—one tenth of the size of Massachusetts. Yet that district still rules the intellect of men. Judæa was a petty country. Yet these two, Greece and Judæa, furnish the mind and the heart by which the rest of the world is sustained; and Massachusetts is little, but, if true to itself, can be the brain which turns about the behemoth.

I say Massachusetts, but I mean Massachusetts in all the quarters of her dispersion; Massachusetts, as she is the mother of all the New England states, and as she sees her progeny scattered over the face of the land, in the farthest South, and the uttermost West. The immense power of rectitude is apt to be forgotten in politics. But they who have brought the great wrong on the country have not forgotten it. They avail themselves of the known probity and honor of Massachusetts, to endorse the statute. The ancient maxim still holds that never was any injustice effected except by the help of justice. The great game of the government has been to win the sanction of Massachusetts to the crime. Hitherto they have succeeded only so far as to win Boston to a certain extent. The behavior of Boston was the reverse of what it should have been: it was supple and officious, and it put itself into the base attitude of pander to the crime. It should have placed obstruction at every step. Let the attitude of the states be firm. Let us respect the Union to all honest ends. But also respect an older and wider union, the law of Nature and rectitude. Massachusetts is as strong

as the Universe, when it does that. We will never intermeddle with your slavery,—but you can in no wise be suffered to bring it to Cape Cod and Berkshire. This law must be made inoperative. It must be abrogated and wiped out of the statute-book; but whilst it stands there, it must be disobeyed. We must make a small state great, by making every man in it true. It was the praise of Athens, “She could not lead countless armies into the field, but she knew how with a little band to defeat those who could.” Every Roman reckoned himself at least a match for a Province. Every Dorian did. Every Englishman in Australia, in South Africa, in India, or in whatever barbarous country their forts and factories have been set up,—represents London, represents the art, power and law of Europe. Every man educated at the Northern school carries the like advantages into the South. For it is confounding distinctions to speak of the geographic sections of this country as of equal civilization. Every nation and every man bows, in spite of himself, to a higher mental and moral existence; and the sting of the late disgraces is that this royal position of Massachusetts was foully lost, that the well-known sentiment of her people was not expressed. Let us correct this error. In this one fastness let truth be spoken and right done. Here let there be no confusion in our ideas. Let us not lie, not steal, nor help to steal, and let us not call stealing by any fine name, such as “Union” or “Patriotism.” Let us know that not by the public, but by ourselves, our safety must be bought. That is the secret of Southern power, that they rest not on meetings, but on private heats and courages.

It is very certain from the perfect guaranties in the constitution, and the high arguments of the defenders of liberty, which the occasion called out, that there is sufficient margin in the statute and the law for the spirit of the Magistrate to show itself, and one, two, three occasions have just now occurred, and past, in either

of which, if one man had felt the spirit of Coke or Mansfield or Parsons, and read the law with the eye of freedom, the dishonor of Massachusetts had been prevented, and a limit set to these encroachments forever.

VII. THE FUGITIVE SLAVE LAW

LECTURE READ IN THE TABERNACLE, NEW YORK CITY MARCH 7, 1854,
ON THE FOURTH ANNIVERSARY OF DANIEL WEBSTER'S SPEECH IN
FAVOR OF THE BILL

"OF ALL we loved and honored, naught
Save power remains,—
A fallen angel's pride of thought,
Still strong in chains.

All else is gone; from those great eyes
The soul has fled:
When faith is lost, when honor dies,
The man is dead!"

Whittier, *Ichabod!*

"WE THAT had loved him so, followed him, honoured him,
Lived in his mild and magnificent eye,
Learned his great language, caught his clear accents,
Made him our pattern to live and to die!
Shakspeare was of us, Milton was for us,
Burns, Shelley, were with us,—they watch from their graves!
He alone breaks from the van and the freemen,
—He alone sinks to the rear and the slaves!"

Browning, *The Lost Leader*.

THE FUGITIVE SLAVE LAW

I DO not often speak to public questions;—they are odious and hurtful, and it seems like meddling or leaving your work. I have my own spirits in prison;—spirits in deeper prisons, whom no man visits if I do not. And then I see what havoc it makes with any good mind, a dissipated philanthropy. The one thing not to be forgiven to intellectual persons is, not to know their own task, or to take their ideas from others. From this want of manly rest in their own and rash acceptance of other people's watchwords come the imbecility and fatigue of their conversation. For they cannot affirm these from any original experience, and of course not with the natural movement and total strength of their nature and talent, but only from their memory, only from their cramped position of standing for their teacher. They say what they would have you believe, but what they do not quite know.²⁶⁸²

My own habitual view is to the well-being of students or scholars. And it is only when the public event affects them, that it very seriously touches me. And what I have to say is to them. For every man speaks mainly to a class whom he works with and more or less fully represents. It is to these I am beforehand related

and engaged, in this audience or out of it—to them and not to others. And yet, when I say the class of scholars or students,—that is a class which comprises in some sort all mankind, comprises every man in the best hours of his life; and in these days not only virtually but actually. For who are the readers and thinkers of 1854? Owing to the silent revolution which the newspaper has wrought, this class has come in this country to take in all classes. Look into the morning trains which, from every suburb, carry the business men into the city to their shops, counting-rooms, work-yards and warehouses. With them enters the car—the newsboy, that humble priest of politics, finance, philosophy, and religion. He unfolds his magical sheets,—twopence a head his bread of knowledge costs—and instantly the entire rectangular assembly, fresh from their breakfast, are bending as one man to their second breakfast. There is, no doubt, chaff enough in what he brings; but there is fact, thought, and wisdom in the crude mass, from all regions of the world.

I have lived all my life without suffering any known inconvenience from American Slavery. I never saw it; I never heard the whip;²⁶⁸³ I never felt the check on my free speech and action, until, the other day, when Mr. Webster, by his personal influence, brought the Fugitive Slave Law on the country. I say Mr. Webster, for though the Bill was not his, it is yet notorious that he was the life and soul of it, that he gave it all he had: it cost him his life, and under the shadow of his great name inferior men sheltered themselves, threw their ballots for it and made the law. I say inferior men. There were all sorts of what are called brilliant men, accomplished men, men of high station, a President of the United States, Senators, men of eloquent speech, but men without self-respect, without character, and it was strange to see that office, age, fame, talent, even a repute for honesty, all count for nothing. They had no opinions, they had

no memory for what they had been saying like the Lord's Prayer all their lifetime: they were only looking to what their great Captain did: if he jumped, they jumped, if he stood on his head, they did. In ordinary, the supposed sense of their district and State is their guide, and that holds them to the part of liberty and justice. But it is always a little difficult to decipher what this public sense is; and when a great man comes who knots up into himself the opinions and wishes of the people, it is so much easier to follow him as an exponent of this. He too is responsible; they will not be. It will always suffice to say,—“I followed him.”

I saw plainly that the great show their legitimate power in nothing more than in their power to misguide us. I saw that a great man, deservedly admired for his powers and their general right direction, was able,—fault of the total want of stamina in public men,—when he failed, to break them all with him, to carry parties with him.

In what I have to say of Mr. Webster I do not confound him with vulgar politicians before or since. There is always base ambition enough, men who calculate on the immense ignorance of the masses; that is their quarry and farm: they use the constituencies at home only for their shoes. And, of course, they can drive out from the contest any honorable man. The low can best win the low, and all men like to be made much of. There are those too who have power and inspiration only to do ill. Their talent or their faculty deserts them when they undertake anything right. Mr. Webster had a natural ascendancy of aspect and carriage which distinguished him over all his contemporaries. His countenance, his figure, and his manners were all in so grand a style, that he was, without effort, as superior to his most eminent rivals as they were to the humblest; so that his arrival in any place was an event which drew crowds of people, who went to satisfy their eyes,

and could not see him enough. I think they looked at him as the representative of the American Continent. He was there in his Adamitic capacity, as if he alone of all men did not disappoint the eye and the ear, but was a fit figure in the landscape.²⁶⁸⁴

I remember his appearance at Bunker's Hill. There was the Monument, and here was Webster. He knew well that a little more or less of rhetoric signified nothing: he was only to say plain and equal things,—grand things if he had them, and, if he had them not, only to abstain from saying unfit things,—and the whole occasion was answered by his presence. It was a place for behavior more than for speech, and Mr. Webster walked through his part with entire success. His excellent organization, the perfection of his elocution and all that thereto belongs,—voice, accent, intonation, attitude, manner,—we shall not soon find again. Then he was so thoroughly simple and wise in his rhetoric; he saw through his matter, hugged his fact so close, went to the principle or essential, and never indulged in a weak flourish, though he knew perfectly well how to make such exordiums, episodes and perorations as might give perspective to his harangues without in the least embarrassing his march or confounding his transitions. In his statement things lay in daylight; we saw them in order as they were. Though he knew very well how to present his own personal claims, yet in his argument he was intellectual,—stated his fact pure of all personality, so that his splendid wrath, when his eyes became lamps, was the wrath of the fact and the cause he stood for.

His power, like that of all great masters, was not in excellent parts, but was total. He had a great and everywhere equal propriety. He worked with that closeness of adhesion to the matter in hand which a joiner or a chemist uses, and the same quiet and sure feeling of right to his place that an oak or a mountain have to theirs. After all his talents have been described, there remains that perfect

propriety which animated all the details of the action or speech with the character of the whole, so that his beauties of detail are endless. He seemed born for the bar, born for the senate, and took very naturally a leading part in large private and in public affairs; for his head distributed things in their right places, and what he saw so well he compelled other people to see also. Great is the privilege of eloquence. What gratitude does every man feel to him who speaks well for the right,—who translates truth into language entirely plain and clear!

The history of this country has given a disastrous importance to the defects of this great man's mind. Whether evil influences and the corruption of politics, or whether original infirmity, it was the misfortune of his country that with this large understanding he had not what is better than intellect, and the source of its health. It is a law of our nature that great thoughts come from the heart. If his moral sensibility had been proportioned to the force of his understanding, what limits could have been set to his genius and beneficent power? But he wanted that deep source of inspiration. Hence a sterility of thought, the want of generalization in his speeches, and the curious fact that, with a general ability which impresses all the world, there is not a single general remark, not an observation on life and manners, not an aphorism that can pass into literature from his writings.

Four years ago to-night, on one of those high critical moments in history when great issues are determined, when the powers of right and wrong are mustered for conflict, and it lies with one man to give a casting vote,—Mr. Webster, most unexpectedly, threw his whole weight on the side of Slavery, and caused by his personal and official authority the passage of the Fugitive Slave Bill.

It is remarked of the Americans that they value dexterity too much, and honor too little; that they think they praise a man more

by saying that he is "smart" than by saying that he is right. Whether the defect be national or not, it is the defect and calamity of Mr. Webster; and it is so far true of his countrymen, namely, that the appeal is sure to be made to his physical and mental ability when his character is assailed. His speeches on the seventh of March, and at Albany, at Buffalo, at Syracuse and Boston are cited in justification. And Mr. Webster's literary editor believes that it was his wish to rest his fame on the speech of the seventh of March. Now, though I have my own opinions on this seventh of March discourse and those others, and think them very transparent and very open to criticism,—yet the secondary merits of a speech, namely, its logic, its illustrations, its points, etc., are not here in question. Nobody doubts that Daniel Webster could make a good speech. Nobody doubts that there were good and plausible things to be said on the part of the South. But this is not a question of ingenuity, not a question of syllogisms, but of sides. *How came he there?*²⁶⁸⁵

There are always texts and thoughts and arguments. But it is the genius and temper of the man which decides whether he will stand for right or for might. Who doubts the power of any fluent debater to defend either of our political parties, or any client in our courts? There was the same law in England for Jeffries and Talbot and Yorke to read slavery out of, and for Lord Mansfield to read freedom. And in this country one sees that there is always margin enough in the statute for a liberal judge to read one way and a servile judge another.

But the question which History will ask is broader. In the final hour, when he was forced by the peremptory necessity of the closing armies to take a side,—did he take the part of great principles, the side of humanity and justice, or the side of abuse and oppression and chaos?

Mr. Webster decided for Slavery, and that, when the aspect of the institution was no longer doubtful, no longer feeble and apologetic and proposing soon to end itself, but when it was strong, aggressive, and threatening an illimitable increase. He listened to State reasons and hopes, and left, with much complacency we are told, the testament of his speech to the astonished State of Massachusetts, *vera pro gratis*; a ghastly result of all those years of experience in affairs, this, that there was nothing better for the foremost American man to tell his countrymen than that Slavery was now at that strength that they must beat down their conscience and become kidnappers for it.

This was like the doleful speech falsely ascribed to the patriot Brutus: "Virtue, I have followed thee through life, and I find thee but a shadow."²⁶⁸⁶ Here was a question of an immoral law; a question agitated for ages, and settled always in the same way by every great jurist, that an immoral law cannot be valid. Cicero, Grotius, Coke, Blackstone, Burlamaqui, Vattel, Burke, Jefferson, do all affirm this, and I cite them, not that they can give evidence to what is indisputable, but because, though lawyers and practical statesmen, the habit of their profession did not hide from them that this truth was the foundation of States.

Here was the question, Are you for man and for the good of man; or are you for the hurt and harm of man? It was the question whether man shall be treated as leather? whether the Negro shall be, as the Indians were in Spanish America, a piece of money? Whether this system, which is a kind of mill or factory for converting men into monkeys, shall be upheld and enlarged? And Mr. Webster and the country went for the application to these poor men of quadruped law.

People were expecting a totally different course from Mr. Webster. If any man had in that hour possessed the weight with

the country which he had acquired, he could have brought the whole country to its senses. But not a moment's pause was allowed. Angry parties went from bad to worse, and the decision of Webster was accompanied with everything offensive to freedom and good morals. There was something like an attempt to debauch the moral sentiment of the clergy and of the youth. Burke said he "would pardon something to the spirit of liberty." But by Mr. Webster the opposition to the law was sharply called treason, and prosecuted so. He told the people at Boston "they must conquer their prejudices;" that "agitation of the subject of Slavery must be suppressed." He did as immoral men usually do, made very low bows to the Christian Church, and went through all the Sunday decorums; but when allusion was made to the question of duty and the sanctions of morality, he very frankly said, at Albany, "Some higher law, something existing somewhere between here and the third heaven,—I do not know where." And if the reporters say true, this wretched atheism found some laughter in the company.

I said I had never in my life up to this time suffered from the Slave Institution. Slavery in Virginia or Carolina was like Slavery in Africa or the Feejees, for me. There was an old fugitive law, but it had become, or was fast becoming, a dead letter, and, by the genius and laws of Massachusetts, inoperative. The new Bill made it operative, required me to hunt slaves, and it found citizens in Massachusetts willing to act as judges and captors. Moreover, it discloses the secret of the new times, that Slavery was no longer mendicant, but was become aggressive and dangerous.

The way in which the country was dragged to consent to this, and the disastrous defection (on the miserable cry of Union) of the men of letters, of the colleges, of educated men, nay, of some preachers of religion,—was the darkest passage in the history. It showed that our prosperity had hurt us, and that we could not be

shocked by crime. It showed that the old religion and the sense of the right had faded and gone out; that while we reckoned ourselves a highly cultivated nation, our bellies had run away with our brains, and the principles of culture and progress did not exist.

For I suppose that liberty is an accurate index, in men and nations, of general progress. The theory of personal liberty must always appeal to the most refined communities and to the men of the rarest perception and of delicate moral sense. For there are rights which rest on the finest sense of justice, and, with every degree of civility, it will be more truly felt and defined. A barbarous tribe of good stock will, by means of their best heads, secure substantial liberty. But where there is any weakness in a race, and it becomes in a degree matter of concession and protection from their stronger neighbors, the incompatibility and offensiveness of the wrong will of course be most evident to the most cultivated. For it is,—is it not?—the essence of courtesy, of politeness, of religion, of love, to prefer another, to postpone oneself, to protect another from oneself. That is the distinction of the gentleman, to defend the weak and redress the injured, as it is of the savage and the brutal to usurp and use others.

In Massachusetts, as we all know, there has always existed a predominant conservative spirit. We have more money and value of every kind than other people, and wish to keep them. The plea on which freedom was resisted was Union. I went to certain serious men, who had a little more reason than the rest, and inquired why they took this part? They answered that they had no confidence in their strength to resist the Democratic party; that they saw plainly that all was going to the utmost verge of licence; each was vying with his neighbor to lead the party, by proposing the worst measure, and they threw themselves on the extreme conservatism, as a drag on the wheel: that they knew Cuba would be had, and

Mexico would be had, and they stood stiffly on conservatism, and as near to monarchy as they could, only to moderate the velocity with which the car was running down the precipice. In short, their theory was despair; the Whig wisdom was only reprieve, a waiting to be last devoured. They side with Carolina, or with Arkansas, only to make a show of Whig strength, wherewith to resist a little longer this general ruin.

I have a respect for conservatism. I know how deeply founded it is in our nature, and how idle are all attempts to shake ourselves free from it. We are all conservatives, half Whig, half Democrat, in our essences: and might as well try to jump out of our skins as to escape from our Whiggery. There are two forces in Nature, by whose antagonism we exist; the power of Fate, Fortune, the laws of the world, the order of things, or however else we choose to phrase it, the material necessities, on the one hand,—and Will or Duty or Freedom on the other.

May and Must, and the sense of right and duty, on the one hand, and the material necessities on the other: May and Must. In vulgar politics the Whig goes for what has been, for the old necessities,—the Musts. The reformer goes for the Better, for the ideal good, for the Mays. But each of these parties must of necessity take in, in some measure, the principles of the other. Each wishes to cover the whole ground; to hold fast *and* to advance. Only, one lays the emphasis on keeping, and the other on advancing. I too think the *musts* are a safe company to follow, and even agreeable. But if we are Whigs, let us be Whigs of nature and science, and so for all the necessities. Let us know that, over and above all the *musts* of poverty and appetite, is the instinct of man to rise, and the instinct to love and help his brother.

Now, Gentlemen, I think we have in this hour instruction again in the simplest lesson. Events roll, millions of men are engaged, and

the result is the enforcing of some of those first commandments which we heard in the nursery. We never get beyond our first lesson, for, really, the world exists, as I understand it, to teach the science of liberty, which begins with liberty from fear.

The events of this month are teaching one thing plain and clear, the worthlessness of good tools to bad workmen; that official papers are of no use; resolutions of public meetings, platforms of conventions, no, nor laws, nor constitutions, any more. These are all declaratory of the will of the moment, and are passed with more levity and on grounds far less honorable than ordinary business transactions of the street.

You relied on the constitution. It has not the word *slave* in it; and very good argument has shown that it would not warrant the crimes that are done under it; that, with provisions so vague for an object not named, and which could not be availed of to claim a barrel of sugar or a barrel of corn, the robbing of a man and of all his posterity is effected. You relied on the Supreme Court. The law was right, excellent law for the lambs. But what if unhappily the judges were chosen from the wolves, and give to all the law a wolfish interpretation? You relied on the Missouri Compromise. That is ridden over. You relied on State sovereignty in the Free States to protect their citizens. They are driven with contempt out of the courts and out of the territory of the Slave States,—if they are so happy as to get out with their lives,²⁶⁸⁷—and now you relied on these dismal guaranties infamously made in 1850; and, before the body of Webster is yet crumbled, it is found that they have crumbled. This eternal monument of his fame and of the Union is rotten in four years. They are no guaranty to the free states. They are a guaranty to the slave states that, as they have hitherto met with no repulse, they shall meet with none.

I fear there is no reliance to be put on any kind or form of covenant, no, not on sacred forms, none on churches, none on bibles. For one would have said that a Christian would not keep slaves;—but the Christians keep slaves. Of course they will not dare to read the Bible? Won't they? They quote the Bible, quote Paul,²⁶⁸⁸ quote Christ, to justify slavery. If slavery is good, then is lying, theft, arson, homicide, each and all good, and to be maintained by Union societies.

These things show that no forms, neither constitutions, nor laws, nor covenants, nor churches, nor bibles, are of any use in themselves. The Devil nestles comfortably into them all. There is no help but in the head and heart and hamstrings of a man. Covenants are of no use without honest men to keep them; laws of none but with loyal citizens to obey them. To interpret Christ it needs Christ in the heart. The teachings of the Spirit can be apprehended only by the same spirit that gave them forth. To make good the cause of Freedom, you must draw off from all foolish trust in others. You must be citadels and warriors yourselves, declarations of Independence, the charter, the battle and the victory. Cromwell said, "We can only resist the superior training of the King's soldiers, by enlisting godly men." And no man has a right to hope that the laws of New York will defend him from the contamination of slaves another day until he has made up his mind that he will not owe his protection to the laws of New York, but to his own sense and spirit. Then he protects New York. He only who is able to stand alone is qualified for society. And that I understand to be the end for which a soul exists in this world,—to be himself the counterbalance of all falsehood and all wrong. "The army of unright is encamped from pole to pole, but the road of victory is known to the just." Everything may be taken away; he may be poor, he may be houseless, yet he will know out of his

arms to make a pillow, and out of his breast a bolster. Why have the minority no influence? Because they have not a real minority of one.²⁶⁸⁹

I conceive that thus to detach a man and make him feel that he is to owe all to himself, is the way to make him strong and rich; and here the optimist must find, if anywhere, the benefit of Slavery. We have many teachers; we are in this world for culture, to be instructed in realities, in the laws of moral and intelligent nature; and our education is not conducted by toys and luxuries, but by austere and rugged masters, by poverty, solitude, passions, War, Slavery; to know that Paradise is under the shadow of swords;²⁶⁹⁰ that divine sentiments which are always soliciting us are breathed into us from on high, and are an offset to a Universe of suffering and crime; that self-reliance, the height and perfection of man, is reliance on God.²⁶⁹¹ The insight of the religious sentiment will disclose to him unexpected aids in the nature of things. The Persian Saadi said, "Beware of hurting the orphan. When the orphan sets a-crying, the throne of the Almighty is rocked from side to side."

Whenever a man has come to this mind, that there is no Church for him but his believing prayer; no Constitution but his dealing well and justly with his neighbor; no liberty but his invincible will to do right,—then certain aids and allies will promptly appear: for the constitution of the Universe is on his side. It is of no use to vote down gravitation of morals. What is useful will last, whilst that which is hurtful to the world will sink beneath all the opposing forces which it must exasperate. The terror which the Marseillaise struck into oppression, it thunders again to-day,—

"Tout est soldat pour vous combattre."

Everything turns soldier to fight you down. The end for which man was made is not crime in any form, and a man cannot steal without incurring the penalties of the thief, though all the legislatures vote that it is virtuous, and though there be a general conspiracy among scholars and official persons to hold him up, and to say, "*Nothing is good but stealing.*" A man who commits a crime defeats the end of his existence. He was created for benefit, and he exists for harm; and as well-doing makes power and wisdom, ill-doing takes them away. A man who steals another man's labor steals away his own faculties; his integrity, his humanity is flowing away from him. The habit of oppression cuts out the moral eyes, and, though the intellect goes on simulating the moral as before, its sanity is gradually destroyed. It takes away the presentiments.

I suppose in general this is allowed, that if you have a nice question of right and wrong, you would not go with it to Louis Napoleon, or to a political hack, or to a slave-driver. The habit of mind of traders in power would not be esteemed favorable to delicate moral perception. American slavery affords no exception to this rule. No excess of good nature or of tenderness in individuals has been able to give a new character to the system, to tear down the whipping-house. The plea in the mouth of a slave-holder that the negro is an inferior race sounds very oddly in my ear. "The masters of slaves seem generally anxious to prove that they are not of a race superior in any noble quality to the meanest of their bondmen." And indeed when the Southerner points to the anatomy of the negro, and talks of chimpanzee,—I recall Montesquieu's remark, "It will not do to say that negroes are men, lest it should turn out that whites are not."

Slavery is disheartening; but Nature is not so helpless but it can rid itself at last of every wrong.²⁶⁹² But the spasms of Nature are centuries and ages, and will tax the faith of short-lived men. Slowly,

slowly the Avenger comes, but comes surely. The proverbs of the nations affirm these delays, but affirm the arrival. They say, "God may consent, but not forever." The delay of the Divine Justice—this was the meaning and soul of the Greek Tragedy; this the soul of their religion. "There has come, too, one to whom lurking warfare is dear, Retribution, with a soul full of wiles; a violator of hospitality; guileful without the guilt of guile; limping, late in her arrival." They said of the happiness of the unjust, that "at its close it begets itself an offspring and does not die childless, and instead of good fortune, there sprouts forth for posterity ever-ravaging calamity:"—

"For evil word shall evil word be said,
For murder-stroke a murder-stroke be paid.
Who smites must smart."

These delays, you see them now in the temper of the times. The national spirit in this country is so drowsy, preoccupied with interest, deaf to principle. The Anglo-Saxon race is proud and strong and selfish. They believe only in Anglo-Saxons. In 1825 Greece found America deaf, Poland found America deaf, Italy and Hungary found her deaf. England maintains trade, not liberty; stands against Greece; against Hungary; against Schleswig-Holstein; against the French Republic whilst it was a republic.

To faint hearts the times offer no invitation, and torpor exists here throughout the active classes on the subject of domestic slavery and its appalling aggressions. Yes, that is the stern edict of Providence, that liberty shall be no hasty fruit, but that event on event, population on population, age on age, shall cast itself into the opposite scale, and not until liberty has slowly accumulated weight enough to countervail and preponderate against all this,

can the sufficient recoil come. All the great cities, all the refined circles, all the statesmen, Guizot, Palmerston, Webster, Calhoun, are sure to be found befriending liberty with their words, and crushing it with their votes. Liberty is never cheap. It is made difficult, because freedom is the accomplishment and perfectness of man. He is a finished man;²⁶⁹³ earning and bestowing good; equal to the world; at home in Nature and dignifying that; the sun does not see anything nobler, and has nothing to teach him. Therefore mountains of difficulty must be surmounted, stern trials met, wiles of seduction, dangers, healed by a quarantine of calamities to measure his strength before he dare say, I am free.

Whilst the inconsistency of slavery with the principles on which the world is built guarantees its downfall, I own that the patience it requires is almost too sublime for mortals, and seems to demand of us more than mere hoping. And when one sees how fast the rot spreads,—it is growing serious,—I think we demand of superior men that they be superior in this,—that the mind and the virtue shall give their verdict in their day, and accelerate so far the progress of civilization. Possession is sure to throw its stupid strength for existing power, and appetite and ambition will go for that. Let the aid of virtue, intelligence and education be cast where they rightfully belong. They are organically ours. Let them be loyal to their own. I wish to see the instructed class here know their own flag, and not fire on their comrades. We should not forgive the clergy for taking on every issue the immoral side; nor the Bench, if it put itself on the side of the culprit; nor the Government, if it sustain the mob against the laws.²⁶⁹⁴

It is a potent support and ally to a brave man standing single, or with a few, for the right, and out-voted and ostracized, to know that better men in other parts of the country appreciate the service and will rightly report him to his own and the next age. Without this

assurance, he will sooner sink. He may well say, 'If my countrymen do not care to be defended, I too will decline the controversy, from which I only reap invectives and hatred.' Yet the lovers of liberty may with reason tax the coldness and indifferentism of scholars and literary men. They are lovers of liberty in Greece and Rome and in the English Commonwealth, but they are lukewarm lovers of the liberty of America in 1854. The universities are not, as in Hobbes's time, "the core of rebellion," no, but the seat of inertness. They have forgotten their allegiance to the Muse, and grown worldly and political. I listened, lately, on one of those occasions when the university chooses one of its distinguished sons returning from the political arena, believing that senators and statesmen would be glad to throw off the harness and to dip again in the Castalian pools. But if audiences forget themselves, statesmen do not. The low bows to all the crockery gods of the day were duly made:—only in one part of the discourse the orator allowed to transpire, rather against his will, a little sober sense.²⁶⁹⁵ It was this: 'I am, as you see, a man virtuously inclined, and only corrupted by my profession of politics. I should prefer the right side. You, gentlemen of these literary and scientific schools, and the important class you represent, have the power to make your verdict clear and prevailing. Had you done so, you would have found me its glad organ and champion. Abstractly, I should have preferred that side. But you have not done it. You have not spoken out. You have failed to arm me. I can only deal with masses as I find them. Abstractions are not for me. I go then for such parties and opinions as have provided me with a working apparatus. I give you my word, not without regret, that I was first for you; and though I am now to deny and condemn you, you see it is not my will but the party necessity.' Having made this manifesto and professed his adoration for liberty in the time of his grandfathers, he proceeded

with his work of denouncing freedom and freemen at the present day, much in the tone and spirit in which Lord Bacon prosecuted his benefactor Essex. He denounced every name and aspect under which liberty and progress dare show themselves in this age and country, but with a lingering conscience which qualified each sentence with a recommendation to mercy.

But I put it to every noble and generous spirit, to every poetic, every heroic, every religious heart, that not so is our learning, our education, our poetry, our worship to be declared. Liberty is aggressive, Liberty is the Crusade of all brave and conscientious men, the Epic Poetry, the new religion, the chivalry of all gentlemen. This is the oppressed Lady whom true knights on their oath and honor must rescue and save.

Now at last we are disenchanted and shall have no more false hopes. I respect the Anti-Slavery Society. It is the Cassandra that has foretold all that has befallen, fact for fact, years ago; foretold all, and no man laid it to heart. It seemed, as the Turks say, "Fate makes that a man should not believe his own eyes." But the Fugitive Law did much to unglue the eyes of men, and now the Nebraska Bill leaves us staring. The Anti-Slavery Society will add many members this year. The Whig Party will join it; the Democrats will join it. The population of the free states will join it. I doubt not, at last, the slave states will join it. But be that sooner or later, and whoever comes or stays away, I hope we have reached the end of our unbelief, have come to a belief that there is a divine Providence in the world, which will not save us but through our own coöperation.

VIII. THE ASSAULT UPON MR. SUMNER

SPEECH AT A MEETING OF THE CITIZENS IN THE TOWN HALL, IN
CONCORD, MAY 26, 1856

HIS ERRING foe,
Self-assured that he prevails,
Looks from his victim lying low,
And sees aloft the red right arm
Redress the eternal scales.

THE ASSAULT UPON MR. SUMNER

MR. CHAIRMAN: I sympathize heartily with the spirit of the resolutions. The events of the last few years and months and days have taught us the lessons of centuries. I do not see how a barbarous community and a civilized community can constitute one state. I think we must get rid of slavery, or we must get rid of freedom. Life has not parity of value in the free state and in the slave state. In one, it is adorned with education, with skilful labor, with arts, with long prospective interests, with sacred family ties, with honor and justice. In the other, life is a fever; man is an animal, given to pleasure, frivolous, irritable, spending his days in hunting and practising with deadly weapons to defend himself against his slaves and against his companions brought up in the same idle and dangerous way. Such people live for the moment, they have properly no future, and readily risk on every passion a life which is of small value to themselves or to others. Many years ago, when Mr. Webster was challenged in Washington to a duel by one of these madcaps, his friends came forward with prompt good sense and said such a thing was not to be thought of; Mr. Webster's life was the property of his friends and of the whole country, and was

not to be risked on the turn of a vagabond's ball. Life and life are incommensurate. The whole state of South Carolina does not now offer one or any number of persons who are to be weighed for a moment in the scale with such a person as the meanest of them all has now struck down. The very conditions of the game must always be,—the worst life staked against the best. It is the best whom they desire to kill. It is only when they cannot answer your reasons, that they wish to knock you down. If, therefore, Massachusetts could send to the Senate a better man than Mr. Sumner, his death would be only so much the more quick and certain. Now, as men's bodily strength, or skill with knives and guns, is not usually in proportion to their knowledge and mother-wit, but oftener in the inverse ratio, it will only do to send foolish persons to Washington, if you wish them to be safe.

The outrage is the more shocking from the singularly pure character of its victim. Mr. Sumner's position is exceptional in its honor. He had not taken his degrees in the caucus and in hack politics. It is notorious that, in the long time when his election was pending, he refused to take a single step to secure it. He would not so much as go up to the state house to shake hands with this or that person whose good will was reckoned important by his friends. He was elected. It was a homage to character and talent. In Congress, he did not rush into party position. He sat long silent and studious. His friends, I remember, were told that they would find Sumner a man of the world like the rest; 't is quite impossible to be at Washington and not bend; he will bend as the rest have done.' Well, he did not bend. He took his position and kept it. He meekly bore the cold shoulder from some of his New England colleagues, the hatred of his enemies, the pity of the indifferent, cheered by the love and respect of good men with whom he acted; and has stood for the North, a little in advance

of all the North, and therefore without adequate support. He has never faltered in his maintenance of justice and freedom. He has gone beyond the large expectation of his friends in his increasing ability and his manlier tone. I have heard that some of his political friends tax him with indolence or negligence in refusing to make electioneering speeches, or otherwise to bear his part in the labor which party organization requires. I say it to his honor. But more to his honor are the faults which his enemies lay to his charge. I think, sir, if Mr. Sumner had any vices, we should be likely to hear of them. They have fastened their eyes like microscopes for five years on every act, word, manner and movement, to find a flaw,—and with what result? His opponents accuse him neither of drunkenness nor debauchery, nor job, nor speculation, nor rapacity, nor personal aims of any kind. No; but with what? Why, beyond this charge, which it is impossible was ever sincerely made, that he broke over the proprieties of debate, I find him accused of publishing his opinion of the Nebraska conspiracy in a letter to the people of the United States, with discourtesy. Then, that he is an abolitionist; as if every sane human being were not an abolitionist, or a believer that all men should be free. And the third crime he stands charged with, is, that his speeches were written before they were spoken; which, of course, must be true in Sumner's case, as it was true of Webster, of Adams, of Calhoun, of Burke, of Chatham, of Demosthenes; of every first-rate speaker that ever lived. It is the high compliment he pays to the intelligence of the Senate and of the country. When the same reproach was cast on the first orator of ancient times by some caviller of his day, he said, "I should be ashamed to come with one unconsidered word before such an assembly." Mr. Chairman, when I think of these most small faults as the worst which party hatred could allege, I think I may borrow

the language which Bishop Burnet applied to Sir Isaac Newton, and say that Charles Sumner "has the whitest soul I ever knew."

Well, sir, this noble head, so comely and so wise, must be the target for a pair of bullies to beat with clubs. The murderer's brand shall stamp their foreheads wherever they may wander in the earth. But I wish, sir, that the high respects of this meeting shall be expressed to Mr. Sumner; that a copy of the resolutions that have been read may be forwarded to him. I wish that he may know the shudder of terror which ran through all this community on the first tidings of this brutal attack. Let him hear that every man of worth in New England loves his virtues; that every mother thinks of him as the protector of families; that every friend of freedom thinks him the friend of freedom. And if our arms at this distance cannot defend him from assassins, we confide the defence of a life so precious to all honorable men and true patriots, and to the Almighty Maker of men.²⁶⁹⁶

IX. SPEECH

AT THE KANSAS RELIEF MEETING IN CAMBRIDGE WEDNESDAY
EVENING, SEPTEMBER 10, 1856

AND YE shall succor men;
'T is nobleness to serve;
Help them who cannot help again:
Beware from right to swerve.

SPEECH ON AFFAIRS IN KANSAS

REGRET, with all this company, the absence of Mr. Whitman of Kansas, whose narrative was to constitute the interest of this meeting. Mr. Whitman is not here; but knowing, as we all do, why he is not, what duties kept him at home, he is more than present. His vacant chair speaks for him. For quite other reasons, I had been wiser to have stayed at home, unskilled as I am to address a political meeting, but it is impossible for the most recluse to extricate himself from the questions of the times.

There is this peculiarity about the case of Kansas, that all the right is on one side. We hear the screams of hunted wives and children answered by the howl of the butchers. The testimony of the telegraphs from St. Louis and the border confirm the worst details. The printed letters of border ruffians avow the facts. When pressed to look at the cause of the mischief in the Kansas laws, the President falters and declines the discussion; but his supporters in the Senate, Mr. Cass, Mr. Geyer, Mr. Hunter, speak out, and declare the intolerable atrocity of the code. It is a maxim that all party spirit produces the incapacity to receive natural impressions from facts; and our recent political history has abundantly borne out

the maxim. But these details that have come from Kansas are so horrible, that the hostile press have but one word in reply, namely, that it is all exaggeration, 't is an Abolition lie. Do the Committee of Investigation say that the outrages have been overstated? Does their dismal catalogue of private tragedies show it? Do the private letters? Is it an exaggeration, that Mr. Hopps of Somerville, Mr. Hoyt of Deerfield, Mr. Jennison of Groton, Mr. Phillips of Berkshire, have been murdered? That Mr. Robinson of Fitchburg has been imprisoned? Rev. Mr. Nute of Springfield seized, and up to this time we have no tidings of his fate?

In these calamities under which they suffer, and the worst which threaten them, the people of Kansas ask for bread, clothes, arms and men, to save them alive, and enable them to stand against these enemies of the human race. They have a right to be helped, for they have helped themselves.

This aid must be sent, and this is not to be doled out as an ordinary charity; but bestowed up to the magnitude of the want, and, as has been elsewhere said, "on the scale of a national action." I think we are to give largely, lavishly, to these men. And we must prepare to do it. We must learn to do with less, live in a smaller tenement, sell our apple-trees, our acres, our pleasant houses. I know people who are making haste to reduce their expenses and pay their debts, not with a view to new accumulations, but in preparation to save and earn for the benefit of the Kansas emigrants.

We must have aid from individuals,—we must also have aid from the state. I know that the last legislature refused that aid. I know that lawyers hesitate on technical grounds, and wonder what method of relief the legislature will apply. But I submit that, in a case like this, where citizens of Massachusetts, legal voters here, have emigrated to national territory under the sanction of every law,

and are then set on by highwaymen, driven from their new homes, pillaged, and numbers of them killed and scalped, and the whole world knows that this is no accidental brawl, but a systematic war to the knife, and in defiance of all laws and liberties,—I submit that the governor and legislature should neither slumber nor sleep till they have found out how to send effectual aid and comfort to these poor farmers, or else should resign their seats to those who can. But first let them hang the halls of the state-house with black crape, and order funeral service to be said for the citizens whom they were unable to defend.

We stick at the technical difficulties. I think there never was a people so choked and stultified by forms. We adore the forms of law, instead of making them vehicles of wisdom and justice. I like the primary assembly. I own I have little esteem for governments. I esteem them only good in the moment when they are established. I set the private man first. He only who is able to stand alone is qualified to be a citizen. Next to the private man, I value the primary assembly, met to watch the government and to correct it. That is the theory of the American State, that it exists to execute the will of the citizens, is always responsible to them, and is always to be changed when it does not. First, the private citizen, then the primary assembly, and the government last.

In this country for the last few years the government has been the chief obstruction to the common weal. Who doubts that Kansas would have been very well settled, if the United States had let it alone? The government armed and led the ruffians against the poor farmers. I do not know any story so gloomy as the politics of this country for the last twenty years, centralizing ever more manifestly round one spring, and that a vast crime, and ever more plainly, until it is notorious that all promotion, power and policy are dictated from one source,—illustrating the fatal effects of a

false position to demoralize legislation and put the best people always at a disadvantage;—one crime always present, always to be varnished over, to find fine names for; and we free statesmen, as accomplices to the guilt, ever in the power of the grand offender.

Language has lost its meaning in the universal cant. *Representative Government* is really misrepresentative; *Union* is a conspiracy against the Northern States which the Northern States are to have the privilege of paying for; the *adding of Cuba and Central America* to the slave marts is *enlarging the area of Freedom*. *Manifest Destiny*, *Democracy*, *Freedom*, fine names for an ugly thing. They call it otto of rose and lavender,—I call it bilgewater. They call it Chivalry and Freedom; I call it the stealing all the earnings of a poor man and the earnings of his little girl and boy, and the earnings of all that shall come from him, his children's children forever.

But this is Union, and this is Democracy; and our poor people, led by the nose by these fine words, dance and sing, ring bells and fire cannon, with every new link of the chain which is forged for their limbs by the plotters in the Capitol.

What are the results of law and union? There is no Union. Can any citizen of Massachusetts travel in honor through Kentucky and Alabama and speak his mind? Or can any citizen of the Southern country who happens to think kidnapping a bad thing, say so? Let Mr. Underwood of Virginia answer. Is it to be supposed that there are no men in Carolina who dissent from the popular sentiment now reigning there? It must happen, in the variety of human opinions, that there are dissenters. They are silent as the grave. Are there no women in that country,—women, who always carry the conscience of a people? Yet we have not heard one discordant whisper.

In the free states, we give a snivelling support to slavery. The judges give cowardly interpretations to the law, in direct opposition to the known foundation of all law, that every *immoral statute is void*. And here of Kansas, the President says: "Let the complainants go to the courts;" though he knows that when the poor plundered farmer comes to the court, he finds the ringleader who has robbed him dismounting from his own horse, and unbuckling his knife to sit as his judge.

The President told the Kansas Committee that the whole difficulty grew from "the factious spirit of the Kansas people respecting institutions which they need not have concerned themselves about." A very remarkable speech from a Democratic President to his fellow citizens, that they are not to concern themselves with institutions which they alone are to create and determine. The President is a lawyer, and should know the statutes of the land. But I borrow the language of an eminent man, used long since, with far less occasion: "If that be law, let the ploughshare be run under the foundations of the Capitol;"—and if that be Government, extirpation is the only cure.

I am glad to see that the terror at disunion and anarchy is disappearing. Massachusetts, in its heroic day, had no government—was an anarchy. Every man stood on his own feet, was his own governor; and there was no breach of peace from Cape Cod to Mount Hoosac. California, a few years ago, by the testimony of all people at that time in the country, had the best government that ever existed. Pans of gold lay drying outside of every man's tent, in perfect security. The land was measured into little strips of a few feet wide, all side by side. A bit of ground that your hand could cover was worth one or two hundred dollars, on the edge of your strip; and there was no dispute. Every man throughout the country was armed with knife and revolver, and it was known that

instant justice would be administered to each offence, and perfect peace reigned. For the Saxon man, when he is well awake, is not a pirate but a citizen, all made of hooks and eyes, and links himself naturally to his brothers, as bees hook themselves to one another and to their queen in a loyal swarm.

But the hour is coming when the strongest will not be strong enough. A harder task will the new revolution of the nineteenth century be than was the revolution of the eighteenth century. I think the American Revolution bought its glory cheap. If the problem was new, it was simple. If there were few people, they were united, and the enemy three thousand miles off. But now, vast property, gigantic interests, family connections, webs of party, cover the land with a network that immensely multiplies the dangers of war.²⁶⁹⁷

Fellow citizens, in these times full of the fate of the Republic, I think the towns should hold town meetings, and resolve themselves into Committees of Safety, go into permanent sessions, adjourning from week to week, from month to month. I wish we could send the sergeant-at-arms to stop every American who is about to leave the country. Send home every one who is abroad, lest they should find no country to return to. Come home and stay at home, while there is a country to save. When it is lost it will be time enough then for any who are luckless enough to remain alive to gather up their clothes and depart to some land where freedom exists.

X. REMARKS

AT A MEETING FOR THE RELIEF OF THE FAMILY OF JOHN BROWN, AT
TREMONT TEMPLE, BOSTON NOVEMBER 18, 1859

"JOHN BROWN in Kansas settled, like a steadfast Yankee farmer,
Brave and godly, with four sons—all stalwart men of might.
There he spoke aloud for Freedom, and the Border strife grew warmer
Till the Rangers fired his dwelling, in his absence, in the night;
 And Old Brown,
 Osawatomie Brown,
Came homeward in the morning to find his house burned down.

Then he grasped his trusty rifle, and boldly fought for Freedom;
Smote from border unto border the fierce invading band:
And he and his brave boys vowed—so might Heaven help and speed 'em—
They would save those grand old prairies from the curse that blights the land;
 And Old Brown,
 Osawatomie Brown,
Said, 'Boys, the Lord will aid us!' and he shoved his ram rod down."

EDMUND CLARENCE STEDMAN, *John Brown*.

JOHN BROWN

MR. CHAIRMAN, and Fellow Citizens: I share the sympathy and sorrow which have brought us together. Gentlemen who have preceded me have well said that no wall of separation could here exist. This commanding event which has brought us together, eclipses all others which have occurred for a long time in our history, and I am very glad to see that this sudden interest in the hero of Harper's Ferry has provoked an extreme curiosity in all parts of the Republic, in regard to the details of his history. Every anecdote is eagerly sought, and I do not wonder that gentlemen find traits of relation readily between him and themselves. One finds a relation in the church, another in the profession, another in the place of his birth. He was happily a representative of the American Republic. Captain John Brown is a farmer, the fifth in descent from Peter Brown, who came to Plymouth in the Mayflower, in 1620. All the six have been farmers. His grandfather, of Simsbury, in Connecticut, was a captain in the Revolution. His father, largely interested as a raiser of stock, became a contractor to supply the army with beef, in the war of 1812, and our Captain John Brown, then a boy, with his father was present and witnessed

the surrender of General Hull. He cherishes a great respect for his father, as a man of strong character, and his respect is probably just. For himself, he is so transparent that all men see him through. He is a man to make friends wherever on earth courage and integrity are esteemed, the rarest of heroes, a pure idealist, with no by-ends of his own. Many of you have seen him, and every one who has heard him speak has been impressed alike by his simple, artless goodness, joined with his sublime courage. He joins that perfect Puritan faith which brought his fifth ancestor to Plymouth Rock with his grandfather's ardor in the Revolution. He believes in two articles,—two instruments, shall I say?—the Golden Rule and the Declaration of Independence; and he used this expression in conversation here concerning them, "Better that a whole generation of men, women and children should pass away by a violent death than that one word of either should be violated in this country." There is a Unionist,—there is a strict constructionist for you. He believes in the Union of the States, and he conceives that the only obstruction to the Union is Slavery, and for that reason, as a patriot, he works for its abolition. The governor of Virginia has pronounced his eulogy in a manner that discredits the moderation of our timid parties. His own speeches to the court have interested the nation in him. What magnanimity, and what innocent pleading, as of childhood! You remember his words: "If I had interfered in behalf of the rich, the powerful, the intelligent, the so-called great, or any of their friends, parents, wives or children, it would all have been right. But I believe that to have interfered as I have done, for the despised poor, was not wrong, but right."²⁶⁹⁸

It is easy to see what a favorite he will be with history, which plays such pranks with temporary reputations. Nothing can resist the sympathy which all elevated minds must feel with Brown, and

through them the whole civilized world; and if he must suffer, he must drag official gentlemen into an immortality most undesirable, of which they have already some disagreeable forebodings. Indeed, it is the *reductio ad absurdum* of Slavery, when the governor of Virginia is forced to hang a man whom he declares to be a man of the most integrity, truthfulness and courage he has ever met. Is that the kind of man the gallows is built for? It were bold to affirm that there is within that broad commonwealth, at this moment, another citizen as worthy to live, and as deserving of all public and private honor, as this poor prisoner.²⁶⁹⁹

But we are here to think of relief for the family of John Brown. To my eyes, that family looks very large and very needy of relief. It comprises his brave fellow sufferers in the Charlestown Jail; the fugitives still hunted in the mountains of Virginia and Pennsylvania; the sympathizers with him in all the states; and, I may say, almost every man who loves the Golden Rule and the Declaration of Independence, like him, and who sees what a tiger's thirst threatens him in the malignity of public sentiment in the slave states. It seems to me that a common feeling joins the people of Massachusetts with him.

I said John Brown was an idealist. He believed in his ideas to that extent that he existed to put them all into action; he said 'he did not believe in moral suasion, he believed in putting the thing through.' He saw how deceptive the forms are. We fancy, in Massachusetts, that we are free; yet it seems the government is quite unreliable. Great wealth, great population, men of talent in the executive, on the bench,—all the forms right,—and yet, life and freedom are not safe. Why? Because the judges rely on the forms, and do not, like John Brown, use their eyes to see the fact behind the forms. They assume that the United States can protect its witness or its prisoner. And in Massachusetts that is true, but the moment he is

carried out of the bounds of Massachusetts, the United States, it is notorious, afford no protection at all; the government, the judges, are an envenomed party, and give such protection as they give in Utah to honest citizens, or in Kansas; such protection as they gave to their own Commodore Paulding, when he was simple enough to mistake the formal instructions of his government for their real meaning.²⁷⁰⁰ The state judges fear collision between their two allegiances; but there are worse evils than collision; namely, the doing substantial injustice. A good man will see that the use of a judge is to secure good government, and where the citizen's weal is imperilled by abuse of the federal power, to use that arm which can secure it, viz., the local government. Had that been done on certain calamitous occasions, we should not have seen the honor of Massachusetts trailed in the dust, stained to all ages, once and again, by the ill-timed formalism of a venerable bench. If judges cannot find law enough to maintain the sovereignty of the state, and to protect the life and freedom of every inhabitant not a criminal, it is idle to compliment them as learned and venerable. What avails their learning or veneration? At a pinch, they are no more use than idiots. After the mischance they wring their hands, but they had better never have been born.²⁷⁰¹ A Vermont judge, Hutchinson, who has the Declaration of Independence in his heart; a Wisconsin judge, who knows that laws are for the protection of citizens against kidnappers, is worth a court-house full of lawyers so idolatrous of forms as to let go the substance. Is any man in Massachusetts so simple as to believe that when a United States Court in Virginia, now, in its present reign of terror, sends to Connecticut, or New York, or Massachusetts, for a witness, it wants him for a witness? No; it wants him for a party; it wants him for meat to slaughter and eat. And your *habeas corpus* is, in any way in which it has been, or, I fear, is likely to be used, a nuisance, and

not a protection; for it takes away his right reliance on himself, and the natural assistance of his friends and fellow citizens, by offering him a form which is a piece of paper.

But I am detaining the meeting on matters which others understand better. I hope, then, that, in administering relief to John Brown's family, we shall remember all those whom his fate concerns, all who are in sympathy with him, and not forget to aid him in the best way, by securing freedom and independence in Massachusetts.

XI. JOHN BROWN

SPEECH AT SALEM, JANUARY 6, 1860

"A MAN there came, whence none could tell,
Bearing a touchstone in his hand,
And tested all things in the land
By its unerring spell.

A thousand transformations rose
From fair to foul, from foul to fair:
The golden crown he did not spare,
Nor scorn the beggar's clothes.

.

Then angrily the people cried,
'The loss outweighs the profit far;
Our goods suffice us as they are:
We will not have them tried.'

And since they could not so avail
To check his unrelenting quest,
They seized him, saying, 'Let him test
How real is our jail!'

But though they slew him with the sword,
And in the fire his touchstone burned,
Its doings could not be o'erturned,
Its undoings restored.

And when, to stop all future harm,
They strewed its ashes to the breeze,
They little guessed each grain of these
Conveyed the perfect charm."

WILLIAM ALLINGHAM.

JOHN BROWN

MR. CHAIRMAN: I have been struck with one fact, that the best orators who have added their praise to his fame,—and I need not go out of this house to find the purest eloquence in the country,—have one rival who comes off a little better, and that is JOHN BROWN. Everything that is said of him leaves people a little dissatisfied; but as soon as they read his own speeches and letters they are heartily contented,—such is the singleness of purpose which justifies him to the head and the heart of all. Taught by this experience, I mean, in the few remarks I have to make, to cling to his history, or let him speak for himself.

John Brown, the founder of liberty in Kansas, was born in Torrington, Litchfield County, Connecticut, in 1800. When he was five years old his father emigrated to Ohio, and the boy was there set to keep sheep and to look after cattle and dress skins; he went bareheaded and barefooted, and clothed in buckskin. He said that he loved rough play, could never have rough play enough; could not see a seedy hat without wishing to pull it off. But for this it needed that the playmates should be equal; not one in fine clothes and the other in buckskin; not one his own master, hale and

heartly, and the other watched and whipped. But it chanced that in Pennsylvania, where he was sent by his father to collect cattle, he fell in with a boy whom he heartily liked and whom he looked upon as his superior. This boy was a slave; he saw him beaten with an iron shovel, and otherwise maltreated; he saw that this boy had nothing better to look forward to in life, whilst he himself was petted and made much of; for he was much considered in the family where he then stayed, from the circumstance that this boy of twelve years had conducted alone a drove of cattle a hundred miles. But the colored boy had no friend, and no future. This worked such indignation in him that he swore an oath of resistance to slavery as long as he lived. And thus his enterprise to go into Virginia and run off five hundred or a thousand slaves was not a piece of spite or revenge, a plot of two years or of twenty years, but the keeping of an oath made to heaven and earth forty-seven years before. Forty-seven years at least, though I incline to accept his own account of the matter at Charlestown, which makes the date a little older, when he said, "This was all settled millions of years before the world was made."

He grew up a religious and manly person, in severe poverty; a fair specimen of the best stock of New England; having that force of thought and that sense of right which are the warp and woof of greatness. Our farmers were Orthodox Calvinists, mighty in the Scriptures; had learned that life was a preparation, a "probation," to use their word, for a higher world, and was to be spent in loving and serving mankind.²⁷⁰²

Thus was formed a romantic character absolutely without any vulgar trait; living to ideal ends, without any mixture of self-indulgence or compromise, such as lowers the value of benevolent and thoughtful men we know; abstemious, refusing luxuries, not sourly and reproachfully, but simply as unfit for his habit; quiet and

gentle as a child in the house. And, as happens usually to men of romantic character, his fortunes were romantic. Walter Scott would have delighted to draw his picture and trace his adventurous career. A shepherd and herdsman, he learned the manners of animals, and knew the secret signals by which animals communicate.²⁷⁰³ He made his hard bed on the mountains with them; he learned to drive his flock through thickets all but impassable; he had all the skill of a shepherd by choice of breed and by wise husbandry to obtain the best wool, and that for a course of years. And the anecdotes preserved show a far-seeing skill and conduct which, in spite of adverse accidents, should secure, one year with another, an honest reward, first to the farmer, and afterwards to the dealer. If he kept sheep, it was with a royal mind; and if he traded in wool, he was a merchant prince, not in the amount of wealth, but in the protection of the interests confided to him.

I am not a little surprised at the easy effrontery with which political gentlemen, in and out of Congress, take it upon them to say that there are not a thousand men in the North who sympathize with John Brown. It would be far safer and nearer the truth to say that all people, in proportion to their sensibility and self-respect, sympathize with him. For it is impossible to see courage, and disinterestedness, and the love that casts out fear, without sympathy. All women are drawn to him by their predominance of sentiment. All gentlemen, of course, are on his side. I do not mean by "gentlemen," people of scented hair and perfumed handkerchiefs, but men of gentle blood and generosity, "fulfilled with all nobleness," who, like the Cid, give the outcast leper a share of their bed; like the dying Sidney, pass the cup of cold water to the dying soldier who needs it more. For what is the oath of gentle blood and knighthood? What but to protect the weak and lowly against the strong oppressor?

Nothing is more absurd than to complain of this sympathy, or to complain of a party of men united in opposition to slavery. As well complain of gravity, or the ebb of the tide. Who makes the abolitionist? The slave-holder. The sentiment of mercy is the natural recoil which the laws of the universe provide to protect mankind from destruction by savage passions. And our blind statesmen go up and down, with committees of vigilance and safety, hunting for the origin of this new heresy. They will need a very vigilant committee indeed to find its birthplace, and a very strong force to root it out. For the arch-abolitionist, older than Brown, and older than the Shenandoah Mountains, is Love, whose other name is Justice, which was before Alfred, before Lycurgus, before slavery, and will be after it.²⁷⁰⁴

XII. THEODORE PARKER

AN ADDRESS AT THE MEMORIAL MEETING AT THE MUSIC HALL,
BOSTON JUNE 15, 1860

"HERE COMES Parker, the Orson of parsons, a man
Whom the Church undertook to put under her ban.—

.

There's a background of God to each hard-working feature,
Every word that he speaks has been fierily furnaced
In the blast of a life that has struggled in earnest:
There he stands, looking more like a ploughman than priest,
If not dreadfully awkward, not graceful at least;

.

But his periods fall on you, stroke after stroke,
Like the blows of a lumberer felling an oak,
You forget the man wholly, you 're thankful to meet
With a preacher who smacks of the field and the street,
And to hear, you 're not over-particular whence,
Almost Taylor's profusion, quite Latimer's sense."

—LOWELL, *A Fable for Critics*.

THEODORE PARKER

AT THE death of a good and admirable person we meet to console and animate each other by the recollection of his virtues.

I have the feeling that every man's biography is at his own expense. He furnishes not only the facts but the report. I mean that all biography is autobiography. It is only what he tells of himself that comes to be known and believed. In Plutarch's lives of Alexander and Pericles, you have the secret whispers of their confidence to their lovers and trusty friends. For it was each report of this kind that impressed those to whom it was told in a manner to secure its being told everywhere to the best, to those who speak with authority to their own times and therefore to ours. For the political rule is a cosmical rule, that if a man is not strong in his own district, he is not a good candidate elsewhere.

He whose voice will not be heard here again could well afford to tell his experiences; they were all honorable to him, and were part of the history of the civil and religious liberty of his times. Theodore Parker was a son of the soil, charged with the energy of New England, strong, eager, inquisitive of knowledge, of a

diligence that never tired, upright, of a haughty independence, yet the gentlest of companions; a man of study, fit for a man of the world; with decided opinions and plenty of power to state them; rapidly pushing his studies so far as to leave few men qualified to sit as his critics.²⁷⁰⁵ He elected his part of duty, or accepted nobly that assigned him in his rare constitution. Wonderful acquisition of knowledge, a rapid wit that heard all, and welcomed all that came, by seeing its bearing. Such was the largeness of his reception of facts and his skill to employ them that it looked as if he were some president of council to whom a score of telegraphs were ever bringing in reports; and his information would have been excessive, but for the noble use he made of it ever in the interest of humanity. He had a strong understanding, a logical method, a love for facts, a rapid eye for their historic relations, and a skill in stripping them of traditional lustres. He had a sprightly fancy, and often amused himself with throwing his meaning into pretty apologies; yet we can hardly ascribe to his mind the poetic element, though his scholarship had made him a reader and quoter of verses. A little more feeling of the poetic significance of his facts would have disqualified him for some of his severer offices to his generation. The old religions have a charm for most minds which it is a little uncanny to disturb. 'T is sometimes a question, shall we not leave them to decay without rude shocks? I remember that I found some harshness in his treatment both of Greek and of Hebrew antiquity, and sympathized with the pain of many good people in his auditory, whilst I acquitted him, of course, of any wish to be flippant. He came at a time when, to the irresistible march of opinion, the forms still retained by the most advanced sects showed loose and lifeless, and he, with something less of affectionate attachment to the old, or with more vigorous logic, rejected them. 'T is objected to him that he scattered too many

illusions. Perhaps more tenderness would have been graceful; but it is vain to charge him with perverting the opinions of the new generation.

The opinions of men are organic. Simply, those came to him who found themselves expressed by him. And had they not met this enlightened mind, in which they beheld their own opinions combined with zeal in every cause of love and humanity, they would have suspected their opinions and suppressed them, and so sunk into melancholy or malignity—a feeling of loneliness and hostility to what was reckoned respectable. 'T is plain to me that he has achieved a historic immortality here; that he has so woven himself in these few years into the history of Boston, that he can never be left out of your annals. It will not be in the acts of city councils, nor of obsequious mayors; nor, in the state-house, the proclamations of governors, with their failing virtue—failing them at critical moments—that coming generations will study what really befell; but in the plain lessons of Theodore Parker in this Music Hall, in Faneuil Hall, or in legislative committee rooms, that the true temper and authentic record of these days will be read. The next generation will care little for the chances of elections that govern governors now, it will care little for fine gentlemen who behaved shabbily; but it will read very intelligently in his rough story, fortified with exact anecdotes, precise with names and dates, what part was taken by each actor; who threw himself into the cause of humanity and came to the rescue of civilization at a hard pinch, and who blocked its course.

The vice charged against America is the want of sincerity in leading men. It does not lie at his door. He never kept back the truth for fear to make an enemy. But, on the other hand, it was complained that he was bitter and harsh, that his zeal burned with too hot a flame. It is so difficult, in evil times, to escape this

charge! for the faithful preacher most of all. It was his merit, like Luther, Knox and Latimer, and John Baptist, to speak tart truth, when that was peremptory and when there were few to say it. But his sympathy for goodness was not less energetic. One fault he had, he overestimated his friends,—I may well say it,—and sometimes vexed them with the importunity of his good opinion, whilst they knew better the ebb which follows unfounded praise. He was capable, it must be said, of the most unmeasured eulogies on those he esteemed, especially if he had any jealousy that they did not stand with the Boston public as highly as they ought. His commanding merit as a reformer is this, that he insisted beyond all men in pulpits—I cannot think of one rival—that the essence of Christianity is its practical morals; it is there for use, or it is nothing; and if you combine it with sharp trading, or with ordinary city ambitions to gloze over municipal corruptions, or private intemperance, or successful fraud, or immoral politics, or unjust wars, or the cheating of Indians, or the robbery of frontier nations, or leaving your principles at home to follow on the high seas or in Europe a supple complaisance to tyrants,—it is a hypocrisy, and the truth is not in you; and no love of religious music or of dreams of Swedenborg, or praise of John Wesley, or of Jeremy Taylor, can save you from the Satan which you are.

His ministry fell on a political crisis also; on the years when Southern slavery broke over its old banks, made new and vast pretensions, and wrung from the weakness or treachery of Northern people fatal concessions in the Fugitive Slave Bill and the repeal of the Missouri Compromise. Two days, bitter in the memory of Boston, the days of the rendition of Sims and of Burns, made the occasion of his most remarkable discourses. He kept nothing back. In terrible earnest he denounced the public crime, and meted out to every official, high and low, his due portion.²⁷⁰⁶

By the incessant power of his statement, he made and held a party. It was his great service to freedom. He took away the reproach of silent consent that would otherwise have lain against the indignant minority, by uttering in the hour and place wherein these outrages were done, the stern protest.

But whilst I praise this frank speaker, I have no wish to accuse the silence of others. There are men of good powers who have so much sympathy that they must be silent when they are not in sympathy. If you don't agree with them, they know they only injure the truth by speaking. Their faculties will not play them true, and they do not wish to squeak and gibber, and so they shut their mouths. I can readily forgive this, only not the other, the false tongue which makes the worse appear the better cause. There were, of course, multitudes to censure and defame this truth-speaker. But the brave know the brave. Fops, whether in hotels or churches, will utter the fop's opinion, and faintly hope for the salvation of his soul; but his manly enemies, who despised the fops, honored him; and it is well known that his great hospitable heart was the sanctuary to which every soul conscious of an earnest opinion came for sympathy—alike the brave slave-holder and the brave slave-rescuer. These met in the house of this honest man—for every sound heart loves a responsible person, one who does not in generous company say generous things, and in mean company base things, but says one thing, now cheerfully, now indignantly, but always because he must, and because he sees that, whether he speak or refrain from speech, this is said over him; and history, nature and all souls testify to the same.

Ah, my brave brother! it seems as if, in a frivolous age, our loss were immense, and your place cannot be supplied. But you will already be consoled in the transfer of your genius, knowing well that the nature of the world will affirm to all men, in all times, that

which for twenty-five years you valiantly spoke; that the winds of Italy murmur the same truth over your grave; the winds of America over these bereaved streets; that the sea which bore your mourners home affirms it, the stars in their courses, and the inspirations of youth; whilst the polished and pleasant traitors to human rights, with perverted learning and disgraced graces, rot and are forgotten with their double tongue saying all that is sordid for the corruption of man.

The sudden and singular eminence of Mr. Parker, the importance of his name and influence, are the verdict of his country to his virtues. We have few such men to lose; amiable and blameless at home, feared abroad as the standard-bearer of liberty, taking all the duties he could grasp, and more, refusing to spare himself, he has gone down in early glory to his grave, to be a living and enlarging power, wherever learning, wit, honest valor and independence are honored.²⁷⁰⁷

XIII. AMERICAN CIVILIZATION

To THE mizzen, the main, and the fore
Up with it once more!—
The old tri-color,
The ribbon of power,
The white, blue and red which the nations adore!
It was down at half-mast
For a grief—that is past!
To the emblem of glory no sorrow can last!

AMERICAN CIVILIZATION

USE, LABOR of each for all, is the health and virtue of all beings. *Ich dien*, I serve, is a truly royal motto. And it is the mark of nobleness to volunteer the lowest service, the greatest spirit only attaining to humility. Nay, God is God because he is the servant of all. Well, now here comes this conspiracy of slavery,—they call it an institution, I call it a destitution,—this stealing of men and setting them to work, stealing their labor, and the thief sitting idle himself; and for two or three ages it has lasted, and has yielded a certain quantity of rice, cotton and sugar. And, standing on this doleful experience, these people have endeavored to reverse the natural sentiments of mankind, and to pronounce labor disgraceful, and the well-being of a man to consist in eating the fruit of other men's labor. Labor: a man coins himself into his labor; turns his day, his strength, his thought, his affection into some product which remains as the visible sign of his power; and to protect that, to secure that to him, to secure his past self to his future self, is the object of all government. There is no interest in any country so imperative as that of labor; it covers all, and constitutions and governments exist for that,—to protect and insure it to the laborer. All honest

men are daily striving to earn their bread by their industry. And who is this who tosses his empty head at this blessing in disguise, the constitution of human nature, and calls labor vile, and insults the faithful workman at his daily toil? I see for such madness no hellebore,—for such calamity no solution but servile war and the Africanization of the country that permits it.

At this moment in America the aspects of political society absorb attention. In every house, from Canada to the Gulf, the children ask the serious father,—“What is the news of the war to-day, and when will there be better times?” The boys have no new clothes, no gifts, no journeys; the girls must go without new bonnets; boys and girls find their education, this year, less liberal and complete.²⁷⁰⁸ All the little hopes that heretofore made the year pleasant are deferred. The state of the country fills us with anxiety and stern duties. We have attempted to hold together two states of civilization: a higher state, where labor and the tenure of land and the right of suffrage are democratical; and a lower state, in which the old military tenure of prisoners or slaves, and of power and land in a few hands, makes an oligarchy: we have attempted to hold these two states of society under one law. But the rude and early state of society does not work well with the later, nay, works badly, and has poisoned politics, public morals and social intercourse in the Republic, now for many years.

The times put this question, Why cannot the best civilization be extended over the whole country, since the disorder of the less-civilized portion menaces the existence of the country? Is this secular progress we have described, this evolution of man to the highest powers, only to give him sensibility, and not to bring duties with it? Is he not to make his knowledge practical? to stand and to withstand? Is not civilization heroic also? Is it not for action? has it not a will? “There are periods,” said Niebuhr, “when something

much better than happiness and security of life is attainable." We live in a new and exceptionable age. America is another word for Opportunity. Our whole history appears like a last effort of the Divine Providence in behalf of the human race; and a literal, slavish following of precedents, as by a justice of the peace, is not for those who at this hour lead the destinies of this people. The evil you contend with has taken alarming proportions, and you still content yourself with parrying the blows it aims, but, as if enchanted, abstain from striking at the cause.²⁷⁰⁹

If the American people hesitate, it is not for want of warning or advices. The telegraph has been swift enough to announce our disasters. The journals have not suppressed the extent of the calamity. Neither was there any want of argument or of experience. If the war brought any surprise to the North, it was not the fault of sentinels on the watch-tower, who had furnished full details of the designs, the muster and the means of the enemy. Neither was anything concealed of the theory or practice of slavery. To what purpose make more big books of these statistics? There are already mountains of facts, if any one wants them. But people do not want them. They bring their opinion into the world. If they have a comatose tendency in the brain, they are pro-slavery while they live; if of a nervous sanguineous temperament, they are abolitionists. Then interests were never persuaded. Can you convince the shoe interest, or the iron interest, or the cotton interest, by reading passages from Milton or Montesquieu? You wish to satisfy people that slavery is bad economy. Why, the Edinburgh Review pounded on that string, and made out its case, forty years ago. A democratic statesman said to me, long since, that, if he owned the state of Kentucky, he would manumit all the slaves, and be a gainer by the transaction. Is this new? No, everybody knows it. As a general economy it is admitted. But

there is no one owner of the state, but a good many small owners. One man owns land and slaves; another owns slaves only. Here is a woman who has no other property,—like a lady in Charleston I knew of, who owned fifteen sweeps and rode in her carriage. It is clearly a vast inconvenience to each of these to make any change, and they are fretful and talkative, and all their friends are; and those less interested are inert, and, from want of thought, averse to innovation. It is like free trade, certainly the interest of nations, but by no means the interest of certain towns and districts, which tariff feeds fat; and the eager interest of the few overpowers the apathetic general conviction of the many. Banknotes rob the public, but are such a daily convenience that we silence our scruples and make believe they are gold. So imposts are the cheap and right taxation; but, by the dislike of people to pay out a direct tax, governments are forced to render life costly by making them pay twice as much, hidden in the price of tea and sugar.

In this national crisis, it is not argument that we want, but that rare courage which dares commit itself to a principle, believing that Nature is its ally, and will create the instruments it requires, and more than make good any petty and injurious profit which it may disturb. There never was such a combination as this of ours, and the rules to meet it are not set down in any history. We want men of original perception and original action, who can open their eyes wider than to a nationality, namely, to considerations of benefit to the human race, can act in the interest of civilization. Government must not be a parish clerk, a justice of the peace. It has, of necessity, in any crisis of the state, the absolute powers of a dictator. The existing administration is entitled to the utmost candor. It is to be thanked for its angelic virtue, compared with any executive experiences with which we have been familiar. But the times will not allow us to indulge in compliment. I wish I saw in

the people that inspiration which, if government would not obey the same, would leave the government behind and create on the moment the means and executors it wanted. Better the war should more dangerously threaten us,—should threaten fracture in what is still whole, and punish us with burned capitals and slaughtered regiments, and so exasperate the people to energy, exasperate our nationality. There are Scriptures written invisibly on men's hearts, whose letters do not come out until they are enraged. They can be read by war-fires, and by eyes in the last peril.

We cannot but remember that there have been days in American history, when, if the free states had done their duty, slavery had been blocked by an immovable barrier, and our recent calamities forever precluded. The free states yielded, and every compromise was surrender and invited new demands. Here again is a new occasion which heaven offers to sense and virtue. It looks as if we held the fate of the fairest possession of mankind in our hands, to be saved by our firmness or to be lost by hesitation.

The one power that has legs long enough and strong enough to wade across the Potomac offers itself at this hour; the one strong enough to bring all the civility up to the height of that which is best, prays now at the door of Congress for leave to move. Emancipation is the demand of civilization. That is a principle; everything else is an intrigue. This is a progressive policy, puts the whole people in healthy, productive, amiable position, puts every man in the South in just and natural relations with every man in the North, laborer with laborer.

I shall not attempt to unfold the details of the project of emancipation. It has been stated with great ability by several of its leading advocates. I will only advert to some leading points of the argument, at the risk of repeating the reasons of others. The war is welcome to the Southerner; a chivalrous sport to him, like

hunting, and suits his semi-civilized condition. On the climbing scale of progress, he is just up to war, and has never appeared to such advantage as in the last twelvemonth. It does not suit us. We are advanced some ages on the war-state,—to trade, art and general cultivation. His laborer works for him at home, so that he loses no labor by the war. All our soldiers are laborers; so that the South, with its inferior numbers, is almost on a footing in effective war-population with the North. Again, as long as we fight without any affirmative step taken by the government, any word intimating forfeiture in the rebel states of their old privileges under the law, they and we fight on the same side, for slavery. Again, if we conquer the enemy,—what then? We shall still have to keep him under, and it will cost as much to hold him down as it did to get him down. Then comes the summer, and the fever will drive the soldiers home; next winter we must begin at the beginning, and conquer him over again. What use then to take a fort, or a privateer, or get possession of an inlet, or to capture a regiment of rebels?

But one weapon we hold which is sure. Congress can, by edict, as a part of the military defence which it is the duty of Congress to provide, abolish slavery, and pay for such slaves as we ought to pay for. Then the slaves near our armies will come to us; those in the interior will know in a week what their rights are, and will, where opportunity offers, prepare to take them. Instantly, the armies that now confront you must run home to protect their estates, and must stay there, and your enemies will disappear.

There can be no safety until this step is taken. We fancy that the endless debate, emphasized by the crime and by the cannons of this war, has brought the free states to some conviction that it can never go well with us whilst this mischief of slavery remains in our politics, and that by concert or by might we must put an end to it. But we have too much experience of the futility of an

easy reliance on the momentary good dispositions of the public. There does exist, perhaps, a popular will that the Union shall not be broken,—that our trade, and therefore our laws, must have the whole breadth of the continent, and from Canada to the Gulf. But since this is the rooted belief and will of the people, so much the more are they in danger, when impatient of defeats, or impatient of taxes, to go with a rush for some peace; and what kind of peace shall at that moment be easiest attained, they will make concessions for it,—will give up the slaves, and the whole torment of the past half-century will come back to be endured anew.

Neither do I doubt, if such a composition should take place, that the Southerners will come back quietly and politely, leaving their haughty dictation. It will be an era of good feelings. There will be a lull after so loud a storm; and, no doubt, there will be discreet men from that section who will earnestly strive to inaugurate more moderate and fair administration of the government, and the North will for a time have its full share and more, in place and counsel. But this will not last;—not for want of sincere good will in sensible Southerners, but because Slavery will again speak through them its harsh necessity. It cannot live but by injustice, and it will be unjust and violent to the end of the world.²⁷¹⁰

The power of Emancipation is this, that it alters the atomic social constitution of the Southern people. Now, their interest is in keeping out white labor; then, when they must pay wages, their interest will be to let it in, to get the best labor, and, if they fear their blacks, to invite Irish, German and American laborers. Thus, whilst Slavery makes and keeps disunion, Emancipation removes the whole objection to union. Emancipation at one stroke elevates the poor-white of the South, and identifies his interest with that of the Northern laborer.

Now, in the name of all that is simple and generous, why should not this great right be done? Why should not America be capable of a second stroke for the well-being of the human race, as eighty or ninety years ago she was for the first,—of an affirmative step in the interests of human civility, urged on her, too, not by any romance of sentiment, but by her own extreme perils? It is very certain that the statesman who shall break through the cobwebs of doubt, fear and petty cavil that lie in the way, will be greeted by the unanimous thanks of mankind. Men reconcile themselves very fast to a bold and good measure when once it is taken, though they condemned it in advance. A week before the two captive commissioners were surrendered to England, every one thought it could not be done: it would divide the North. It was done, and in two days all agreed it was the right action.²⁷¹¹ And this action, which costs so little (the parties injured by it being such a handful that they can very easily be indemnified), rids the world, at one stroke, of this degrading nuisance, the cause of war and ruin to nations. This measure at once puts all parties right. This is borrowing, as I said, the omnipotence of a principle. What is so foolish as the terror lest the blacks should be made furious by freedom and wages? It is denying these that is the outrage, and makes the danger from the blacks. But justice satisfies everybody,—white man, red man, yellow man and black man. All like wages, and the appetite grows by feeding.

But this measure, to be effectual, must come speedily. The weapon is slipping out of our hands. "Time," say the Indian Scriptures, "drinketh up the essence of every great and noble action which ought to be performed, and which is delayed in the execution."²⁷¹²

I hope it is not a fatal objection to this policy that it is simple and beneficent thoroughly, which is the tribute of a moral action.

An unprecedented material prosperity has not tended to make us Stoics or Christians. But the laws by which the universe is organized reappear at every point, and will rule it. The end of all political struggle is to establish morality as the basis of all legislation. It is not free institutions, it is not a republic, it is not a democracy, that is the end,—no, but only the means. Morality is the object of government.²⁷¹³ We want a state of things in which crime shall not pay. This is the consolation on which we rest in the darkness of the future and the afflictions of to-day, that the government of the world is moral, and does forever destroy what is not. It is the maxim of natural philosophers that the natural forces wear out in time all obstacles, and take place: and it is the maxim of history that victory always falls at last where it ought to fall; or, there is perpetual march and progress to ideas. But in either case, no link of the chain can drop out. Nature works through her appointed elements; and ideas must work through the brains and the arms of good and brave men, or they are no better than dreams.

Since the above pages were written, President Lincoln has proposed to Congress that the government shall coöperate with any state that shall enact a gradual abolishment of slavery. In the recent series of national successes, this message is the best. It marks the happiest day in the political year. The American Executive ranges itself for the first time on the side of freedom. If Congress has been backward, the President has advanced. This state-paper is the more interesting that it appears to be the President's individual act, done under a strong sense of duty. He speaks his own thought in his own style. All thanks and honor to the Head of the State! The message has been received throughout the country with praise, and, we doubt not, with more pleasure than has been spoken. If Congress accords with the President, it is not yet too

late to begin the emancipation; but we think it will always be too late to make it gradual. All experience agrees that it should be immediate.²⁷¹⁴ More and better than the President has spoken shall, perhaps, the effect of this message be,—but, we are sure, not more or better than he hoped in his heart, when, thoughtful of all the complexities of his position, he penned these cautious words.

XIV. THE EMANCIPATION PROCLAMATION

AN ADDRESS DELIVERED IN BOSTON IN SEPTEMBER, 1862

TO-DAY UNBIND the captive,
So only are ye unbound;
Lift up a people from the dust,
Trump of their rescue, sound!

Pay ransom to the owner
And fill the bag to the brim.
Who is the owner? The slave is owner,
And ever was. Pay him.

O North! give him beauty for rags,
And honor, O South! for his shame;
Nevada! coin thy golden crags
With freedom's image and name.

Up! and the dusky race
That sat in darkness long,—
Be swift their feet as antelopes,
And as behemoth strong.

Come, East and West and North,
By races, as snow-flakes,
And carry my purpose forth,
Which neither halts nor shakes.

My will fulfilled shall be,
For in daylight or in dark,
My thunderbolt has eyes to see
His way home to the mark.

THE EMANCIPATION PROCLAMATION

IN SO many arid forms which states encrust themselves with, once in a century, if so often, a poetic act and record occur. These are the jets of thought into affairs, when, roused by danger or inspired by genius, the political leaders of the day break the else insurmountable routine of class and local legislation, and take a step forward in the direction of catholic and universal interests. Every step in the history of political liberty is a sally of the human mind into the untried Future, and has the interest of genius, and is fruitful in heroic anecdotes. Liberty is a slow fruit. It comes, like religion, for short periods, and in rare conditions, as if awaiting a culture of the race which shall make it organic and permanent. Such moments of expansion in modern history were the Confession of Augsburg, the plantation of America, the English Commonwealth of 1648, the Declaration of American Independence in 1776, the British emancipation of slaves in the West Indies, the passage of the Reform Bill, the repeal of the Corn-Laws, the Magnetic Ocean Telegraph, though yet imperfect, the passage of the Homestead Bill in the last Congress, and now, eminently, President Lincoln's Proclamation on the twenty-second of September. These are

acts of great scope, working on a long future and on permanent interests, and honoring alike those who initiate and those who receive them. These measures provoke no noisy joy, but are received into a sympathy so deep as to apprise us that mankind are greater and better than we know.²⁷¹⁵ At such times it appears as if a new public were created to greet the new event. It is as when an orator, having ended the compliments and pleasantries with which he conciliated attention, and having run over the superficial fitness and commodities of the measure he urges, suddenly, lending himself to some happy inspiration, announces with vibrating voice the grand human principles involved;—the bravos and wits who greeted him loudly thus far are surprised and overawed; a new audience is found in the heart of the assembly,—an audience hitherto passive and unconcerned, now at last so searched and kindled that they come forward, every one a representative of mankind, standing for all nationalities.

The extreme moderation with which the President advanced to his design,—his long-avowed expectant policy, as if he chose to be strictly the executive of the best public sentiment of the country, waiting only till it should be unmistakably pronounced,—so fair a mind that none ever listened so patiently to such extreme varieties of opinion,—so reticent that his decision has taken all parties by surprise, whilst yet it is just the sequel of his prior acts,—the firm tone in which he announces it, without inflation or surplusage,—all these have bespoken such favor to the act that, great as the popularity of the President has been, we are beginning to think that we have underestimated the capacity and virtue which the Divine Providence has made an instrument of benefit so vast. He has been permitted to do more for America than any other American man. He is well entitled to the most indulgent construction. Forget all that we thought shortcomings, every mistake, every delay. In the

extreme embarrassments of his part, call these endurance, wisdom, magnanimity; illuminated, as they now are, by this dazzling success.

When we consider the immense opposition that has been neutralized or converted by the progress of the war (for it is not long since the President anticipated the resignation of a large number of officers in the army, and the secession of three states, on the promulgation of this policy),—when we see how the great stake which foreign nations hold in our affairs has recently brought every European power as a client into this court, and it became every day more apparent what gigantic and what remote interests were to be affected by the decision of the President,—one can hardly say the deliberation was too long. Against all timorous counsels he had the courage to seize the moment; and such was his position, and such the felicity attending the action, that he has replaced government in the good graces of mankind. “Better is virtue in the sovereign than plenty in the season,” say the Chinese. ‘T is wonderful what power is, and how ill it is used, and how its ill use makes life mean, and the sunshine dark. Life in America had lost much of its attraction in the later years. The virtues of a good magistrate undo a world of mischief, and, because Nature works with rectitude, seem vastly more potent than the acts of bad governors, which are ever tempered by the good nature in the people, and the incessant resistance which fraud and violence encounter. The acts of good governors work a geometrical ratio, as one midsummer day seems to repair the damage of a year of war.

A day which most of us dared not hope to see, an event worth the dreadful war, worth its costs and uncertainties, seems now to be close before us. October, November, December will have passed over beating hearts and plotting brains: then the hour will strike, and all men of African descent who have faculty enough

to find their way to our lines are assured of the protection of American law.

It is by no means necessary that this measure should be suddenly marked by any signal results on the negroes or on the rebel masters. The force of the act is that it commits the country to this justice,—that it compels the innumerable officers, civil, military, naval, of the Republic to range themselves on the line of this equity. It draws the fashion to this side. It is not a measure that admits of being taken back. Done, it cannot be undone by a new administration. For slavery overpowers the disgust of the moral sentiment only through immemorial usage. It cannot be introduced as an improvement of the nineteenth century. This act makes that the lives of our heroes have not been sacrificed in vain. It makes a victory of our defeats. Our hurts are healed; the health of the nation is repaired. With a victory like this, we can stand many disasters. It does not promise the redemption of the black race; that lies not with us: but it relieves it of our opposition. The President by this act has paroled all the slaves in America; they will no more fight against us: and it relieves our race once for all of its crime and false position. The first condition of success is secured in putting ourselves right. We have recovered ourselves from our false position, and planted ourselves on a law of Nature:—

“If that fail,
The pillared firmament is rottenness,
And earth's base built on stubble.”²⁷¹⁶

The government has assured itself of the best constituency in the world: every spark of intellect, every virtuous feeling, every religious heart, every man of honor, every poet, every philosopher, the generosity of the cities, the health of the country, the strong

arms of the mechanic, the endurance of farmers, the passionate conscience of women, the sympathy of distant nations,—all rally to its support.

Of course, we are assuming the firmness of the policy thus declared. It must not be a paper proclamation. We confide that Mr. Lincoln is in earnest, and as he has been slow in making up his mind, has resisted the importunacy of parties and of events to the latest moment, he will be as absolute in his adhesion. Not only will he repeat and follow up his stroke, but the nation will add its irresistible strength. If the ruler has duties, so has the citizen. In times like these, when the nation is imperilled, what man can, without shame, receive good news from day to day without giving good news of himself? What right has any one to read in the journals tidings of victories, if he has not bought them by his own valor, treasure, personal sacrifice, or by service as good in his own department? With this blot removed from our national honor, this heavy load lifted off the national heart, we shall not fear henceforward to show our faces among mankind. We shall cease to be hypocrites and pretenders, but what we have styled our free institutions will be such.²⁷¹⁷

In the light of this event the public distress begins to be removed. What if the brokers' quotations show our stocks discredited, and the gold dollar costs one hundred and twenty-seven cents? These tables are fallacious. Every acre in the free states gained substantial value on the twenty-second of September. The cause of disunion and war has been reached and begun to be removed. Every man's house-lot and garden are relieved of the malaria which the purest winds and strongest sunshine could not penetrate and purge. The territory of the Union shines to-day with a lustre which every European emigrant can discern from far; a sign of inmost security and permanence. Is it feared that taxes will check immigration?

That depends on what the taxes are spent for. If they go to fill up this yawning Dismal Swamp, which engulfed armies and populations, and created plague, and neutralized hitherto all the vast capabilities of this continent,—then this taxation, which makes the land wholesome and habitable, and will draw all men unto it, is the best investment in which property-holder ever lodged his earnings.

Whilst we have pointed out the opportuneness of the Proclamation, it remains to be said that the President had no choice. He might look wistfully for what variety of courses lay open to him; every line but one was closed up with fire. This one, too, bristled with danger, but through it was the sole safety. The measure he has adopted was imperative. It is wonderful to see the unseasonable senility of what is called the Peace Party, through all its masks, blinding their eyes to the main feature of the war, namely, its inevitableness. The war existed long before the cannonade of Sumter, and could not be postponed. It might have begun otherwise or elsewhere, but war was in the minds and bones of the combatants, it was written on the iron leaf, and you might as easily dodge gravitation. If we had consented to a peaceable secession of the rebels, the divided sentiment of the border states made peaceable secession impossible, the insatiable temper of the South made it impossible, and the slaves on the border, wherever the border might be, were an incessant fuel to rekindle the fire. Give the Confederacy New Orleans, Charleston, and Richmond, and they would have demanded St. Louis and Baltimore. Give them these, and they would have insisted on Washington. Give them Washington, and they would have assumed the army and navy, and, through these, Philadelphia, New York, and Boston. It looks as if the battle-field would have been at least as large in that event as it is now. The war was formidable, but could not be

avoided. The war was and is an immense mischief, but brought with it the immense benefit of drawing a line and rallying the free states to fix it impassably,—preventing the whole force of Southern connection and influence throughout the North from distracting every city with endless confusion, detaching that force and reducing it to handfuls, and, in the progress of hostilities, disinfecting us of our habitual proclivity, through the affection of trade and the traditions of the Democratic party, to follow Southern leading.²⁷¹⁸

These necessities which have dictated the conduct of the federal government are overlooked especially by our foreign critics. The popular statement of the opponents of the war abroad is the impossibility of our success. "If you could add," say they, "to your strength the whole army of England, of France and of Austria, you could not coerce eight millions of people to come under this government against their will." This is an odd thing for an Englishman, a Frenchman or an Austrian to say, who remembers Europe of the last seventy years,—the condition of Italy, until 1859,—of Poland, since 1793,—of France, of French Algiers,—of British Ireland, and British India. But granting the truth, rightly read, of the historical aphorism, that "the people always conquer," it is to be noted that, in the Southern States, the tenure of land and the local laws, with slavery, give the social system not a democratic but an aristocratic complexion; and those states have shown every year a more hostile and aggressive temper, until the instinct of self-preservation forced us into the war. And the aim of the war on our part is indicated by the aim of the President's Proclamation, namely, to break up the false combination of Southern society, to destroy the piratic feature in it which makes it our enemy only as it is the enemy of the human race, and so allow its reconstruction on a just and healthful basis. Then new affinities will act, the old

repulsion will cease, and, the cause of war being removed, Nature and trade may be trusted to establish a lasting peace.

We think we cannot overstate the wisdom and benefit of this act of the government. The malignant cry of the Secession press within the free states, and the recent action of the Confederate Congress, are decisive as to its efficiency and correctness of aim. Not less so is the silent joy which has greeted it in all generous hearts, and the new hope it has breathed into the world. It was well to delay the steamers at the wharves until this edict could be put on board. It will be an insurance to the ship as it goes plunging through the sea with glad tidings to all people. Happy are the young, who find the pestilence cleansed out of the earth, leaving open to them an honest career. Happy the old, who see Nature purified before they depart. Do not let the dying die: hold them back to this world, until you have charged their ear and heart with this message to other spiritual societies, announcing the melioration of our planet:—

"Incertainties now crown themselves assured,
And Peace proclaims olives of endless age."²⁷¹⁹

Meantime that ill-fated, much-injured race which the Proclamation respects will lose somewhat of the dejection sculptured for ages in their bronzed countenance, uttered in the wailing of their plaintive music,—a race naturally benevolent, docile, industrious, and whose very miseries sprang from their great talent for usefulness, which, in a more moral age, will not only defend their independence, but will give them a rank among nations.²⁷²⁰

XV. ABRAHAM LINCOLN

REMARKS AT THE FUNERAL SERVICES HELD IN CONCORD, APRIL 19,
1865

"NATURE, THEY say, doth dote,
And cannot make a man
Save on some worn-out plan,
Repeating us by rote:
For him her Old-World moulds aside she threw,
And, choosing sweet clay from the breast
Of the unexhausted West,
With stuff untainted shaped a hero new,
Wise, steadfast in the strength of God, and true.
How beautiful to see
Once more a shepherd of mankind indeed,
Who loved his charge, but never loved to lead;
One whose meek flock the people joyed to be,
Not lured by any cheat of birth,
But by his clear-grained human worth,
And brave old wisdom of sincerity!
They knew that outward grace is dust;
They could not choose but trust
In that sure-footed mind's unfaltering skill,
And supple-tempered will
That bent, like perfect steel, to spring again and thrust.

.

Nothing of Europe here,
Or, then, of Europe fronting mornward still,
Ere any names of Serf and Peer
Could Nature's equal scheme deface;...
Here was a type of the true elder race,
And one of Plutarch's men talked with us face to face."

Lowell, *Commemoration Ode*.

ABRAHAM LINCOLN

WE MEET under the gloom of a calamity which darkens down over the minds of good men in all civil society, as the fearful tidings travel over sea, over land, from country to country, like the shadow of an uncalculated eclipse over the planet. Old as history is, and manifold as are its tragedies, I doubt if any death has caused so much pain to mankind as this has caused, or will cause, on its announcement; and this, not so much because nations are by modern arts brought so closely together, as because of the mysterious hopes and fears which, in the present day, are connected with the name and institutions of America.

In this country, on Saturday, every one was struck dumb, and saw at first only deep below deep, as he meditated on the ghastly blow. And perhaps, at this hour, when the coffin which contains the dust of the President sets forward on its long march through mourning states, on its way to his home in Illinois, we might well be silent, and suffer the awful voices of the time to thunder to us. Yes, but that first despair was brief: the man was not so to be mourned. He was the most active and hopeful of men; and his work had not perished: but acclamations of praise for the task he

had accomplished burst out into a song of triumph, which even tears for his death cannot keep down.

The President stood before us as a man of the people. He was thoroughly American, had never crossed the sea, had never been spoiled by English insularity or French dissipation; a quite native, aboriginal man, as an acorn from the oak; no aping of foreigners, no frivolous accomplishments, Kentuckian born, working on a farm, a flatboatman, a captain in the Black Hawk War, a country lawyer, a representative in the rural legislature of Illinois;—on such modest foundations the broad structure of his fame was laid. How slowly, and yet by happily prepared steps, he came to his place. All of us remember—it is only a history of five or six years—the surprise and the disappointment of the country at his first nomination by the convention at Chicago. Mr. Seward, then in the culmination of his good fame, was the favorite of the Eastern States. And when the new and comparatively unknown name of Lincoln was announced (notwithstanding the report of the acclamations of that convention), we heard the result coldly and sadly. It seemed too rash, on a purely local reputation, to build so grave a trust in such anxious times; and men naturally talked of the chances in politics as incalculable. But it turned out not to be chance. The profound good opinion which the people of Illinois and of the West had conceived of him, and which they had imparted to their colleagues, that they also might justify themselves to their constituents at home, was not rash, though they did not begin to know the riches of his worth.²⁷²¹

A plain man of the people, an extraordinary fortune attended him. He offered no shining qualities at the first encounter; he did not offend by superiority. He had a face and manner which disarmed suspicion, which inspired confidence, which confirmed good will. He was a man without vices. He had a strong sense of

duty, which it was very easy for him to obey. Then, he had what farmers call a long head; was excellent in working out the sum for himself; in arguing his case and convincing you fairly and firmly. Then, it turned out that he was a great worker; had prodigious faculty of performance; worked easily. A good worker is so rare; everybody has some disabling quality. In a host of young men that start together and promise so many brilliant leaders for the next age, each fails on trial; one by bad health, one by conceit, or by love of pleasure, or lethargy, or an ugly temper,—each has some disqualifying fault that throws him out of the career. But this man was sound to the core, cheerful, persistent, all right for labor, and liked nothing so well.

Then, he had a vast good nature, which made him tolerant and accessible to all; fair-minded, leaning to the claim of the petitioner; affable, and not sensible to the affliction which the innumerable visits paid to him when President would have brought to any one else.²⁷²² And how this good nature became a noble humanity, in many a tragic case which the events of the war brought to him, every one will remember; and with what increasing tenderness he dealt when a whole race was thrown on his compassion. The poor negro said of him, on an impressive occasion, "Massa Linkum am eberywhere."

Then his broad good humor, running easily into jocular talk, in which he delighted and in which he excelled, was a rich gift to this wise man. It enabled him to keep his secret; to meet every kind of man and every rank in society; to take off the edge of the severest decisions; to mask his own purpose and sound his companion; and to catch with true instinct the temper of every company he addressed. And, more than all, it is to a man of severe labor, in anxious and exhausting crises, the natural restorative, good as

sleep, and is the protection of the overdriven brain against rancor and insanity.

He is the author of a multitude of good sayings, so disguised as pleasantries that it is certain they had no reputation at first but as jests; and only later, by the very acceptance and adoption they find in the mouths of millions, turn out to be the wisdom of the hour. I am sure if this man had ruled in a period of less facility of printing, he would have become mythological in a very few years, like Æsop or Pilpay, or one of the Seven Wise Masters, by his fables and proverbs. But the weight and penetration of many passages in his letters, messages and speeches, hidden now by the very closeness of their application to the moment, are destined hereafter to wide fame. What pregnant definitions; what unerring common sense; what foresight; and, on great occasion, what lofty, and more than national, what humane tone! His brief speech at Gettysburg will not easily be surpassed by words on any recorded occasion. This, and one other American speech, that of John Brown to the court that tried him, and a part of Kossuth's speech at Birmingham, can only be compared with each other, and with no fourth.

His occupying the chair of state was a triumph of the good sense of mankind, and of the public conscience. This middle-class country had got a middle-class president, at last. Yes, in manners and sympathies, but not in powers, for his powers were superior. This man grew according to the need. His mind mastered the problem of the day; and as the problem grew, so did his comprehension of it. Rarely was man so fitted to the event. In the midst of fears and jealousies, in the Babel of counsels and parties, this man wrought incessantly with all his might and all his honesty, laboring to find what the people wanted, and how to obtain that. It cannot be said there is any exaggeration of his worth. If ever a

man was fairly tested, he was. There was no lack of resistance, nor of slander, nor of ridicule. The times have allowed no state secrets; the nation has been in such ferment, such multitudes had to be trusted, that no secret could be kept. Every door was ajar, and we know all that befell.

Then, what an occasion was the whirlwind of the war. Here was place for no holiday magistrate, no fair-weather sailor; the new pilot was hurried to the helm in a tornado. In four years,—four years of battle-days,—his endurance, his fertility of resources, his magnanimity, were sorely tried and never found wanting. There, by his courage, his justice, his even temper, his fertile counsel, his humanity, he stood a heroic figure in the centre of a heroic epoch. He is the true history of the American people in his time. Step by step he walked before them; slow with their slowness, quickening his march by theirs, the true representative of this continent; an entirely public man; father of his country, the pulse of twenty millions throbbing in his heart, the thought of their minds articulated by his tongue.

Adam Smith remarks that the axe, which in Houbraken's portraits of British kings and worthies is engraved under those who have suffered at the block, adds a certain lofty charm to the picture. And who does not see, even in this tragedy so recent, how fast the terror and ruin of the massacre are already burning into glory around the victim? Far happier this fate than to have lived to be wished away; to have watched the decay of his own faculties; to have seen—perhaps even he—the proverbial ingratitude of statesmen; to have seen mean men preferred. Had he not lived long enough to keep the greatest promise that ever man made to his fellow men,—the practical abolition of slavery? He had seen Tennessee, Missouri and Maryland emancipate their slaves. He had seen Savannah, Charleston and Richmond surrendered; had

seen the main army of the rebellion lay down its arms. He had conquered the public opinion of Canada, England and France.²⁷²³ Only Washington can compare with him in fortune.

And what if it should turn out, in the unfolding of the web, that he had reached the term; that this heroic deliverer could no longer serve us; that the rebellion had touched its natural conclusion, and what remained to be done required new and uncommitted hands,—a new spirit born out of the ashes of the war; and that Heaven, wishing to show the world a completed benefactor, shall make him serve his country even more by his death than by his life? Nations, like kings, are not good by facility and complaisance. “The kindness of kings consists in justice and strength.” Easy good nature has been the dangerous foible of the Republic, and it was necessary that its enemies should outrage it, and drive us to unwonted firmness, to secure the salvation of this country in the next ages.

The ancients believed in a serene and beautiful Genius which ruled in the affairs of nations; which, with a slow but stern justice, carried forward the fortunes of certain chosen houses, weeding out single offenders or offending families, and securing at last the firm prosperity of the favorites of Heaven. It was too narrow a view of the Eternal Nemesis. There is a serene Providence which rules the fate of nations, which makes little account of time, little of one generation or race, makes no account of disasters, conquers alike by what is called defeat or by what is called victory, thrusts aside enemy and obstruction, crushes everything immoral as inhuman, and obtains the ultimate triumph of the best race by the sacrifice of everything which resists the moral laws of the world.²⁷²⁴ It makes its own instruments, creates the man for the time, trains him in poverty, inspires his genius, and arms him for his task. It has given

every race its own talent, and ordains that only that race which combines perfectly with the virtues of all shall endure.²⁷²⁵

XVI. HARVARD COMMEMORATION SPEECH JULY 21, 1865

"Old classmate, say
Do you remember our Commencement Day?
Were we such boys as these at twenty?' Nay,
God called them to a nobler task than ours,
And gave them holier thoughts and manlier powers,—
This is the day of fruits and not of flowers!
These 'boys' we talk about like ancient sages
Are the same *men* we read of in old pages—
The bronze recast of dead heroic ages!
We grudge them not, our dearest, bravest, best,—
Let but the quarrel's issue stand confest:
'T is Earth's old slave-God battling for his crown
And Freedom fighting with her visor down."

HOLMES.

"MANY LOVED Truth, and lavished life's best oil
Amid the dust of books to find her,
Content at last, for guerdon of their toil,
With the cast mantle she hath left behind her.

Many in sad faith sought for her,
Many with crossed hands sighed for her;
But these, our brothers, fought for her,
At life's dear peril wrought for her,
So loved her that they died for her,
Tasting the raptured fleetness
Of her divine completeness:

 Their higher instinct knew
Those love her best who to themselves are true,
And what they dare to dream of, dare to do;
 They followed her and found her
 Where all may hope to find,
Not in the ashes of the burnt-out mind,
But beautiful, with danger's sweetness round her.
 Where faith made whole with deed
 Breathes its awakening breath
 Into the lifeless creed,
 They saw her plumed and mailed,
 With sweet, stern face unveiled,
And all-repaying eyes, look proud on them in death."

Lowell, *Commemoration Ode*.

HARVARD COMMEMORATION SPEECH

MR. CHAIRMAN, and Gentlemen: With whatever opinion we come here, I think it is not in man to see, without a feeling of pride and pleasure, a tried soldier, the armed defender of the right. I think that in these last years all opinions have been affected by the magnificent and stupendous spectacle which Divine Providence has offered us of the energies that slept in the children of this country,—that slept and have awakened. I see thankfully those that are here, but dim eyes in vain explore for some who are not.

The old Greek Heraclitus said, "War is the Father of all things." He said it, no doubt, as science, but we of this day can repeat it as political and social truth. War passes the power of all chemical solvents, breaking up the old adhesions, and allowing the atoms of society to take a new order. It is not the Government, but the War, that has appointed the good generals, sifted out the pedants, put in the new and vigorous blood. The War has lifted many other people besides Grant and Sherman into their true places. Even Divine Providence, we may say, always seems to work after a certain military necessity. Every nation punishes the General

who is not victorious. It is a rule in games of chance that the cards beat all the players, and revolutions disconcert and outwit all the insurgents.

The revolutions carry their own points, sometimes to the ruin of those who set them on foot. The proof that war also is within the highest right, is a marked benefactor in the hands of the Divine Providence, is its *morale*. The war gave back integrity to this erring and immoral nation. It charged with power, peaceful, amiable men, to whose life war and discord were abhorrent. What an infusion of character went out from this and other colleges! What an infusion of character down to the ranks! The experience has been uniform that it is the gentle soul that makes the firm hero after all. It is easy to recall the mood in which our young men, snatched from every peaceful pursuit, went to the war. Many of them had never handled a gun. They said, "It is not in me to resist. I go because I must. It is a duty which I shall never forgive myself if I decline. I do not know that I can make a soldier. I may be very clumsy. Perhaps I shall be timid; but you can rely on me. Only one thing is certain, I can well die, but I cannot afford to misbehave."

In fact the infusion of culture and tender humanity from these scholars and idealists who went to the war in their own despite—God knows they had no fury for killing their old friends and countrymen—had its signal and lasting effect. It was found that enthusiasm was a more potent ally than science and munitions of war without it. "It is a principle of war," said Napoleon, "that when you can use the thunderbolt you must prefer it to the cannon." Enthusiasm was the thunderbolt. Here in this little Massachusetts, in smaller Rhode Island, in this little nest of New England republics it flamed out when the guilty gun was aimed at Sumter.

Mr. Chairman, standing here in Harvard College, the parent of all the colleges; in Massachusetts, the parent of all the North; when

I consider her influence on the country as a principal planter of the Western States, and now, by her teachers, preachers, journalists and books, as well as by traffic and production, the diffuser of religious, literary and political opinion;—and when I see how irresistible the convictions of Massachusetts are in these swarming populations,—I think the little state bigger than I knew. When her blood is up, she has a fist big enough to knock down an empire. And her blood was roused. Scholars changed the black coat for the blue. A single company in the Forty-fourth Massachusetts Regiment contained thirty-five sons of Harvard. You all know as well as I the story of these dedicated men, who knew well on what duty they went,—whose fathers and mothers said of each slaughtered son, "We gave him up when he enlisted." One mother said, when her son was offered the command of the first negro regiment, "If he accepts it, I shall be as proud as if I had heard that he was shot."²⁷²⁶ These men, thus tender, thus high-bred, thus peaceable, were always in the front and always employed. They might say, with their forefathers the old Norse Vikings, "We sung the mass of lances from morning until evening." And in how many cases it chanced, when the hero had fallen, they who came by night to his funeral, on the morrow returned to the war-path to show his slayers the way to death!

Ah! young brothers, all honor and gratitude to you,—you, manly defenders, Liberty's and Humanity's bodyguard! We shall not again disparage America, now that we have seen what men it will bear. We see—we thank you for it—a new era, worth to mankind all the treasure and all the lives it has cost; yes, worth to the world the lives of all this generation of American men, if they had been demanded.²⁷²⁷

XVII. ADDRESS

AT THE DEDICATION OF THE SOLDIERS MONUMENT IN CONCORD,
APRIL 19, 1867

"THEY HAVE shown what men may do,
They have proved how men may die,—
Count, who can, the fields they have pressed,
Each face to the solemn sky!"

BROWNELL.

"THINK YOU these felt no charms
In their gray homesteads and embowered farms?
In household faces waiting at the door
Their evening step should lighten up no more?
In fields their boyish feet had known?
In trees their fathers' hands had set,
And which with them had grown,
Widening each year their leafy coronet?
Felt they no pang of passionate regret
For those unsolid goods that seem so much our own?
These things are dear to every man that lives,
And life prized more for what it lends than gives.
Yea, many a tie, through iteration sweet,
Strove to detain their fatal feet;
And yet the enduring half they chose,
Whose choice decides a man life's slave or king,
The invisible things of God before the seen and known:
Therefore their memory inspiration blows
With echoes gathering on from zone to zone;
For manhood is the one immortal thing
Beneath Time's changeful sky,
And, where it lightened once, from age to age,
Men come to learn, in grateful pilgrimage,
That length of days is knowing when to die."

LOWELL, *Concord Ode*.

ADDRESS

DEDICATION OF SOLDIERS' MONUMENT IN CONCORD, APRIL 19, 1867

FELLOW CITIZENS: The day is in Concord doubly our calendar day, as being the anniversary of the invasion of the town by the British troops in 1775, and of the departure of the company of volunteers for Washington, in 1861. We are all pretty well aware that the facts which make to us the interest of this day are in a great degree personal and local here; that every other town and city has its own heroes and memorial days, and that we can hardly expect a wide sympathy for the names and anecdotes which we delight to record. We are glad and proud that we have no monopoly of merit. We are thankful that other towns and cities are as rich; that the heroes of old and of recent date, who made and kept America free and united, were not rare or solitary growths, but sporadic over vast tracts of the Republic. Yet, as it is a piece of nature and the common sense that the throbbing chord that holds us to our kindred, our friends and our town, is not to be denied or resisted,—no matter how frivolous or unphilosophical its pulses,—we shall cling affectionately to our houses, our river and pastures,

and believe that our visitors will pardon us if we take the privilege of talking freely about our nearest neighbors as in a family party;—well assured, meantime, that the virtues we are met to honor were directed on aims which command the sympathy of every loyal American citizen, were exerted for the protection of our common country, and aided its triumph.

The town has thought fit to signify its honor for a few of its sons by raising an obelisk in the square. It is a simple pile enough,—a few slabs of granite, dug just below the surface of the soil, and laid upon the top of it; but as we have learned that the upheaved mountain, from which these discs or flakes were broken, was once a glowing mass at white heat, slowly crystallized, then uplifted by the central fires of the globe: so the roots of the events it appropriately marks are in the heart of the universe. I shall say of this obelisk, planted here in our quiet plains, what Richter says of the volcano in the fair landscape of Naples: "Vesuvius stands in this poem of Nature, and exalts everything, as war does the age."

The art of the architect and the sense of the town have made these dumb stones speak; have, if I may borrow the old language of the church, converted these elements from a secular to a sacred and spiritual use; have made them look to the past and the future; have given them a meaning for the imagination and the heart. The sense of the town, the eloquent inscriptions the shaft now bears, the memories of these martyrs, the noble names which yet have gathered only their first fame, whatever good grows to the country out of the war, the largest results, the future power and genius of the land, will go on clothing this shaft with daily beauty and spiritual life. 'T is certain that a plain stone like this, standing on such memories, having no reference to utilities, but only to the grand instincts of the civil and moral man, mixes with surrounding nature,—by day with the changing seasons, by night the stars roll

over it gladly,—becomes a sentiment, a poet, a prophet, an orator, to every townsman and passenger, an altar where the noble youth shall in all time come to make his secret vows.²⁷²⁸

The old Monument, a short half-mile from this house, stands to signalize the first Revolution, where the people resisted offensive usurpations, offensive taxes of the British Parliament, claiming that there should be no tax without representation. Instructed by events, after the quarrel began, the Americans took higher ground, and stood for political independence. But in the necessities of the hour, they overlooked the moral law, and winked at a practical exception to the Bill of Rights they had drawn up. They winked at the exception, believing it insignificant. But the moral law, the nature of things, did not wink at it, but kept its eye wide open. It turned out that this one violation was a subtle poison, which in eighty years corrupted the whole overgrown body politic, and brought the alternative of extirpation of the poison or ruin to the Republic.²⁷²⁹

This new Monument is built to mark the arrival of the nation at the new principle,—say, rather, at its new acknowledgment, for the principle is as old as Heaven,—that only that state can live, in which injury to the least member is recognized as damage to the whole.

Reform must begin at home. The aim of the hour was to reconstruct the South; but first the North had to be reconstructed. Its own theory and practice of liberty had got sadly out of gear, and must be corrected. It was done on the instant. A thunder-storm at sea sometimes reverses the magnets in the ship, and south is north. The storm of war works the like miracle on men. Every Democrat who went South came back a Republican, like the governors who, in Buchanan's time, went to Kansas, and instantly took the free-state colors. War, says the poet, is

"the arduous strife,
To which the triumph of all good is given."²⁷³⁰

Every principle is a war-note. When the rights of man are recited under any old government, every one of them is a declaration of war. War civilizes, rearranges the population, distributing by ideas,—the innovators on one side, the antiquaries on the other. It opens the eyes wider. Once we were patriots up to the town-bounds, or the state-line. But when you replace the love of family or clan by a principle, as freedom, instantly that fire runs over the state-line into New Hampshire, Vermont, New York and Ohio, into the prairie and beyond, leaps the mountains, bridges river and lake, burns as hotly in Kansas and California as in Boston, and no chemist can discriminate between one soil and the other. It lifts every population to an equal power and merit.

As long as we debate in council, both sides may form their private guess what the event may be, or which is the strongest. But the moment you cry "Every man to his tent, O Israel!" the delusions of hope and fear are at an end;—the strength is now to be tested by the eternal facts. There will be no doubt more. The world is equal to itself. The secret architecture of things begins to disclose itself; the fact that all things were made on a basis of right; that justice is really desired by all intelligent beings; that opposition to it is against the nature of things; and that, whatever may happen in this hour or that, the years and the centuries are always pulling down the wrong and building up the right.

The war made the Divine Providence credible to many who did not believe the good Heaven quite honest. Every man was an abolitionist by conviction, but did not believe that his neighbor was. The opinions of masses of men, which the tactics of primary caucuses and the proverbial timidity of trade had concealed, the

war discovered; and it was found, contrary to all popular belief, that the country was at heart abolitionist, and for the Union was ready to die.

As cities of men are the first effects of civilization, and also instantly causes of more civilization, so armies, which are only wandering cities, generate a vast heat, and lift the spirit of the soldiers who compose them to the boiling point. The armies mustered in the North were as much missionaries to the mind of the country as they were carriers of material force, and had the vast advantage of carrying whither they marched a higher civilization. Of course, there are noble men everywhere, and there are such in the South; and the noble know the noble, wherever they meet; and we have all heard passages of generous and exceptional behavior exhibited by individuals there to our officers and men, during the war. But the common people, rich or poor, were the narrowest and most conceited of mankind, as arrogant as the negroes on the Gambia River; and, by the way, it looks as if the editors of the Southern press were in all times selected from this class. The invasion of Northern farmers, mechanics, engineers, tradesmen, lawyers and students did more than forty years of peace had done to educate the South²⁷³¹ "This will be a slow business," writes our Concord captain home, "for we have to stop and civilize the people as we go along."

It is an interesting part of the history, the manner in which this incongruous militia were made soldiers. That was done again on the Kansas plan. Our farmers went to Kansas as peaceable, God-fearing men as the members of our school committee here. But when the Border raids were let loose on their villages, these people, who turned pale at home if called to dress a cut finger, on witnessing the butchery done by the Missouri riders on women and babes, were so beside themselves with rage, that they became

on the instant the bravest soldiers and the most determined avengers.²⁷³² And the first events of the war of the Rebellion gave the like training to the new recruits.

All sorts of men went to the war,—the roughs, men who liked harsh play and violence, men for whom pleasure was not strong enough, but who wanted pain, and found sphere at last for their superabundant energy; then the adventurous type of New Englander, with his appetite for novelty and travel; the village politician, who could now verify his newspaper knowledge, see the South, and amass what a stock of adventures to retail hereafter at the fireside, or to the well-known companions on the Mill-dam; young men, also, of excellent education and polished manners, delicately brought up; manly farmers, skilful mechanics, young tradesmen, men hitherto of narrow opportunities of knowing the world, but well taught in the grammar-schools. But perhaps in every one of these classes were idealists, men who went from a religious duty. I have a note of a conversation that occurred in our first company, the morning before the battle of Bull Run. At a halt in the march, a few of our boys were sitting on a rail fence talking together whether it was right to sacrifice themselves. One of them said, 'he had been thinking a good deal about it, last night, and he thought one was never too young to die for a principle.' One of our later volunteers, on the day when he left home, in reply to my question, How can you be spared from your farm, now that your father is so ill? said: "I go because I shall always be sorry if I did not go when the country called me. I can go as well as another." One wrote to his father these words: "You may think it strange that I, who have always naturally rather shrunk from danger, should wish to enter the army; but there is a higher Power that tunes the hearts of men, and enables them to see their duty, and gives them courage to face the dangers with which those duties are attended."

And the captain writes home of another of his men, "B—— comes from a sense of duty and love of country, and these are the soldiers you can depend upon."²⁷³³

None of us can have forgotten how sharp a test to try our peaceful people with, was the first call for troops. I doubt not many of our soldiers could repeat the confession of a youth whom I knew in the beginning of the war, who enlisted in New York, went to the field, and died early. Before his departure he confided to his sister that he was naturally a coward, but was determined that no one should ever find it out; that he had long trained himself by forcing himself, on the suspicion of any near danger, to go directly up to it, cost him what struggles it might. Yet it is from this temperament of sensibility that great heroes have been formed.

Our first company was led by an officer who had grown up in this village from a boy.²⁷³⁴ The older among us can well remember him at school, at play and at work, all the way up, the most amiable, sensible, unpretending of men; fair, blond, the rose lived long in his cheek; grave, but social, and one of the last men in this town you would have picked out for the rough dealing of war,—not a trace of fierceness, much less of recklessness, or of the devouring thirst for excitement; tender as a woman in his care for a cough or a chilblain in his men; had troches and arnica in his pocket for them. The army officers were welcome to their jest on him as too kind for a captain, and, later, as the colonel who got off his horse when he saw one of his men limp on the march, and told him to ride. But *he* knew that his men had found out, first that he was captain, then that he was colonel, and neither dared nor wished to disobey him. He was a man without conceit, who never fancied himself a philosopher or a saint; the most modest and amiable of men, engaged in common duties, but equal always to the occasion; and the war showed him still equal, however stern

and terrible the occasion grew,—disclosed in him a strong good sense, great fertility of resource, the helping hand, and then the moral qualities of a commander,—a patience not to be tired out, a serious devotion to the cause of the country that never swerved, a hope that never failed. He was a Puritan in the army, with traits that remind one of John Brown,—an integrity incorruptible, and an ability that always rose to the need.

You will remember that these colonels, captains and lieutenants, and the privates too, are domestic men, just wrenched away from their families and their business by this rally of all the manhood in the land. They have notes to pay at home; have farms, shops, factories, affairs of every kind to think of and write home about. Consider what sacrifice and havoc in business arrangements this war-blast made. They have to think carefully of every last resource at home on which their wives or mothers may fall back; upon the little account in the savings bank, the grass that can be sold, the old cow, or the heifer. These necessities make the topics of the ten thousand letters with which the mail-bags came loaded day by day. These letters play a great part in the war. The writing of letters made the Sunday in every camp:—meantime they are without the means of writing. After the first marches there is no letter-paper, there are no envelopes, no postage-stamps, for these were wetted into a solid mass in the rains and mud. Some of these letters are written on the back of old bills, some on brown paper, or strips of newspaper; written by fire-light, making the short night shorter; written on the knee, in the mud, with pencil, six words at a time; or in the saddle, and have to stop because the horse will not stand still. But the words are proud and tender,—“Tell mother I will not disgrace her;” “tell her not to worry about me, for I know she would not have had me stay at home if she could as well as not.” The letters of the captain are the dearest treasures of this

town. Always devoted, sometimes anxious, sometimes full of joy at the deportment of his comrades, they contain the sincere praise of men whom I now see in this assembly. If Marshal Montluc's²⁷³⁵ Memoirs are the Bible of soldiers, as Henry IV. of France said, Colonel Prescott might furnish the Book of Epistles.

He writes, "You don't know how one gets attached to a company by living with them and sleeping with them all the time. I know every man by heart. I know every man's weak spot,—who is shaky, and who is true blue." He never remits his care of the men, aiming to hold them to their good habits and to keep them cheerful. For the first point, he keeps up a constant acquaintance with them; urges their correspondence with their friends; writes news of them home, urging his own correspondent to visit their families and keep them informed about the men; encourages a temperance society which is formed in the camp. "I have not had a man drunk, or affected by liquor, since we came here." At one time he finds his company unfortunate in having fallen between two companies of quite another class,—"'t is profanity all the time; yet instead of a bad influence on our men, I think it works the other way,—it disgusts them."

One day he writes, "I expect to have a time, this forenoon, with the officer from West Point who drills us. He is very profane, and I will not stand it. If he does not stop it, I shall march my men right away when he is drilling them. There is a fine for officers swearing in the army, and I have too many young men that are not used to such talk. I told the colonel this morning I should do it, and shall,—don't care what the consequence is. This lieutenant seems to think that these men, who never saw a gun, can drill as well as he, who has been at West Point four years." At night he adds: "I told that officer from West Point, this morning, that he could not swear at my company as he did yesterday; told him I would not stand it

anyway. I told him I had a good many young men in my company whose mothers asked me to look after them, and I should do so, and not allow them to hear such language, especially from an officer, whose duty it was to set them a better example. Told him I did not swear myself and would not allow him to. He looked at me as much as to say, *Do you know whom you are talking to?* and I looked at him as much as to say, *Yes, I do.* He looked rather ashamed, but went through the drill without an oath." So much for the care of their morals. His next point is to keep them cheerful. 'T is better than medicine. He has games of baseball, and pitching quoits, and euchre, whilst part of the military discipline is sham fights.

The best men heartily second him, and invent excellent means of their own. When, afterwards, five of these men were prisoners in the Parish Prison in New Orleans, they set themselves to use the time to the wisest advantage,—formed a debating-club, wrote a daily or weekly newspaper, called it "Stars and Stripes." It advertises, "prayer-meeting at 7 o'clock, in cell No. 8, second floor," and their own printed record is a proud and affecting narrative.

Whilst the regiment was encamped at Camp Andrew, near Alexandria, in June, 1861, marching orders came. Colonel Lawrence sent for eight wagons, but only three came. On these they loaded all the canvas of the tents, but took no tent-poles.

"It looked very much like a severe thunder-storm," writes the captain, "and I knew the men would all have to sleep out of doors, unless we carried them. So I took six poles, and went to the colonel, and told him I had got the poles for two tents, which would cover twenty-four men, and unless he ordered me not to carry them, I should do so. He said he had no objection, only thought they would be too much for me. We only had about twelve men [the rest of the company being, perhaps, on picket or other duty], and

some of them have their heavy knapsacks and guns to carry, so could not carry any poles. We started and marched two miles without stopping to rest, not having had anything to eat, and being very hot and dry." At this time Captain Prescott was daily threatened with sickness, and suffered the more from this heat. "I told Lieutenant Bowers, this morning, that I could afford to be sick from bringing the tent-poles, for it saved the whole regiment from sleeping outdoors; for they would not have thought of it, if I had not taken mine. The major had tried to discourage me;—said, 'perhaps, if I carried them over, some other company would get them;'—I told him, perhaps he did not think I was smart." He had the satisfaction to see the whole regiment enjoying the protection of these tents.²⁷³⁶

In the disastrous battle of Bull Run this company behaved well, and the regimental officers believed, what is now the general conviction of the country, that the misfortunes of the day were not so much owing to the fault of the troops as to the insufficiency of the combinations by the general officers. It happened, also, that the Fifth Massachusetts was almost unofficered. The colonel was, early in the day, disabled by a casualty; the lieutenant-colonel, the major and the adjutant were already transferred to new regiments, and their places were not yet filled. The three months of the enlistment expired a few days after the battle.

In the fall of 1861, the old artillery company of this town was reorganized, and Captain Richard Barrett received a commission in March, 1862, from the state, as its commander. This company, chiefly recruited here, was later embodied in the Forty-seventh Regiment, Massachusetts Volunteers, enlisted as nine months' men, and sent to New Orleans, where they were employed in guard duty during their term of service. Captain Humphrey H. Buttrick, lieutenant in this regiment, as he had been already lieutenant in

Captain Prescott's company in 1861, went out again in August, 1864, a captain in the Fifty-ninth Massachusetts, and saw hard service in the Ninth Corps, under General Burnside. The regiment being formed of veterans, and in fields requiring great activity and exposure, suffered extraordinary losses; Captain Buttrick and one other officer being the only officers in it who were neither killed, wounded nor captured.²⁷³⁷ In August, 1862, on the new requisition for troops, when it was becoming difficult to meet the draft,—mainly through the personal example and influence of Mr. Sylvester Lovejoy, twelve men, including himself, were enlisted for three years, and, being soon after enrolled in the Fortieth Massachusetts, went to the war; and a very good account has been heard, not only of the regiment, but of the talents and virtues of these men.

After the return of the three months' company to Concord, in 1861, Captain Prescott raised a new company of volunteers, and Captain Bowers another. Each of these companies included recruits from this town, and they formed part of the Thirty-second Regiment of Massachusetts Volunteers. Enlisting for three years, and remaining to the end of the war, these troops saw every variety of hard service which the war offered, and, though suffering at first some disadvantage from change of commanders, and from severe losses, they grew at last, under the command of Colonel Prescott, to an excellent reputation, attested by the names of the thirty battles they were authorized to inscribe on their flag, and by the important position usually assigned them in the field.

I have found many notes of their rough experience in the march and in the field. In McClellan's retreat in the Peninsula, in July, 1862, "it is all our men can do to draw their feet out of the mud. We marched one mile through mud, without exaggeration, one foot deep,—a good deal of the way over my boots, and with short rations; on one day nothing but liver, blackberries, and pennyroyal

tea.”—“At Fredericksburg we lay eleven hours in one spot without moving, except to rise and fire.” The next note is, “cracker for a day and a half,—but all right.” Another day, “had not left the ranks for thirty hours, and the nights were broken by frequent alarms. How would Concord people,” he asks, “like to pass the night on the battle-field, and hear the dying cry for help, and not be able to go to them?” But the regiment did good service at Harrison’s Landing, and at Antietam, under Colonel Parker; and at Fredericksburg, in December, Lieutenant-Colonel Prescott loudly expressed his satisfaction at his comrades, now and then particularizing names: “Bowers, Shepard and Lauriat are as brave as lions.”²⁷³⁸

At the battle of Gettysburg, in July, 1863, the brigade of which the Thirty-second Regiment formed a part, was in line of battle seventy-two hours, and suffered severely. Colonel Prescott’s regiment went in with two hundred and ten men, nineteen officers. On the second of July they had to cross the famous wheat-field, under fire from the rebels in front and on both flanks. Seventy men were killed or wounded out of seven companies. Here Francis Buttrick, whose manly beauty all of us remember,²⁷³⁹ and Sergeant Appleton, an excellent soldier, were fatally wounded. The Colonel was hit by three bullets. “I feel,” he writes, “I have much to be thankful for that my life is spared, although I would willingly die to have the regiment do as well as they have done. Our colors had several holes made, and were badly torn. One bullet hit the staff which the bearer had in his hand. The color-bearer is brave as a lion; he will go anywhere you say, and no questions asked; his name is Marshall Davis.” The Colonel took evident pleasure in the fact that he could account for all his men. There were so many killed, so many wounded,—but no missing. For that word “missing” was apt to mean skulking. Another incident: “A friend of Lieutenant Barrow complains that we did not treat his body with

respect, inasmuch as we did not send it home. I think we were very fortunate to save it at all, for in ten minutes after he was killed the rebels occupied the ground, and we had to carry him and all our wounded nearly two miles in blankets. There was no place nearer than Baltimore where we could have got a coffin, and I suppose it was eighty miles there. We laid him in two double blankets, and then sent off a long distance and got boards off a barn to make the best coffin we could, and gave him burial."

After Gettysburg, Colonel Prescott remarks that our regiment is highly complimented. When Colonel Gurney, of the Ninth, came to him the next day to tell him that "folks are just beginning to appreciate the Thirty-second Regiment: it always was a good regiment, and people are just beginning to find it out;" Colonel Prescott notes in his journal,—“Pity they have not found it out before it was all gone. We have a hundred and seventy-seven guns this morning.”

Let me add an extract from the official report of the brigade commander: “Word was sent by General Barnes, that, when we retired, we should fall back under cover of the woods. This order was communicated to Colonel Prescott, whose regiment was then under the hottest fire. Understanding it to be a peremptory order to retire then, he replied, ‘I don’t want to retire; I am not ready to retire; I can hold this place;’ and he made good his assertion. Being informed that he misunderstood the order, which was only to inform him how to retire when it became necessary, he was satisfied, and he and his command held their ground manfully.” It was said that Colonel Prescott’s reply, when reported, pleased the Acting-Brigadier-General Sweitzer mightily.

After Gettysburg, the Thirty-second Regiment saw hard service at Rappahannock Station; and at Baltimore, in Virginia, where they were drawn up in battle order for ten days successively: crossing

the Rappahannock, and suffering from such extreme cold, a few days later, at Mine Run, that the men were compelled to break rank and run in circles to keep themselves from being frozen. On the third of December, they went into winter quarters.

I must not follow the multiplied details that make the hard work of the next year. But the campaign in the Wilderness surpassed all their worst experience hitherto of the soldier's life. On the third of May, they crossed the Rappahannock for the fifth time. On the twelfth, at Laurel Hill, the regiment had twenty-one killed and seventy-five wounded, including five officers. "The regiment has been in the front and centre since the battle begun, eight and a half days ago, and is now building breastworks on the Fredericksburg road. This has been the hardest fight the world ever knew. I think the loss of our army will be forty thousand. Every day, for the last eight days, there has been a terrible battle the whole length of the line. One day they drove us; but it has been regular bull-dog fighting." On the twenty-first, they had been, for seventeen days and nights, under arms without rest. On the twenty-third, they crossed the North Anna, and achieved a great success. On the thirtieth, we learn, "Our regiment has never been in the second line since we crossed the Rappahannock, on the third." On the night of the thirtieth,— "The hardest day we ever had. We have been in the first line twenty-six days, and fighting every day but two; whilst your newspapers talk of the inactivity of the Army of the Potomac. If those writers could be here and fight all day, and sleep in the trenches, and be called up several times in the night by picket-firing, they would not call it inactive." June fourth is marked in the diary as "An awful day;—two hundred men lost to the command;" and not until the fifth of June comes at last a respite for a short space, during which the men drew shoes and socks, and the officers were able to send

to the wagons and procure a change of clothes, for the first time in five weeks.

But from these incessant labors there was now to be rest for one head,—the honored and beloved commander of the regiment. On the sixteenth of June, they crossed the James River, and marched to within three miles of Petersburg. Early in the morning of the eighteenth they went to the front, formed line of battle, and were ordered to take the Norfolk and Petersburg Railroad from the rebels. In this charge, Colonel George L. Prescott was mortally wounded. After driving the enemy from the railroad, crossing it, and climbing the farther bank to continue the charge, he was struck, in front of his command, by a musket-ball which entered his breast near the heart. He was carried off the field to the division hospital, and died on the following morning. On his death-bed, he received the needless assurances of his general that "he had done more than all his duty,"—needless to a conscience so faithful and unspotted. One of his townsmen and comrades, a sergeant in his regiment, writing to his own family, uses these words: "He was one of the few men who fight for principle. He did not fight for glory, honor, nor money, but because he thought it his duty. These are not my feelings only, but of the whole regiment."

On the first of January, 1865, the Thirty-second Regiment made itself comfortable in log huts, a mile south of our rear line of works before Petersburg. On the fourth of February, sudden orders came to move next morning at daylight. At Dabney's Mills, in a sharp fight, they lost seventy-four in killed, wounded and missing. Here Major Shepard was taken prisoner. The lines were held until the tenth, with more than usual suffering from snow and hail and intense cold, added to the annoyance of the artillery fire. On the first of April, the regiment connected with Sheridan's cavalry, near the Five Forks, and took an important part in that battle which

opened Petersburg and Richmond, and forced the surrender of Lee. On the ninth, they marched in support of the cavalry, and were advancing in a grand charge, when the white flag of General Lee appeared. The brigade of which the Thirty-second Regiment formed part was detailed to receive the formal surrender of the rebel arms. The homeward march began on the thirteenth, and the regiment was mustered out in the field, at Washington, on the twenty-eighth of June, and arrived in Boston on the first of July.

Fellow citizens: The obelisk records only the names of the dead. There is something partial in this distribution of honor. Those who went through those dreadful fields and returned not deserve much more than all the honor we can pay. But those also who went through the same fields, and returned alive, put just as much at hazard as those who died, and, in other countries, would wear distinctive badges of honor as long as they lived. I hope the disuse of such medals or badges in this country only signifies that everybody knows these men, and carries their deeds in such lively remembrance that they require no badge or reminder. I am sure I need not bespeak your gratitude to these fellow citizens and neighbors of ours. I hope they will be content with the laurels of one war.

But let me, in behalf of this assembly, speak directly to you, our defenders, and say, that it is easy to see that if danger should ever threaten the homes which you guard, the knowledge of your presence will be a wall of fire for their protection. Brave men! you will hardly be called to see again fields as terrible as those you have already trampled with your victories.

There are people who can hardly read the names on yonder bronze tablet, the mist so gathers in their eyes. Three of the names are of sons of one family.²⁷⁴⁰ A gloom gathers on this

assembly, composed as it is of kindred men and women, for, in many houses, the dearest and noblest is gone from their hearthstone. Yet it is tinged with light from heaven. A duty so severe has been discharged, and with such immense results of good, lifting private sacrifice to the sublime, that, though the cannon volleys have a sound of funeral echoes, they can yet hear through them the benedictions of their country and mankind.

APPENDIX

In the above Address I have been compelled to suppress more details of personal interest than I have used. But I do not like to omit the testimony to the character of the Commander of the Thirty-second Massachusetts Regiment, given in the following letter by one of his soldiers:—

NEAR PETERSBURG, VIRGINIA,

June 20, 1864.

DEAR FATHER:

With feelings of deep regret, I inform you that Colonel Prescott, our brave and lamented leader, is no more. He was shot through the body, near the heart, on the eighteenth day of June, and died the following morning. On the morning of the eighteenth, our division was not in line. Reveille was at an early hour, and before long we were moving to the front. Soon we passed the ground where the Ninth Corps drove the enemy from their fortified lines, and came upon and formed our line in rear of Crawford's Division. In front of us, and one mile distant, the Rebels' lines of works could be seen. Between us and them, and in a deep gulley, was the Norfolk and Petersburg Railroad. Soon the order came for us to take the railroad from the enemy, whose advance then held it. Four regiments of our brigade were to head the charge; so the 32d Massachusetts, 62d, 91st

and 155th Pennsylvania regiments, under command of Colonel Gregory, moved forward in good order, the enemy keeping up a steady fire all the time. All went well till we reached the road. The Rebels left when they saw us advance, and, when we reached the road, they were running away. But here our troubles began. The banks, on each side of the road, were about thirty feet high, and, being stiff clay, were nearly perpendicular. We got down well enough, because we got started, and were rolled to the bottom, a confused pile of Yanks. Now to climb the other side! It was impossible to get up by climbing, for the side of it was like the side of a house. By dint of getting on each other's shoulders and making holes for our feet with bayonets, a few of us got up; reaching our guns down to the others, we all finally got over. Meanwhile, a storm of bullets was rained upon us. Through it all, Colonel Prescott was cool and collected, encouraging the men to do their best. After we were almost all across, he moved out in front of the line, and called the men out to him, saying, "Come on, men; form our line here." The color-bearer stepped towards him, when a bullet struck the Colonel, passed through him, and wounded the color-bearer, Sergeant Giles of Company G. Calmly the Colonel turned, and said, "I am wounded; some one help me off." A sergeant of Company B, and one of the 21st Pennsylvania, helped him off. This man told me, last night, all that the Colonel said, while going off. He was afraid we would be driven back, and wanted these men to stick by him. He said, "I die for my country." He seemed to be conscious that death was near to him, and said the wound was near his heart; wanted the sergeant of Company B to write to his family, and tell them all about him. He will write to Mrs. Prescott, probably; but if they do not hear from some one an account of his death, I wish you would show this to Mrs. Prescott. He died in the division hospital, night before last, and his remains will probably be sent to Concord. We lament his loss in the regiment very much. He was like a father to us,—always counselling us to be firm in the path of duty, and setting the example himself. I think a more moral man, or one more likely to enter the kingdom of heaven,

cannot be found in the Army of the Potomac. No man ever heard him swear, or saw him use liquor, since we were in the service. I wish there was some way for the regiment to pay some tribute to his memory. But the folks at home must do this for the present. The Thirty-second Regiment has lost its leader, and calls on the people of Concord to console the afflicted family of the brave departed, by showing their esteem for him in some manner. He was one of the few men who fight for principle,—pure principle. He did not fight for glory, honor nor money but because he thought it his duty. These are not my feelings only, but of the whole regiment. I want you to show this to every one, so they can see what we thought of the Colonel, and how he died in front of his regiment. God bless and comfort his poor family. Perhaps people think soldiers have no feeling, but it is not so. We feel deep anxiety for the families of all our dear comrades.

CHARLES BARTLETT,
*Sergeant Company G, 32d Mass. Vols.*²⁷⁴¹

XVIII. EDITORS' ADDRESS

MASSACHUSETTS QUARTERLY REVIEW, DECEMBER, 1847

THE OLD men studied magic in the flowers,
And human fortunes in astronomy,
And an omnipotence in chemistry,
Preferring things to names, for these were men,
Were unitarians of the united world,
And, wheresoever their clear eye-beams fell,
They caught the footsteps of the Same. Our eyes
Are armed, but we are strangers to the stars,
And strangers to the mystic beast and bird,
And strangers to the plant and to the mine.
The injured elements say, 'Not in us;'
And night and day, ocean and continent,
Fire, plant and mineral say, 'Not in us;'
And haughtily return us stare for stare.
For we invade them impiously for gain;
We devastate them unreligiously,
And coldly ask their pottage, not their love.
Therefore they shove us from them, yield to us
Only what to our griping toil is due;
But the sweet affluence of love and song,
The rich results of the divine consents
Of man and earth, of world beloved and loved,
The nectar and ambrosia are withheld.

EDITORS' ADDRESS

THE AMERICAN people are fast opening their own destiny. The material basis is of such extent that no folly of man can quite subvert it; for the territory is a considerable fraction of the planet, and the population neither loath nor inexperienced to use their advantages. Add, that this energetic race derive an unprecedented material power from the new arts, from the expansions effected by public schools, cheap postage and a cheap press, from the telescope, the telegraph, the railroad, steamship, steam-ferry, steam-mill; from domestic architecture, chemical agriculture, from ventilation, from ice, ether, caoutchouc, and innumerable inventions and manufactures.

A scholar who has been reading of the fabulous magnificence of Assyria and Persia, of Rome and Constantinople, leaves his library and takes his seat in a railroad-car, where he is importuned by newsboys with journals still wet from Liverpool and Havre, with telegraphic despatches not yet fifty minutes old from Buffalo and Cincinnati. At the screams of the steam-whistle, the train quits city and suburbs, darts away into the interior, drops every man at his estate as it whirls along, and shows our traveller what tens

of thousands of powerful and weaponed men, science-armed and society-armed, sit at large in this ample region, obscure from their numbers and the extent of the domain. He reflects on the power which each of these plain republicans can employ; how far these chains of intercourse and travel reach, interlock and ramify; what levers, what pumps, what exhaustive analyses are applied to Nature for the benefit of masses of men. Then he exclaims, What a negro-fine royalty is that of Jamschid and Solomon! What a substantial sovereignty does my townsman possess! A man who has a hundred dollars to dispose of—a hundred dollars over his bread—is rich beyond the dreams of the Cæsars.

Keep our eyes as long as we can on this picture, we cannot stave off the ulterior question,—the famous question of Cineas to Pyrrhus,²⁷⁴²—the WHERE TO of all this power and population, these surveys and inventions, this taxing and tabulating, mill-privilege, roads, and mines. The aspect this country presents is a certain maniacal activity, an immense apparatus of cunning machinery which turns out, at last, some Nuremberg toys. Has it generated, as great interests do, any intellectual power? Where are the works of the imagination—the surest test of a national genius? At least as far as the purpose and genius of America is yet reported in any book, it is a sterility and no genius.

One would say there is nothing colossal in the country but its geography and its material activities; that the moral and intellectual effects are not on the same scale with the trade and production. There is no speech heard but that of auctioneers, newsboys, and the caucus. Where is the great breath of the New World, the voice of aboriginal nations opening new eras with hymns of lofty cheer? Our books and fine arts are imitations; there is a fatal incuriosity and disinclination in our educated men to new studies and the interrogation of Nature. We have taste, critical talent, good

professors, good commentators, but a lack of male energy. What more serious calamity can befall a people than a constitutional dulness and limitation? The moral influence of the intellect is wanting. We hearken in vain for any profound voice speaking to the American heart, cheering timid good men, animating the youth, consoling the defeated, and intelligently announcing duties which clothe life with joy, and endear the face of land and sea to men.²⁷⁴³ It is a poor consideration that the country wit is precocious, and, as we say, practical; that political interests on so broad a scale as ours are administered by little men with some saucy village talent, by deft partisans, good cipherers; strict economists, quite empty of all superstition.

Conceding these unfavorable appearances, it would yet be a poor pedantry to read the fates of this country from these narrow data. On the contrary, we are persuaded that moral and material values are always commensurate. Every material organization exists to a moral end, which makes the reason of its existence. Here are no books, but who can see the continent with its inland and surrounding waters, its temperate climates, its west-wind breathing vigor through all the year, its confluence of races so favorable to the highest energy, and the infinite glut of their production, without putting new queries to Destiny as to the purpose for which this muster of nations and this sudden creation of enormous values is made?

This is equally the view of science and of patriotism. We hesitate to employ a word so much abused as *patriotism*, whose true sense is almost the reverse of its popular sense. We have no sympathy with that boyish egotism, hoarse with cheering for one side, for one state, for one town: the right patriotism consists in the delight which springs from contributing our peculiar and legitimate advantages to the benefit of humanity. Every foot of soil has its

proper quality; the grape on two sides of the same fence has new flavors; and so every acre on the globe, every family of men, every point of climate, has its distinguishing virtues. Certainly then this country does not lie here in the sun causeless; and though it may not be easy to define its influence, men feel already its emancipating quality in the careless self-reliance of the manners, in the freedom of thought, in the direct roads by which grievances are reached and redressed, and even in the reckless and sinister politics, not less than in purer expressions. Bad as it is, this freedom leads onward and upward,—to a Columbia of thought and art, which is the last and endless end of Columbus's adventure.

Lovers of our country, but not always approvers of the public counsels, we should certainly be glad to give good advice in politics. We have not been able to escape our national and endemic habit, and to be liberated from interest in the elections and in public affairs. Nor have we cared to disfranchise ourselves. We are more solicitous than others to make our politics clear and healthful, as we believe politics to be nowise accidental or exceptional, but subject to the same laws with trees, earths and acids. We see that reckless and destructive fury which characterizes the lower classes of American society, and which is pampered by hundreds of profligate presses. The young intriguers who drive in bar-rooms and town-meetings the trade of politics, sagacious only to seize the victorious side, have put the country into the position of an overgrown bully, and Massachusetts finds no heart or head to give weight and efficacy to her contrary judgment. In hours when it seemed only to need one just word from a man of honor to have vindicated the rights of millions, and to have given a true direction to the first steps of a nation, we have seen the best understandings of New England, the trusted leaders of her counsels, constituting a snivelling and despised opposition,

clapped on the back by comfortable capitalists from all sections, and persuaded to say, We are too old to stand for what is called a New England sentiment any longer. Rely on us for commercial representatives, but for questions of ethics,—who knows what markets may be opened? We are not well, we are not in our seats, when justice and humanity are to be spoken for.

We have a bad war, many victories, each of which converts the country into an immense chanticleer; and a very insincere political opposition.²⁷⁴⁴ The country needs to be extricated from its delirium at once. Public affairs are chained in the same law with private; the retributions of armed states are not less sure and signal than those which come to private felons. The facility of majorities is no protection from the natural sequence of their own acts. Men reason badly, but Nature and Destiny are logical.²⁷⁴⁵

But, whilst we should think our pains well bestowed if we could cure the infatuation of statesmen, and should be sincerely pleased if we could give a direction to the Federal politics, we are far from believing politics the primal interest of men. On the contrary, we hold that the laws and governors cannot possess a commanding interest for any but vacant or fanatical people; for the reason that this is simply a formal and superficial interest; and men of a solid genius are only interested in substantial things.

The State, like the individual, should rest on an ideal basis. Not only man but Nature is injured by the imputation that man exists only to be fattened with bread, but he lives in such connection with Thought and Fact that his bread is surely involved as one element thereof, but is not its end and aim. So the insight which commands the laws and conditions of the true polity precludes forever all interest in the squabbles of parties. As soon as men have tasted the enjoyment of learning, friendship and virtue, for

which the State exists, the prizes of office appear polluted, and their followers outcasts.

A journal that would meet the real wants of this time must have a courage and power sufficient to solve the problems which the great groping society around us, stupid with perplexity, is dumbly exploring. Let it now show its astuteness by dodging each difficult question and arguing diffusely every point on which men are long ago unanimous. Can it front this matter of Socialism, to which the names of Owen and Fourier have attached, and dispose of that question? Will it cope with the allied questions of Government, Nonresistance, and all that belongs under that category? Will it measure itself with the chapter on Slavery, in some sort the special enigma of the time, as it has provoked against it a sort of inspiration and enthusiasm singular in modern history? There are literary and philosophical reputations to settle. The name of Swedenborg has in this very time acquired new honors, and the current year has witnessed the appearance, in their first English translation, of his manuscripts. Here is an unsettled account in the book of Fame; a nebula to dim eyes, but which great telescopes may yet resolve into a magnificent system. Here is the standing problem of Natural Science, and the merits of her great interpreters to be determined; the encyclopædical Humboldt, and the intrepid generalizations collected by the author of the *Vestiges of Creation*. Here is the balance to be adjusted between the exact French school of Cuvier, and the genial catholic theorists, Geoffroy St.-Hilaire, Goethe, Davy and Agassiz. Will it venture into the thin and difficult air of that school where the secrets of structure are discussed under the topics of mesmerism and the twilights of demonology?

What will easily seem to many a far higher question than any other is that which respects the embodying of the Conscience of the period. Is the age we live in unfriendly to the highest powers;

to that blending of the affections with the poetic faculty which has distinguished the Religious Ages? We have a better opinion of the economy of Nature than to fear that those varying phases which humanity presents ever leave out any of the grand springs of human action. Mankind for the moment seem to be in search of a religion. The Jewish *cultus* is declining; the Divine, or, as some will say, the truly Human, hovers, now seen, now unseen, before us. This period of peace, this hour when the jangle of contending churches is hushing or hushed, will seem only the more propitious to those who believe that man need not fear the want of religion, because they know his religious constitution,—that he must rest on the moral and religious sentiments, as the motion of bodies rests on geometry. In the rapid decay of what was called religion, timid and unthinking people fancy a decay of the hope of man. But the moral and religious sentiments meet us everywhere, alike in markets as in churches. A God starts up behind cotton bales also. The conscience of man is regenerated as is the atmosphere, so that society cannot be debauched. The health which we call Virtue is an equipoise which easily redresses itself, and resembles those rocking stones which a child's finger can move, and a weight of many hundred tons cannot overthrow.

With these convictions, a few friends of good letters have thought fit to associate themselves for the conduct of a new journal. We have obeyed the custom and convenience of the time in adopting this form of a Review, as a mould into which all metal most easily runs. But the form shall not be suffered to be an impediment. The name might convey the impression of a book of criticism, and that nothing is to be found here which was not written expressly for the Review; but good readers know that inspired pages are not written to fill a space, but for inevitable utterance; and to such our journal is freely and solicitously open,

even though everything else be excluded. We entreat the aid of every lover of truth and right, and let these principles entreat for us. We rely on the talents and industry of good men known to us, but much more on the magnetism of truth, which is multiplying and educating advocates for itself and friends for us. We rely on the truth for and against ourselves.

XIX. ADDRESS TO KOSSUTH

AT CONCORD, MAY 11, 1852

GOD SAID, I am tired of kings,
I suffer them no more;
Up to my ear the morning brings
The outrage of the poor.

My angel,—his name is Freedom,—
Choose him to be your king;
He shall cut pathways east and west,
And fend you with his wing.

ADDRESS TO KOSSUTH

SIR,—THE FATIGUE of your many public visits, in such unbroken succession as may compare with the toils of a campaign, forbid us to detain you long. The people of this town share with their countrymen the admiration of valor and perseverance; they, like their compatriots, have been hungry to see the man whose extraordinary eloquence is seconded by the splendor and the solidity of his actions. But, as it is the privilege of the people of this town to keep a hallowed mound which has a place in the story of the country; as Concord is one of the monuments of freedom; we knew beforehand that you could not go by us; you could not take all your steps in the pilgrimage of American liberty, until you had seen with your eyes the ruins of the bridge where a handful of brave farmers opened our Revolution. Therefore, we sat and waited for you.

And now, Sir, we are heartily glad to see you, at last, in these fields. We set no more value than you do on cheers and huzzas. But we think that the graves of our heroes around us throb to-day to a footstep that sounded like their own:—

"The mighty tread
Brings from the dust the sound of liberty."²⁷⁴⁶

Sir, we have watched with attention your progress through the land, and the varying feeling with which you have been received, and the unvarying tone and countenance which you have maintained. We wish to discriminate in our regard. We wish to reserve our honor for actions of the noblest strain. We please ourselves that in you we meet one whose temper was long since tried in the fire, and made equal to all events; a man so truly in love with the greatest future, that he cannot be diverted to any less.

It is our republican doctrine, too, that the wide variety of opinions is an advantage. I believe I may say of the people of this country at large, that their sympathy is more worth, because it stands the test of party. It is not a blind wave; it is a living soul contending with living souls. It is, in every expression, antagonized. No opinion will pass but must stand the tug of war. As you see, the love you win is worth something; for it has been argued through; its foundation searched; it has proved sound and whole; it may be avowed; it will last, and it will draw all opinion to itself.

We have seen, with great pleasure, that there is nothing accidental in your attitude. We have seen that you are organically in that cause you plead. The man of Freedom, you are also the man of Fate. You do not elect, but you are elected by God and your genius to the task. We do not, therefore, affect to thank you. We only see in you the angel of freedom, crossing sea and land; crossing parties, nationalities, private interests and self-esteem; dividing populations where you go, and drawing to your part only the good. We are afraid that you are growing popular, Sir; you may be called to the dangers of prosperity. But, hitherto, you have

had in all centuries and in all parties only the men of heart. I do not know but you will have the million yet. Then, may your strength be equal to your day. But remember, Sir, that everything great and excellent in the world is in minorities.²⁷⁴⁷

Far be from us, Sir, any tone of patronage; we ought rather to ask yours. We know the austere condition of liberty—that it must be reconquered over and over again; yea, day by day; that it is a state of war; that it is always slipping from those who boast it to those who fight for it: and you, the foremost soldier of freedom in this age,—it is for us to crave your judgment; who are we that we should dictate to you? You have won your own. We only affirm it. This country of workingmen greets in you a worker. This republic greets in you a republican. We only say, 'Well done, good and faithful.'—You have earned your own nobility at home. We admit you *ad eundem* (as they say at College). We admit you to the same degree, without new trial. We suspend all rules before so paramount a merit. You may well sit a doctor in the college of liberty. You have achieved your right to interpret our Washington. And I speak the sense not only of every generous American, but the law of mind, when I say that it is not those who live idly in the city called after his name, but those who, all over the world, think and act like him, who can claim to explain the sentiment of Washington.

Sir, whatever obstruction from selfishness, indifference, or from property (which always sympathizes with possession) you may encounter, we congratulate you that you have known how to convert calamities into powers, exile into a campaign, present defeat into lasting victory. For this new crusade which you preach to willing and to unwilling ears in America is a seed of armed men. You have got your story told in every palace and log hut and prairie camp, throughout this continent. And, as the shores of

Europe and America approach every month, and their politics will one day mingle, when the crisis arrives it will find us all instructed beforehand in the rights and wrongs of Hungary, and parties already to her freedom.

XX. WOMAN

A LECTURE READ BEFORE THE WOMAN'S RIGHTS CONVENTION,
BOSTON, SEPTEMBER 20, 1855

The politics are base,
 The letters do not cheer,
And 't is far in the deeps of history,
 The voice that speaketh clear.

Yet there in the parlor sits
 Some figure in noble guise,—
Our Angel in a stranger's form;
 Or Woman's pleading eyes.

"LO, WHEN the Lord made North and South,
And sun and moon ordained he,
Forth bringing each by word of mouth
In order of its dignity,
Did man from the crude clay express
By sequence, and, all else decreed,
He formed the woman; nor might less
Than Sabbath such a work succeed."

COVENTRY PATMORE.

WOMAN

AMONG THOSE movements which seem to be, now and then, endemic in the public mind,—perhaps we should say, sporadic,—rather than the single inspiration of one mind, is that which has urged on society the benefits of action having for its object a benefit to the position of Woman. And none is more seriously interesting to every healthful and thoughtful mind.

In that race which is now predominant over all the other races of men, it was a cherished belief that women had an oracular nature. They are more delicate than men,—delicate as iodine to light,—and thus more impressionable. They are the best index of the coming hour. I share this belief. I think their words are to be weighed; but it is their inconsiderate word,—according to the rule, 'take their first advice, not the second:' as Coleridge was wont to apply to a lady for her judgment in questions of taste, and accept it; but when she added—"I think so, because—" "Pardon me, madam," he said, "leave me to find out the reasons for myself." In this sense, as more delicate mercuries of the imponderable and immaterial influences, what they say and think is the shadow of coming events. Their very dolls are indicative. Among our Norse

ancestors, Frigga was worshipped as the goddess of women. "Weirdes all," said the Edda, "Frigga knoweth, though she telleth them never." That is to say, all wisdoms Woman knows; though she takes them for granted, and does not explain them as discoveries, like the understanding of man. Men remark figure: women always catch the expression. They inspire by a look, and pass with us not so much by what they say or do, as by their presence. They learn so fast and convey the result so fast as to outrun the logic of their slow brother and make his acquisitions poor.²⁷⁴⁸ 'T is their mood and tone that is important. Does their mind misgive them, or are they firm and cheerful? 'T is a true report that things are going ill or well. And any remarkable opinion or movement shared by woman will be the first sign of revolution.

Plato said, Women are the same as men in faculty, only less in degree. But the general voice of mankind has agreed that they have their own strength; that women are strong by sentiment; that the same mental height which their husbands attain by toil, they attain by sympathy with their husbands. Man is the will, and Woman the sentiment. In this ship of humanity, Will is the rudder, and Sentiment the sail: when Woman affects to steer, the rudder is only a masked sail. When women engage in any art or trade, it is usually as a resource, not as a primary object. The life of the affections is primary to them, so that there is usually no employment or career which they will not with their own applause and that of society quit for a suitable marriage. And they give entirely to their affections, set their whole fortune on the die, lose themselves eagerly in the glory of their husbands and children. Man stands astonished at a magnanimity he cannot pretend to. Mrs. Lucy Hutchinson, one of the heroines of the English Commonwealth, who wrote the life of her husband, the Governor of Nottingham, says, "If he esteemed her at a higher rate than she in herself could have deserved, he was

the author of that virtue he doted on, while she only reflected his own glories upon him. All that she was, was *him*, while he was hers, and all that she is now, at best, but his pale shade." As for Plato's opinion, it is true that, up to recent times, in no art or science, nor in painting, poetry or music, have they produced a masterpiece. Till the new education and larger opportunities of very modern times, this position, with the fewest possible exceptions, has always been true. Sappho, to be sure, in the Olympic Games, gained the crown over Pindar. But, in general, no mastery in either of the fine arts—which should, one would say, be the arts of women—has yet been obtained by them, equal to the mastery of men in the same. The part they play in education, in the care of the young and the tuition of older children, is their organic office in the world. So much sympathy as they have makes them inestimable as the mediators between those who have knowledge and those who want it: besides, their fine organization, their taste and love of details, makes the knowledge they give better in their hands.

But there is an art which is better than painting, poetry, music, or architecture,—better than botany, geology, or any science; namely, Conversation. Wise, cultivated, genial conversation is the last flower of civilization and the best result which life has to offer us,—a cup for gods, which has no repentance. Conversation is our account of ourselves. All we have, all we can, all we know, is brought into play, and as the reproduction, in finer form, of all our havings.

Women are, by this and their social influence, the civilizers of mankind. What is civilization? I answer, the power of good women. It was Burns's remark when he first came to Edinburgh that between the men of rustic life and the polite world he observed little difference; that in the former, though unpolished by fashion and unenlightened by science, he had found much observation

and much intelligence; but a refined and accomplished woman was a being almost new to him, and of which he had formed a very inadequate idea. "I like women," said a clear-headed man of the world; "they are so finished." They finish society, manners, language. Form and ceremony are their realm. They embellish trifles. All these ceremonies that hedge our life around are not to be despised, and when we have become habituated to them, cannot be dispensed with. No woman can despise them with impunity. Their genius delights in ceremonies, in forms, in decorating life with manners, with properties, order and grace. They are, in their nature, more relative; the circumstance must always be fit; out of place they lose half their weight, out of place they are disfranchised. Position, Wren said, is essential to the perfecting of beauty;—a fine building is lost in a dark lane; a statue should stand in the air; much more true is it of woman.

We commonly say that easy circumstances seem somehow necessary to the finish of the female character: but then it is to be remembered that they create these with all their might. They are always making that civilization which they require; that state of art, of decoration, that ornamental life in which they best appear.

The spiritual force of man is as much shown in taste, in his fancy and imagination,—attaching deep meanings to things and to arbitrary inventions of no real value,—as in his perception of truth. He is as much raised above the beast by this creative faculty as by any other. The horse and ox use no delays; they run to the river when thirsty, to the corn when hungry, and say no thanks, but fight down whatever opposes their appetite. But man invents and adorns all he does with delays and degrees, paints it all over with forms, to please himself better; he invented majesty and the etiquette of courts and drawing-rooms; architecture, curtains, dress, all luxuries and adornments, and the elegance of

privacy, to increase the joys of society. He invented marriage; and surrounded by religion, by comeliness, by all manner of dignities and renunciations, the union of the sexes.

And how should we better measure the gulf between the best intercourse of men in old Athens, in London, or in our American capitals,—between this and the hedgehog existence of diggers of worms, and the eaters of clay and offal,—than by signaling just this department of taste or comeliness? Herein woman is the prime genius and ordainer. There is no grace that is taught by the dancing-master, no style adopted into the etiquette of courts, but was first the whim and the mere action of some brilliant woman, who charmed beholders by this new expression, and made it remembered and copied. And I think they should magnify their ritual of manners.²⁷⁴⁹ Society, conversation, decorum, flowers, dances, colors, forms, are their homes and attendants. They should be found in fit surroundings—with fair approaches, with agreeable architecture, and with all advantages which the means of man collect:

"The far-fetched diamond finds its home
Flashing and smouldering in her hair.
For her the seas their pearls reveal,
Art and strange lands her pomp supply
With purple, chrome and cochineal,
Ochre and lapis lazuli.
The worm its golden woof presents.
Whatever runs, flies, dives or delves
All doff for her their ornaments,
Which suit her better than themselves."²⁷⁵⁰

There is no gift of Nature without some drawback. So, to women, this exquisite structure could not exist without its own penalty. More vulnerable, more infirm, more mortal than men, they could not be such excellent artists in this element of fancy if they did not lend and give themselves to it. They are poets who believe their own poetry. They emit from their pores a colored atmosphere, one would say, wave upon wave of rosy light, in which they walk evermore, and see all objects through this warm-tinted mist that envelops them.

But the starry crown of woman is in the power of her affection and sentiment, and the infinite enlargements to which they lead. Beautiful is the passion of love, painter and adorer of youth and early life: but who suspects, in its blushes and tremors, what tragedies, heroisms and immortalities are beyond it? The passion, with all its grace and poetry, is profane to that which follows it. All these affections are only introductory to that which is beyond, and to that which is sublime.

We men have no right to say it, but the omnipotence of Eve is in humility. The instincts of mankind have drawn the Virgin Mother—

"Created beings all in lowliness
Surpassing, as in height above them all."²⁷⁵¹

This is the Divine Person whom Dante and Milton saw in vision. This is the victory of Griselda, her supreme humility. And it is when love has reached this height that all our pretty rhetoric begins to have meaning. When we see that, it adds to the soul a new soul, it is honey in the mouth, music in the ear and balsam in the heart.

"Far have I clambered in my mind,
But nought so great as Love I find.

What is thy tent, where dost thou dwell?
'My mansion is humility,
Heaven's vastest capability.'
The further it doth downward tend,
The higher up it doth ascend."²⁷⁵²

The first thing men think of, when they love, is to exhibit their usefulness and advantages to the object of their affection. Women make light of these, asking only love. They wish it to be an exchange of nobleness.

There is much in their nature, much in their social position which gives them a certain power of divination. And women know, at first sight, the characters of those with whom they converse. There is much that tends to give them a religious height which men do not attain. Their sequestration from affairs and from the injury to the moral sense which affairs often inflict, aids this. And in every remarkable religious development in the world, women have taken a leading part. It is very curious that in the East, where Woman occupies, nationally, a lower sphere, where the laws resist the education and emancipation of women,—in the Mohammedan faith, Woman yet occupies the same leading position, as a prophetess, that she has among the ancient Greeks, or among the Hebrews, or among the Saxons. This power, this religious character, is everywhere to be remarked in them.²⁷⁵³

The action of society is progressive. In barbarous society the position of women is always low—in the Eastern nations lower than in the West. "When a daughter is born," says the Shiking, the old Sacred Book of China, "she sleeps on the ground, she is clothed with a wrapper, she plays with a tile; she is incapable of evil or of good." And something like that position, in all low society, is the position of woman; because, as before remarked, she is herself

its civilizer. With the advancements of society, the position and influence of woman bring her strength or her faults into light. In modern times, three or four conspicuous instrumentalities may be marked. After the deification of Woman in the Catholic Church, in the sixteenth or seventeenth century,—when her religious nature gave her, of course, new importance,—the Quakers have the honor of having first established, in their discipline, the equality in the sexes. It is even more perfect in the later sect of the Shakers, where no business is broached or counselled without the intervention of one elder and one elderess.

A second epoch for Woman was in France,—entirely civil; the change of sentiment from a rude to a polite character, in the age of Louis XIV.,—commonly dated from the building of the Hôtel de Rambouillet.²⁷⁵⁴ I think another important step was made by the doctrine of Swedenborg, a sublime genius who gave a scientific exposition of the part played severally by man and woman in the world, and showed the difference of sex to run through nature and through thought. Of all Christian sects this is at this moment the most vital and aggressive.

Another step was the effect of the action of the age in the antagonism to Slavery. It was easy to enlist Woman in this; it was impossible not to enlist her. But that Cause turned out to be a great scholar. He was a terrible metaphysician. He was a jurist, a poet, a divine. Was never a University of Oxford or Göttingen that made such students. It took a man from the plough and made him acute, eloquent, and wise, to the silencing of the doctors. There was nothing it did not pry into, no right it did not explore, no wrong it did not expose. And it has, among its other effects, given Woman a feeling of public duty and an added self-respect.

One truth leads in another by the hand; one right is an accession of strength to take more. And the times are marked by the new

attitude of Woman; urging, by argument and by association, her rights of all kinds,—in short, to one half of the world;—as the right to education, to avenues of employment, to equal rights of property, to equal rights in marriage, to the exercise of the professions and of suffrage.

Of course, this conspicuousness had its inconveniences. But it is cheap wit that has been spent on this subject; from Aristophanes, in whose comedies I confess my dulness to find good joke, to Rabelais, in whom it is monstrous exaggeration of temperament, and not borne out by anything in nature,—down to English Comedy, and, in our day, to Tennyson,²⁷⁵⁵ and the American newspapers. In all, the body of the joke is one, namely, to charge women with temperament; to describe them as victims of temperament; and is identical with Mahomet's opinion that women have not a sufficient moral or intellectual force to control the perturbations of their physical structure. These were all drawings of morbid anatomy, and such satire as might be written on the tenants of a hospital or on an asylum for idiots. Of course it would be easy for women to retaliate in kind, by painting men from the dogs and gorillas that have worn our shape. That they have not, is an eulogy on their taste and self-respect. The good easy world took the joke which it liked. There is always the want of thought; there is always credulity. There are plenty of people who believe women to be incapable of anything but to cook, incapable of interest in affairs. There are plenty of people who believe that the world is governed by men of dark complexions, that affairs are only directed by such, and do not see the use of contemplative men, or how ignoble would be the world that wanted them. And so without the affection of women.

But for the general charge: no doubt it is well founded. They are victims of the finer temperament. They have tears, and gayeties,

and faintings, and glooms and devotion to trifles. Nature's end, of maternity for twenty years, was of so supreme importance that it was to be secured at all events, even to the sacrifice of the highest beauty. They are more personal. Men taunt them that, whatever they do, say, read or write, they are thinking of themselves and their set. Men are not to the same degree tempermented, for there are multitudes of men who live to objects quite out of them, as to politics, to trade, to letters or an art, unhindered by any influence of constitution.

The answer that lies, silent or spoken, in the minds of well-meaning persons, to the new claims, is this: that though their mathematical justice is not to be denied, yet the best women do not wish these things; they are asked for by people who intellectually seek them, but who have not the support or sympathy of the truest women; and that, if the laws and customs were modified in the manner proposed, it would embarrass and pain gentle and lovely persons with duties which they would find irksome and distasteful. Very likely. Providence is always surprising us with new and unlikely instruments. But perhaps it is because these people have been deprived of education, fine companions, opportunities, such as they wished,—because they feel the same rudeness and disadvantage which offends you,—that they have been stung to say, 'It is too late for us to be polished and fashioned into beauty, but, at least, we will see that the whole race of women shall not suffer as we have suffered.'

They have an unquestionable right to their own property. And if a woman demand votes, offices and political equality with men, as among the Shakers an Elder and Elderess are of equal power,—and among the Quakers,—it must not be refused. It is very cheap wit that finds it so droll that a woman should vote. Educate and

refine society to the highest point,—bring together a cultivated society of both sexes, in a drawing-room, and consult and decide by voices on a question of taste or on a question of right, and is there any absurdity or any practical difficulty in obtaining their authentic opinions? If not, then there need be none in a hundred companies, if you educate them and accustom them to judge. And, for the effect of it, I can say, for one, that all my points would sooner be carried in the State if women voted. On the questions that are important,—whether the government shall be in one person, or whether representative, or whether democratic; whether men shall be holden in bondage, or shall be roasted alive and eaten, as in Typee, or shall be hunted with bloodhounds, as in this country; whether men shall be hanged for stealing, or hanged at all; whether the unlimited sale of cheap liquors shall be allowed;—they would give, I suppose, as intelligent a vote as the voters of Boston or New York.

We may ask, to be sure,—Why need you vote? If new power is here, of a character which solves old tough questions, which puts me and all the rest in the wrong, tries and condemns our religion, customs, laws, and opens new careers to our young receptive men and women, you can well leave voting to the old dead people. Those whom you teach, and those whom you half teach, will fast enough make themselves considered and strong with their new insight, and votes will follow from all the dull.

The objection to their voting is the same as is urged, in the lobbies of legislatures, against clergymen who take an active part in politics;—that if they are good clergymen they are unacquainted with the expedencies of politics, and if they become good politicians they are worse clergymen. So of women, that they cannot enter this arena without being contaminated and unsexed.

Here are two or three objections: first, a want of practical wisdom; second, a too purely ideal view; and, third, danger of contamination. For their want of intimate knowledge of affairs, I do not think this ought to disqualify them from voting at any town-meeting which I ever attended. I could heartily wish the objection were sound. But if any man will take the trouble to see how our people vote,—how many gentlemen are willing to take on themselves the trouble of thinking and determining for you, and, standing at the door of the polls, give every innocent citizen his ticket as he comes in, informing him that this is the vote of his party; and how the innocent citizen, without further demur, goes and drops it in the ballot-box,—I cannot but think he will agree that most women might vote as wisely.

For the other point, of their not knowing the world, and aiming at abstract right without allowance for circumstances,—that is not a disqualification, but a qualification. Human society is made up of partialities. Each citizen has an interest and a view of his own, which, if followed out to the extreme, would leave no room for any other citizen. One man is timid and another rash; one would change nothing, and the other is pleased with nothing; one wishes schools, another armies, one gunboats, another public gardens. Bring all these biases together and something is done in favor of them all.

Every one is a half vote, but the next elector behind him brings the other or corresponding half in his hand: a reasonable result is had. Now there is no lack, I am sure, of the expediency, or of the interests of trade or of imperative class interests being neglected. There is no lack of votes representing the physical wants; and if in your city the uneducated emigrant vote numbers thousands, representing a brutal ignorance and mere animal wants, it is to be corrected by an educated and religious vote, representing the

wants and desires of honest and refined persons. If the wants, the passions, the vices, are allowed a full vote through the hands of a half-brutal intemperate population, I think it but fair that the virtues, the aspirations should be allowed a full vote, as an offset, through the purest part of the people.

As for the unsexing and contamination,—that only accuses our existing politics, shows how barbarous we are,—that our policies are so crooked, made up of things not to be spoken, to be understood only by wink and nudge; this man to be coaxed, that man to be bought, and that other to be duped. It is easy to see that there is contamination enough, but it rots the men now, and fills the air with stench. Come out of that: it is like a dance-cellar. The fairest names in this country in literature, in law, have gone into Congress and come out dishonored. And when I read the list of men of intellect, of refined pursuits, giants in law, or eminent scholars, or of social distinction, leading men of wealth and enterprise in the commercial community, and see what they have voted for and suffered to be voted for, I think no community was ever so politely and elegantly betrayed.

I do not think it yet appears that women wish this equal share in public affairs. But it is they and not we that are to determine it. Let the laws be purged of every barbarous remainder, every barbarous impediment to women. Let the public donations for education be equally shared by them, let them enter a school as freely as a church, let them have and hold and give their property as men do theirs;—and in a few years it will easily appear whether they wish a voice in making the laws that are to govern them. If you do refuse them a vote, you will also refuse to tax them,—according to our Teutonic principle, No representation, no tax.

All events of history are to be regarded as growths and offshoots of the expanding mind of the race, and this appearance of new opinions, their currency and force in many minds, is itself the wonderful fact. For whatever is popular is important, shows the spontaneous sense of the hour. The aspiration of this century will be the code of the next. It holds of high and distant causes, of the same influences that make the sun and moon. When new opinions appear, they will be entertained and respected, by every fair mind, according to their reasonableness, and not according to their convenience, or their fitness to shock our customs. But let us deal with them greatly; let them make their way by the upper road, and not by the way of manufacturing public opinion, which lapses continually into expediency, and makes charlatans. All that is spontaneous is irresistible, and forever it is individual force that interests. I need not repeat to you—your own solitude will suggest it—that a masculine woman is not strong, but a lady is. The loneliest thought, the purest prayer, is rushing to be the history of a thousand years.

Let us have the true woman, the adorer, the hospitable, the religious heart, and no lawyer need be called in to write stipulations, the cunning clauses of provision, the strong investitures;—for woman moulds the lawgiver and writes the law. But I ought to say, I think it impossible to separate the interests and education of the sexes. Improve and refine the men, and you do the same by the women, whether you will or no. Every woman being the wife or the daughter of a man,—wife, daughter, sister, mother, of a man, she can never be very far from his ear, never not of his counsel, if she has really something to urge that is good in itself and agreeable to nature. Slavery it is that makes slavery; freedom, freedom. The slavery of women happened when the men were slaves of kings. The melioration of manners brought their melioration of course.

It could not be otherwise, and hence the new desire of better laws. For there are always a certain number of passionately loving fathers, brothers, husbands and sons who put their might into the endeavor to make a daughter, a wife, or a mother happy in the way that suits best. Woman should find in man her guardian. Silently she looks for that, and when she finds that he is not, as she instantly does, she betakes her to her own defences, and does the best she can. But when he is her guardian, fulfilled with all nobleness, knows and accepts his duties as her brother, all goes well for both.

The new movement is only a tide shared by the spirits of man and woman; and you may proceed in the faith that whatever the woman's heart is prompted to desire, the man's mind is simultaneously prompted to accomplish.²⁷⁵⁶

XXI. ADDRESS

TO THE INHABITANTS OF CONCORD AT THE CONSECRATION OF
SLEEPY HOLLOW SEPTEMBER 29, 1855

SLEEPY HOLLOW

"No abbey's gloom, nor dark cathedral stoops,
No winding torches paint the midnight air;
Here the green pines delight, the aspen droops
Along the modest pathways, and those fair
Pale asters of the season spread their plumes
Around this field, fit garden for our tombs.

And shalt thou pause to hear some funeral-bell
Slow stealing o'er the heart in this calm place,
Not with a throb of pain, a feverish knell,
But in its kind and supplicating grace,
It says, Go, pilgrim, on thy march, be more
Friend to the friendless than thou wast before;

Learn from the loved one's rest serenity;
To-morrow that soft bell for thee shall sound,
And thou repose beneath the whispering tree,
One tribute more to this submissive ground;—
Prison thy soul from malice, bar out pride,
Nor these pale flowers nor this still field deride:

Rather to those ascents of being turn
Where a ne'er-setting sun illumines the year
Eternal, and the incessant watch-fires burn
Of unspent holiness and goodness clear,—
Forget man's littleness, deserve the best,
God's mercy in thy thought and life confest."

WILLIAM ELLERY CHANNING.

ADDRESS

TO THE INHABITANTS OF CONCORD AT THE CONSECRATION OF
SLEEPY HOLLOW SEPTEMBER 29, 1855

CITIZENS AND Friends: The committee to whom was confided the charge of carrying out the wishes of the town in opening the cemetery, having proceeded so far as to enclose the ground, and cut the necessary roads, and having laid off as many lots as are likely to be wanted at present, have thought it fit to call the inhabitants together, to show you the ground, now that the new avenues make its advantages appear; and to put it at your disposition.

They have thought that the taking possession of this field ought to be marked by a public meeting and religious rites: and they have requested me to say a few words which the serious and tender occasion inspires.

And this concourse of friendly company assures me that they have rightly interpreted your wishes. [Here followed, in the address, about three pages of matter which Mr. Emerson used later in his essay on Immortality, which may be found in the volume

Letters and Social Aims, beginning on page 324, "The credence of men," etc., and ending on pages 326–27 with the sentence, "Meantime the true disciples saw, through the letters, the doctrine of eternity which dissolved the poor corpse and nature also, and gave grandeur to the passing hour."]

In these times we see the defects of our old theology; its inferiority to our habit of thoughts. Men go up and down; Science is popularized; the irresistible democracy—shall I call it?—of chemistry, of vegetation, which recomposes for new life every decomposing particle,—the race never dying, the individual never spared,—have impressed on the mind of the age the futility of these old arts of preserving. We give our earth to earth. We will not jealously guard a few atoms under immense marbles, selfishly and impossibly sequestering it from the vast circulations of Nature, but, at the same time, fully admitting the divine hope and love which belong to our nature, wishing to make one spot tender to our children, who shall come hither in the next century to read the dates of these lives.

Our people accepting this lesson from science, yet touched by the tenderness which Christianity breathes, have found a mean in the consecration of gardens. A simultaneous movement has, in a hundred cities and towns in this country, selected some convenient piece of undulating ground with pleasant woods and waters; every family chooses its own clump of trees; and we lay the corpse in these leafy colonnades.

A grove of trees,—what benefit or ornament is so fair and great? they make the landscape; they keep the earth habitable; their roots run down, like cattle, to the water-courses; their heads expand to feed the atmosphere. The life of a tree is a hundred and a thousand years; its decays ornamental; its repairs self-made: they grow when we sleep, they grew when we were unborn. Man is a

moth among these longevities. He plants for the next millennium. Shadows haunt them; all that ever lived about them cling to them. You can almost see behind these pines the Indian with bow and arrow lurking yet exploring the traces of the old trail.

Modern taste has shown that there is no ornament, no architecture alone, so sumptuous as well disposed woods and waters, where art has been employed only to remove superfluities, and bring out the natural advantages. In cultivated grounds one sees the picturesque and opulent effect of the familiar shrubs, barberry, lilac, privet and thorns, when they are disposed in masses, and in large spaces. What work of man will compare with the plantation of a park? It dignifies life. It is a seat for friendship, counsel, taste and religion. I do not wonder that they are the chosen badge and point of pride of European nobility. But how much more are they needed by us, anxious, overdriven Americans, to stanch and appease that fury of temperament which our climate bestows!

This tract fortunately lies adjoining to the Agricultural Society's ground, to the New Burial Ground, to the Court House and the Town House, making together a large block of public ground, permanent property of the town and county,—all the ornaments of either adding so much value to all.

I suppose all of us will readily admit the value of parks and cultivated grounds to the pleasure and education of the people, but I have heard it said here that we would gladly spend for a park for the living, but not for a cemetery; a garden for the living, a home of thought and friendship. Certainly the living need it more than the dead; indeed, to speak precisely, it is given to the dead for the reaction of benefit on the living. But if the direct regard to the living be thought expedient, that is also in your power. This ground is happily so divided by Nature as to admit of this relation

between the Past and the Present. In the valley where we stand will be the Monuments. On the other side of the ridge, towards the town, a portion of the land is in full view of the cheer of the village and is out of sight of the Monuments; it admits of being reserved for secular purposes; for games,—not such as the Greeks honored the dead with, but for games of education; the distribution of school prizes; the meeting of teachers; patriotic eloquence, the utterance of the principles of national liberty to private, social, literary or religious fraternities. Here we may establish that most agreeable of all museums, and agreeable to the temper of our times,—an *Arboretum*,—wherein may be planted, by the taste of every citizen, one tree, with its name recorded in a book; every tree that is native to Massachusetts, or will grow in it; so that every child may be shown growing, side by side, the eleven oaks of Massachusetts; and the twenty willows; the beech, which we have allowed to die out of the eastern counties; and here the vast firs of California and Oregon.

This spot for twenty years has borne the name of *Sleepy Hollow*. Its seclusion from the village in its immediate neighborhood had made it to all the inhabitants an easy retreat on a Sabbath day, or a summer twilight, and it was inevitably chosen by them when the design of a new cemetery was broached, if it did not suggest the design, as the fit place for their final repose. In all the multitudes of woodlands and hillsides, which within a few years have been laid out with a similar design, I have not known one so fitly named. *Sleepy Hollow*. In this quiet valley, as in the palm of Nature's hand, we shall sleep well when we have finished our day. What is the Earth itself but a surface scooped into nooks and caves of slumber—according to the Eastern fable, a bridge full of holes, into one or other of which all the passengers sink to silence? Nay, when I think of the mystery of life, its round of illusions, our

ignorance of its beginning or its end, the speed of the changes of that glittering dream we call existence,—I think sometimes that the vault of the sky arching there upward, under which our busy being is whirled, is only a Sleepy Hollow, with path of Suns, instead of foot-paths; and Milky Ways, for truck-roads.

The ground has the peaceful character that belongs to this town;—no lofty crags, no glittering cataracts;—but I hold that every part of Nature is handsome when not deformed by bad Art. Bleak sea-rocks and sea-downs and blasted heaths have their own beauty; and though we make much ado in our praises of Italy or Andes, Nature makes not so much difference. The morning, the moonlight, the spring day, are magical painters, and can glorify a meadow or a rock.

But we must look forward also, and make ourselves a thousand years old; and when these acorns, that are falling at our feet, are oaks overshadowing our children in a remote century, this mute green bank will be full of history: the good, the wise and great will have left their names and virtues on the trees; heroes, poets, beauties, sanctities, benefactors, will have made the air timeable and articulate.

And hither shall repair, to this modest spot of God's earth, every sweet and friendly influence; the beautiful night and beautiful day will come in turn to sit upon the grass. Our use will not displace the old tenants. The well-beloved birds will not sing one song the less, the high-holding woodpecker, the meadow-lark, the oriole, robin, purple finch, bluebird, thrush and red-eyed warbler, the heron, the bittern will find out the hospitality and protection from the gun of this asylum, and will seek the waters of the meadow; and in the grass, and by the pond, the locust, the cricket and the hyla, shall shrilly play.

We shall bring hither the body of the dead, but how shall we catch the escaped soul? Here will burn for us, as the oath of God, the sublime belief. I have heard that death takes us away from ill things, not from good. I have heard that when we pronounce the name of man, we pronounce the belief of immortality. All great natures delight in stability; all great men find eternity affirmed in the promise of their faculties. Why is the fable of the Wandering Jew agreeable to men, but because they want more time and land to execute their thoughts in? Life is not long enough for art, nor long enough for friendship. The evidence from intellect is as valid as the evidence from love. The being that can share a thought and feeling so sublime as confidence in truth is no mushroom. Our dissatisfaction with any other solution is the blazing evidence of immortality.

XXII. ROBERT BURNS

SPEECH DELIVERED AT THE CELEBRATION OF THE BURNS CENTENARY,
BOSTON JANUARY 25, 1859

"HIS WAS the music to whose tone
The common pulse of man keeps time
In cot or castle's mirth or moan,
In cold or sunny clime.

Praise to the bard! his words are driven,
Like flower-seeds by the far winds sown,
Where'er, beneath the sky of heaven,
The birds of fame have flown."

HALLECK.

ROBERT BURNS

MR. PRESIDENT, and Gentlemen: I do not know by what untoward accident it has chanced, and I forbear to inquire, that, in this accomplished circle, it should fall to me, the worst Scotsman of all, to receive your commands, and at the latest hour too, to respond to the sentiment just offered, and which indeed makes the occasion. But I am told there is no appeal, and I must trust to the inspirations of the theme to make a fitness which does not otherwise exist. Yet, Sir, I heartily feel the singular claims of the occasion. At the first announcement, from I know not whence, that the 25th of January was the hundredth anniversary of the birth of Robert Burns, a sudden consent warmed the great English race, in all its kingdoms, colonies and states, all over the world, to keep the festival. We are here to hold our parliament with love and poesy, as men were wont to do in the Middle Ages. Those famous parliaments might or might not have had more stateliness and better singers than we,—though that is yet to be known,—but they could not have better reason. I can only explain this singular unanimity in a race which rarely acts together, but rather after their watchword, Each for himself,—by the fact that Robert Burns,

the poet of the middle class, represents in the mind of men to-day that great uprising of the middle class against the armed and privileged minorities, that uprising which worked politically in the American and French Revolutions, and which, not in governments so much as in education and social order, has changed the face of the world.

In order for this destiny, his birth, breeding and fortunes were low. His organic sentiment was absolute independence, and resting as it should on a life of labor. No man existed who could look down on him. They that looked into his eyes saw that they might look down the sky as easily.²⁷⁵⁷ His muse and teaching was common sense, joyful, aggressive, irresistible. Not Latimer, nor Luther struck more telling blows against false theology than did this brave singer. The Confession of Augsburg, the Declaration of Independence, the French Rights of Man, and the Marseillaise, are not more weighty documents in the history of freedom than the songs of Burns. His satire has lost none of its edge. His musical arrows yet sing through the air. He is so substantially a reformer that I find his grand plain sense in close chain with the greatest masters,—Rabelais, Shakspeare in comedy, Cervantes, Butler, and Burns. If I should add another name, I find it only in a living countryman of Burns.²⁷⁵⁸

He is an exceptional genius. The people who care nothing for literature and poetry care for Burns. It was indifferent—they thought who saw him—whether he wrote verse or not: he could have done anything else as well. Yet how true a poet is he! And the poet, too, of poor men, of gray hodden and the guernsey coat and the blouse. He has given voice to all the experiences of common life; he has endeared the farmhouse and cottage, patches and poverty, beans and barley; ale, the poor man's wine; hardship; the fear of debt; the dear society of weans and wife, of brothers

and sisters, proud of each other, knowing so few and finding amends for want and obscurity in books and thoughts.²⁷⁵⁹ What a love of Nature, and, shall I say it? of middle-class Nature. Not like Goethe, in the stars, or like Byron, in the ocean, or Moore, in the luxurious East, but in the homely landscape which the poor see around them,—bleak leagues of pasture and stubble, ice and sleet and rain and snow-choked brooks; birds, hares, field-mice, thistles and heather, which he daily knew. How many "Bonny Doons" and "John Anderson my jo's" and "Auld lang syne" all around the earth have his verses been applied to! And his love-songs still woo and melt the youths and maids; the farm-work, the country holiday, the fishing-cobble are still his debtors to-day.

And as he was thus the poet of the poor, anxious, cheerful, working humanity, so had he the language of low life. He grew up in a rural district, speaking a *patois* unintelligible to all but natives, and he has made the Lowland Scotch a Doric dialect of fame. It is the only example in history of a language made classic by the genius of a single man. But more than this. He had that secret of genius to draw from the bottom of society the strength of its speech, and astonish the ears of the polite with these artless words, better than art, and filtered of all offence through his beauty. It seemed odious to Luther that the devil should have all the best tunes; he would bring them into the churches; and Burns knew how to take from fairs and gypsies, blacksmiths and drovers, the speech of the market and street, and clothe it with melody. But I am detaining you too long. The memory of Burns, —I am afraid heaven and earth have taken too good care of it to leave us anything to say. The west winds are murmuring it. Open the windows behind you, and hearken for the incoming tide, what the waves say of it. The doves perching always on the eaves of the Stone Chapel opposite, may know something about it. Every name in broad Scotland keeps his

fame bright. The memory of Burns,—every man's, every boy's and girl's head carries snatches of his songs, and they say them by heart, and, what is strangest of all, never learned them from a book, but from mouth to mouth. The wind whispers them, the birds whistle them, the corn, barley, and bulrushes hoarsely rustle them, nay, the music-boxes at Geneva are framed and toothed to play them; the hand-organs of the Savoyards in all cities repeat them, and the chimes of bells ring them in the spires. They are the property and the solace of mankind.²⁷⁶⁰

XXIII. REMARKS

AT THE CELEBRATION OF THE THREE HUNDREDTH ANNIVERSARY OF
THE BIRTH OF SHAKSPEARE BY THE SATURDAY CLUB AT THE REVERE
HOUSE. BOSTON, 1864

ENGLAND'S GENIUS filled all measure
Of heart and soul, of strength and pleasure,
Gave to mind its emperor
And life was larger than before;
And centuries brood, nor can attain
The sense and bound of Shakspeare's brain.
The men who lived with him became
Poets, for the air was fame.

SHAKSPEARE

THIS NOT our fault if we have not made this evening's circle still richer than it is. We seriously endeavored, besides our brothers and our seniors, on whom the ordinary lead of literary and social action falls—and falls because of their ability—to draw out of their retirements a few rarer lovers of the muse—"seld-seen flamens"—whom this day seemed to elect and challenge. And it is to us a painful disappointment that Bryant and Whittier as guests, and our own Hawthorne,—with the best will to come,—should have found it impossible at last; and again, that a well-known and honored compatriot, who first in Boston wrote elegant verse, and on Shakspeare, and whose American devotion through forty or fifty years to the affairs of a bank, has not been able to bury the fires of his genius,—Mr. Charles Sprague,—pleads the infirmities of age as an absolute bar to his presence with us.

We regret also the absence of our members Sumner and Motley.

We can hardly think of an occasion where so little need be said. We are all content to let Shakspeare speak for himself. His fame is settled on the foundations of the moral and intellectual world.

Wherever there are men, and in the degree in which they are civil—have power of mind, sensibility to beauty, music, the secrets of passion, and the liquid expression of thought, he has risen to his place as the first poet of the world.

Genius is the consoler of our mortal condition, and Shakspeare taught us that the little world of the heart is vaster, deeper and richer than the spaces of astronomy. What shocks of surprise and sympathetic power, this battery, which he is, imparts to every fine mind that is born! We say to the young child in the cradle, 'Happy, and defended against Fate! for here is Nature, and here is Shakspeare, waiting for you!'

'T is our metre of culture. He is a cultivated man—who can tell us something new of Shakspeare. All criticism is only a making of rules out of his beauties. He is as superior to his countrymen, as to all other countrymen. He fulfilled the famous prophecy of Socrates, that the poet most excellent in tragedy would be most excellent in comedy, and more than fulfilled it by making tragedy also a victorious melody which healed its own wounds. In short, Shakspeare is the one resource of our life on which no gloom gathers; the fountain of joy which honors him who tastes it; day without night; pleasure without repentance; the genius which, in unpoetic ages, keeps poetry in honor and, in sterile periods, keeps up the credit of the human mind.

His genius has reacted on himself. Men were so astonished and occupied by his poems that they have not been able to see his face and condition, or say, who was his father and his brethren; or what life he led; and at the short distance of three hundred years he is mythical, like Orpheus and Homer, and we have already seen the most fantastic theories plausibly urged, as that Raleigh and Bacon were the authors of the plays.

Yet we pause expectant before the genius of Shakspeare—as if his biography were not yet written; until the problem of the whole English race is solved.

I see, among the lovers of this catholic genius, here present, a few, whose deeper knowledge invites me to hazard an article of my literary creed; that Shakspeare, by his transcendant reach of thought, so unites the extremes, that, whilst he has kept the theatre now for three centuries, and, like a street-bible, furnishes sayings to the market, courts of law, the senate, and common discourse,—he is yet to all wise men the companion of the closet. The student finds the solitariest place not solitary enough to read him; and so searching is his penetration, and such the charm of his speech, that he still agitates the heart in age as in youth, and will, until it ceases to beat.

Young men of a contemplative turn carry his sonnets in the pocket. With that book, the shade of any tree, a room in any inn, becomes a chapel or oratory in which to sit out their happiest hours. Later they find riper and manlier lessons in the plays.

And secondly, he is the most robust and potent thinker that ever was. I find that it was not history, courts and affairs that gave him lessons, but he that gave grandeur and prestige to them. There never was a writer who, seeming to draw every hint from outward history, the life of cities and courts, owed them so little. You shall never find in this world the barons or kings he depicted. 'T is fine for Englishmen to say, they only know history by Shakspeare. The palaces they compass earth and sea to enter, the magnificence and personages of royal and imperial abodes, are shabby imitations and caricatures of his,—clumsy pupils of his instruction. There are no Warwicks, no Talbots, no Bolingbrokes, no Cardinals, no Harry Fifth, in real Europe, like his. The loyalty and royalty he drew were

all his own. The real Elizabeths, Jameses and Louises were painted sticks before this magician.

The unaffected joy of the comedy,—he lives in a gale,—contrasted with the grandeur of the tragedy, where he stoops to no contrivance, no pulping, but flies an eagle at the heart of the problem; where his speech is a Delphi,—the great Nemesis that he is and utters. What a great heart of equity is he! How good and sound and inviolable his innocency, that is never to seek, and never wrong, but speaks the pure sense of humanity on each occasion. He dwarfs all writers without a solitary exception. No egotism. The egotism of men is immense. It concealed Shakspeare for a century. His mind has a superiority such that the universities should read lectures on him, and conquer the unconquerable if they can.

There are periods fruitful of great men; others, barren; or, as the world is always equal to itself, periods when the heat is latent,—others when it is given out.

They are like the great wine years,—the vintage of 1847, is it? or 1835?—which are not only noted in the carte of the table d'hôte, but which, it is said, are always followed by new vivacity in the politics of Europe. His birth marked a great wine year when wonderful grapes ripened in the vintage of God, when Shakspeare and Galileo were born within a few months of each other, and Cervantes was his exact contemporary, and, in short space before and after, Montaigne, Bacon, Spenser, Raleigh and Jonson. Yet Shakspeare, not by any inferiority of theirs, but simply by his colossal proportions, dwarfs the geniuses of Elizabeth as easily as the wits of Anne, or the poor slipshod troubadours of King René.

In our ordinary experience of men there are some men so born to live well that, in whatever company they fall,—high or

low,—they fit well, and lead it! but, being advanced to a higher class, they are just as much in their element as before, and easily command: and being again preferred to selecter companions, find no obstacle to ruling these as they did their earlier mates; I suppose because they have more humanity than talent, whilst they have quite as much of the last as any of the company. It would strike you as comic, if I should give my own customary examples of this elasticity, though striking enough to me. I could name in this very company—or not going far out of it—very good types, but in order to be parliamentary, Franklin, Burns and Walter Scott are examples of the rule; and king of men, by this grace of God also, is Shakspeare.

The Pilgrims came to Plymouth in 1620. The plays of Shakspeare were not published until three years later. Had they been published earlier, our forefathers, or the most poetical among them, might have stayed at home to read them.

XXIV. HUMBOLDT

AN ABSTRACT OF MR. EMERSON'S REMARKS MADE AT THE
CELEBRATION OF THE CENTENNIAL ANNIVERSARY OF THE BIRTH OF
ALEXANDER VON HUMBOLDT, SEPTEMBER 14, 1869

"If A life prolonged to an advanced period bring with it several inconveniences to the individual, there is a compensation in the delight of being able to compare older states of knowledge with that which now exists, and to see great advances in knowledge develop themselves under our eyes in departments which had long slept in inactivity."

Humboldt, *Letter to Ritter*.

HUMBOLDT

HUMBOLDT WAS one of those wonders of the world, like Aristotle, like Julius Cæsar, like the Admirable Crichton, who appear from time to time, as if to show us the possibilities of the human mind, the force and the range of the faculties,—a universal man, not only possessed of great particular talents, but they were symmetrical, his parts were well put together. As we know, a man's natural powers are often a sort of committee that slowly, one at a time, give their attention and action; but Humboldt's were all united, one electric chain, so that a university, a whole French Academy, travelled in his shoes. With great propriety, he named his sketch of the results of science *Cosmos*. There is no other such survey or surveyor. The wonderful Humboldt, with his solid centre and expanded wings, marches like an army, gathering all things as he goes. How he reaches from science to science, from law to law, folding away moons and asteroids and solar systems in the clauses and parentheses of his encyclopædic paragraphs! There is no book like it; none indicating such a battalion of powers. You could not put him on any sea or shore but his instant recollection of every other sea or shore illuminated this.

He was properly a man of the world; you could not lose him; you could not detain him; you could not disappoint him, for at any point on land or sea he found the objects of his researches. When he was stopped in Spain and could not get away, he turned round and interpreted their mountain system, explaining the past history of the continent of Europe. He belonged to that wonderful German nation, the foremost scholars in all history, who surpass all others in industry, space and endurance. A German reads a literature whilst we are reading a book. One of their writers warns his countrymen that it is not the Battle of Leipsic, but the Leipsic Fair Catalogue, which raises them above the French. I remember Cuvier tells us of fossil elephants; that Germany has furnished the greatest number;—not because there are more elephants in Germany,—oh no; but because in that empire there is no canton without some well-informed person capable of making researches and publishing interesting results. I know that we have been accustomed to think they were too good scholars, that because they reflect, they never resolve, that “in a crisis no plan-maker was to be found in the empire;” but we have lived to see now, for the second time in the history of Prussia, a statesman of the first class, with a clear head and an inflexible will.

XXV. WALTER SCOTT

REMARKS AT THE CELEBRATION BY THE MASSACHUSETTS HISTORICAL
SOCIETY OF THE CENTENNIAL ANNIVERSARY OF HIS BIRTH, AUGUST
15, 1871

SCOTT, THE delight of generous boys.

AS FAR as Sir Walter Scott aspired to be known for a fine gentleman, so far our sympathies leave him....Our concern is only with the residue, where the man Scott was warmed with a divine ray that clad with beauty every sheet of water, every bald hill in the country he looked upon, and so reanimated the well-nigh obsolete feudal history and illustrated every hidden corner of a barren and disagreeable territory.

Lecture, "Being and Seeing," 1838.

WALTER SCOTT

THE MEMORY of Sir Walter Scott is dear to this Society, of which he was for ten years an honorary member. If only as an eminent antiquary who has shed light on the history of Europe and of the English race, he had high claims to our regard. But to the rare tribute of a centennial anniversary of his birthday, which we gladly join with Scotland, and indeed with Europe, to keep, he is not less entitled—perhaps he alone among literary men of this century is entitled—by the exceptional debt which all English-speaking men have gladly owed to his character and genius. I think no modern writer has inspired his readers with such affection to his own personality. I can well remember as far back as when *The Lord of the Isles* was first republished in Boston, in 1815,—my own and my school-fellows' joy in the book.²⁷⁶¹ *Marmion* and *The Lay* had gone before, but we were then learning to spell. In the face of the later novels, we still claim that his poetry is the delight of boys. But this means that when we reopen these old books we all consent to be boys again. We tread over our youthful grounds with joy. Critics have found them to be only rhymed prose. But I believe that many of those who read them in youth, when, later, they come to dismiss

finally their school-days' library, will make some fond exception for Scott as for Byron.

It is easy to see the origin of his poems. His own ear had been charmed by old ballads crooned by Scottish dames at firesides, and written down from their lips by antiquaries; and finding them now outgrown and dishonored by the new culture, he attempted to dignify and adapt them to the times in which he lived. Just so much thought, so much picturesque detail in dialogue or description as the old ballad required, so much suppression of details and leaping to the event, he would keep and use, but without any ambition to write a high poem after a classic model. He made no pretension to the lofty style of Spenser, or Milton, or Wordsworth. Compared with their purified songs, purified of all ephemeral color or material, his were *vers de société*. But he had the skill proper to *vers de société*,—skill to fit his verse to his topic, and not to write solemn pentameters alike on a hero or a spaniel. His good sense probably elected the ballad to make his audience larger. He apprehended in advance the immense enlargement of the reading public, which almost dates from the era of his books,—which his books and Byron's inaugurated; and which, though until then unheard of, has become familiar to the present time.

If the success of his poems, however large, was partial, that of his novels was complete. The tone of strength in *Waverley* at once announced the master, and was more than justified by the superior genius of the following romances, up to the *Bride of Lammermoor*, which almost goes back to Æschylus for a counterpart as a painting of Fate,—leaving on every reader the impression of the highest and purest tragedy.²⁷⁶²

His power on the public mind rests on the singular union of two influences. By nature, by his reading and taste an aristocrat, in a time and country which easily gave him that bias, he had the

virtues and graces of that class, and by his eminent humanity and his love of labor escaped its harm. He saw in the English Church the symbol and seal of all social order; in the historical aristocracy the benefits to the state which Burke claimed for it; and in his own reading and research such store of legend and renown as won his imagination to their cause. Not less his eminent humanity delighted in the sense and virtue and wit of the common people. In his own household and neighbors he found characters and pets of humble class, with whom he established the best relation,—small farmers and tradesmen, shepherds, fishermen, gypsies, peasant-girls, crones,—and came with these into real ties of mutual help and good will. From these originals he drew so genially his Jeanie Deans, his Dinmonts and Edie Ochiltrees, Caleb Balderstones and Fairservices, Cuddie Headriggs, Dominies, Meg Merrilies, and Jenny Rintherouts, full of life and reality; making these, too, the pivots on which the plots of his stories turn; and meantime without one word of brag of this discernment,—nay, this extreme sympathy reaching down to every beggar and beggar's dog, and horse and cow. In the number and variety of his characters he approaches Shakspeare. Other painters in verse or prose have thrown into literature a few type-figures; as Cervantes, De Foe, Richardson, Goldsmith, Sterne and Fielding; but Scott portrayed with equal strength and success every figure in his crowded company.

His strong good sense saved him from the faults and foibles incident to poets,—from nervous egotism, sham modesty or jealousy. He played ever a manly part.²⁷⁶³ With such a fortune and such a genius, we should look to see what heavy toll the Fates took of him, as of Rousseau or Voltaire, of Swift or Byron. But no: he had no insanity, or vice, or blemish. He was a thoroughly upright, wise and great-hearted man, equal to whatever event or fortune should try him. Disasters only drove him to immense exertion.

What an ornament and safeguard is humor! Far better than wit for a poet and writer. It is a genius itself, and so defends from the insanities.

Under what rare conjunction of stars was this man born, that, wherever he lived, he found superior men, passed all his life in the best company, and still found himself the best of the best! He was apprenticed at Edinburgh to a Writer to the Signet, and became a Writer to the Signet, and found himself in his youth and manhood and age in the society of Mackintosh, Horner, Jeffrey, Playfair, Dugald Stewart, Sydney Smith, Leslie, Sir William Hamilton, Wilson, Hogg, De Quincey,—to name only some of his literary neighbors, and, as soon as he died, all this brilliant circle was broken up.

XXVI. SPEECH

AT BANQUET IN HONOR OF THE CHINESE EMBASSY BOSTON, 1860

NATURE CREATES in the East the uncontrollable yearning to escape from limitation into the vast and boundless, to use a freedom of fancy which plays with all works of Nature, great or minute, galaxy or grain of dust, as toys and words of the mind; inculcates a beatitude to be found in escape from all organization and all personality, and makes ecstasy an institution.

SPEECH AT THE BANQUET IN HONOR OF THE CHINESE EMBASSY

MR. MAYOR: I suppose we are all of one opinion on this remarkable occasion of meeting the embassy sent from the oldest Empire in the world to the youngest Republic. All share the surprise and pleasure when the venerable Oriental dynasty—hitherto a romantic legend to most of us—suddenly steps into the fellowship of nations. This auspicious event, considered in connection with the late innovations in Japan, marks a new era, and is an irresistible result of the science which has given us the power of steam and the electric telegraph. It is the more welcome for the surprise. We had said of China, as the old prophet said of Egypt, "Her strength is to sit still." Her people had such elemental conservatism that by some wonderful force of race and national manners, the wars and revolutions that occur in her annals have proved but momentary swells or surges on the pacific ocean of her history, leaving no trace. But in its immovability this race has claims. China is old, not in time only, but in wisdom, which is gray hair to a nation,—or, rather, truly seen, is eternal youth. As we know, China had the magnet centuries before Europe; and block-printing or stereotype, and lithography, and gunpowder, and vaccination,

and canals; had anticipated Linnæus's nomenclature of plants; had codes, journals, clubs, hackney coaches, and, thirty centuries before New York, had the custom of New Year's calls of comity and reconciliation. I need not mention its useful arts,—its pottery indispensable to the world, the luxury of silks, and its tea, the cordial of nations. But I must remember that she has respectable remains of astronomic science, and historic records of forgotten time, that have supplied important gaps in the ancient history of the western nations. Then she has philosophers who cannot be spared. Confucius has not yet gathered all his fame. When Socrates heard that the oracle declared that he was the wisest of men, he said, it must mean that other men held that they were wise, but that he knew that he knew nothing. Confucius had already affirmed this of himself: and what we call the GOLDEN RULE of Jesus, Confucius had uttered in the same terms five hundred years before. His morals, though addressed to a state of society unlike ours, we read with profit to-day. His rare perception appears in his GOLDEN MEAN, his doctrine of Reciprocity, his unerring insight,—putting always the blame of our misfortunes on ourselves; as when to the governor who complained of thieves, he said, "If you, sir, were not covetous, though you should reward them for it, they would not steal." His ideal of greatness predicts Marcus Antoninus. At the same time, he abstained from paradox, and met the ingrained prudence of his nation by saying always, "Bend one cubit to straighten eight."

China interests us at this moment in a point of politics. I am sure that gentlemen around me bear in mind the bill which the Hon. Mr. Jenckes of Rhode Island has twice attempted to carry through Congress, requiring that candidates for public offices shall first pass examinations on their literary qualifications for the same. Well, China has preceded us, as well as England and France, in this essential correction of a reckless usage; and the like high esteem of

education appears in China in social life, to whose distinctions it is made an indispensable passport.

It is gratifying to know that the advantages of the new intercourse between the two countries are daily manifest on the Pacific coast. The immigrants from Asia come in crowds. Their power of continuous labor, their versatility in adapting themselves to new conditions, their stoical economy, are unlooked-for virtues. They send back to their friends, in China, money, new products of art, new tools, machinery, new foods, etc., and are thus establishing a commerce without limit. I cannot help adding, after what I have heard to-night, that I have read in the journals a statement from an English source, that Sir Frederic Bruce attributed to Mr. Burlingame the merit of the happy reform in the relations of foreign governments to China. I am quite sure that I heard from Mr. Burlingame in New York, in his last visit to America, that the whole merit of it belonged to Sir Frederic Bruce. It appears that the ambassadors were emulous in their magnanimity. It is certainly the best guaranty for the interests of China and of humanity.

XXVII. REMARKS

AT THE MEETING FOR ORGANIZING THE FREE RELIGIOUS
ASSOCIATION, BOSTON MAY 30, 1867

IN MANY forms we try
To utter God's infinity,
But the Boundless hath no form,
And the Universal Friend
Doth as far transcend
An angel as a worm.

The great Idea baffles wit,
Language falters under it,
It leaves the learned in the lurch;
Nor art, nor power, nor toil can find
The measure of the eternal Mind,
Nor hymn nor prayer nor church.

REMARKS AT THE MEETING FOR ORGANIZING THE FREE RELIGIOUS ASSOCIATION

MR. CHAIRMAN: I hardly felt, in finding this house this morning, that I had come into the right hall. I came, as I supposed myself summoned, to a little committee meeting, for some practical end, where I should happily and humbly learn my lesson; and I supposed myself no longer subject to your call when I saw this house. I have listened with great pleasure to the lessons which we have heard. To many, to those last spoken, I have found so much in accord with my own thought that I have little left to say. I think that it does great honor to the sensibility of the committee that they have felt the universal demand in the community for just the movement they have begun. I say again, in the phrase used by my friend, that we began many years ago,—yes, and many ages before that. But I think the necessity very great, and it has prompted an equal magnanimity, that thus invites all classes, all religious men, whatever their connections, whatever their specialties, in whatever relation they stand to the Christian Church, to unite in a movement of benefit to men, under the sanction of religion. We are all very sensible—it is forced on us every day—of the

feeling that churches are outgrown; that the creeds are outgrown; that a technical theology no longer suits us. It is not the ill will of people—no, indeed, but the incapacity for confining themselves there. The church is not large enough for the man; it cannot inspire the enthusiasm which is the parent of everything good in history, which makes the romance of history. For that enthusiasm you must have something greater than yourselves, and not less.

The child, the young student, finds scope in his mathematics and chemistry or natural history, because he finds a truth larger than he is; finds himself continually instructed. But, in churches, every healthy and thoughtful mind finds itself in something less; it is checked, cribbed, confined. And the statistics of the American, the English and the German cities, showing that the mass of the population is leaving off going to church, indicate the necessity, which should have been foreseen, that the Church should always be new and extemporized, because it is eternal and springs from the sentiment of men, or it does not exist.²⁷⁶⁴ One wonders sometimes that the churches still retain so many votaries, when he reads the histories of the Church. There is an element of childish infatuation in them which does not exalt our respect for man. Read in Michelet, that in Europe, for twelve or fourteen centuries, God the Father had no temple and no altar. The Holy Ghost and the Son of Mary were worshipped, and in the thirteenth century the First Person began to appear at the side of his Son, in pictures and in sculpture, for worship, but only through favor of his Son. These mortifying puerilities abound in religious history. But as soon as every man is apprised of the Divine Presence within his own mind,—is apprised that the perfect law of duty corresponds with the laws of chemistry, of vegetation, of astronomy, as face to face in a glass; that the basis of duty, the order of society, the power of character, the wealth of culture, the perfection of taste, all draw

their essence from this moral sentiment, then we have a religion that exalts, that commands all the social and all the private action.

What strikes me in the sudden movement which brings together to-day so many separated friends,—separated but sympathetic,—and what I expected to find here, was some practical suggestions by which we were to reanimate and reorganize for ourselves the true Church, the pure worship. Pure doctrine always bears fruit in pure benefits. It is only by good works, it is only on the basis of active duty, that worship finds expression. What is best in the ancient religions was the sacred friendships between heroes, the Sacred Bands, and the relations of the Pythagorean disciples. Our Masonic institutions probably grew from the like origin. The close association which bound the first disciples of Jesus is another example; and it were easy to find more. The soul of our late war, which will always be remembered as dignifying it, was, first, the desire to abolish slavery in this country, and secondly, to abolish the mischief of the war itself, by healing and saving the sick and wounded soldiers,—and this by the sacred bands of the Sanitary Commission. I wish that the various beneficent institutions which are springing up, like joyful plants of wholesomeness, all over this country, should all be remembered as within the sphere of this committee,—almost all of them are represented here,—and that within this little band that has gathered here to-day, should grow friendship. The interests that grow out of a meeting like this should bind us with new strength to the old eternal duties.

XXVIII. SPEECH

AT THE SECOND ANNUAL MEETING OF THE FREE RELIGIOUS
ASSOCIATION, AT TREMONT TEMPLE FRIDAY, MAY 28, 1869

THOU MEETEST him by centuries,
And lo! he passes like the breeze;
Thou seek'st in globe and galaxy,
He hides in pure transparency;
Thou ask'st in fountains and in fires,
He is the essence that inquires.

SPEECH AT SECOND ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION

FRIENDS: I wish I could deserve anything of the kind expression of my friend, the President, and the kind good will which the audience signifies, but it is not in my power to-day to meet the natural demands of the occasion, and, quite against my design and my will, I shall have to request the attention of the audience to a few written remarks, instead of the more extensive statement which I had hoped to offer them.

I think we have disputed long enough. I think we might now relinquish our theological controversies to communities more idle and ignorant than we. I am glad that a more realistic church is coming to be the tendency of society, and that we are likely one day to forget our obstinate polemics in the ambition to excel each other in good works. I have no wish to proselyte any reluctant mind, nor, I think, have I any curiosity or impulse to intrude on those whose ways of thinking differ from mine. But as my friend, your presiding officer, has asked me to take at least some small part in this day's conversation, I am ready to give, as often before, the first simple foundation of my belief, that the Author of Nature

has not left himself without a witness in any sane mind: that the moral sentiment speaks to every man the law after which the Universe was made; that we find parity, identity of design, through Nature, and benefit to be the uniform aim: that there is a force always at work to make the best better and the worst good.²⁷⁶⁵ We have had not long since presented us by Max Müller a valuable paragraph from St. Augustine, not at all extraordinary in itself, but only as coming from that eminent Father in the Church, and at that age, in which St. Augustine writes: "That which is now called the Christian religion existed among the ancients, and never did not exist from the planting of the human race until Christ came in the flesh, at which time the true religion which already existed began to be called Christianity." I believe that not only Christianity is as old as the Creation,—not only every sentiment and precept of Christianity can be paralleled in other religious writings,—but more, that a man of religious susceptibility, and one at the same time conversant with many men,—say a much-travelled man,—can find the same idea in numberless conversations. The religious find religion wherever they associate. When I find in people narrow religion, I find also in them narrow reading. Nothing really is so self-publishing, so divulgatory, as thought. It cannot be confined or hid. It is easily carried; it takes no room; the knowledge of Europe looks out into Persia and India, and to the very Kaffirs. Every proverb, every fine text, every pregnant jest, travels across the line; and you will find it at Cape Town, or among the Tartars. We are all believers in natural religion; we all agree that the health and integrity of man is self-respect, self-subsistency, a regard to natural conscience. All education is to accustom him to trust himself, discriminate between his higher and lower thoughts, exert the timid faculties until they are robust, and thus train him to self-help, until he ceases to be an underling, a tool, and becomes a

benefactor. I think wise men wish their religion to be all of this kind, teaching the agent to go alone, not to hang on the world as a pensioner, a permitted person, but an adult, self-searching soul, brave to assist or resist a world: only humble and docile before the source of the wisdom he has discovered within him.

As it is, every believer holds a different creed; that is, all the churches are churches of one member. All our sects have refined the point of difference between them. The point of difference that still remains between churches, or between classes, is in the addition to the moral code, that is, to natural religion, of somewhat positive and historical. I think that to be, as Mr. Abbot has stated it in his form, the one difference remaining. I object, of course, to the claim of miraculous dispensation,—certainly not to the *doctrine* of Christianity.²⁷⁶⁶ This claim impairs, to my mind, the soundness of him who makes it, and indisposes us to his communion. This comes the wrong way; it comes from without, not within. This positive, historical, authoritative scheme is not consistent with our experience or our expectations. It is something not in Nature: it is contrary to that law of Nature which all wise men recognize; namely, never to require a larger cause than is necessary to the effect. George Fox, the Quaker, said that, though he read of Christ and God, he knew them only from the like spirit in his own soul. We want all the aids to our moral training. We cannot spare the vision nor the virtue of the saints; but let it be by pure sympathy, not with any personal or official claim. If you are childish, and exhibit your saint as a worker of wonders, a thaumaturgist, I am repelled. That claim takes his teachings out of logic and out of nature, and permits official and arbitrary senses to be grafted on the teachings. It is the praise of our New Testament that its teachings go to the honor and benefit of humanity,—that no better lesson has been taught or incarnated. Let it stand, beautiful and wholesome, with

whatever is most like it in the teaching and practice of men; but do not attempt to elevate it out of humanity, by saying, 'This was not a man,' for then you confound it with the fables of every popular religion, and my distrust of the story makes me distrust the doctrine as soon as it differs from my own belief.

Whoever thinks a story gains by the prodigious, by adding something out of nature, robs it more than he adds. It is no longer an example, a model; no longer a heart-stirring hero, but an exhibition, a wonder, an anomaly, removed out of the range of influence with thoughtful men. I submit that in sound frame of mind, we read or remember the religious sayings and oracles of other men, whether Jew or Indian, or Greek or Persian, only for friendship, only for joy in the social identity which they open to us, and that these words would have no weight with us if we had not the same conviction already. I find something stingy in the unwilling and disparaging admission of these foreign opinions—opinions from all parts of the world—by our churchmen, as if only to enhance by their dimness the superior light of Christianity. Meantime, observe, you cannot bring me too good a word, too dazzling a hope, too penetrating an insight from the Jews. I hail every one with delight, as showing the riches of my brother, my fellow soul, who could thus think and thus greatly feel. Zealots eagerly fasten their eyes on the differences between their creed and yours, but the charm of the study is in finding the agreements, the identities, in all the religions of men.²⁷⁶⁷

I am glad to hear each sect complain that they do not now hold the opinions they are charged with. The earth moves, and the mind opens. I am glad to believe society contains a class of humble souls who enjoy the luxury of a religion that does not degrade; who think it the highest worship to expect of Heaven the most and the best; who do not wonder that there was a Christ, but that there

were not a thousand; who have conceived an infinite hope for mankind; who believe that the history of Jesus is the history of every man, written large.²⁷⁶⁸

XXIX. ADDRESS

AT THE OPENING OF THE CONCORD FREE PUBLIC LIBRARY

THE BISHOP of Cavaillon, Petrarch's friend, in a playful experiment locked up the poet's library, intending to exclude him from it for three days, but the poet's misery caused him to restore the key on the first evening. "And I verily believe I should have become insane," says Petrarch, "if my mind had longer been deprived of its necessary nourishment."

ADDRESS AT THE OPENING OF THE CONCORD FREE PUBLIC LIBRARY

THE PEOPLE of Massachusetts prize the simple political arrangement of towns, each independent in its local government, electing its own officers, assessing its taxes, caring for its schools, its charities, its highways. That town is attractive to its native citizens and to immigrants which has a healthy site, good land, good roads, good sidewalks, a good hotel; still more, if it have an adequate town hall, good churches, good preachers, good schools, and if it avail itself of the Act of the Legislature authorizing towns to tax themselves for the establishment of a public library. Happier, if it contain citizens who cannot wait for the slow growth of the population to make these advantages adequate to the desires of the people, but make costly gifts to education, civility and culture, as in the act we are met to witness and acknowledge to-day.

I think we cannot easily overestimate the benefit conferred. In the details of this munificence, we may all anticipate a sudden and lasting prosperity to this ancient town, in the benefit of a noble library, which adds by the beauty of the building, and its

skilful arrangement, a quite new attraction,—making readers of those who are not readers,—making scholars of those who only read newspapers or novels until now; and whilst it secures a new and needed culture to our citizens, offering a strong attraction to strangers who are seeking a country home to sit down here. And I am not sure that when Boston learns the good deed of Mr. Munroe, it will not be a little envious, nor rest until it has annexed Concord to the city. Our founder has found the many admirable examples which have lately honored the country, of benefactors who have not waited to bequeath colleges and hospitals, but have themselves built them, reminding us of Sir Isaac Newton's saying, "that they who give nothing before their death, never in fact give at all."

I think it is not easy to exaggerate the utility of the beneficence which takes this form. If you consider what has befallen you when reading a poem, or a history, or a tragedy, or a novel, even, that deeply interested you,—how you forgot the time of day, the persons sitting in the room, and the engagements for the evening, you will easily admit the wonderful property of books to make all towns equal: that Concord Library makes Concord as good as Rome, Paris or London, for the hour;—has the best of each of those cities in itself. Robinson Crusoe, could he have had a shelf of our books, could almost have done without his man Friday, or even the arriving ship.

Every faculty casts itself into an art, and memory into the art of writing, that is, the book. The sedge *Papyrus*, which gave its name to our word paper, is of more importance to history than cotton, or silver, or gold. Its first use for writing is between three and four thousand years old, and though it hardly grows now in Egypt, where I lately looked for it in vain, I always remember with

satisfaction that I saw that venerable plant in 1833, growing wild at Syracuse, in Sicily, near the fountain of Arethusa.

The chairman of Mr. Munroe's trustees has told you how old is the foundation of our village library, and we think we can trace in our modest records a correspondent effect of culture amidst our citizens. A deep religious sentiment is, in all times, an inspirer of the intellect, and that was not wanting here. The town was settled by a pious company of non-conformists from England, and the printed books of their pastor and leader, Rev. Peter Bulkeley, sometime fellow of Saint John's College in Cambridge, England, testify the ardent sentiment which they shared. "There is no people," said he to his little flock of exiles, "but will strive to excel in something. What can we excel in if not in holiness? If we look to number, we are the fewest; if to strength, we are the weakest; if to wealth and riches, we are the poorest of all the people of God through the whole world. We cannot excel, nor so much as equal other people in these things, and if we come short in grace and holiness too, we are the most despicable people under heaven. Strive we therefore herein to excel, and suffer not this crown to be taken away from us."²⁷⁶⁹

The religious bias of our founders had its usual effect to secure an education to read their Bible and hymn-book, and thence the step was easy for active minds to an acquaintance with history and with poetry. Peter Bulkeley sent his son John to the first class that graduated at Harvard College in 1642, and two sons to later classes. Major Simon Willard's son Samuel graduated at Harvard in 1659, and was for six years, from 1701 to 1707, vice-president of the college; and his son Joseph was president of the college from 1781 to 1804; and Concord counted fourteen graduates of Harvard in its first century, and its representation there increased with its gross population.²⁷⁷⁰

I possess the manuscript journal of a lady, native of this town (and descended from three of its clergymen), who removed into Maine, where she possessed a farm and a modest income. She was much addicted to journeying and not less to reading, and whenever she arrived in a town where was a good minister who had a library, she would persuade him to receive her as a boarder, and would stay until she had looked over all his volumes which were to her taste. On a very cold day, she writes in her diary, "Life truly resembles a river—ever the same—never the same; and perhaps a greater variety of internal emotions would be felt by remaining with books in one place than pursuing the waves which are ever the same. Is the melancholy bird of night, covered with the dark foliage of the willow and cypress, less gratified than the gay lark amid the flowers and suns? I think that you never enjoy so much as in solitude with a book that meets the feelings," and in reference to her favorite authors, she adds, "The delight in others' superiority is my best gift from God."²⁷⁷¹

Lemuel Shattuck, by his history of the town, has made all of us grateful to his memory as a careful student and chronicler; but events so important have occurred in the forty years since that book was published, that it now needs a second volume.

Henry Thoreau we all remember as a man of genius, and of marked character, known to our farmers as the most skilful of surveyors, and indeed better acquainted with their forests and meadows and trees than themselves, but more widely known as the writer of some of the best books which have been written in this country, and which, I am persuaded, have not yet gathered half their fame. He, too, was an excellent reader. No man would have rejoiced more than he in the event of this day. In a private letter to a lady, he writes, "Do you read any noble verses? For my part, they have been the only things I remembered,—or that

which occasioned them,—when all things else were blurred and defaced.²⁷⁷² All things have put on mourning but they: for the elegy itself is some victorious melody in you, escaping from the wreck. It is a relief to read some true books wherein all are equally dead, equally alive. I think the best parts of Shakspeare would only be enhanced by the most thrilling and affecting events. I have found it so: and all the more, that they are not intended for consolation.”

Nathaniel Hawthorne’s residence in the Manse gave new interest to that house whose windows overlooked the retreat of the British soldiers in 1775, and his careful studies of Concord life and history are known wherever the English language is spoken.²⁷⁷³

I know the word literature has in many ears a hollow sound. It is thought to be the harmless entertainment of a few fanciful persons, and not at all to be the interest of the multitude. To these objections, which proceed on the cheap notion that nothing but what grinds corn, roasts mutton and weaves cotton, is anything worth, I have little to say. There are utilitarians who prefer that Jesus should have wrought as a carpenter, and Saint Paul as a tent-maker. But literature is the record of the best thoughts. Every attainment and discipline which increases a man’s acquaintance with the invisible world lifts his being. Everything that gives him a new perception of beauty multiplies his pure enjoyments. A river of thought is always running out of the invisible world into the mind of man. Shall not they who received the largest streams spread abroad the healing waters?

It was the symbolical custom of the ancient Mexican priests, after the annual extinction of the household fires of their land, to procure in the temple fire from the sun, and thence distribute it as a sacred gift to every hearth in the nation. It is a just type of the service rendered to mankind by wise men. Homer and Plato and Pindar and Shakspeare serve many more than have heard

their names. Thought is the most volatile of all things. It cannot be contained in any cup, though you shut the lid never so tight. Once brought into the world, it runs over the vessel which received it into all minds that love it. The very language we speak thinks for us by the subtle distinctions which already are marked for us by its words, and every one of these is the contribution of the wit of one and another sagacious man in all the centuries of time.

Consider that it is our own state of mind at any time that makes our estimate of life and the world. If you sprain your foot, you will presently come to think that Nature has sprained hers. Everything begins to look so slow and inaccessible. And when you sprain your mind, by gloomy reflection on your failures and vexations, you come to have a bad opinion of life. Think how indigent Nature must appear to the blind, the deaf, and the idiot. Now if you can kindle the imagination by a new thought, by heroic histories, by uplifting poetry, instantly you expand,—are cheered, inspired, and become wise, and even prophetic. Music works this miracle for those who have a good ear; what omniscience has music! so absolutely impersonal, and yet every sufferer feels his secret sorrow reached. Yet to a scholar the book is as good or better. There is no hour of vexation which on a little reflection will not find diversion and relief in the library. His companions are few: at the moment, he has none: but, year by year, these silent friends supply their place. Many times the reading of a book has made the fortune of the man,—has decided his way of life. It makes friends. 'T is a tie between men to have been delighted with the same book. Every one of us is always in search of his friend, and when unexpectedly he finds a stranger enjoying the rare poet or thinker who is dear to his own solitude,—it is like finding a brother. Dr. Johnson hearing that Adam Smith, whom he had once met, relished rhyme, said, "If I had known that, I should have hugged him."

We expect a great man to be a good reader, or in proportion to the spontaneous power should be the assimilating power. There is a wonderful agreement among eminent men of all varieties of character and condition in their estimate of books. Julius Cæsar, when shipwrecked, and forced to swim for life, did not gather his gold, but took his Commentaries between his teeth and swam for the shore. Even the wild and warlike Arab Mahomet said, "Men are either learned or learning: the rest are blockheads." The great Duke of Marlborough could not encamp without his Shakspeare. The Duchess d'Abrantes, wife of Marshal Junot, tells us that Bonaparte, in hastening out of France to join his army in Germany, tossed his journals and books out of his travelling carriage as fast as he had read them, and strewed the highway with pamphlets. Napoleon's reading could not be large, but his criticism is sometimes admirable, as reported by Las Casas; and Napoleon was an excellent writer. Montesquieu, one of the greatest minds that France has produced, writes: "The love of study is in us almost the only eternal passion. All the others quit us in proportion as this miserable machine which gives them to us approaches its ruin. Study has been for me the sovereign remedy against the disgusts of life, never having had a chagrin which an hour of reading has not put to flight." Hear the testimony of Seldon, the oracle of the English House of Commons in Cromwell's time. "Patience is the chiefest fruit of study. A man, that strives to make himself a different thing from other men by much reading gains this chiefest good, that in all fortunes he hath something to entertain and comfort himself withal."

I have found several humble men and women who gave as affectionate, if not as judicious testimony to their readings. One curious witness was that of a Shaker who, when showing me the houses of the Brotherhood, and a very modest bookshelf, said there was Milton's *Paradise Lost*, and some other books in the

house, and added "that he knew where they were, but he took up a sound cross in not reading them."

In 1618 (8th March) John Kepler came upon the discovery of the law connecting the mean distances of the planets with the periods of their revolution about the sun, that the squares of the times vary as the cubes of the distances. And he writes, "It is now eighteen months since I got the first glimpse of light,—three months since the dawn,—very few days since the unveiled sun, most admirable to gaze on, burst out upon me. Nothing holds me. I will indulge in my sacred fury. I will triumph over mankind by the honest confession that I have stolen the golden vases of the Egyptians²⁷⁷⁴ to build up a tabernacle for my God far away from the confines of Egypt. If you forgive me, I rejoice; if you are angry, I can bear it: the die is cast; the book is written; to be read either now or by posterity. I care not which. It may well wait a century for a reader, since God has waited six thousand years for an observer like myself."

In books I have the history or the energy of the past. Angels they are to us of entertainment, sympathy and provocation. With them many of us spend the most of our life,—these silent guides,—these tractable prophets, historians, and singers, whose embalmed life is the highest feat of art; who now cast their moonlight illumination over solitude, weariness and fallen fortunes. You say, 't is a languid pleasure. Yes, but its tractableness, coming and going like a dog at our bidding, compensates the quietness, and contrasts with the slowness of fortune and the inaccessibleness of persons.

You meet with a man of science, a good thinker or good wit,—but you do not know how to draw out of him that which he knows. But the book is a sure friend, always ready at your first leisure,—opens to the very page you desire, and shuts at your first fatigue,—as possibly your professor might not.

It is a tie between men to have read the same book, and it is a disadvantage not to have read the book your mates have read, or not to have read it at the same time, so that it may take the place in your culture it does in theirs, and you shall understand their allusions to it, and not give it more or less emphasis than they do. Yet the strong character does not need this sameness of culture. The imagination knows its own food in every pasture, and if it has not had the Arabian Nights, Prince Le Boo, or Homer or Scott, has drawn equal delight and terror from haunts and passages which you will hear of with envy.

In saying these things for books, I do not for a moment forget that they are secondary, mere means, and only used in the off-hours, only in the pause, and, as it were, the sleep, or passive state of the mind. The intellect reserves all its rights. Instantly, when the mind itself wakes, all books, all past acts are forgotten, huddled aside as impertinent in the august presence of the creator. Their costliest benefit is that they set us free from themselves; for they wake the imagination and the sentiment,—and in their inspirations we dispense with books. Let me add then,—read proudly; put the duty of being read invariably on the author. If he is not read, whose fault is it? I am quite ready to be charmed,—but I shall not make believe I am charmed.

But there is no end to the praise of books, to the value of the library. Who shall estimate their influence on our population where all the millions read and write? It is the joy of nations that man can communicate all his thoughts, discoveries and virtues to records that may last for centuries.

But I am pleading a cause which in the event of this day has already won: and I am happy in the assurance that the whole assembly to whom I speak entirely sympathize in the feeling of this town in regard to the new Library, and its honored Founder.

XXX. THE FORTUNE OF THE REPUBLIC

"THERE is a mystery in the soul of state
Which hath an operation more divine
Than breath or pen can give expression to."

THE FORTUNE OF THE REPUBLIC

IT is a rule that holds in economy as well as in hydraulics that you must have a source higher than your tap. The mills, the shops, the theatre and the caucus, the college and the church, have all found out this secret. The sailors sail by chronometers that do not lose two or three seconds in a year, ever since Newton explained to Parliament that the way to improve navigation was to get good watches, and to offer public premiums for a better time-keeper than any then in use. The manufacturers rely on turbines of hydraulic perfection; the carpet-mill, on mordants and dyes which exhaust the skill of the chemist; the calico print, on designers of genius who draw the wages of artists, not of artisans. Wedgwood, the eminent potter, bravely took the sculptor Flaxman to counsel, who said, "Send to Italy, search the museums for the forms of old Etruscan vases, urns, water-pots, domestic and sacrificial vessels of all kinds." They built great works and called their manufacturing village Etruria. Flaxman, with his Greek taste, selected and combined the loveliest forms, which were executed in English clay; sent boxes of these as gifts to every court of Europe, and formed the taste of the world. It was a renaissance of the breakfast-table

and china-closet. The brave manufacturers made their fortune. The jewellers imitated the revived models in silver and gold.

The theatre avails itself of the best talent of poet, of painter, and of amateur of taste, to make the *ensemble* of dramatic effect. The marine insurance office has its mathematical counsellor to settle averages; the life-assurance, its table of annuities. The wine-merchant has his analyst and taster, the more exquisite the better. He has also, I fear, his debts to the chemist as well as to the vineyard.

Our modern wealth stands on a few staples, and the interest nations took in our war was exasperated by the importance of the cotton trade. And what is cotton? One plant out of some two hundred thousand known to the botanist, vastly the larger part of which are reckoned weeds. What is a weed? A plant whose virtues have not yet been discovered,—every one of the two hundred thousand probably yet to be of utility in the arts. As Bacchus of the vine, Ceres of the wheat, as Arkwright and Whitney were the demi-gods of cotton, so prolific Time will yet bring an inventor to every plant. There is not a property in Nature but a mind is born to seek and find it. For it is not the plants or the animals, innumerable as they are, nor the whole magazine of material nature that can give the sum of power, but the infinite applicability of these things in the hands of thinking man, every new application being equivalent to a new material.²⁷⁷⁵

Our sleepy civilization, ever since Roger Bacon and Monk Schwartz invented gunpowder, has built its whole art of war, all fortification by land and sea, all drill and military education, on that one compound,—all is an extension of a gun-barrel,—and is very scornful about bows and arrows, and reckons Greeks and Romans and Middle Ages little better than Indians and bow-and-arrow times. As if the earth, water, gases, lightning and caloric had not a million energies, the discovery of any one of which could change

the art of war again, and put an end to war by the exterminating forces man can apply.

Now, if this is true in all the useful and in the fine arts, that the direction must be drawn from a superior source or there will be no good work, does it hold less in our social and civil life?

In our popular politics you may note that each aspirant who rises above the crowd, however at first making his obedient apprenticeship in party tactics, if he have sagacity, soon learns that it is by no means by obeying the vulgar weathercock of his party, the resentments, the fears and whims of it, that real power is gained, but that he must often face and resist the party, and abide by his resistance, and put them in fear; that the only title to their permanent respect, and to a larger following, is to see for himself what is the real public interest, and to stand for that;—that is a principle, and all the cheering and hissing of the crowd must by and by accommodate itself to it. Our times easily afford you very good examples.

The law of water and all fluids is true of wit. Prince Metternich said, "Revolutions begin in the best heads and run steadily down to the populace." It is a very old observation; not truer because Metternich said it, and not less true.

There have been revolutions which were not in the interest of feudalism and barbarism, but in that of society. And these are distinguished not by the numbers of the combatants nor the numbers of the slain, but by the motive. No interest now attaches to the wars of York and Lancaster, to the wars of German, French and Spanish emperors, which were only dynastic wars, but to those in which a principle was involved. These are read with passionate interest and never lose their pathos by time. When the cannon is aimed by ideas, when men with religious convictions are behind it, when men die for what they live for, and the mainspring that

works daily urges them to hazard all, then the cannon articulates its explosions with the voice of a man, then the rifle seconds the cannon and the fowling-piece the rifle, and the women make the cartridges, and all shoot at one mark; then gods join in the combat; then poets are born, and the better code of laws at last records the victory.

Now the culmination of these triumphs of humanity—and which did virtually include the extinction of slavery—is the planting of America.

At every moment some one country more than any other represents the sentiment and the future of mankind. None will doubt that America occupies this place in the opinion of nations, as is proved by the fact of the vast immigration into this country from all the nations of Western and Central Europe. And when the adventurers have planted themselves and looked about, they send back all the money they can spare to bring their friends.

Meantime they find this country just passing through a great crisis in its history, as necessary as lactation or dentition or puberty to the human individual. We are in these days settling for ourselves and our descendants questions which, as they shall be determined in one way or the other, will make the peace and prosperity or the calamity of the next ages. The questions of Education, of Society, of Labor, the direction of talent, of character, the nature and habits of the American, may well occupy us, and more the question of Religion.

The new conditions of mankind in America are really favorable to progress, the removal of absurd restrictions and antique inequalities. The mind is always better the more it is used, and here it is kept in practice. The humblest is daily challenged to give his opinion on practical questions, and while civil and social freedom exists, nonsense even has a favorable effect. Cant is good

to provoke common sense....The trance-mediums, the rebel paradoxes, exasperate the common sense. The wilder the paradox, the more sure is Punch to put it in the pillory.

The lodging the power in the people, as in republican forms, has the effect of holding things closer to common sense; for a court or an aristocracy, which must always be a small minority, can more easily run into follies than a republic, which has too many observers—each with a vote in his hand—to allow its head to be turned by any kind of nonsense: since hunger, thirst, cold, the cries of children and debt are always holding the masses hard to the essential duties.

One hundred years ago the American people attempted to carry out the bill of political rights to an almost ideal perfection. They have made great strides in that direction since. They are now proceeding, instructed by their success and by their many failures, to carry out, not the bill of rights, but the bill of human duties.

And look what revolution that attempt involves. Hitherto government has been that of the single person or of the aristocracy. In this country the attempt to resist these elements, it is asserted, must throw us into the government not quite of mobs, but in practice of an inferior class of professional politicians, who by means of newspapers and caucuses really thrust their unworthy minority into the place of the old aristocracy on the one side, and of the good, industrious, well-taught but unambitious population on the other, win the posts of power and give their direction to affairs. Hence liberal congresses and legislatures ordain, to the surprise of the people, equivocal, interested and vicious measures. The men themselves are suspected and charged with lobbying and being lobbied. No measure is attempted for itself, but the opinion of the people is courted in the first place, and the measures are perfunctorily carried through as secondary. We do not choose

our own candidate, no, nor any other man's first choice,—but only the available candidate, whom, perhaps, no man loves. We do not speak what we think, but grope after the practicable and available. Instead of character, there is a studious exclusion of character. The people are feared and flattered. They are not reprimanded. The country is governed in bar-rooms, and in the mind of bar-rooms. The low can best win the low, and each aspirant for power vies with his rival which can stoop lowest, and depart widest from himself.

The partisan on moral, even on religious questions, will choose a proven rogue who can answer the tests, over an honest, affectionate, noble gentleman; the partisan ceasing to be a man that he may be a sectarian.

The spirit of our political economy is low and degrading. The precious metals are not so precious as they are esteemed. Man exists for his own sake, and not to add a laborer to the state. The spirit of our political action, for the most part, considers nothing less than the sacredness of man. Party sacrifices man to the measure.²⁷⁷⁶

We have seen the great party of property and education in the country drivelling and huckstering away, for views of party fear or advantage, every principle of humanity and the dearest hopes of mankind; the trustees of power only energetic when mischief could be done, imbecile as corpses when evil was to be prevented.

Our great men succumb so far to the forms of the day as to peril their integrity for the sake of adding to the weight of their personal character the authority of office, or making a real government titular. Our politics are full of adventurers, who having by education and social innocence a good repute in the state, break away from the law of honesty and think they can afford to join the devil's party. 'T is odious, these offenders in high life. You rally to the support of old charities and the cause of literature, and

there, to be sure, are these brazen faces. In this innocence you are puzzled how to meet them; must shake hands with them, under protest.²⁷⁷⁷ We feel toward them as the minister about the Cape Cod farm,—in the old time when the minister was still invited, in the spring, to make a prayer for the blessing of a piece of land,—the good pastor being brought to the spot, stopped short: “No, this land does not want a prayer, this land wants manure.”

“’T is virtue which they want, and wanting it,
Honor no garment to their backs can fit.”²⁷⁷⁸

Parties keep the old names, but exhibit a surprising fugacity in creeping out of one snake-skin into another of equal ignominy and lubricity, and the grasshopper on the turret of Faneuil Hall gives a proper hint of the men below.

Everything yields. The very glaciers are viscous, or relegate into conformity, and the stiffest patriots falter and compromise; so that *will* cannot be depended on to save us.

How rare are acts of will! We are all living according to custom; we do as other people do, and shrink from an act of our own. Every such act makes a man famous, and we can all count the few cases—half a dozen in our time—when a public man ventured to act as he thought without waiting for orders or for public opinion. John Quincy Adams was a man of an audacious independence that always kept the public curiosity alive in regard to what he might do. None could predict his word, and a whole congress could not gainsay it when it was spoken. General Jackson was a man of will, and his phrase on one memorable occasion, “I will take the responsibility,” is a proverb ever since.²⁷⁷⁹

The American marches with a careless swagger to the height of power, very heedless of his own liberty or of other peoples’ in

his reckless confidence that he can have all he wants, risking all the prized charters of the human race, bought with battles and revolutions and religion, gambling them all away for a paltry selfish gain.

He sits secure in the possession of his vast domain, rich beyond all experience in resources, sees its inevitable force unlocking itself in elemental order day by day, year by year; looks from his coal-fields, his wheat-bearing prairie, his gold-mines, to his two oceans on either side, and feels the security that there can be no famine in a country reaching through so many latitudes, no want that cannot be supplied, no danger from any excess of importation of art or learning into a country of such native strength, such immense digestive power.

In proportion to the personal ability of each man, he feels the invitation and career which the country opens to him. He is easily fed with wheat and game, with Ohio wine, but his brain is also pampered by finer draughts, by political power and by the power in the railroad board, in the mills, or the banks. This elevates his spirits, and gives, of course, an easy self-reliance that makes him self-willed and unscrupulous.

I think this levity is a reaction on the people from the extraordinary advantages and invitations of their condition. When we are most disturbed by their rash and immoral voting, it is not malignity, but recklessness. They are careless of politics, because they do not entertain the possibility of being seriously caught in meshes of legislation. They feel strong and irresistible. They believe that what they have enacted they can repeal if they do not like it. But one may run a risk once too often. They stay away from the polls, saying that one vote can do no good! Or they take another step, and say 'One vote can do no harm!' and vote for something which they do not approve, because their party or set votes for

it. Of course this puts them in the power of any party having a steady interest to promote which does not conflict manifestly with the pecuniary interest of the voters. But if they should come to be interested in themselves and in their career, they would no more stay away from the election than from their own counting-room or the house of their friend.

The people are right-minded enough on ethical questions, but they must pay their debts, and must have the means of living well, and not pinching. So it is useless to rely on them to go to a meeting, or to give a vote, if any check from this must-have-the-money side arises. If a customer looks grave at their newspaper, or damns their member of Congress, they take another newspaper, and vote for another man. They must have money, for a certain style of living fast becomes necessary; they must take wine at the hotel, first, for the look of it, and second, for the purpose of sending the bottle to two or three gentlemen at the table; and presently because they have got the taste, and do not feel that they have dined without it.

The record of the election now and then alarms people by the all but unanimous choice of a rogue and a brawler. But how was it done? What lawless mob burst into the polls and threw in these hundreds of ballots in defiance of the magistrates? This was done by the very men you know,—the mildest, most sensible, best-natured people. The only account of this is, that they have been scared or warped into some association in their mind of the candidate with the interest of their trade or of their property.

Whilst each cabal urges its candidate, and at last brings, with cheers and street demonstrations, men whose names are a knell to all hope of progress, the good and wise are hidden in their active retirements, and are quite out of question.

"These we must join to wake, for these are of the strain

That justice dare defend, and will the age maintain."²⁷⁸⁰

Yet we know, all over this country, men of integrity, capable of action and of affairs, with the deepest sympathy in all that concerns the public, mortified by the national disgrace, and quite capable of any sacrifice except of their honor.

Faults in the working appear in our system, as in all, but they suggest their own remedies. After every practical mistake out of which any disaster grows, the people wake and correct it with energy. And any disturbances in politics, in civil or foreign wars, sober them, and instantly show more virtue and conviction in the popular vote. In each new threat of faction the ballot has been, beyond expectation, right and decisive.

It is ever an inspiration, God only knows whence; a sudden, undated perception of eternal right coming into and correcting things that were wrong; a perception that passes through thousands as readily as through one.

The gracious lesson taught by science to this country is that the history of Nature from first to last is incessant advance from less to more, from rude to finer organization, the globe of matter thus conspiring with the principle of undying hope in man. Nature works in immense time, and spends individuals and races prodigally to prepare new individuals and races. The lower kinds are one after one extinguished; the higher forms come in.²⁷⁸¹ The history of civilization, or the refining of certain races to wonderful power of performance, is analogous; but the best civilization yet is only valuable as a ground of hope.

Ours is the country of poor men. Here is practical democracy; here is the human race poured out over the continent to do itself justice; all mankind in its shirt-sleeves; not grimacing like poor rich

men in cities, pretending to be rich, but unmistakably taking off its coat to hard work, when labor is sure to pay.²⁷⁸² This through all the country. For really, though you see wealth in the capitals, it is only a sprinkling of rich men in the cities and at sparse points; the bulk of the population is poor. In Maine, nearly every man is a lumberer. In Massachusetts, every twelfth man is a shoemaker, and the rest, millers, farmers, sailors, fishermen.

Well, the result is, instead of the doleful experience of the European economist, who tells us, "In almost all countries the condition of the great body of the people is poor and miserable," here that same great body has arrived at a sloven plenty,—ham and corn-cakes, tight roof and coals enough have been attained; an unbuttoned comfort, not clean, not thoughtful, far from polished, without dignity in his repose; the man awkward and restless if he have not something to do, but honest and kind for the most part, understanding his own rights and stiff to maintain them, and disposed to give his children a better education than he received.

The steady improvement of the public schools in the cities and the country enables the farmer or laborer to secure a precious primary education. It is rare to find a born American who cannot read and write. The facility with which clubs are formed by young men for discussion of social, political and intellectual topics secures the notoriety of the questions.

Our institutions, of which the town is the unit, are all educational, for responsibility educates fast. The town-meeting is, after the high-school, a higher school.²⁷⁸³ The legislature, to which every good farmer goes once on trial, is a superior academy.

The result appears in the power of invention, the freedom of thinking, in the readiness for reforms, eagerness for novelty, even for all the follies of false science; in the antipathy to secret societies, in the predominance of the democratic party in the politics of the

Union, and in the voice of the public even when irregular and vicious,—the voice of mobs, the voice of lynch law,—because it is thought to be, on the whole, the verdict, though badly spoken, of the greatest number.

All this forwardness and self-reliance, cover self-government; proceed on the belief that as the people have made a government they can make another; that their union and law are not in their memory, but in their blood and condition. If they unmake a law, they can easily make a new one. In Mr. Webster's imagination the American Union was a huge Prince Rupert's drop, which will snap into atoms if so much as the smallest end be shivered off. Now the fact is quite different from this. The people are loyal, law-abiding. They prefer order, and have no taste for misrule and uproar.

America was opened after the feudal mischief was spent, and so the people made a good start. We began well. No inquisition here, no kings, no nobles, no dominant church. Here heresy has lost its terrors. We have eight or ten religions in every large town, and the most that comes of it is a degree or two on the thermometer of fashion; a pew in a particular church gives an easier entrance to the subscription ball.

We began with freedom, and are defended from shocks now for a century by the facility with which through popular assemblies every necessary measure of reform can instantly be carried. A congress is a standing insurrection, and escapes the violence of accumulated grievance. As the globe keeps its identity by perpetual change, so our civil system, by perpetual appeal to the people and acceptance of its reforms.

The government is acquainted with the opinions of all classes, knows the leading men in the middle class, knows the leaders of the humblest class. The President comes near enough to these; if

he does not, the caucus does, the primary ward and town-meeting, and what is important does reach him.

The men, the women, all over this land shrill their exclamations of impatience and indignation at what is short-coming or is unbecoming in the government,—at the want of humanity, of morality,—ever on broad grounds of general justice, and not on the class-feeling which narrows the perception of English, French, German people at home.

In this fact, that we are a nation of individuals, that we have a highly intellectual organization, that we can see and feel moral distinctions, and that on such an organization sooner or later the moral laws must tell, to such ears must speak,—in this is our hope. For if the prosperity of this country has been merely the obedience of man to the guiding of Nature,—of great rivers and prairies,—yet is there fate above fate, if we choose to spread this language; or if there is fate in corn and cotton, so is there fate in thought,—this, namely, that the largest thought and the widest love are born to victory, and must prevail.

The revolution is the work of no man, but the eternal effervescence of Nature. It never did not work. And we say that revolutions beat all the insurgents, be they never so determined and politic; that the great interests of mankind, being at every moment through ages in favor of justice and the largest liberty, will always, from time to time, gain on the adversary and at last win the day. Never country had such a fortune, as men call fortune, as this, in its geography, its history, and in its majestic possibilities.

We have much to learn, much to correct,—a great deal of lying vanity. The spread eagle must fold his foolish wings and be less of a peacock; must keep his wings to carry the thunderbolt when he is commanded. We must realize our rhetoric and our rituals. Our national flag is not affecting, as it should be, because it does

not represent the population of the United States, but some Baltimore or Chicago or Cincinnati or Philadelphia caucus; not union or justice, but selfishness and cunning. If we never put on the liberty-cap until we were freemen by love and self-denial, the liberty-cap would mean something. I wish to see America not like the old powers of the earth, grasping, exclusive and narrow, but a benefactor such as no country ever was, hospitable to all nations, legislating for all nationalities. Nations were made to help each other as much as families were; and all advancement is by ideas, and not by brute force or mechanic force.

In this country, with our practical understanding, there is, at present, a great sensualism, a headlong devotion to trade and to the conquest of the continent,—to each man as large a share of the same as he can carve for himself,—an extravagant confidence in our talent and activity, which becomes, whilst successful, a scornful materialism,—but with the fault, of course, that it has no depth, no reserved force whereon to fall back when a reverse comes.

That repose which is the ornament and ripeness of man is not American. That repose which indicates a faith in the laws of the universe,—a faith that they will fulfil themselves, and are not to be impeded, transgressed or accelerated. Our people are too slight and vain. They are easily elated and easily depressed. See how fast they extend the fleeting fabric of their trade,—not at all considering the remote reaction and bankruptcy, but with the same abandonment to the moment and the facts of the hour as the Esquimaux who sells his bed in the morning. Our people act on the moment, and from external impulse. They all lean on some other, and this superstitiously, and not from insight of his merit. They follow a fact; they follow success, and not skill. Therefore, as soon as the success stops and the admirable man blunders, they quit him; already they remember that they long ago suspected his

judgment, and they transfer the repute of judgment to the next prosperous person who has not yet blundered. Of course this levity makes them as easily despond. It seems as if history gave no account of any society in which despondency came so readily to heart as we see it and feel it in ours. Young men at thirty and even earlier lose all spring and vivacity, and if they fail in their first enterprise throw up the game.

The source of mischief is the extreme difficulty with which men are roused from the torpor of every day. Blessed is all that agitates the mass, breaks up this torpor, and begins motion. *Corpora non agunt nisi soluta*; the chemical rule is true in mind. Contrast, change, interruption, are necessary to new activity and new combinations.

If a temperate wise man should look over our American society, I think the first danger that would excite his alarm would be the European influences on this country. We buy much of Europe that does not make us better men; and mainly the expensiveness which is ruining that country. We import trifles, dancers, singers, laces, books of patterns, modes, gloves and cologne, manuals of Gothic architecture, steam-made ornaments. America is provincial. It is an immense Halifax. See the secondariness and aping of foreign and English life, that runs through this country, in building, in dress, in eating, in books. Every village, every city, has its architecture, its costume, its hotel, its private house, its church, from England.

Our politics threaten her. Her manners threaten us. Life is grown and growing so costly that it threatens to kill us. A man is coming, here as there, to value himself on what he can buy. Worst of all, his expense is not his own, but a far-off copy of Osborne House or the Elysée. The tendency of this is to make all men alike; to extinguish individualism and choke up all the channels of inspiration from God in man. We lose our invention and descend into imitation. A man no longer conducts his own life. It is manufactured for him.

The tailor makes your dress; the baker your bread; the upholsterer, from an imported book of patterns, your furniture; the Bishop of London your faith.

In the planters of this country, in the seventeenth century, the conditions of the country, combined with the impatience of arbitrary power which they brought from England, forced them to a wonderful personal independence and to a certain heroic planting and trading. Later this strength appeared in the solitudes of the West, where a man is made a hero by the varied emergencies of his lonely farm, and neighborhoods must combine against the Indians, or the horse-thieves, or the river rowdies, by organizing themselves into committees of vigilance. Thus the land and sea educate the people, and bring out presence of mind, self-reliance, and hundred-handed activity. These are the people for an emergency. They are not to be surprised, and can find a way out of any peril. This rough and ready force becomes them, and makes them fit citizens and civilizers. But if we found them clinging to English traditions, which are graceful enough at home, as the English Church, and entailed estates, and distrust of popular election, we should feel this reactionary, and absurdly out of place.

Let the passion for America cast out the passion for Europe. Here let there be what the earth waits for,—exalted manhood. What this country longs for is personalities, grand persons, to counteract its materialities. For it is the rule of the universe that corn shall serve man, and not man corn.

They who find America insipid—they for whom London and Paris have spoiled their own homes—can be spared to return to those cities. I not only see a career at home for more genius than we have, but for more than there is in the world.

The class of which I speak make themselves merry without duties. They sit in decorated club-houses in the cities, and burn tobacco

and play whist; in the country they sit idle in stores and bar-rooms, and burn tobacco, and gossip and sleep. They complain of the flatness of American life; "America has no illusions, no romance." They have no perception of its destiny. They are not Americans.

The felon is the logical extreme of the epicure and coxcomb. Selfish luxury is the end of both, though in one it is decorated with refinements, and in the other brutal. But my point now is, that this spirit is not American.

Our young men lack idealism. A man for success must not be pure idealist, then he will practically fail; but he must have ideas, must obey ideas, or he might as well be the horse he rides on. A man does not want to be sun-dazzled, sun-blind; but every man must have glimmer enough to keep him from knocking his head against the walls. And it is in the interest of civilization and good society and friendship, that I dread to hear of well-born, gifted and amiable men, that they have this indifference, disposing them to this despair.

Of no use are the men who study to do exactly as was done before, who can never understand that to-day is a new day. There never was such a combination as this of ours, and the rules to meet it are not set down in any history. We want men of original perception and original action, who can open their eyes wider than to a nationality,—namely, to considerations of benefit to the human race,—can act in the interest of civilization; men of elastic, men of moral mind, who can live in the moment and take a step forward. Columbus was no backward-creeping crab, nor was Martin Luther, nor John Adams, nor Patrick Henry, nor Thomas Jefferson; and the Genius or Destiny of America is no log or sluggard, but a man incessantly advancing, as the shadow on the dial's face, or the heavenly body by whose light it is marked.

The flowering of civilization is the finished man, the man of sense, of grace, of accomplishment, of social power,—the gentleman. What hinders that he be born here? The new times need a new man, the complemental man, whom plainly this country must furnish. Freer swing his arms; farther pierce his eyes; more forward and forthright his whole build and rig than the Englishman's, who, we see, is much imprisoned in his backbone.

'T is certain that our civilization is yet incomplete, it has not ended nor given sign of ending in a hero. 'T is a wild democracy; the riot of mediocrities and dishonesties and fudges. Ours is the age of the omnibus, of the third person plural, of Tammany Hall. Is it that Nature has only so much vital force, and must dilute it if it is to be multiplied into millions? The beautiful is never plentiful. Then Illinois and Indiana, with their spawning loins, must needs be ordinary.

It is not a question whether we shall be a multitude of people. No, that has been conspicuously decided already; but whether we shall be the new nation, the guide and lawgiver of all nations, as having clearly chosen and firmly held the simplest and best rule of political society.

Now, if the spirit which years ago armed this country against rebellion, and put forth such gigantic energy in the charity of the Sanitary Commission, could be waked to the conserving and creating duty of making the laws just and humane, it were to enroll a great constituency of religious, self-respecting, brave, tender, faithful obeyers of duty, lovers of men, filled with loyalty to each other, and with the simple and sublime purpose of carrying out in private and in public action the desire and need of mankind.

Here is the post where the patriot should plant himself; here the altar where virtuous young men, those to whom friendship

is the dearest covenant, should bind each other to loyalty; where genius should kindle its fires and bring forgotten truth to the eyes of men.

It is not possible to extricate yourself from the questions in which your age is involved. Let the good citizen perform the duties put on him here and now. It is not by heads reverted to the dying Demosthenes, or to Luther, or to Wallace, or to George Fox, or to George Washington, that you can combat the dangers and dragons that beset the United States at this time. I believe this cannot be accomplished by dunces or idlers, but requires docility, sympathy, and religious receiving from higher principles; for liberty, like religion, is a short and hasty fruit, and like all power subsists only by new rallyings on the source of inspiration.

Power can be generous. The very grandeur of the means which offer themselves to us should suggest grandeur in the direction of our expenditure. If our mechanic arts are unsurpassed in usefulness, if we have taught the river to make shoes and nails and carpets, and the bolt of heaven to write our letters like a Gillot pen, let these wonders work for honest humanity, for the poor, for justice, genius and the public good.²⁷⁸⁴ Let us realize that this country, the last found, is the great charity of God to the human race.

America should affirm and establish that in no instance shall the guns go in advance of the present right. We shall not make *coups d'état* and afterwards explain and pay, but shall proceed like William Penn, or whatever other Christian or humane person who treats with the Indian or the foreigner, on principles of honest trade and mutual advantage. We can see that the Constitution and the law in America must be written on ethical principles, so that the entire power of the spiritual world shall hold the citizen loyal, and repel the enemy as by force of nature. It should be mankind's

bill of rights, or Royal Proclamation of the Intellect ascending the throne, announcing its good pleasure that now, once for all, the world shall be governed by common sense and law of morals.

The end of all political struggle is to establish morality as the basis of all legislation. 'T is not free institutions, 't is not a democracy that is the end,—no, but only the means. Morality is the object of government. We want a state of things in which crime will not pay; a state of things which allows every man the largest liberty compatible with the liberty of every other man.

Humanity asks that government shall not be ashamed to be tender and paternal, but that democratic institutions shall be more thoughtful for the interests of women, for the training of children, and for the welfare of sick and unable persons, and serious care of criminals, than was ever any the best government of the Old World.

The genius of the country has marked out our true policy,—opportunity. Opportunity of civil rights, of education, of personal power, and not less of wealth; doors wide open. If I could have it,—free trade with all the world without toll or custom-houses, invitation as we now make to every nation, to every race and skin, white men, red men, yellow men, black men; hospitality of fair field and equal laws to all.²⁷⁸⁵ Let them compete, and success to the strongest, the wisest and the best. The land is wide enough, the soil has bread for all.

I hope America will come to have its pride in being a nation of servants, and not of the served. How can men have any other ambition where the reason has not suffered a disastrous eclipse? Whilst every man can say I serve,—to the whole extent of my being I apply my faculty to the service of mankind in my especial place,—he therein sees and shows a reason for his being in the world, and is not a moth or incumbrance in it.

The distinction and end of a soundly constituted man is his labor. Use is inscribed on all his faculties. Use is the end to which he exists. As the tree exists for its fruit, so a man for his work. A fruitless plant, an idle animal, does not stand in the universe. They are all toiling, however secretly or slowly, in the province assigned them, and to a use in the economy of the world; the higher and more complex organizations to higher and more catholic service. And man seems to play, by his instincts and activity, a certain part that even tells on the general face of the planet, drains swamps, leads rivers into dry countries for their irrigation, perforates forests and stony mountain chains with roads, hinders the inroads of the sea on the continent, as if dressing the globe for happier races.

On the whole, I know that the cosmic results will be the same, whatever the daily events may be. Happily we are under better guidance than of statesmen. Pennsylvania coal-mines and New York shipping and free labor, though not idealists, gravitate in the ideal direction. Nothing less large than justice can keep them in good temper. Justice satisfies everybody, and justice alone. No monopoly must be foisted in, no weak party or nationality sacrificed, no coward compromise conceded to a strong partner. Every one of these is the seed of vice, war and national disorganization. It is our part to carry out to the last the ends of liberty and justice. We shall stand, then, for vast interests; north and south, east and west will be present to our minds, and our vote will be as if they voted, and we shall know that our vote secures the foundations of the state, good will, liberty and security of traffic and of production, and mutual increase of good will in the great interests.

Our helm is given up to a better guidance than our own; the course of events is quite too strong for any helmsman, and our little wherry is taken in tow by the ship of the great Admiral which

knows the way, and has the force to draw men and states and planets to their good.

Such and so potent is this high method by which the Divine Providence sends the chiefest benefits under the mask of calamities, that I do not think we shall by any perverse ingenuity prevent the blessing.

In seeing this guidance of events, in seeing this felicity without example that has rested on the Union thus far, I find new confidence for the future.

I could heartily wish that our will and endeavor were more active parties to the work. But I see in all directions the light breaking. Trade and government will not alone be the favored aims of mankind, but every useful, every elegant art, every exercise of the imagination, the height of reason, the noblest affection, the purest religion will find their home in our institutions, and write our laws for the benefit of men.²⁷⁸⁶

XII: NATURAL HISTORY OF INTELLECT AND OTHER PAPERS

PREFACE

IN THIS volume, in addition to the papers which it contained in the Riverside Edition, five of Mr. Emerson's lectures appear in print for the first time. They are "Instinct and Inspiration," "The Celebration of Intellect," "Country Life," "Concord Walks," and "Art and Criticism." Some account of the origin, or the circumstances attending the delivery of these lectures, will be found in the Notes. The first of them belonged to the course on Natural History of Intellect and now follows the lecture which bears that name in the Riverside Edition, but is here called "Powers and Laws of Thought." These two, with "Memory," are grouped under the general name of that course. Important passages from another lecture and from other versions of the first here given, are introduced into the Notes to it.

The General Index, which first appeared in the Riverside Edition, has been enlarged and improved by Miss Laura Woolsey Lord, to whom and to many friends who have given valuable help in tracing quotations to their sources, and for information used in the Notes, my thanks are due. I desire to make grateful acknowledgment also to Mr. Waldo Emerson Forbes for assistance given me in my work,

and to the heirs of Mr. J. Elliot Cabot and to Mr. George Willis Cooke, Mr. Moncure D. Conway, Mr. Charles J. Woodbury, Mr. John Albee, Dr. Richard Garnett, Dr. William T. Harris, and Mr. F. B. Sanborn, from whose books I have quoted, as well as to Messrs. Houghton, Mifflin & Company for extracts from books of which they own the copyright.

EDWARD WALDO EMERSON.
CONCORD, October 12, 1904.

I. NATURAL HISTORY OF INTELLECT

BACON'S PERFECT law of inquiry after truth was that nothing should be in the globe of matter which was not also in the globe of crystal; that is, nothing should take place as event in life which did not also exist as truth in the mind.

POWER THAT by obedience grows,
Knowledge that its source not knows,
Wave which severs whom it bears
From the things which he compares.

I. POWERS AND LAWS OF THOUGHT

I HAVE used such opportunity as I have had, and lately in London and Paris, to attend scientific lectures; and in listening to Richard Owen's masterly enumeration of the parts and laws of the human body, or Michael Faraday's explanation of magnetic powers, or the botanist's descriptions, one could not help admiring the irresponsible security and happiness of the attitude of the naturalist; sure of admiration for his facts, sure of their sufficiency.²⁷⁸⁷ They ought to interest you; if they do not, the fault lies with you.

Then I thought—could not a similar enumeration be made of the laws and powers of the Intellect, and possess the same claims on the student? Could we have, that is, the exhaustive accuracy of distribution which chemists use in their nomenclature and anatomists in their descriptions, applied to a higher class of facts; to those laws, namely, which are common to chemistry, anatomy, astronomy, geometry, intellect, morals and social life;—laws of the world?

Why not? These powers and laws are also facts in a Natural History. They also are objects of science and may be numbered and recorded, like stamens and vertebræ. At the same time they

have a deeper interest, as in the order of Nature they lie higher and are nearer to the mysterious seat of power and creation.²⁷⁸⁸

For at last, it is only that exceeding and universal part which interests us, when we shall read in a true history what befalls in that kingdom where a thousand years is as one day, and see that what is set down is true through all the sciences; in the laws of thought as well as of chemistry.²⁷⁸⁹

In all sciences the student is discovering that Nature, as he calls it, is always working, in wholes and in every detail, after the laws of the human mind. Every creation, in parts or in particles, is on the method and by the means which our mind approves as soon as it is thoroughly acquainted with the facts; hence the delight. No matter how far or how high science explores, it adopts the method of the universe as fast as it appears; and this discloses that the mind as it opens, the mind as it shall be, comprehends and works thus; that is to say, the Intellect builds the universe and is the key to all it contains. It is not then cities or mountains, or animals, or globes that any longer commands us, but only man; not the fact, but so much of man as is in the fact.

In astronomy, vast distance, but we never go into a foreign system. In geology, vast duration, but we are never strangers. Our metaphysics should be able to follow the flying force through all transformations, and name the pair identical through all variety.

I believe in the existence of the material world as the expression of the spiritual or the real, and in the impenetrable mystery which hides (and hides through absolute transparency) the mental nature, I await the insight which our advancing knowledge of material laws shall furnish.²⁷⁹⁰

Every object in Nature is a word to signify some fact in the mind. But when that fact is not yet put into English words, when I look at the tree or the river and have not yet definitely made out what

they would say to me, they are by no means unimpressive. I wait for them, I enjoy them before they yet speak. I feel as if I stood by an ambassador charged with the message of his king, which he does not deliver because the hour when he should say it is not yet arrived.

Whilst we converse with truths as thoughts, they exist also as plastic forces; as the soul of a man, the soul of a plant, the genius or constitution of any part of Nature, which makes it what it is. The thought which was in the world, part and parcel of the world, has disengaged itself and taken an independent existence.

My belief in the use of a course on philosophy is that the student shall learn to appreciate the miracle of the mind; shall learn its subtle but immense power, or shall begin to learn it; shall come to know that in seeing and in no tradition he must find what truth is; that he shall see in it the source of all traditions, and shall see each one of them as better or worse statement of its revelations; shall come to trust it entirely, as the only true; to cleave to God against the name of God.²⁷⁹¹ When he has once known the oracle he will need no priest. And if he finds at first with some alarm how impossible it is to accept many things which the hot or the mild sectarian may insist on his believing, he will be armed by his insight and brave to meet all inconvenience and all resistance it may cost him. He from whose hand it came will guide and direct it.²⁷⁹²

Yet these questions which really interest men, how few can answer. Here are learned faculties of law and divinity, but would questions like these come into mind when I see them? Here are learned academies and universities, yet they have not propounded these for any prize.

Seek the literary circles, the stars of fame, the men of splendor, of bon-mots, will they afford me satisfaction? I think you could

not find a club of men acute and liberal enough in the world. Bring the best wits together, and they are so impatient of each other, so vulgar, there is so much more than their wit,—such follies, gluttonies, partialities, age, care, and sleep, that you shall have no academy.

There is really a grievous amount of unavailableness about men of wit. A plain man finds them so heavy, dull and oppressive, with bad jokes and conceit and stupefying individualism, that he comes to write in his tablets, Avoid the great man as one who is privileged to be an unprofitable companion. For the course of things makes the scholars either egotists or worldly and jocose. In so many hundreds of superior men hardly ten or five or two from whom one can hope for a reasonable word.²⁷⁹³

Go into the scientific club and harken. Each savant proves in his admirable discourse that he, and he only, knows now or ever did know anything on the subject: "Does the gentleman speak of anatomy? Who peeped into a box at the Custom House and then published a drawing of my rat?" Or is it pretended discoveries of new strata that are before the meeting? This professor hastens to inform us that he knew it all twenty years ago, and is ready to prove that he knew so much then that all further investigation was quite superfluous;—and poor Nature and the sublime law, which is all that our student cares to hear of, are quite omitted in this triumphant vindication.

Was it better when we came to the philosophers, who found everybody wrong; acute and ingenious to lampoon and degrade mankind? And then was there ever prophet burdened with a message to his people who did not cloud our gratitude by a strange confounding in his own mind of private folly with his public wisdom?

But if you like to run away from this besetting sin of sedentary men, you can escape all this insane egotism by running into society, where the manners and estimate of the world have corrected this folly, and effectually suppressed this overweening self-conceit. Here each is to make room for others, and the solidest merits must exist only for the entertainment of all. We are not in the smallest degree helped. Great is the dazzle, but the gain is small. Here they play the game of conversation, as they play billiards, for pastime and credit.

Yes, 't is a great vice in all countries, the sacrifice of scholars to be courtiers and diners-out, to talk for the amusement of those who wish to be amused, though the stars of heaven must be plucked down and packed into rockets to this end. What with egotism on one side and levity on the other, we shall have no Olympus.

But there is still another hindrance, namely, practicality. We must have a special talent, and bring something to pass. Ever since the Norse heaven made the stern terms of admission that a man must do something excellent with his hands or feet, or with his voice, eyes, ears, or with his whole body, the same demand has been made in Norse earth.²⁷⁹⁴

Yet what we really want is not a haste to act, but a certain piety toward the source of action and knowledge. In fact we have to say that there is a certain beatitude,—I can call it nothing less,—to which all men are entitled, tasted by them in different degrees, which is a perfection of their nature, and to which their entrance must be in every way forwarded. Practical men, though they could lift the globe, cannot arrive at this. Something very different has to be done,—the availing ourselves of every impulse of genius, an emanation of the heaven it tells of, and the resisting this conspiracy of men and material things against the sanitary and legitimate inspirations of the intellectual nature.²⁷⁹⁵

What is life but the angle of vision? A man is measured by the angle at which he looks at objects. What is life but what a man is thinking of all day? This is his fate and his employer. Knowing is the measure of the man. By how much we know, so much we are.²⁷⁹⁶

The laws and powers of the Intellect have, however, a stupendous peculiarity, of being at once observers and observed. So that it is difficult to hold them fast, as objects of examination, or hinder them from turning the professor out of his chair. The wonder of the science of Intellect is that the substance with which we deal is of that subtle and active quality that it intoxicates all who approach it. Gloves on the hands, glass guards over the eyes, wire-gauze masks over the face, volatile salts in the nostrils, are no defence against this virus, which comes in as secretly as gravitation into and through all barriers.

Let me have your attention to this dangerous subject, which we will cautiously approach on different sides of this dim and perilous lake, so attractive, so delusive. We have had so many guides and so many failures. And now the world is still uncertain whether the pool has been sounded or not.

My contribution will be simply historical. I write anecdotes of the intellect; a sort of Farmer's Almanac of mental moods. I confine my ambition to true reporting of its play in natural action, though I should get only one new fact in a year.²⁷⁹⁷

I cannot myself use that systematic form which is reckoned essential in treating the science of the mind. But if one can say so without arrogance, I might suggest that he who contents himself with dotting a fragmentary curve, recording only what facts he has observed, without attempting to arrange them within one outline, follows a system also,—a system as grand as any other, though he does not interfere with its vast curves by prematurely forcing them

into a circle or ellipse, but only draws that arc which he clearly sees, or perhaps at a later observation a remote curve of the same orbit, and waits for a new opportunity, well assured that these observed arcs will consist with each other.

I confess to a little distrust of that completeness of system which metaphysicians are apt to affect. 'T is the gnat grasping the world. All these exhaustive theories appear indeed a false and vain attempt to introvert and analyze the Primal Thought. That is upstream, and what a stream! Can you swim up Niagara Falls?

We have invincible repugnance to introversion, to study of the eyes instead of that which the eyes see; and the belief of men is that the attempt is unnatural and is punished by loss of faculty. I share the belief that the natural direction of the intellectual powers is from within outward, and that just in proportion to the activity of thoughts on the study of outward objects, as architecture, or farming, or natural history, ships, animals, chemistry,—in that proportion the faculties of the mind had a healthy growth; but a study in the opposite direction had a damaging effect on the mind.

Metaphysics is dangerous as a single pursuit. We should feel more confidence in the same results from the mouth of a man of the world. The inward analysis must be corrected by rough experience. Metaphysics must be perpetually reinforced by life; must be the observations of a working man on working men; must be biography,—the record of some law whose working was surprised by the observer in natural action.

I think metaphysics a grammar to which, once read, we seldom return. 'T is a Manila full of pepper, and I want only a teaspoonful in a year. I admire the Dutch, who burned half the harvest to enhance the price of the remainder.

I want not the logic, but the power, if any, which it brings into science and literature; the man who can humanize this logic, these syllogisms, and give me the results. The adepts value only the pure geometry, the aërial bridge ascending from earth to heaven with arches and abutments of pure reason. I am fully contented if you tell me where are the two termini.

My metaphysics are to the end of use. I wish to know the laws of this wonderful power, that I may domesticate it. I observe with curiosity its risings and its settings, illumination and eclipse; its obstructions and its provocations, that I may learn to live with it wisely, court its aid, catch sight of its splendor, feel its approach, hear and save its oracles and obey them. But this watching of the mind, in season and out of season, to see the mechanics of the thing, is a little of the detective. The analytic process is cold and bereaving and, shall I say it? somewhat mean, as spying. There is something surgical in metaphysics as we treat it. Were not an ode a better form? The poet sees wholes and avoids analysis; the metaphysician, dealing as it were with the mathematics of the mind, puts himself out of the way of the inspiration; loses that which is the miracle and creates the worship.

I think that philosophy is still rude and elementary. It will one day be taught by poets. The poet is in the natural attitude; he is believing; the philosopher, after some struggle, having only reasons for believing.²⁷⁹⁸

What I am now to attempt is simply some sketches or studies for such a picture; *Mémoires pour servir* toward a Natural History of Intellect.

First I wish to speak of the excellence of that element, and the great auguries that come from it, notwithstanding the impediments which our sensual civilization puts in the way.

Next I treat of the identity of the thought with Nature; and I add a rude list of some by-laws of the mind.

Thirdly I proceed to the fountains of thought in Instinct and Inspiration, and I also attempt to show the relation of men of thought to the existing religion and civility of the present time.

I. We figure to ourselves Intellect as an ethereal sea, which ebbs and flows, which surges and washes hither and thither, carrying its whole virtue into every creek and inlet which it bathes. To this sea every human house has a water front. But this force, creating nature, visiting whom it will and withdrawing from whom it will, making day where it comes and leaving night when it departs, is no fee or property of man or angel. It is as the light, public and entire to each, and on the same terms.

What but thought deepens life, and makes us better than cow or cat? The grandeur of the impression the stars and heavenly bodies make on us is surely more valuable than our exact perception of a tub or a table on the ground.

To Be is the unsolved, unsolvable wonder. To Be, in its two connections of inward and outward, the mind and Nature. The wonder subsists, and age, though of eternity, could not approach a solution. But the suggestion is always returning, that hidden source publishing at once our being and that it is the source of outward Nature. Who are we, and what is Nature, have one answer in the life that rushes into us.

In my thought I seem to stand on the bank of a river and watch the endless flow of the stream, floating objects of all shapes, colors and natures; nor can I much detain them as they pass, except by running beside them a little way along the bank. But whence they come or whither they go is not told me. Only I have a suspicion that, as geologists say every river makes its own valley, so does

this mystic stream. It makes its valley, makes its banks and makes perhaps the observer too. Who has found the boundaries of human intelligence? Who has made a chart of its channel, or approached the fountain of this wonderful Nile?²⁷⁹⁹

I am of the oldest religion. Leaving aside the question which was prior, egg or bird, I believe the mind is the creator of the world, and is ever creating;—that at last Matter is dead Mind; that mind makes the senses it sees with; that the genius of man is a continuation of the power that made him and that has not done making him.

I dare not deal with this element in its pure essence. It is too rare for the wings of words. Yet I see that Intellect is a science of degrees, and that as man is conscious of the law of vegetable and animal nature, so he is aware of an Intellect which overhangs his consciousness like a sky, of degree above degree, of heaven within heaven.

Every just thinker has attempted to indicate these degrees, these steps on the heavenly stair, until he comes to light where language fails him. Above the thought is the higher truth,—truth as yet undomesticated and therefore unformulated.

It is a steep stair down from the essence of Intellect pure to thoughts and intellections. As the sun is conceived to have made our system by hurling out from itself the outer rings of diffuse ether which slowly condensed into earths and moons, by a higher force of the same law the mind detaches minds, and a mind detaches thoughts or intellections. These again all mimic in their sphericity the first mind, and share its power.

Life is incessant parturition. There are viviparous and oviparous minds; minds that produce their thoughts complete men, like armed soldiers, ready and swift to go out to resist and conquer all

the armies of error, and others that deposit their dangerous unripe thoughts here and there to lie still for a time and be brooded in other minds, and the shell not be broken until the next age, for them to begin, as new individuals, their career.

The perceptions of a soul, its wondrous progeny, are born by the conversation, the marriage of souls; so nourished, so enlarged. They are detached from their parent, they pass into other minds; ripened and unfolded by many they hasten to incarnate themselves in action, to take body, only to carry forward the will which sent them out. They take to themselves wood and stone and iron; ships and cities and nations and armies of men and ages of duration; the pomps of religion, the armaments of war, the codes and heraldry of states; agriculture, trade, commerce; —these are the ponderous instrumentalities into which the nimble thoughts pass, and which they animate and alter, and presently, antagonized by other thoughts which they first aroused, or by thoughts which are sons and daughters of these, the thought buries itself in the new thought of larger scope, whilst the old instrumentalities and incarnations are decomposed and recomposed into new.

Our eating, trading, marrying, and learning are mistaken by us for ends and realities, whilst they are properly symbols only; when we have come, by a divine leading, into the inner firmament, we are apprised of the unreality or representative character of what we esteemed final.

So works the poor little blockhead manikin. He must arrange and dignify his shop or farm the best he can. At last he must be able to tell you it, or write it, translate it all clumsily enough into the new sky-language he calls thought.²⁸⁰⁰ He cannot help it, the irresistible meliorations bear him forward.

II. Whilst we consider this appetite of the mind to arrange its phenomena, there is another fact which makes this useful. There is in Nature a parallel unity which corresponds to the unity in the mind and makes it available. This methodizing mind meets no resistance in its attempts. The scattered blocks, with which it strives to form a symmetrical structure, fit. This design following after finds with joy that like design went before. Not only man puts things in a row, but things belong in a row.

It is certain that however we may conceive of the wonderful little bricks of which the world is builded, we must suppose a similarity and fitting and identity in their frame. It is necessary to suppose that every hose in Nature fits every hydrant; so only is combination, chemistry, vegetation, animation, intellection possible. Without identity at base, chaos must be forever.²⁸⁰¹

And as mind, our mind or mind like ours, reappears to us in our study of Nature, Nature being everywhere formed after a method which we can well understand, and all the parts, to the most remote, allied or explicable,—therefore our own organization is a perpetual key, and a well-ordered mind brings to the study of every new fact or class of facts a certain divination of that which it shall find.

This reduction to a few laws, to one law, is not a choice of the individual, it is the tyrannical instinct of the mind. There is no solitary flower and no solitary thought. It comes single like a foreign traveller,—but find out its name, and it is related to a powerful and numerous family. Wonderful is their working and relation each to each. We hold them as lanterns to light each other and our present design. Every new thought modifies, interprets old problems. The retrospective value of each new thought is immense, like a torch applied to a long train of gunpowder. To be isolated is to be sick,

and in so far, dead. The life of the All must stream through us to make the man and the moment great.²⁸⁰²

Well, having accepted this law of identity pervading the universe, we next perceive that whilst every creature represents and obeys it, there is diversity, there is more or less of power; that the lowest only means incipient form, and over it is a higher class in which its rudiments are opened, raised to higher powers; that there is development from less to more, from lower to superior function, steadily ascending to man.

If man has organs for breathing, for sight, for locomotion, for taking food, for digesting, for protection by house-building, by attack and defence, for reproduction and love and care of his young, you shall find all the same in the muskrat. There is a perfect correspondence; or 't is only man modified to live in a mud-bank. A fish in like manner is man furnished to live in the sea; a thrush, to fly in the air; and a mollusk is a cheap edition with a suppression of the costlier illustrations, designed for dingy circulation, for shelving in an oyster-bank or among the seaweed.

If we go through the British Museum or the Jardin des Plantes in Paris, or any cabinet where is some representation of all the kingdoms of Nature, we are surprised with occult sympathies; we feel as if looking at our bone and flesh through coloring and distorting glasses. Is it not a little startling to see with what genius some people take to hunting, with what genius some people fish,—what knowledge they still have of the creature they hunt? The robber, as the police reports say, must have been intimately acquainted with the premises. How lately the hunter was the poor creature's organic enemy; a presumption *inflamed*, as the lawyers say, by observing how many faces in the street still remind us of visages in the forest,—the escape from the quadruped type not yet perfectly accomplished.²⁸⁰³

From whatever side we look at Nature we seem to be exploring the figure of a disguised man. How obvious is the momentum, in our mental history! The momentum, which increases by exact laws in falling bodies, increases by the same rate in the intellectual action. Every scholar knows that he applies himself coldly and slowly at first to his task, but, with the progress of the work, the mind itself becomes heated, and sees far and wide as it approaches the end, so that it is the common remark of the student, Could I only have begun with the same fire which I had on the last day, I should have done something.

The affinity of particles accurately translates the affinity of thoughts, and what a modern experimenter calls "the contagious influence of chemical action" is so true of mind that I have only to read the law that its application may be evident: "A body in the act of combination or decomposition enables another body, with which it may be in contact, to enter into the same state." And if one remembers how contagious are the moral states of men, how much we are braced by the presence and actions of any Spartan soul, it does not need vigor of our own kind, but the spectacle of vigor of any kind, any prodigious power of performance wonderfully arms and recruits us. There are those who disputing will make you dispute, and the nervous and hysterical and animalized will produce a like series of symptoms in you, though no other persons ever evoke the like phenomena, and though you are conscious that they do not properly belong to you, but are a sort of extension of the diseases of this particular person into you.

The idea of vegetation is irresistible in considering mental activity. Man seems a higher plant. What happens here in mankind is matched by what happens out there in the history of grass and wheat.²⁸⁰⁴ This curious resemblance repeats, in the mental function, the germination, growth, state of melioration, crossings, blight,

parasites, and in short all the accidents of the plant. Under every leaf is the bud of a new leaf, and not less under every thought is a newer thought. The plant absorbs much nourishment from the ground in order to repair its own waste by exhalation, and keep itself good. Increase its food and it becomes fertile. The mind is first only receptive. Surcharge it with thoughts in which it delights and it becomes active. The moment a man begins not to be convinced, that moment he begins to convince.

In the orchard many trees send out a moderate shoot in the first summer heat, and stop. They look all summer as if they would presently burst into bud again, but they do not. The fine tree continues to grow. The same thing happens in the man. Every man has material enough in his experience to exhaust the sagacity of Newton in working it out. We have more than we use. I never hear a good speech at caucus or at cattle-show but it helps me, not so much by adding to my knowledge as by apprising me of admirable uses to which what I know can be turned. The commonest remark, if the man could only extend it a little, would make him a genius; but the thought is prematurely checked, and grows no more. All great masters are chiefly distinguished by the power of adding a second, a third, and perhaps a fourth step in a continuous line. Many a man had taken the first step. With every additional step you enchain immensely the value of your first.

The botanist discovered long ago that Nature loves mixtures, and that nothing grows well on the crab-stock, but the blood of two trees being mixed a new and excellent fruit is produced. And not less in human history aboriginal races are incapable of improvement; the dull, melancholy Pelasgi arrive at no civility until the Phoenicians and Ionians come in. The Briton, the Pict, is nothing until the Roman, the Saxon, the Norman, arrives.²⁸⁰⁵

It is observed that our mental processes go forward even when they seem suspended. Scholars say that if they return to the study of a new language after some intermission, the intelligence of it is more and not less. A subject of thought to which we return from month to month, from year to year, has always some ripeness of which we can give no account. We say the book grew in the author's mind.

In unfit company the finest powers are paralyzed. No ambition, no opposition, no friendly attention and fostering kindness, no wine, music or exhilarating aids, neither warm fireside nor fresh air, walking or riding, avail at all to resist the palsy of mis-association. Genius is mute, is dull; there is no genius. Ask of your flowers to open when you have let in on them a freezing wind.

The mechanical laws might as easily be shown pervading the kingdom of mind as the vegetative. A man has been in Spain. The facts and thoughts which the traveller has found in that country gradually settle themselves into a determinate heap of one size and form and not another. That is what he knows and has to say of Spain; he cannot say it truly until a sufficient time for the arrangement of the particles has elapsed.

These views of the source of thought and the mode of its communication lead us to a whole system of ethics, strict as any department of human duty, and open to us the tendencies and duties of men of thought in the present time.

Wisdom is like electricity. There is no permanent wise man, but men capable of wisdom, who, being put into certain company or other favorable conditions, become wise, as glasses rubbed acquire power for a time.

An individual body is the momentary arrest or fixation of certain atoms, which, after performing compulsory duty to this enchanted

statue, are released again to flow in the currents of the world. An individual mind in like manner is a fixation or momentary eddy in which certain services and powers are taken up and minister in petty niches and localities, and then, being released, return to the unbounded soul of the world.

In this eternal resurrection and rehabilitation of transitory persons, who and what are they? 'T is only the source that we can see;—the eternal mind, careless of its channels, omnipotent in itself, and continually ejaculating its torrent into every artery and vein and veinlet of humanity. Wherever there is health, that is, consent to the cause and constitution of the universe, there is perception and power.²⁸⁰⁶

Each man is a new power in Nature. He holds the keys of the world in his hands. No quality in Nature's vast magazines he cannot touch, no truth he cannot see. Silent, passive, even sulkily, Nature offers every morning her wealth to man. She is immensely rich; he is welcome to her entire goods, but she speaks no word, will not so much as beckon or cough; only this, she is careful to leave all her doors ajar,—towers, hall, storeroom and cellar. If he takes her hint and uses her goods she speaks no word; if he blunders and starves she says nothing. To the idle blockhead Nature is poor, sterile, inhospitable. To the gardener her loam is all strawberries, pears, pineapples. To the miller her rivers whirl the wheel and weave carpets and broadcloth. To the sculptor her stone is soft; to the painter her plumbago and marl are pencils and chromes. To the poet all sounds and words are melodies and rhythms. In her hundred-gated Thebes every chamber is a new door.²⁸⁰⁷

But he enters the world by one key. Herein is the wealth of each. His equipment, though new, is complete; his prudence is his own; his courage, his charity, are his own. He has his own defences and his own fangs; his perception and his own mode

of reply to sophistries. Whilst he draws on his own he cannot be overshadowed or supplanted.

There are two mischievous superstitions, I know not which does the most harm, one, that "I am wiser than you," and the other that "You are wiser than I." The truth is that every man is furnished, if he will heed it, with wisdom necessary to steer his own boat,—if he will not look away from his own to see how his neighbor steers his.

Every man is a new method and distributes things anew. If he could attain full size he would take up, first or last, atom by atom, all the world into a new form. And our deep conviction of the riches proper to every mind does not allow us to admit of much looking over into one another's virtues. Let me whisper a secret; nobody ever forgives any admiration in you of them, any overestimate of what they do or have. I acquiesce to be that I am, but I wish no one to be civil to me.

Strong men understand this very well. Power fraternizes with power, and wishes you not to be like him but like yourself. Echo the leaders and they will fast enough see that you have nothing for them. They came to you for something they had not.

There is always a loss of truth and power when a man leaves working for himself to work for another. Absolutely speaking, I can only work for myself. All my good is magnetic, and I educate not by lessons but by going about my business. When, moved by love, a man teaches his child or joins with his neighbor in any act of common benefit, or spends himself for his friend, or rushes at immense personal sacrifice on some public, self-immolating act, it is not done for others, but to fulfil a high necessity of his proper character. The benefit to others is contingent and not contemplated by the doer.²⁸⁰⁸

The one thing not to be forgiven to intellectual persons is that they believe in the ideas of others. From this deference comes the

imbecility and fatigue of their society, for of course they cannot affirm these from the deep life; they say what they would have you believe, but what they do not quite know. Profound sincerity is the only basis of talent as of character. The temptation is to patronize Providence, to fall into the accepted ways of talking and acting of the good sort of people.

Each has a certain aptitude for knowing or doing somewhat which, when it appears, is so adapted and aimed on that, that it seems a sort of obtuseness to everything else. Well, this aptitude, if he would obey it, would prove a telescope to bring under his clear vision what was blur to everybody else. 'T is a wonderful instrument, an organic sympathy with the whole frame of things. There is no property or relation in that immense arsenal of forces which the earth is, but some man is at last found who affects this, delights to unfold and work it, as if he were the born publisher and demonstrator of it.

As a dog has a sense that you have not, to find the track of his master or of a fox, and as each tree can secrete from the soil the elements that form a peach, a lemon, or a cocoa-nut, according to its kind, so individual men have secret senses, each some incommunicable sagacity. And men are primary or secondary as their opinions and actions are organic or not.

I know well what a sieve every ear is. Teach me never so much and I hear or retain only that which I wish to hear, what comports with my experience and my desire. Many eyes go through the meadow, but few see the flowers. A hunter finds plenty of game on the ground you have sauntered over with idle gun. White huckleberries are so rare that in miles of pasture you shall not find a dozen. But a girl who understands it will find you a pint in a quarter of an hour.

Though the world is full of food we can take only the crumbs fit for us. The air rings with sounds, but only a few vibrations can reach our tympanum. Perhaps creatures live with us which we never see, because their motion is too swift for our vision. The sun may shine, or a galaxy of suns; you will get no more light than your eye will hold. What can Plato or Newton teach, if you are deaf or incapable? A mind does not receive truth as a chest receives jewels that are put into it, but as the stomach takes up food into the system. It is no longer food, but flesh, and is assimilated. The appetite and the power of digestion measure our right to knowledge. He has it who can use it. As soon as our accumulation overruns our invention or power to use, the evils of intellectual gluttony begin,—congestion of the brain, apoplexy and strangulation.

III. In reckoning the sources of our mental power it were fatal to omit that one which pours all the others into its mould;—that unknown country in which all the rivers of our knowledge have their fountains, and which, by its qualities and structure, determines both the nature of the waters and the direction in which they flow.

The healthy mind lies parallel to the currents of Nature and sees things in place, or makes discoveries. Newton did not exercise more ingenuity but less than another to see the world. Right thought comes spontaneously, comes like the morning wind; comes daily, like our daily bread, to humble service; comes duly to those who look for it. It does not need to pump your brains and force thought to think rightly. Oh no, the ingenious person is warped by his ingenuity and mis-sees.

Instinct is our name for the potential wit. Each man has a feeling that what is done anywhere is done by the same wit as his. All men are his representatives, and he is glad to see that his wit can work at this or that problem as it ought to be done, and better

than he could do it. We feel as if one man wrote all the books, painted, built, in dark ages; and we are sure that it can do more than ever was done. It was the same mind that built the world. That is Instinct.²⁸⁰⁹

Ask what the Instinct declares, and we have little to say. He is no newsmonger, no disputant, no talker. 'T is a taper, a spark in the great night. Yet a spark at which all the illuminations of human arts and sciences were kindled. This is that glimpse of inextinguishable light by which men are guided; though it does not show objects, yet it shows the way. This is that sense by which men feel when they are wronged, though they do not see how. This is that source of thought and feeling which acts on masses of men, on all men at certain times with resistless power. Ever at intervals leaps a word or fact to light which is no man's invention, but the common instinct, making the revolutions that never go back.

This is Instinct, and Inspiration is only this power excited, breaking its silence; the spark bursting into flame. Instinct is a shapeless giant in the cave, massive, without hands or fingers or articulating lips or teeth or tongue; Behemoth, disdaining speech, disdaining particulars, lurking, surly, invincible, disdaining thoughts, always whole, never distributed, aboriginal, old as Nature, and saying, like poor Topsy, "never was born; grewed." Indifferent to the dignity of its function, it plays the god in animal nature as in human or as in the angelic, and spends its omniscience on the lowest wants. The old Hindoo Gautama says, "Like the approach of the iron to the loadstone is the approach of the new-born child to the breast." There is somewhat awful in that first approach.

The Instinct begins at this low point, at the surface of the earth, and works for the necessities of the human being; then ascends step by step to suggestions which are when expressed the intellectual and moral laws.²⁸¹⁰

The mythology cleaves close to Nature; and what else was it they represented in Pan, god of shepherds, who was not yet completely finished in godlike form, blocked rather, and wanting the extremities; had emblematic horns and feet? Pan, that is, All. His habit was to dwell in mountains, lying on the ground, tooting like a cricket in the sun, refusing to speak, clinging to his behemoth ways. He could intoxicate by the strain of his shepherd's pipe,—silent yet to most, for his pipes make the music of the spheres, which, because it sounds eternally, is not heard at all by the dull, but only by the mind. He wears a coat of leopard spots or stars. He could terrify by earth-born fears called *panics*. Yet was he in the secret of Nature and could look both before and after. He was only seen under disguises, and was not represented by any outward image; a terror sometimes, at others a placid omnipotence.²⁸¹¹

Such homage did the Greek—delighting in accurate form, not fond of the extravagant and unbounded—pay to the unscrutable force we call Instinct, or Nature when it first becomes intelligent.

The action of the Instinct is for the most part negative, regulative, rather than initiative or impulsive. But it has a range as wide as human nature, running over all the ground of morals, of intellect and of sense. In its lower function, when it deals with the apparent world, it is common sense. It requires the performance of all that is needful to the animal life and health. Then it requires a proportion between a man's acts and his condition, requires all that is called humanity; that symmetry and connection which is imperative in all healthily constituted men, and the want of which the rare and brilliant sallies of irregular genius cannot excuse.

If we could retain our early innocence, we might trust our feet uncommanded to take the right path to our friend in the woods. But we have interfered too often; the feet have lost, by our distrust,

their proper virtue, and we take the wrong path and miss him. 'T is the barbarian instinct within us which culture deadens.

We find ourselves expressed in Nature, but we cannot translate it into words. But Perception is the armed eye. A civilization has tamed and ripened this savage wit, and he is a Greek. His Aye and No have become nouns and verbs and adverbs. Perception differs from Instinct by adding the Will. Simple percipieny is the virtue of space, not of man.

The senses minister to a mind they do not know. At a moment in our history the mind's eye opens and we become aware of spiritual facts, of rights, of duties, of thoughts,—a thousand faces of one essence. We call the essence Truth; the particular aspects of it we call thoughts. These facts, this essence, are not new; they are old and eternal, but our seeing of them is new. Having seen them we are no longer brute lumps whirled by Fate, but we pass into the council-chamber and government of Nature. In so far as we see them we share their life and sovereignty.

The point of interest is here, that these gates, once opened, never swing back. The observers may come at their leisure, and do at last satisfy themselves of the fact. The thought, the doctrine, the right hitherto not affirmed is published in set propositions, in conversation of scholars and philosophers, of men of the world, and at last in the very choruses of songs. The young hear it, and as they have never fought it, never known it otherwise, they accept it, vote for it at the polls, embody it in the laws. And the perception thus satisfied reacts on the senses, to clarify them, so that it becomes more indisputable.

This is the first property of the Intellect I am to point out; the mind detaches. A man is intellectual in proportion as he can make an object of every sensation, perception and intuition; so long as

he has no engagement in any thought or feeling which can hinder him from looking at it as somewhat foreign.

A man of talent has only to name any form or fact with which we are most familiar, and the strong light which he throws on it enhances it to all eyes. People wonder they never saw it before. The detachment consists in seeing it under a new order, not under a personal but under a universal light. To us it had economic, but to the universe it has poetic relations, and it is as good as sun and star now. Indeed, this is the measure of all intellectual power among men, the power to complete this detachment, the power of genius to hurl a new individual into the world.²⁸¹²

An intellectual man has the power to go out of himself and see himself as an object; therefore his defects and delusions interest him as much as his successes. He not only wishes to succeed in life, but he wishes in thought to know the history and destiny of a man; whilst the cloud of egotists drifting about are only interested in a success to their egotism.

The senses report the new fact or change; the mind discovers some essential copula binding this fact or change to a class of facts or changes, and enjoys the discovery as if coming to its own again. A perception is always a generalization. It lifts the object, whether in material or moral nature, into a type. The animal, the low degrees of intellect, know only individuals. The philosopher knows only laws. That is, he considers a purely mental fact, part of the soul itself. We say with Kenelm Digby, "All things that she knoweth are herself, and she is all that she knoweth." Insight assimilates the thing seen. Is it only another way of affirming and illustrating this to say that it sees nothing alone, but sees each particular object in just connections,—sees all in God? In all healthy souls is an inborn necessity of presupposing for each particular fact a prior Being which compels it to a harmony with all other natures. The

game of Intellect is the perception that whatever befalls or can be stated is a universal proposition; and contrariwise, that every general statement is poetical again by being particularized or impersonated.

A single thought has no limit to its value; a thought, properly speaking,—that is a truth held not from any man's saying so, or any accidental benefit or recommendation it has in our trade or circumstance, but because we have perceived it is a fact in the nature of things, and in all times and places will and must be the same thing,—is of inestimable value. Every new impression on the mind is not to be derided, but is to be accounted for, and, until accounted for, registered as an indisputable addition to our catalogue of natural facts.

The first fact is the fate in every mental perception,—that my seeing this or that, and that I see it so or so, is as much a fact in the natural history of the world as is the freezing of water at thirty-two degrees of Fahrenheit. My percipency affirms the presence and perfection of law, as much as all the martyrs. A perception, it is of a necessity older than the sun and moon, and the Father of the Gods. It is there with all its destinies. It is its nature to rush to expression, to rush to embody itself. It is impatient to put on its sandals and be gone on its errand, which is to lead to a larger perception, and so to new action. For thought exists to be expressed. That which cannot externize itself is not thought.²⁸¹³

Do not trifle with your perceptions, or hold them cheap. They are your door to the seven heavens, and if you pass it by you will miss your way. Say, what impresses me ought to impress me. I am bewildered by the immense variety of attractions and cannot take a step; but this one thread, fine as gossamer, is yet real; and I hear a whisper, which I dare trust, that it is the thread on which the earth and the heaven of heavens are strung.

The universe is traversed by paths or bridges or stepping-stones across the gulfs of space in every direction. To every soul that is created is its path, invisible to all but itself. Each soul, therefore, walking in its own path walks firmly; and to the astonishment of all other souls, who see not its path, it goes as softly and playfully on its way as if, instead of being a line, narrow as the edge of a sword, over terrific pits right and left, it were a wide prairie.

Genius is a delicate sensibility to the laws of the world, adding the power to express them again in some new form. The highest measure of poetic power is such insight and faculty to fuse the circumstances of to-day as shall make transparent the whole web of circumstance and opinion in which the man finds himself, so that he releases himself from the traditions in which he grew,—no longer looks back to Hebrew or Greek or English use or tradition in religion, laws or life, but sees so truly the omnipresence of eternal cause that he can convert the daily and hourly event of New York, of Boston, into universal symbols. I owe to genius always the same debt, of lifting the curtain from the common and showing me that gods are sitting disguised in every company.

The conduct of Intellect must respect nothing so much as preserving the sensibility. My measure for all subjects of science as of events is their impression on the soul. That mind is best which is most impressionable.²⁸¹⁴ There are times when the cawing of a crow, a weed, a snow-flake, a boy's willow whistle, or a farmer planting in his field is more suggestive to the mind than the Yosemite gorge or the Vatican would be in another hour. In like mood an old verse, or certain words, gleam with rare significance.

But sensibility does not exhaust our idea of it. That is only half. Genius is not a lazy angel contemplating itself and things. It is insatiable for expression. Thought must take the stupendous step of passing into realization. A master can formulate his thought.

Our thoughts at first possess us. Later, if we have good heads, we come to possess them. We believe that certain persons add to the common vision a certain degree of control over these states of mind; that the true scholar is one who has the power to stand beside his thoughts or to hold off his thoughts at arm's length and give them perspective.

It is not to be concealed that the gods have guarded this privilege with costly penalty. This slight discontinuity which perception effects between the mind and the object paralyzes the will. If you cut or break in two a block or stone and press the two parts closely together, you can indeed bring the particles very near, but never again so near that they shall attract each other so that you can take up the block as one. That indescribably small interval is as good as a thousand miles, and has forever severed the practical unity. Such is the immense deduction from power by discontinuity.²⁸¹⁵

The intellect that sees the interval partakes of it, and the fact of intellectual perception severs once for all the man from the things with which he converses. Affection blends, intellect disjoins subject and object. For weal or woe we clear ourselves from the thing we contemplate. We grieve but are not the grief; we love but are not love. If we converse with low things, with crimes, with mischances, we are not compromised. And if with high things, with heroic actions, with virtues, the interval becomes a gulf and we cannot enter into the highest good. Artist natures do not weep. Goethe, the surpassing intellect of modern times, apprehends the spiritual but is not spiritual.²⁸¹⁶

There is indeed this vice about men of thought, that you cannot quite trust them; not as much as other men of the same natural probity, without intellect; because they have a hankering to play

Providence and make a distinction in favor of themselves from the rules they apply to the human race.²⁸¹⁷

The primary rule for the conduct of Intellect is to have control of the thoughts without losing their natural attitudes and action. They are the oracle; we are not to poke and drill and force, but to follow them.²⁸¹⁸ Yet the spirits of the prophets are subject to the prophets. You must formulate your thought or 't is all sky and no stars. There are men of great apprehension, discursive minds, who easily entertain ideas, but are not exact, severe with themselves, cannot connect or arrange their thoughts so as effectively to report them. A blending of these two—the intellectual perception of truth and the moral sentiment of right—is wisdom. All thought is practical. Wishing is one thing; will another. Wishing is castle-building; the dreaming about things agreeable to the senses, but to which we have no right. Will is the advance to that which rightly belongs to us, to which the inward magnet ever points, and which we dare to make ours. The revelation of thought takes us out of servitude into freedom. So does the sense of right.

Will is the measure of power. To a great genius there must be a great will. If the thought is not a lamp to the will, does not proceed to an act, the wise are imbecile. He alone is strong and happy who has a will. The rest are herds. He uses; they are used. He is of the Maker; they are of the Made.²⁸¹⁹

Will is always miraculous, being the presence of God to men. When it appears in a man he is a hero, and all metaphysics are at fault. Heaven is the exercise of the faculties, the added sense of power.

All men know the truth, but what of that? It is rare to find one who knows how to speak it. A man tries to speak it and his voice is like the hiss of a snake, or rude and chiding. The truth is not

spoken but injured. The same thing happens in power to do the right. His rectitude is ridiculous. His organs do not play him true.

There is a meter which determines the constructive power of man,—this, namely, the question whether the mind possesses the control of its thoughts, or they of it. The new sect stands for certain thoughts. We go to individual members for an exposition of them. Vain expectation. They are possessed by the ideas but do not possess them. One meets contemplative men who dwell in a certain feeling and delight which are intellectual but wholly above their expression. They cannot formulate. They impress those who know them by their loyalty to the truth they worship but cannot impart. Sometimes the patience and love are rewarded by the chamber of power being at last opened; but sometimes they pass away dumb, to find it where all obstruction is removed.

By and by comes a facility; some one that can move the mountain and build of it a causeway through the Dismal Swamp, as easily as he carries the hair on his head. Talent is habitual facility of execution. We like people who can do things. The various talents are organic, or each related to that part of nature it is to explore and utilize. Somewhat is to come to the light, and one was created to fetch it,—a vessel of honor or of dishonor. 'T is of instant use in the economy of the Cosmos, and the more armed and biassed for the work the better.

Each of these talents is born to be unfolded and set at work for the use and delight of men, and, in the last results, the man with the talent is the need of mankind; the whole ponderous machinery of the state has really for its aim just to place this skill of each.

But idea and execution are not often intrusted to the same head. There is some incompatibility of good speculation and practice, for example, the failure of monasteries and Brook Farms.

To hammer out phalanxes must be done by smiths; as soon as the scholar attempts it, he is half a charlatan.

The grasp is the main thing. Most men's minds do not grasp anything. All slips through their fingers, like the paltry brass grooves that in most country houses are used to raise or drop the curtain, but are made to sell, and will not hold any curtain but cobwebs. I have heard that idiot children are known from their birth by the circumstance that their hands do not close round anything. Webster naturally and always grasps, and therefore retains something from every company and circumstance.

As a talent Dante's imagination is the nearest to hands and feet that we have seen. He clasps the thought as if it were a tree or a stone, and describes as mathematically. I once found Page the painter modelling his figures in clay, Ruth and Naomi, before he painted them on canvas. Dante, one would say, did the same thing before he wrote the verses.

I have spoken of Intellect constructive.²⁸²⁰ But it is in degrees. How it moves when its pace is accelerated! The pace of Nature is so slow. Why not from strength to strength, from miracle to miracle, and not as now with this retardation—as if Nature had sprained her foot—and plenteous stopping at little stations?

The difference is obvious enough in Talent between the speed of one man's action above another's. In debate, in legislature, not less in action; in war or in affairs, alike daring and effective. But I speak of it in quite another sense, namely, in the habitual speed of combination of thought.

The same functions which are perfect in our quadrupeds are seen slower performed in palæontology. Many races it cost them to achieve the completion that is now in the life of one. Life had not yet so fierce a glow.²⁸²¹

Shakspeare astonishes by his equality in every play, act; scene or line. One would say he must have been a thousand years old when he wrote his first line, so thoroughly is his thought familiar to him, and has such scope and so solidly worded, as if it were already a proverb and not hereafter to become one. Well, that millennium in effect is really only a little acceleration in his process of thought.

But each power is commonly at the expense of some other. When pace is increased it will happen that the control is in a degree lost. Reason does not keep her firm seat. The Delphian prophetess, when the spirit possesses her, is herself a victim. The excess of individualism, when it is not corrected or subordinated to the Supreme Reason, makes that vice which we stigmatize as monotonies, men of one idea, or, as the French say, *enfant perdu d'une conviction isolée*, which give such a comic tinge to all society. Every man has his theory, true, but ridiculously overstated. We are forced to treat a great part of mankind as if they were a little deranged. We detect their mania and humor it, so that conversation soon becomes a tiresome effort.

You laugh at the monotonies, at the men of one idea, but if we look nearly at heroes we may find the same poverty; and perhaps it is not poverty, but power. The secret of power, intellectual or physical, is concentration, and all concentration involves of necessity a certain narrowness. It is a law of Nature that he who looks at one thing must turn his eyes from every other thing in the universe. The horse goes better with blinders, and the man for dedication to his task. If you ask what compensation is made for the inevitable narrowness, why, this, that in learning one thing well you learn all things.²⁸²²

Immense is the patience of Nature. You say thought is a penurious rill. Well, we can wait. Nature is immortal, and can wait. Nature

having for capital this rill, drop by drop, as it trickles from the rock of ages,—this rill and her patience,—she husbands and hives, she forms reservoirs, were it only a phial or a hair-tube that will hold as it were a drop of attar. Not having enough to support all the powers of a race, she thins all her stock and raises a few individuals, or only a pair. Not sufficing to feed all the faculties synchronously, she feeds one faculty and starves all the rest. I am familiar with cases, we meet them daily, wherein the vital force being insufficient for the constitution, everything is neglected that can be spared; some one power fed, all the rest pine. 'T is like a withered hand or leg on a Hercules. It makes inconvenience in society, for we presume symmetry, and because they know one thing, we defer to them in another, and find them really contemptible. We can't make a half bow and say, I honor and despise you. But Nature can; she whistles with all her winds, and does as she pleases.²⁸²³

It is much to write sentences; it is more to add method and write out the spirit of your life symmetrically. But to arrange general reflections in their natural order, so that I shall have one homogeneous piece,—a Lycidas, an Allegro, a Hamlet, a *Midsummer Night's Dream*,—this continuity is for the great. The wonderful men are wonderful hereby. Such concentration of experiences is in every great work, which, though successive in the mind of the master, were primarily combined in his piece.

But what we want is consecutiveness. 'T is with us a flash of light, then a long darkness, then a flash again. Ah! could we turn these fugitive sparkles into an astronomy of Copernican worlds.²⁸²⁴

I must think this keen sympathy, this thrill of awe with which we watch the performance of genius, a sign of our own readiness to exert the like power. I must think we are entitled to powers far

transcending any that we possess; that we have in the race the sketch of a man which no individual comes up to.

Every sincere man is right, or, to make him right, only needs a little larger dose of his own personality. Excellent in his own way by means of not apprehending the gift of another. When he speaks out of another's mind, we detect it. He can't make any paint stick but his own. No man passes for that with another which he passes for with himself. The respect and the censure of his brother are alike injurious and irrelevant. We see ourselves; we lack organs to see others, and only squint at them.

Don't fear to push these individualities to their farthest divergence. Characters and talents are complementary and supplementary. The world stands by balanced antagonisms. The more the peculiarities are pressed, the better the result. The air would rot without lightning; and without the violence of direction that men have, without bigots, without men of fixed idea, no excitement, no efficiency.

The novelist should not make any character act absurdly, but only absurdly as seen by others. For it is so in life. Nonsense will not keep its unreason if you come into the humorist's point of view, but unhappily we find it is fast becoming sense, and we must flee again into the distance if we would laugh.

What strength belongs to every plant and animal in Nature. The tree or the brook has no duplicity, no pretentiousness, no show. It is, with all its might and main, what it is, and makes one and the same impression and effect at all times. All the thoughts of a turtle are turtles, and of a rabbit, rabbits. But a man is broken and dissipated by the giddiness of his will; he does not throw himself into his judgments; his genius leads him one way, but 't is likely his trade or politics in quite another. He rows with one hand and with the other backs water, and does not give to any manner of life the

strength of his constitution. Hence the perpetual loss of power and waste of human life.

The natural remedy against this miscellany of knowledge and aim, this desultory universality of ours, this immense ground-juniper falling abroad and not gathered up into any columnar tree, is to substitute realism for sentimentalism; a certain recognition of the simple and terrible laws which, seen or unseen, pervade and govern.

You will say this is quite axiomatic and a little too true. I do not find it an agreed point. Literary men for the most part have a settled despair as to the realization of ideas in their own time. There is in all students a distrust of truth, a timidity about affirming it; a wish to patronize Providence.

We disown our debt to moral evil. To science there is no poison; to botany no weed; to chemistry no dirt. The curses of malignity and despair are important criticism, which must be heeded until he can explain and rightly silence them.

"Croyez moi, l'erreur aussi a son mérite," said Voltaire. We see those who surmount by dint of egotism or infatuation obstacles from which the prudent recoil. The right partisan is a heady man, who, because he does not see many things, sees some one thing with heat and exaggeration; and if he falls among other narrow men, or objects which have a brief importance, prefers it to the universe, and seems inspired and a godsend to those who wish to magnify the matter and carry a point. 'T is the difference between progress by railroad and by walking across the broken country. Immense speed, but only in one direction.

There are two theories of life; one for the demonstration of our talent, the other for the education of the man. One is activity, the busy-body, the following of that practical talent which we have,

in the belief that what is so natural, easy and pleasant to us and desirable to others will surely lead us out safely; in this direction lie usefulness, comfort, society, low power of all sorts. The other is trust, religion, consent to be nothing for eternity, entranced waiting, the worship of ideas. This is solitary, grand, secular. They are in perpetual balance and strife. One is talent, the other genius. One is skill, the other character.²⁸²⁵

We are continually tempted to sacrifice genius to talent, the hope and promise of insight to the lust of a freer demonstration of those gifts we have; and we buy this freedom to glitter by the loss of general health.

It is the levity of this country to forgive everything to talent. If a man show cleverness, rhetorical skill, bold front in the forum or senate, people clap their hands without asking more. We have a juvenile love of smartness, of showy speech. We like faculty that can rapidly be coined into money, and society seems to be in conspiracy to utilize every gift prematurely, and pull down genius to lucrative talent. Every kind of meanness and mischief is forgiven to intellect. All is condoned if I can write a good song or novel.

Wide is the gulf between genius and talent. The men we know, poets, wits, writers, deal with their thoughts as jewellers with jewels, which they sell but must not wear. Like the carpenter, who gives up the key of the fine house he has built, and never enters it again.

There is a conflict between a man's private dexterity or talent and his access to the free air and light which wisdom is; between wisdom and the habit and necessity of repeating itself which belongs to every mind. Peter is the mould into which everything is poured like warm wax, and be it astronomy or railroads or French revolution or theology or botany, it comes out Peter. But there are quick limits to our interest in the personality of people. They are

as much alike as their barns and pantries, and are as soon musty and dreary. They entertain us for a time, but at the second or third encounter we have nothing more to learn.²⁸²⁶

The daily history of the Intellect is this alternating of expansions and concentrations. The expansions are the invitations from heaven to try a larger sweep, a higher pitch than we have yet climbed, and to leave all our past for this enlarged scope. Present power, on the other hand, requires concentration on the moment and the thing to be done.

The condition of sanity is to respect the order of the intellectual world; to keep down talent in its place, to enthrone the instinct. There must be perpetual rallying and self-recovery. Each talent is ambitious and self-asserting; it works for show and for the shop, and the greater it grows the more is the mischief and the misleading, so that presently all is wrong.

No wonder the children love masks and costumes, and play horse, play soldier, play school, play bear, and delight in theatricals. The children have only the instinct of the universe, in which becoming somewhat else is the perpetual game of Nature, and death the penalty of standing still. 'T is not less in thought. I cannot conceive any good in a thought which confines and stagnates. The universe exists only in transit, or we behold it shooting the gulf from the past to the future. We are passing into new heavens in fact by the movement of our solar system, and in thought by our better knowledge.²⁸²⁷ Transition is the attitude of power. A fact is only a fulcrum of the spirit. It is the terminus of a past thought, but only a means now to new sallies of the imagination and new progress of wisdom. The habit of saliency, of not pausing but proceeding, is a sort of importation and domestication of the divine effort into a

man. Routine, the rut, is the path of indolence, of cows, of sluggish animal life; as near gravitation as it can go. But wit sees the short way, puts together what belongs together, custom or no custom; in that is organization.

Inspiration is the continuation of the divine effort that built the man. The same course continues itself in the mind which we have witnessed in Nature, namely the carrying-on and completion of the metamorphosis from grub to worm, from worm to fly. In human thought this process is often arrested for years and ages. The history of mankind is the history of arrested growth. This premature stop; I know not how, befalls most of us in early youth; as if the growth of high powers, the access to rare truths, closed at two or three years in the child, while all the pagan faculties went ripening on to sixty.

So long as you are capable of advance, so long you have not abdicated the hope and future of a divine soul. That wonderful oracle will reply when it is consulted, and there is no history or tradition, no rule of life or art or science, on which it is not a competent and the only competent judge.

Man was made for conflict, not for rest. In action is his power; not in his goals but in his transitions man is great. Instantly he is dwarfed by self-indulgence. The truest state of mind rested in becomes false.

The spiritual power of man is twofold, mind and heart, Intellect and morals; one respecting truth, the other the will. One is the man, the other the woman in spiritual nature. One is power, the other is love. These elements always coexist in every normal individual, but one predominates. And as each is easily exalted in our thoughts till it serves to fill the universe and become the synonym of God, the soul in which one predominates is ever watchful and jealous when such immense claims are made for one as seem injurious to

the other. Ideal and practical, like ecliptic and equator, are never parallel. Each has its vices, its proper dangers, obvious enough when the opposite element is deficient.

Intellect is skeptical, runs down into talent, selfish working for private ends, conceited, ostentatious and malignant. On the other side the clear-headed thinker complains of souls led hither and thither by affections which, alone, are blind guides and thriftless workmen, and in the confusion asks the polarity of intellect. But all great minds and all great hearts have mutually allowed the absolute necessity of the twain.²⁸²⁸

If the first rule is to obey your genius, in the second place the good mind is known by the choice of what is positive, of what is advancing. We must embrace the affirmative. But the affirmative of affirmatives is love. *Quantus amor tantus animus*. Strength enters as the moral element enters. Lovers of men are as safe as the sun. Good will makes insight. Sensibility is the secret readiness to believe in all kinds of power, and the contempt of any experience we have not is the opposite pole. The measure of mental health is the disposition to find good everywhere, good and order, analogy, health and benefit,—the love of truth, tendency to be in the right, no fighter for victory, no cockerel.²⁸²⁹

We have all of us by nature a certain divination and parturient vaticination in our minds of some higher good and perfection than either power or knowledge. Knowledge is plainly to be preferred before power, as being that which guides and directs its blind force and impetus; but Aristotle declares that the origin of reason is not reason, but something better.

The height of culture, the highest behavior, consists in the identification of the Ego with the universe; so that when a man says I hope, I find, I think, he might properly say, The human race thinks or finds or hopes. And meantime he shall be able continually to

keep sight of his biographical Ego,—I have a desk, I have an office, I am hungry, I had an ague,—as rhetoric or offset to his grand spiritual Ego, without impertinence, or ever confounding them.²⁸³⁰

I may well say this is divine, the continuation of the divine effort. Alas! it seems not to be ours, to be quite independent of us. Often there is so little affinity between the man and his works that we think the wind must have writ them. Also its communication from one to another follows its own law and refuses our intrusion. It is in one, it belongs to all; yet how to impart it?

We need all our resources to live in the world which is to be used and decorated by us. Socrates kept all his virtues as well as his faculties well in hand. He was sincerely humble, but he utilized his humanity chiefly as a better eye-glass to penetrate the vapors that baffled the vision of other men.

The superiority of the man is in the simplicity of his thought, that he has no obstruction, but looks straight at the pure fact, with no color of option. Profound sincerity is the only basis of talent as of character. The virtue of the Intellect is its own, its courage is of its own kind, and at last it will be justified, though for the moment it seem hostile to what it most reveres.

We wish to sum up the conflicting impressions by saying that all point at last to a unity which inspires all. Our poetry, our religion are its skirts and penumbrae. Yet the charm of life is the hints we derive from this. They overcome us like perfumes from a far-off shore of sweetness, and their meaning is that no tongue shall syllable it without leave; that only itself can name it; that by casting ourselves on it and being its voice it rushes each moment to positive commands, creating men and methods, and ties the will of a child to the love of the First Cause.²⁸³¹

II. INSTINCT AND INSPIRATION

IN RECKONING the sources of our mental power, it were fatal to omit that one which pours all the others into mould—that unknown country in which all the rivers of our knowledge have their fountains, which by its qualities and structure determines both the nature of the waters, and the direction in which they flow. We have a certain blind wisdom, a brain of the brain, a seminal brain, which has not yet put forth organs, which rests in oversight and presence, but which seems to sheathe a certain omniscience; and which, in the despair of language, is commonly called Instinct.

This is that which never pretends: nothing seems less, nothing is more. Ask what the Instinct declares, and we have little to say; he is no newsmonger, no disputant, no talker. Consciousness is but a taper in the great night; but the taper at which all the illumination of human arts and sciences was kindled. And in each man's experience, from this spark torrents of light have once and again streamed and revealed the dusky landscape of his life. 'T is very certain that a man's whole possibility is contained in that habitual first look which he casts on all objects. Here alone is the field of metaphysical discovery, yes, and of every religion and

civil order that has been or shall be. All that we know is flakes and grains detached from this mountain. None of the metaphysicians have prospered in describing this power, which constitutes sanity; and is the corrector of private excesses and mistakes; public in all its regards, and of a balance which is never lost, not even in the insane.

All men are, in respect to this source of truth, on a certain footing of equality, equal in original science, though against appearance; and 't is incredible to them. There is a singular credulity which no experience will cure us of, that another man has seen or may see somewhat more than we, of the primary facts; as, for example, of the continuity of the individual, and, eye for eye, object for object, their experience is invariably identical in a million individuals. I know, of course, all the grounds on which any man affirms the immortality of the Soul. Fed from one spring, the water-tank is equally full in all the gardens: the difference is in the distribution by pipes and pumps (difference in the aqueduct), and fine application of it. Its property is absolute science and an implicit reliance is due to it.²⁸³²

All true wisdom of thought and of action comes of deference to this instinct, patience with its delays.

To make a practical use of this instinct in every part of life constitutes true wisdom, and we must form the habit of preferring in all cases this guidance, which is given as it is used. To indicate a few examples of our recurrence to instinct instead of to the understanding: we can only judge safely of a discipline, of a book, of a man, or other influence, by the frame of mind it induces, as whether that be large and serene, or dispiriting and degrading. Then we get a certain habit of the mind as the measure; as Haydon found Voltaire's tales left him melancholy. The eye and ear have a logic which transcends the skill of the tongue. The ear

is not to be cheated. A continuous effect cannot be produced by discontinuous thought, and when the eye cannot detect the juncture of the skilful mosaic, the spirit is apprised of disunion, simply by the failure to affect the spirit. Objection and loud denial not less prove the reality and conquests of an idea than the friends and advocates it finds. One often sees in the embittered acuteness of critics snuffing heresy from afar, their own unbelief, that they pour forth on the innocent promulgator of new doctrine their anger at that which they vainly resist in their own bosom. Again, if you go to a gallery of pictures, or other works of fine art, the eye is dazzled and embarrassed by many excellences. The marble imposes on us; the exquisite details, we cannot tell if they be good or not: but long after we have quitted the place, the objects begin to take a new order; the inferior recede or are forgotten and the truly noble forms reappear to the imagination.

The Instinct begins at this low point at the surface of the earth, and works for the necessities of the human being; then ascends, step by step, to suggestions, which are, when expressed, the intellectual and moral laws.²⁸³³

And what is Inspiration? It is this Instinct, whose normal state is passive, at last put in action. We attributed power and science and good will to the Instinct, but we found it dumb and inexorable. If it would but impart itself! To coax and woo the strong Instinct to bestir itself, and work its miracle, is the end of all wise endeavor. It is resistless, and knows the way, is the inventor of all arts, and is melodious, and at all points a god. Could we prick the sides of this slumberous giant; could we break the silence of this oldest angel, who was with God when the worlds were made! The whole art of man has been an art of excitation, to provoke, to extort speech from the drowsy genius. We ought to know the way to our nectar. We ought to know the way to insight and prophecy as surely as the

plant knows its way to the light; the cow and sheep to the running brook; or the feaster to his wine. We believe (the drop of blood has latent power and organs) that the rudest mind has a Delphi and Dodona—predictions of Nature and history—in itself, though now dim and hard to read. All depends on some instigation, some impulse. Where is the yeast that will leaven this lump? Where the wine that will warm and open these silent lips? Where the fire that will light this combustible pile? That force or flame is alone to be considered; 't is indifferent on what it is fed.

Here are we with all our world of facts and experience, the spontaneous impressions of Nature and men, and original oracles,—all ready to be uttered, if only we could be set aglow. How much material lies in every man!²⁸³⁴ Who knows not the insufficiency of our forces, the solstice of genius? The star climbs for a time the heaven, but never reaches the zenith; it culminates low, and goes backward whence it came.²⁸³⁵

The human faculty only warrants inceptions. Even those we call great men build substructures, and, like Cologne Cathedral, these are never finished. Lord Bacon begins; Behmen begins; Goethe, Fourier, Schelling, Coleridge, they all begin: we, credulous bystanders, believe, of course, that they can finish as they begun. If you press them, they fly to a new topic, and here, again, open a magnificent promise, which serves the turn of interesting us once more, and silencing reproaches, but they never complete their work. Inspiration is vital and continuous. It is also a public or universal light, and not particular.²⁸³⁶ But genius is as weary of his personality as others are, and he has the royal expedient to thrust Nature between him and you, and perpetually to divert attention from himself, by the stream of thoughts, laws and images.

In the healthy mind, the thought is not a barren thesis, but expands, varies, recruits itself with relations to all Nature, paints

itself in wonderful symbols, appears in new men, in institutions, in social arrangements, in wood, in stone, in art, in books. The mark and sign of it is newness. The divine energy never rests or repeats itself, but casts its old garb, and reappears, another creature; the old energy in a new form, with all the vigor of the earth; the Ancient of Days in the dew of the morning.

Novelty in the means by which we arrive at the old universal ends is the test of the presence of the highest power, alike in intellectual and in moral action. How incomparable beyond all price seems to us a new poem—say Spenser—or true work of literary genius! In five hundred years we shall not have a second. We brood on the words or works of our companion, and ask in vain the sources of his information. He exhibits an exotic culture, as if he had his education in another planet. The poet is incredible, inexplicable.

The poet works to an end above his will, and by means, too, which are out of his will. Every part of the poem is therefore a true surprise to the reader, like the parts of the plant, and legitimate as they. The muse may be defined, *Supervoluntary ends effected by supervoluntary means*. No practical rules for the poem, no working-plan was ever drawn up. It is miraculous at all points. The poetic state given, a little more or a good deal more or less performance seems indifferent. It is as impossible for labor to produce a sonnet of Milton, or a song of Burns, as Shakspeare's Hamlet, or the Iliad. There is much loss, as we say on the railway, in the stops, but the running time need be but little increased, to add great results. One master could so easily be conceived as writing all the books of the world. They are all alike. For it is a power to convert all Nature to his use. It is a tap-root that sucks all the juices of the earth.²⁸³⁷

It is this employment of new means—of means not mechanical, but spontaneously appearing for the new need, and as good as

the end—that denotes the inspired man. This is equally obvious in all the fine arts; and in action as well as in fine arts. We must try our philanthropists so. The reformer comes with many plans of melioration, and the basis on which he wishes to build his new world, a great deal of money. But what is gained? Certain young men or maidens are thus to be screened from the evil influences of trade by force of money. Perhaps that is a benefit, but those who give the money must be just so much more shrewd, and worldly, and hostile, in order to save so much money. I see not how any virtue is thus gained to society. It is a mere transference. But he will instruct and aid us who shows us how the young may be taught without degrading the old; how the daily sunshine and sap may be made to feed wheat instead of moss and Canada thistle; and really the capital discovery of modern agriculture is that it costs no more to keep a good tree than a bad one.

But *how*, cries my reformer, is this to be done? *How* could I do it, who have wife and family to keep? The question is most reasonable,—yet proves that you are not the man to do the feat. The mark of the spirit is to know its way, to invent means. It has been in the universe before, of old and from everlasting, and knows its way up and down. Power is the authentic mark of spirit....

What a revelation of power is music! Yet, when we consider who and what the professors of that art usually are, does it not seem as if music falls accidentally and superficially on its artists? Is it otherwise with poetry?... Here is a famous Ode, which is the first performance of the British mind and lies in all memories as the high-water mark in the flood of thought in this age. What does the writer know of that? Converse with him, learn his opinions and hopes. He has long ago passed out of it, and perhaps his only concern with it is some copyright of an edition in which certain pages, so and so entitled, are contained. When a young man asked

old Goethe about Faust, he replied, "What can I know of this? I ought rather to ask you, who are young, and can enter much better into that feeling." Indeed, I believe it is true in the experience of all men,—for all are inspirable, and sometimes inspired,—that, for the memorable moments of life, we were in them, and not they in us. "...How they entered into me, let them say if they can; for I have gone over all the avenues of my flesh, and cannot find by which they entered," said Saint Augustine. And the ancient Proclus seems to signify his sense of the same fact, by saying, "The parts in us are more the property of wholes, and of things above us, than they are our property."

Yes, this wonderful source of knowledge remains a mystery; and its arts and methods of working remain a mystery: it is untamable; the ship of heaven guides itself, and will not accept a wooden rudder. It must be owned that what we call Inspiration is coy and capricious; we must lose many days to gain one; and in order to win infallible verdicts from the inner mind, we must indulge and humor it in every way, and not too exactly task and harness it. Also its communication from one to another follows its own law, and refuses our intrusion. It is one, it belongs to all: yet how to impart it? This makes the perpetual problem of education. How shall I educate my children? Shall I indulge, or shall I control them? Philosophy replies, Nature is stronger than your will, and were you never so vigilant, you may rely on it, your nature and genius will certainly give your vigilance the slip though it had *delirium tremens*, and will educate the children by the inevitable infusions of its quality. You will do as you can. Why then cumber yourself about it, and make believe be better than you are? Our teaching is indeed hazardous and rare. Our only security is in our rectitude, whose influences must be salutary. That virtue which was never taught us, we cannot teach others. They must be taught by the

same schoolmaster. And in spite of our imbecility and terrors, in spite of Boston and London, and universal decay of religion, etc., etc., the moral sense reappears forever with the same angelic newness that has been from of old the fountain of poetry and beauty and strength. Nature is forever over education; our famous orchardist once more: Van Mons of Belgium, after all his experiments at crossing and refining his fruit, arrived at last at the most complete trust in the native power. "My part is to sow, and sow, and re-sow, and in short do nothing but sow."

It is not in our will. That is the quality of it, that it commands, and is not commanded. And rarely, and suddenly, and without desert, we are let into the serene upper air. Is it that we are such mountains of conceit that Heaven cannot enough mortify and snub us,—I know not; but there seems a settled determination to break our spirit. We shall not think of ourselves too highly. We cannot even see what or where our stars of destiny are.²⁸³⁸ . . . The inexorable Laws, the Ideas, the private Fate, the Instinct, the Intellect, Memory, Imagination, Fancy, Number, Inspiration, Nature, Duty;—'t is very certain that these things have been hid as under towels and blankets, most part of our days, and, at certain privileged moments, they emerge unaccountably into light. I know not why, but our thoughts have a life of their own, independent of our will. We call genius, in all our popular and proverbial language, divine; to signify its independence of our will. Intellect is universal not individual.²⁸³⁹ . . . I think this pathetic,—not to have any wisdom at our own terms, not to have any power of organizing victory. The only comfort I can lay to my own sorrow is that we have a higher than a personal interest, which, in the ruin of the personal, is secured. I see that all beauty of discourse or of manners lies in launching on the thought, and forgetting ourselves; and though the beatitude of the Intellect seems to lie out of our volition, and

to be unattainable as the sky, yet we can take sight beforehand of a state of being wherein the will shall penetrate and control what it cannot now reach. The old law of science, *Imperat parendo*, we command by obeying, is forever true; and by faithful serving, we shall complete our noviciate to this subtle art. Yes, and one day, though far off, you will attain the control of these states; you will enter them at will; you will do what now the muses only sing. That is the nobility and high prize of the world.

And this reminds me to add one more trait of the inspired state, namely, incessant advance,—the forward foot. For it is the curious property of truth to be uncontainable and ever enlarging. Truth indeed! We talk as if we had it, or sometimes said it, or knew anything about it,—that terrific re-agent. 'T is a gun with a recoil which will knock down the most nimble artillerists, and therefore is never fired. The ideal is as far ahead of the videttes of the van as it is of the rear. And before the good we aim at, all history is symptomatic, and only a good omen.

And the practical rules of literature ought to follow from these views, namely, that all writing is by the grace of God;²⁸⁴⁰ that none but a writer should write; that he should write affirmatively, not polemically, or should write nothing that will not help somebody,—as I knew of a good man who held conversations, and wrote on the wall, "that every person might speak to the subject, but no allusion should be made to the opinions of other speakers;"—that we must affirm and affirm, but neither you nor I know the value of what we say; that we must be openers of doors and not a blind alley; that we must hope and strive, for despair is no muse, and vigor always liberates.

The whole ethics of thought is of this kind, flowing out of reverence of the source, and is a sort of religious office. If there is inspiration let there be only that. You shall not violate its conditions,

but we will by all means invite it. It is a sort of rule in Art that you shall not speak of any work of art except in its presence; then you will continue to learn something, and will make no blunder. It is not less the rule of this kingdom that you shall not speak of the mount except on the mount;²⁸⁴¹ that there are certain problems one would not willingly open, except when the irresistible oracles broke silence. He needs all his health and the flower of his faculties for that. All men are inspirable. Whilst they say only the beautiful and sacred words of necessity, there is no weakness, and no repentance. But the moment they attempt to say these things by memory, charlatanism begins. I am sorry that we do not receive the higher gifts justly and greatly. The reception should be equal. The thoughts which wander through our mind, we do not absorb and make flesh of, but we report them as thoughts; we retail them as news, to our lovers and to all Athenians. At a dreadful loss we play this game; for the secret Power will not impart himself to us for tea-table talk; he frowns on moths and puppets, passes by us, and seeks a solitary and religious heart.

All intellectual virtue consists in a reliance on Ideas. It must be carried with a certain magnificence. We must live by our strength, not by our weakness. It is the exhortation of Zoroaster, "Let the depth, the immortal depth of your soul lead you." It was the saying of Pythagoras, "Remember to be sober, and to be disposed to believe; for these are the nerves of wisdom."

Why should we be the dupes of our senses, the victims of our own works, and always inferior to ourselves. We do not yet trust the unknown powers of thought. The whole world is nothing but an exhibition of the powers of this principle, which distributes men. Whence came all these tools, inventions, books, laws, parties, kingdoms? Out of the invisible world, through a few brains. Nineteen twentieths of their substance do trees draw from the

air. Plant the pitch-pine in a sand-bank, where is no food, and it thrives, and presently makes a grove, and covers the sand with a soil by shedding its leaves. Not less are the arts and institutions of men created out of thought. The powers that make the capitalist are metaphysical, the force of method and the force of will makes trade, and builds towns. "All conquests that history tells of will be found to resolve themselves into the superior mental powers of the conquerors," and the real credentials by which man takes precedence of man, and lays his hand on those advantages which confirm and consolidate rank, are intellectual and moral. The men are all drugged with this liquor of thought, and thereby secured to their several works. It is easy to see that the races of men rise out of the ground preoccupied with a thought which rules them, divided beforehand into parties ready armed and angry to fight for they know not what. They all share, to the rankest Philistines, the same belief. The haberdashers and brokers and attorneys are idealists and only differ in the amount and clearness of their perception. Whether Whiggery, or Chartism, or Church, or a dream of Wealth, fashioned all these resolute bankers, merchants, lawyers, landlords, who administer the world of to-day, as leaves and wood are made of air, an idea fashioned them, and one related to yours. A stronger idea will subordinate them. Yours, if you see it to be nearer and truer. A man of more comprehensive view can always see with good humor the seeming opposition of a powerful talent which has less comprehension. 'T is a strong paddy, who, with his burly elbows, is making place and way for him. Trust entirely the thought. Lean upon it, it will bear up thee and thine, and society, and systems, like a scrap of down.

The world is intellectual; and the man is. Every man comes into Nature impressed with his own polarity or bias, in obeying which his power, opportunity and happiness reside....He is strong by

his genius, gets all his knowledge only through that aperture. Society is unanimous against his project. He never hears it as he knows it. Nevertheless he is right; right against the world. All excellence is only an inflamed personality. If he is wrong, increase his determination to his aim, and he is right again. What is the use of trying to be somewhat else? He has a facility, which costs him nothing, to do somewhat admirable to all men. He is strong by his genius, and happy also by the same. The secret of power is delight in one's work. He takes delight in working, not in having wrought. His workbench he finds everywhere, and his workbench is home, education, power and patron. Whilst he serves his genius, he works when he stands, when he sits, when he eats and when he sleeps. The dream which lately floated before the eyes of the French nation—that every man shall do that which of all things he prefers, and shall have three francs a day for doing that—is the real law of the world; and all good labor, by which society is really served, will be found to be of that kind.

All we ask of any man is to be contented with his own work. An enthusiastic workman dignifies his art and arrives at results. Him we account the fortunate man whose determination to his aim is sufficiently strong to leave him no doubt. I am aware that Nature does not always pronounce early on this point. Many men are very slow in finding their vocation. It does not at once appear what they were made for. Nature has not made up her mind in regard to her young friend, and when this happens, we feel life to be some failure. Life is not quite desirable to themselves. It uniformly suggests in the conversation of men the presumption of continued life, of which the present is only one term. We must suppose life to such is a kind of hibernation, and 't is to be hoped they will be very fat and energetic in the spring. They ripen too slowly than that the determination should appear in this brief life.

As with our Catawbias and Isabellas at the eastward, the season is not quite long enough for them.

This determination of Genius in each is so strong that, if it were not guarded with powerful checks, it would have made society impossible. As it is, men are best and most by themselves: and always work in society with great loss of power. They are not timed each to the other: they cannot keep step, and life requires too much compromise. Men go through the world each musing on a great fable dramatically pictured and rehearsed before him. If you speak to the man, he turns his eyes from his own scene, and, slower or faster, endeavors to comprehend what you say. When you have done speaking, he returns to his private music. Men generally attempt, early in life, to make their brothers, afterwards their wives, acquainted with what is going forward in their private theatre; but they soon desist from the attempt, in finding that they also have some farce, or, perhaps, some ear- and heart-rending tragedy forward on their secret boards, on which they are intent; and all parties acquiesce, at last, each in a private box, with the whole play performed before himself *solus*.

The source of thought evolves its own rules, its own virtues, its own religion. Its whole equipment is new, and it can only fight with its own weapons. Is there only one courage, one gratitude, one benevolence? No, but as many as there are men. Every constitution has its own health and diseases. A new constitution, a new fever, say the physicians. I think the reason why men fail in their conflicts is because they wear other armor than their own. Each must have all, but by no means need he have it in your form. Each must be rich, but not only in money or lands, he may have instead the riches of riches,—creative supplying power.²⁸⁴²

Within this magical power derived from fidelity to his nature, he adds also the mechanical force of perseverance. He shall keep the

law which shall keep him.... In persistency, he knows the strength of Nature, and the immortality of man to lie. A man must do the work with that faculty he has now. But that faculty is the accumulation of past days. That you have done long ago helps you now. No rival can rival backward. What you have learned and done, is safe and fruitful. Work and learn in evil days, in barren days, in days of depression and calamity. "There is but one only liberator in this life from the demons that invade us, and that is, Endeavor,—earnest, entire, perennial endeavor."

Follow this leading, nor ask too curiously whither. To follow it is thy part. And what if it lead, as men say, to an excess, to partiality, to individualism? Follow it still. His art shall suffice this artist, his flame this lover, his inspiration this poet. The artist must be sacrificed. Take it sadly home to thy heart,—the artist must pay for his learning and doing with his life. The old Herschel must choose between the night and the day, and draw on his night-cap when the sun rises, and defend his eyes for nocturnal use. Michael Angelo must paint Sistine ceilings till he can no longer read, except by holding the book over his head. Nature deals with all her children so. See the poor flies, lately so wanton, now fixed to the wall or the tree, exhausted and presently blown away. Men likewise, they put their lives into their deed.²⁸⁴³...

There is a probity of the Intellect, which demands, if possible, virtues more costly than any Bible has consecrated. It consists in an absolute devotion to truth, founded in a faith in truth.... The virtue of the Intellect is its own, as its courage is of its own kind: and at last, it will be justified, though for the time it seem hostile to that which it most reveres.... I will speak the truth in my heart, or think the truth against what is called God.²⁸⁴⁴...

One polarity is impressed on the universe and on its particles. As the whole has its law, so each individual has his genius. Obedience to its genius (to speak a little scholastically) is the particular of faith; perception that the tendency of the whole is to the benefit of the individual is the universal of faith. Do not truck for your private immortality. If immortality, in the sense in which you seek it, is best, you shall be immortal. If it is up to the dignity of that order of things you know, it is secure. The sky, the sea, the plants, the rocks, astronomy, chemistry, keep their word. Morals and the genius of humanity will also. In short, the whole moral of modern science is the transference of that trust which is felt in Nature's admired arrangements, to the sphere of freedom and of rational life.²⁸⁴⁵...

These studies seem to me to derive an importance from their bearing on the universal question of modern times, the question of Religion. It seems to me, as if men stood craving a more stringent creed than any of the pale and enervating systems to which they have had recourse. The Buddhist who finds gods masked in all his friends and enemies, and reads the issue of the conflict beforehand in the rank of the actors, is calm. The old Greek was respectable and we are not yet able to forget his dramas,—who found the genius of tragedy in the conflict between Destiny and the strong *should*, and not like the moderns, in the weak *would*.²⁸⁴⁶...

Our books are full of generous biographies of Saints, who knew not that they were such; of men and of women who lived for the benefit and healing of nature. But one fact I read in them all,—that there is a religion which survives immutably all persons and fashions, and is worshipped and pronounced with emphasis again and again by some holy person;—and men, with their weak incapacity for principles, and their passion for persons, have run mad for the pronouncer, and forgot the religion. But there is surely enough for the heart and the imagination in the religion itself.²⁸⁴⁷

The joy of knowledge, the late discovery that the veil which hid all things from him is really transparent, transparent everywhere to pure eyes, and the heart of trust which every perception fortifies,—renew life for him. He finds that events spring from the same root as persons; the universe understands itself, and all the parts play with a sure harmony.

III. MEMORY

MEMORY IS a primary and fundamental faculty, without which none other can work; the cement, the bitumen, the matrix in which the other faculties are embedded; or it is the thread on which the beads of man are strung, making the personal identity which is necessary to moral action. Without it all life and thought were an unrelated succession. As gravity holds matter from flying off into space, so memory gives stability to knowledge; it is the cohesion which keeps things from falling into a lump, or flowing in waves.

We like longevity, we like signs of riches and extent of nature in an individual. And most of all we like a great memory. The lowest life remembers. The sparrow, the ant, the worm, have the same memory as we. If you bar their path, or offer them somewhat disagreeable to their senses, they make one or two trials, and then once for all avoid it.

Every machine must be perfect of its sort. It is essential to a locomotive that it can reverse its movement, and run backward and forward with equal celerity. The builder of the mind found it not less needful that it should have retroaction, and command its

past act and deed. Perception, though it were immense and could pierce through the universe, was not sufficient.

Memory performs the impossible for man by the strength of his divine arms; holds together past and present, beholding both, existing in both, abides in the flowing, and gives continuity and dignity to human life. It holds us to our family, to our friends. Hereby a home is possible; hereby only a new fact has value.

Opportunities of investment are useful only to those who have capital. Any piece of knowledge I acquire to-day, a fact that falls under my eyes, a book I read, a piece of news I hear, has a value at this moment exactly proportioned to my skill to deal with it. To-morrow, when I know more, I recall that piece of knowledge and use it better.

The Past has a new value every moment to the active mind, through the incessant purification and better method of its memory. Once it joined its facts by color and form and sensuous relations. Some fact that had a childish significance to your childhood and was a type in the nursery, when riper intelligence recalls it means more and serves you better as an illustration; and perhaps in your age has new meaning. What was an isolated, unrelated belief or conjecture, our later experience instructs us how to place in just connection with other views which confirm and expand it. The old whim or perception was an augury of a broader insight, at which we arrive later with securer conviction. This is the companion, this the tutor, the poet, the library, with which you travel. It does not lie, cannot be corrupted, reports to you not what you wish, but what really befell. You say, "I can never think of some act of neglect, of selfishness, or of passion without pain." Well, that is as it should be. That is the police of the Universe: the angels are set to punish you, so long as you are capable of such crime. But in the history of character the day comes when you are incapable of such crime.

Then you suffer no more, you look on it as heaven looks on it, with wonder at the deed, and with applause at the pain it has cost you.²⁸⁴⁸

Memory is not a pocket, but a living instructor, with a prophetic sense of the values which he guards; a guardian angel set there within you to record your life, and by recording to animate you to uplift it. It is a scripture written day by day from the birth of the man; all its records full of meanings which open as he lives on, explaining each other, explaining the world to him and expanding their sense as he advances, until it shall become the whole law of Nature and life.

As every creature is furnished with teeth to seize and eat, and with stomach to digest its food, so the memory is furnished with a perfect apparatus. There is no book like the memory, none with such a good index, and that of every kind, alphabetic, systematic, arranged by names of persons, by colors, tastes, smells, shapes, likeness, unlikeness, by all sorts of mysterious hooks and eyes to catch and hold, and contrivances for giving a hint.

The memory collects and re-collects. We figure it as if the mind were a kind of looking-glass, which being carried through the street of time receives on its clear plate every image that passes; only with this difference, that our plate is iodized so that every image sinks into it, and is held there. But in addition to this property it has one more, this, namely, that of all the million images that are imprinted, the very one we want reappears in the centre of the plate in the moment when we want it.

We can tell much about it, but you must not ask us what it is. On seeing a face I am aware that I have seen it before, or that I have not seen it before. On hearing a fact told I am aware that I knew it already. You say the first words of the old song, and I finish the line and stanza. But where I have them, or what becomes of them

when I am not thinking of them for months and years, that they should lie so still, as if they did not exist, and yet so nigh that they come on the instant when they are called for, never any man was so sharp-sighted, or could turn himself inside out quick enough to find.

'T is because of the believed incompatibility of the affirmative and advancing attitude of the mind with tenacious acts of recollection that people are often reproached with living in their memory. Late in life we live by memory, and in our solstices or periods of stagnation; as the starved camel in the desert lives on his humps. Memory was called by the schoolmen *vespertina cognitio*, evening knowledge, in distinction from the command of the future which we have by the knowledge of causes, and which they called *matutina cognitio*, or morning knowledge.²⁸⁴⁹

Am I asked whether the thoughts clothe themselves in words? I answer, Yes, always; but they are apt to be instantly forgotten. Never was truer fable than that of the Sibyl's writing on leaves which the wind scatters. The difference between men is that in one the memory with inconceivable swiftness flies after and recollects the flying leaves,—flies on wing as fast as that mysterious whirlwind, and the envious Fate is baffled.

This command of old facts, the clear beholding at will of what is best in our experience, is our splendid privilege. "He who calls what is vanished back again into being enjoys a bliss like that of creating," says Niebuhr. The memory plays a great part in settling the intellectual rank of men. We estimate a man by how much he remembers. A seneschal of Parnassus is Mnemosyne. This power will alone make a man remarkable; and it is found in all good wits. Therefore the poets represented the Muses as the daughters of Memory, for the power exists in some marked and eminent

degree in men of an ideal determination. Quintilian reckoned it the measure of genius. *Tantum ingenii quantum memoriæ.*

We are told that Boileau having recited to Daguesseau one day an epistle or satire he had just been composing, Daguesseau tranquilly told him he knew it already, and in proof set himself to recite it from end to end. Boileau, astonished, was much distressed until he perceived that it was only a feat of memory.

The mind disposes all its experience after its affection and to its ruling end; one man by puns and one by cause and effect, one to heroic benefit and one to wrath and animal desire. This is the high difference, the quality of the association by which a man remembers. In the minds of most men memory is nothing but a farm-book or a pocket-diary. On such a day I paid my note; on the next day the cow calved; on the next I cut my finger; on the next the banks suspended payment. But another man's memory is the history of science and art and civility and thought; and still another deals with laws and perceptions that are the theory of the world.

This thread or order of remembering, this classification, distributes men, one remembering by shop-rule or interest; one by passion; one by trifling external marks, as dress or money. And one rarely takes an interest in how the facts really stand, in the order of cause and effect, without self-reference. This is an intellectual man. Nature interests him; a plant, a fish, time, space, mind, being, in their own method and law. Napoleon is such, and that saves him.

But this mysterious power that binds our life together has its own vagaries and interruptions. It sometimes occurs that Memory has a personality of its own, and volunteers or refuses its informations at its will, not at mine. One sometimes asks himself, Is it possible that it is only a visitor, not a resident? Is it some old

aunt who goes in and out of the house, and occasionally recites anecdotes of old times and persons which I recognize as having heard before, and she being gone again I search in vain for any trace of the anecdotes?

We can help ourselves to the *modus* of mental processes only by coarse material experiences. A knife with a good spring, a forceps whose lips accurately meet and match, a steel-trap, a loom, a watch, the teeth or jaws of which fit and play perfectly, as compared with the same tools when badly put together, describe to us the difference between a person of quick and strong perception, like Franklin or Swift or Webster or Richard Owen, and a heavy man who witnesses the same facts or shares experiences like theirs. 'T is like the impression made by the same stamp in sand or in wax. The way in which Burke or Sheridan or Webster or any orator surprises us is by his always having a sharp tool that fits the present use. He has an old story, an odd circumstance, that illustrates the point he is now proving, and is better than an argument. The more he is heated, the wider he sees; he seems to remember all he ever knew; thus certifying us that he is in the habit of seeing better than other people; that what his mind grasps it does not let go. 'T is the bull-dog bite; you must cut off the head to loosen the teeth.

We hate this fatal shortness of Memory, these docked men whom we behold. We gathered up what a rolling snow-ball as we came along,—much of it professedly for the future, as capital stock of knowledge. Where is it now? Look behind you. I cannot see that your train is any longer than it was in childhood. The facts of the last two or three days or weeks are all you have with you,—the reading of the last month's books. Your conversation, action, your face and manners report of no more, of no greater wealth of mind. Alas! you have lost something for everything you have gained, and cannot grow. Only so much iron will the loadstone draw; it gains

new particles all the way as you move it, but one falls off for every one that adheres.

As there is strength in the wild horse which is never regained when he is once broken by training, and as there is a sound sleep of children and of savages, profound as the hibernation of bears, which never visits the eyes of civil gentlemen and ladies, so there is a wild memory in children and youth which makes what is early learned impossible to forget; and perhaps in the beginning of the world it had most vigor. Plato deploras writing as a barbarous invention which would weaken the memory by disuse. The Rhapsodists in Athens it seems could recite at once any passage of Homer that was desired.

If writing weakens the memory, we may say as much and more of printing. What is the newspaper but a sponge or invention for oblivion? the rule being that for every fact added to the memory, one is crowded out, and that only what the affection animates can be remembered.

The mind has a better secret in generalization than merely adding units to its list of facts. The reason of the short memory is shallow thought.²⁸⁵⁰ As deep as the thought, so great is the attraction. An act of the understanding will marshal and concatenate a few facts; a principle of the reason will thrill and magnetize and redistribute the whole world.

But defect of memory is not always want of genius. By no means. It is sometimes owing to excellence of genius. Thus men of great presence of mind who are always equal to the occasion do not need to rely on what they have stored for use, but can think in this moment as well and deeply as in any past moment, and if they cannot remember the rule they can make one. Indeed it is remarked that inventive men have bad memories. Sir Isaac Newton was embarrassed when the conversation turned on his discoveries

and results; he could not recall them; but if he was asked why things were so or so, he could find the reason on the spot.

A man would think twice about learning a new science or reading a new paragraph, if he believed the magnetism was only a constant amount, and that he lost a word or a thought for every word he gained. But the experience is not quite so bad. In reading a foreign language, every new word mastered is a lamp lighting up related words and so assisting the memory. Apprehension of the whole sentence aids to fix the precise meaning of a particular word, and what familiarity has been acquired with the genius of the language, and the writer, helps in fixing the exact meaning of the sentence. So is it with every fact in a new science: they are mutually explaining, and each one adds transparency to the whole mass.

The damages of forgetting are more than compensated by the large values which new thoughts and knowledge give to what we already know. If new impressions sometimes efface old ones, yet we steadily gain insight; and because all Nature has one law and meaning,—part corresponding to part,—all we have known aids us continually to the knowledge of the rest of Nature. Thus, all the facts in this chest of memory are property at interest. And who shall set a boundary to this mounting value? Shall we not on higher stages of being remember and understand our early history better?

They say in Architecture, "An arch never sleeps;" I say, the Past will not sleep, it works still. With every new fact a ray of light shoots up from the long buried years. Who can judge the new book? He who has read many books. Who, the new assertion? He who has heard many the like. Who, the new man? He that has seen men. The experienced and cultivated man is lodged in a hall hung with

pictures which every new day retouches, and to which every step in the march of the soul adds a more sublime perspective.

We learn early that there is great disparity of value between our experiences; some thoughts perish in the using. Some days are bright with thought and sentiment, and we live a year in a day.²⁸⁵¹ Yet these best days are not always those which memory can retain. This water once spilled cannot be gathered. There are more inventions in the thoughts of one happy day than ages could execute, and I suppose I speak the sense of most thoughtful men when I say, I would rather have a perfect recollection of all I have thought and felt in a day or a week of high activity than read all the books that have been published in a century.

The memory is one of the compensations which Nature grants to those who have used their days well; when age and calamity have bereaved them of their limbs or organs, then they retreat on mental faculty and concentrate on that. The poet, the philosopher, lamed, old, blind, sick, yet disputing the ground inch by inch against fortune, finds a strength against the wrecks and decays sometimes more invulnerable than the heyday of youth and talent.

I value the praise of Memory. And how does memory praise? By holding fast the best. A thought takes its true rank in the memory by surviving other thoughts that were once preferred. Plato remembered Anaxagoras by one of his sayings. If we recall our own favorites, we shall usually find that it is for one crowning act or thought that we hold them dear.

Have you not found memory an apotheosis or deification? The poor short lone fact dies at the birth. Memory catches it up into her heaven, and bathes it in immortal waters. Then a thousand times over it lives and acts again, each time transfigured, ennobled. In solitude, in darkness, we tread over again the sunny walks of youth; confined now in populous streets you behold again the

green fields, the shadows of the gray birches; by the solitary river hear again the joyful voices of early companions, and vibrate anew to the tenderness and dainty music of the poetry your boyhood fed upon. At this hour the stream is still flowing, though you hear it not; the plants are still drinking their accustomed life and repaying it with their beautiful forms. But you need not wander thither. It flows for you, and they grow for you, in the returning images of former summers. In low or bad company you fold yourself in your cloak,²⁸⁵² withdraw yourself entirely from all the doleful circumstance, recall and surround yourself with the best associates and the fairest hours of your life:—

"Passing sweet are the domains of tender memory."²⁸⁵³

You may perish out of your senses, but not out of your memory or imagination.

The memory has a fine art of sifting out the pain and keeping all the joy. The spring days when the bluebird arrives have usually only few hours of fine temperature, are sour and unlovely; but when late in autumn we hear rarely a bluebird's notes they are sweet by reminding us of the spring.²⁸⁵⁴ Well, it is so with other tricks of memory. Of the most romantic fact the memory is more romantic; and this power of sinking the pain of any experience and of recalling the saddest with tranquillity, and even with a wise pleasure, is familiar. The memory is as the affection. Sampson Reed says, "The true way to store the memory is to develop the affections." A *souvenir* is a token of love. *Remember me* means, Do not cease to love me. We remember those things which we love and those things which we hate. The memory of all men is robust on the subject of a debt due to them, or of an insult inflicted on

them. "They can remember," as Johnson said, "who kicked them last."

Every artist is alive on the subject of his art. The Persians say, "A real singer will never forget the song he has once learned." Michael Angelo, after having once seen a work of any other artist, would remember it so perfectly that if it pleased him to make use of any portion thereof, he could do so, but in such a manner that none could perceive it.

We remember what we understand, and we understand best what we like; for this doubles our power of attention, and makes it our own. Captain John Brown, of Ossawatimie, said he had in Ohio three thousand sheep on his farm, and could tell a strange sheep in his flock as soon as he saw its face. One of my neighbors, a grazier, told me that he should know again every cow, ox, or steer that he ever saw. Abel Lawton knew every horse that went up and down through Concord to the towns in the county. And in higher examples each man's memory is in the line of his action.

Nature trains us on to see illusions and prodigies with no more wonder than our toast and omelet at breakfast. Talk of memory and cite me these fine examples of Grotius and Daguesseau, and I think how awful is that power and what privilege and tyranny it must confer. Then I come to a bright school-girl who remembers all she hears, carries thousands of nursery rhymes and all the poetry in all the readers, hymn-books, and pictorial ballads in her mind; and 't is a mere drug. She carries it so carelessly, it seems like the profusion of hair on the shock heads of all the village boys and village dogs; it grows like grass. 'T is a bushel-basket memory of all unchosen knowledge, heaped together in a huge hamper, without method, yet securely held, and ready to come at call; so that an old scholar, who knows what to do with a memory, is full

of wonder and pity that this magical force should be squandered on such frippery.

He is a skilful doctor who can give me a recipe for the cure of a bad memory. And yet we have some hints from experience on this subject. And first, *health*. It is found that we remember best when the head is clear, when we are thoroughly awake. When the body is in a quiescent state in the absence of the passions, in the moderation of food, it yields itself a willing medium to the intellect. For the true river Lethe is the body of man, with its belly and uproar of appetite and mountains of indigestion and bad humors and quality of darkness. And for this reason, and observing some mysterious continuity of mental operation during sleep or when our will is suspended, 't is an old rule of scholars, that which Fuller records, "'T is best knocking in the nail overnight and clinching it next morning." Only I should give extension to this rule and say, Yes, drive the nail this week and clinch it the next, and drive it this year and clinch it the next.

But Fate also is an artist. We forget also according to beautiful laws. Thoreau said, "Of what significance are the things you can forget. A little thought is sexton to all the world."

We must be severe with ourselves, and what we wish to keep, we must once thoroughly possess. Then the thing seen will no longer be what it was, a mere sensuous object before the eye or ear, but a reminder of its law, a possession for the intellect. Then we relieve ourselves of all task in the matter, we put the *onus* of being remembered on the object, instead of on our will. We shall do as we do with all our studies, prize the fact or the name of the person by that predominance it takes in our mind after near acquaintance. I have several times forgotten the name of Flamsteed, never that of Newton; and can drop easily many poets out of the Elizabethan chronology, but not Shakspeare.

We forget rapidly what should be forgotten. The *universal* sense of fables and anecdotes is marked by our tendency to forget name and date and geography. "How in the right are children," said Margaret Fuller, "to forget name and date and place."

You cannot overstate our debt to the past, but has the present no claim? This past memory is the baggage, but where is the troop? The divine gift is not the old but the new. The divine is the instant life that receives and uses, the life that can well bury the old in the omnipotency with which it makes all things new.²⁸⁵⁵

The acceleration of mental process is equivalent to the lengthening of life. If a great many thoughts pass through your mind, you will believe a long time has elapsed, many hours or days. In dreams a rush of many thoughts, or seeming experiences, of spending hours and going through a great variety of actions and companies, and when we start up and look at the watch, instead of a long night we are surprised to find it was a short nap. The opium-eater says, "I sometimes seemed to have lived seventy or a hundred years in one night." You know what is told of the experience of some persons who have been recovered from drowning. They relate that their whole life's history seemed to pass before them in review. They remembered in a moment all that they ever did.

If we occupy ourselves long on this wonderful faculty, and see the natural helps of it in the mind, and the way in which new knowledge calls upon old knowledge—new giving undreamed-of value to old; every relation and suggestion, so that what one had painfully held by strained attention and recapitulation now falls into place and is clamped and locked by inevitable connection as a planet in its orbit (every other orb, or the law or system of which it is a part, being a perpetual reminder),—we cannot fail to draw thence a sublime hint that thus there must be an endless increase

in the power of memory only through its use; that there must be a proportion between the power of memory and the amount of knowables; and since the Universe opens to us, the reach of the memory must be as large.

With every broader generalization which the mind makes, with every deeper insight, its retrospect is also wider. With every new insight into the duty or fact of to-day we come into new possession of the past.

When we live by principles instead of traditions, by obedience to the law of the mind instead of by passion, the Great Mind will enter into us, not as now in fragments and detached thoughts, but the light of to-day will shine backward and forward.

Memory is a presumption of a possession of the future. Now we are halves, we see the past but not the future, but in that day will the hemisphere complete itself and foresight be as perfect as aftersight.

II. THE CELEBRATION OF INTELLECT

AN ADDRESS DELIVERED BEFORE THE STUDENTS OF TUFTS COLLEGE,
JULY 10, 1861

BY SYBARITES beguiled,
He shall no task decline;
Merlin's mighty line
Extremes of nature reconciled—
Bereaved a tyrant of his will,
And made the lion mild.

I KNOW the mighty bards,
I listen when they sing,
And now I know
The secret store
Which these explore
When they with torch of genius pierce
The tenfold clouds that cover
The riches of the universe
From God's adoring lover.
And if to me it is not given
To fetch one ingot hence
Of the unfading gold of Heaven
His merchants may dispense,
Yet well I know the royal mine
And know the sparkle of its ore,
Know Heaven's truths from lies that shine—
Explored, they teach us to explore.

CELEBRATION OF INTELLECT

I CANNOT consent to wander from the duties of this day into the fracas of politics. The brute noise of cannon has, I know, a most poetic echo in these days when it is an instrument of freedom and the primal sentiments of humanity. Yet it is but representative and a far-off means and servant: but here in the college we are in the presence of the constituency and the principle itself. Here is, or should be, the majesty of reason and the creative cause; and it were a compounding of all gradation and reverence to suffer the flash of swords and the boyish strife of passion and the feebleness of military strength to intrude on this sanctity and omnipotence of Intellectual Law. Against the heroism of soldiers I set the heroism of scholars, which consists in ignoring the other. You shall not put up in your Academy the statue of Cæsar or Pompey, of Nelson or Wellington, of Washington or Napoleon, of Garibaldi, but of Archimedes, of Milton, of Newton. Archimedes disdained to apply himself to the useful arts, only to the liberal or the causal arts. Hiero the king reproached him with his barren studies. Like Thales, he was willing to show him that he was quite able in rude matters, if he could condescend to them, and he conducted the defence of

Syracuse against the Romans. Then he returned to his geometry; and when the Roman soldier, at the sack of Syracuse, broke into his study, the philosopher could not rise from his chair and his diagram, and took his death without resistance. Michael Angelo gave himself to art, despising all meaner pursuits. When the war came to his own city, he lent his genius, and defended Florence as long as he was obeyed. Milton congratulates the Parliament that, whilst London is besieged and blocked, the Thames infested, inroads and excursions round, and battle oft rumored to be marching up to her walls and suburb trenches,—yet then are the people, or the greater part, more than at other times wholly taken up with the study of highest and most important matters to be reformed,—they reasoning, reading, inventing, discoursing, even to a rarity and admiration, things not before discoursed or written, and the fact argues a just confidence in the grandeur and self-subsistency of the cause of religious liberty which made all material war an impertinence.

For either science and literature is a hypocrisy, or it is not. If it be, then resign your charter to the Legislature, turn your college into barracks and warehouses, and divert the funds of your founders into the stock of a rope-walk or a candle-factory, a tan-yard or some other undoubted conveniency for the surrounding population. But if the intellectual interest be, as I hold, no hypocrisy, but the only reality,—then it behooves us to enthrone it, obey it; and give it possession of us and ours; to give, among other possessions, the college into its hand casting down every idol, every pretender, every hoary lie, every dignified blunder that has crept into its administration.

At this season, the colleges keep their anniversaries, and in this country where education is a primary interest, every family has a representative in their halls, a son, a brother, or one of our own

kindred is there for his training. But even if we had no son or friend therein, yet the college is part of the community, and it is there for us, is training our teachers, civilizers and inspirers. It is essentially the most radiating and public of agencies, like, but better than, the light-house, or the alarm-bell, or the sentinel who fires a signal-cannon, or the telegraph which speeds the local news over the land. Besides, it deals with a force which it cannot monopolize or confine; cannot give to those who come to it and refuse to those outside. I have no doubt of the force, and for me the only question is, whether the force is inside.

This power which it deals is dear to all. If the colleges were better, if they had any monopoly of it, nay, if they really had it, had the power of imparting valuable thought, creative principles, truths which become powers, thoughts which become talents,—if they could cause that a mind not profound should become profound,—we should all rush to their gates: instead of contriving inducements to draw students, you would need to set police at the gates to keep order in the in-rushing multitude.

These are giddy times, and, you say, the college will be deserted. No, never was it so much needed. But I say, those were the giddy times which went before these, and the new times are the times of arraignment, times of trial and times of judgment. 'T is because the college was false to its trust, because the scholars did not learn and teach, because they were traders and left their altars and libraries and worship of truth and played the sycophant to presidents and generals and members of Congress, and gave degrees and literary and social honors to those whom they ought to have rebuked and exposed, incurring the contempt of those whom they ought to have put in fear; then the college is suicidal; ceases to be a school; power oozes out of it just as fast as truth does; and instead of

overawing the strong, and upholding the good, it is a hospital for decayed tutors.

This Integrity over all partial knowledge and skill, homage to truth—how rare! Few men wish to know how the thing really stands, what is the law of it without reference to persons. Other men are victims of their means—sanity consists in not being subdued by your means.

Two men cannot converse together on any topic without presently finding where each stands in moral judgment; and each learns whether the other's view commands, or is commanded by, his own. I presently know whether my companion has more candor or less, more hope for men or less, whether his sense of duty is more or less severe and his generosity larger than mine; whether he stands for ideal justice, or for a timorous expediency.

Society is always idolatrous and exaggerates the merits of those who work to vulgar ends. But genius may be known by its probity. Never was pure valor—and almost I might say, never pure ability—shown in a bad cause. For ambition makes insane.²⁸⁵⁶

Society is always taken by surprise at any new example of common sense and of simple justice, as at a wonderful discovery. Thus, at Mr. Rarey's mode of taming a horse by kindness, or Garibaldi's emancipation of Italy for Italy's sake; at the introduction of gentleness into insane asylums, and of cleanliness and comfort into penitentiaries. A farmer wished to buy an ox. The seller told him how well he had treated the animal. "But," said my farmer, "I asked the ox, and the ox showed me by marks that could not lie that he had been abused." We affect to slight England and Englishmen. But I note that we had a vast self-esteem on the subject of Bunker Hill, Yorktown and New Orleans. We should not think it much to beat Indians or Mexicans,—but to beat English! The English newspapers and some writers of reputation disparage

America. Meantime I note that the British people are emigrating hither by thousands, which is a very sincere, and apt to be a very seriously considered expression of opinion. The emigration into America of British, as well as of Continental people, is the eulogy of America by the most competent and sincere arbiters. The hater of property and of government takes care to have his warranty-deed recorded; and the book written against fame and learning has the author's name on the title-page....

Gentlemen, I too am an American, and value practical talent. I love results and hate abortions. I delight in people who can do things. I value talent,—perhaps no man more. I value dearly the poet who knows his art so well that, when his voice vibrates, it fills the hearer with sympathetic song, just as a powerful note of an organ sets all tuned strings in its neighborhood in accordant vibration,—the novelist with his romance, the architect with his palace, the composer with his score. I wish you to be eloquent, to grasp the bolt and to hurl it home to the mark. I wish to see that Mirabeau who knows how to seize the heart-strings of the people and drive their hands and feet in the way he wishes them to go, to fill them with himself, to enchant men so that their will and purpose is in abeyance and they serve him with a million hands just as implicitly as his own members obey him. But I value it more when it is legitimate, when the talent is in true order, subject to genius, subject to the total and native sentiment of the man, and therefore in harmony with the public sentiment of mankind. Such is the patriotism of Demosthenes, of Patrick Henry and of what was best in Cicero and Burke; not an ingenious special pleading, not the making a plausible case, but strong by the strength of the facts themselves. Then the orator is still one of the audience, persuaded by the same reasons which persuade them; not a

ventriloquist, not a juggler, not a wire-puller paid to manage the lobby and caucus.²⁸⁵⁷

In Demosthenes is this realism of genius. He wins his cause honestly. His doctrine is self-reliance. "If it please you to note it, my counsels to you are not such whereby I should grow great among you, and you become little among the Grecians; but they be of that nature as is sometimes not good for me to give, but are always good for you to follow."

You, gentlemen, are selected out of the great multitude of your mates, out of those who begun life with you, set apart through some strong persuasion of your own, or of your friends, that you were capable of the high privilege of thought. Need enough there is of such a band of priests of intellect and knowledge; and great is the office, and well deserving and well paying the last sacrifices and the highest ability. But I wish this were a needless task, to urge upon you scholars the claims of thought and learning. The order of the world educates with care the senses and the understanding.²⁸⁵⁸...

Men are as they think. A certain quantity of power belongs to a certain quantity of truth. And the man who knows any truth not yet discerned by other men is master of all other men, so far as that truth and its wide relations are concerned. Do you suppose that the thunderbolt falls short? Do you imagine that a lie will nourish and work like a truth?...The whole battle is fought in a few heads. A little finer order, a larger angle of vision, commands centuries of facts and millions of thoughtless people. It reverses all rank; "he who discriminates is the father of his father."...

And yet the world is not saved. With this divine oracle, we somehow do not get instructed. Here are still perverse millions full of passion, crime and blood. Here are bad governors and bad subjects. Nay, in the class called intellectual the men are no better than the uninstructed. They use their wit and learning in the service

of the Devil. There are bad books and false teachers and corrupt judges; and in the institutions of education a want of faith in their own cause. Nay, it happens often that the well-bred and refined, the inhabitants of cities, dwelling amidst colleges, churches, and scientific museums, lectures, poets, libraries, newspapers, and other aids supposed intellectual are more vicious and malignant than the rude country people, and need to have their corrupt voting and violence corrected by the cleaner and wiser suffrages of poor farmers. The poet does not believe in his poetry. Men are ashamed of their intellect.²⁸⁵⁹...

Instinct is the name for the potential wit, that feeling which each has that what is done by any man or agent is done by the same with as his. He looks at all men as his representatives, and is glad to see that his wit can work at that problem as it ought to be done, and better than he could do it; whether it be to build, engineer, carve, paint, sing, heal, or compute, or play chess, or ride, or swim. We feel as if one man wrote all the books, painted, built, in dark ages, and we are sure we can do more than ever was done. It was the same mind that built the world.

The Understanding is the name we give to the low, limitary power working to short ends, to daily life in house and street. This is the power which the world of men adopt and educate. He is the calculator, he is the merchant, the politician, the worker in the useful; he works by shifts, by compromise, by statute, by bribes. All his activities are to short, personal ends, and he is apt to be a talker, a boaster, a busy-body.

Will you let me say to you what I think is the organic law of learning? It is to observe the order, to keep down the talent, to enthrone the Instinct. There must be the perpetual rallying and self-recovery; each talent links itself so fast with self-love and with petty advantage that it loses sight of its obedience, which is

beautiful, and sets up for itself, and makes confusion. Falsehood begins as soon as it disobeys, it works for show, and for the shop, and the greater it grows, the more is the mischief and misleading, so that presently all is wrong, talent is mistaken for genius, dogma or system for truth.²⁸⁶⁰...

Now the idea of a college is an assembly of such men, obedient each to this pure light, and drawing from it illumination to that science or art to which his constitution and affections draw him. And the very highest advantage which a young man of good mind can meet is to find such a teacher. No books, no aids, laboratory, apparatus, prizes, can compare with this. Here is sympathy; here is an order that corresponds to that in his own mind, and in all sound minds, and the hope and impulse imparted. And education is what it should be, a delightful unfolding of the faculties in right order.

I could heartily wish it were otherwise, but there is a certain shyness of genius, of free thought, of a master of art in colleges, which is as old as the rejection of Molière by the French Academy, of Bentley by the pedants of his time, and only the other day, of Arago; in Oxford, the recent rejection of Max Müller....If the truth must be told, thought is as rare in colleges as in cities. The necessity of a mechanical system is not to be denied. Young men must be classed and employed, not according to the secret needs of each mind but by some available plan that will give weekly and annual results; and a little violence must be done to private genius to accomplish this. Then genius is always its own law, and must be a little impatient and rebellious to this rule, so that, of necessity, a certain hostility and jealousy of genius grows up in the masters of routine, and unless, by rare good fortune, the professor has a generous sympathy with genius and takes care to interpose

a certain relief and cherishing and reverence for the wild poet and dawning philosopher he has detected in his classes, that will happen which has happened so often, that the best scholar, he for whom colleges exist, finds himself a stranger and an orphan therein. 'T is precisely analogous to what befalls in religious societies. In the romance *Spiridion* a few years ago, we had what it seems was a piece of accurate autobiography, the story of a young saint who comes into a convent for her education, and not falling into the system and the little parties in the convent, but inspired with an enthusiasm which finds nothing there to feed it, it turns out in a few days that every hand is against this young votary. Piety in a convent accuses every one, from the novice to the abbess. What right have you to be better than your neighbor? Piety comes to be regarded as a spy and a rebel.... And how often we have had repeated the trails of the young man who made no figure at college because his own methods were new and extraordinary, and who only prospered at last because he forsook theirs and took his own.²⁸⁶¹

It is true that the University and the Church, which should be counter balancing institutions to our great material institutions of trade and of territorial power, do not express the sentiment of the popular politics and the popular optimism, whatever it be. Harvard College has no voice in Harvard College, but State Street votes it down on every ballot. Everything will be permitted there which goes to adorn Boston Whiggism,—is it geology, astronomy, poetry, antiquities, art, rhetoric. But that which it exists for, to be a fountain of novelties out of heaven, a Delphos uttering warning and ravishing oracles to lift and lead mankind,—*that* it shall not be permitted to do or to think of.²⁸⁶² On the contrary, every generosity of thought is suspect and gets a bad name. And all the youth come out decrepit citizens;²⁸⁶³ not a prophet, not a poet, not a *daimon*,

but is gagged and stifled or driven away. All that is sought in the instruction is drill; tutors, not inspirers.

I conceive that a college should have no mean ambition, but should aim at a reverent discipline and invitation of the soul, that here, if no-where else in the world, genius should find its home; here Imagination should be greeted with the problems in which it delights; the noblest tasks to the Muse proposed and the most cordial and honoring rewards; here the highest duties be urged, and enthusiasm for liberty and wisdom should breed enthusiasm and form heroes for the state. The College should hold the profound thought, and the Church the great heart to which the nation should turn, and these two should be counterbalancing to the bad politics and selfish trade. But there is but one institution, and not three. The Church and the College now take their tone from the City, and do not dictate their own. You all well know the downward tendency in literature, the facility with which men renounce their youthful aims and say, the labor is too severe, the prize too high for me; and they accept the employments of the market....

Ah, gentlemen, it's only a dream of mine, and perhaps never will be true,—but I thought a college was a place not to train talents, not to train attorneys, and those who say what they please, but to adorn Genius, which only speaks truth, and after the way which truth uses, namely, Beauty; a college was to teach you geometry, or the lovely laws of space and figure; chemistry, botany, zoölogy, the streaming of thought into form, and the precipitation of atoms which Nature is.

This, then, is the theory of Education, the happy meeting of the young soul, filled with the desire, with the living teacher who has already made the passage from the centre forth, step by step,

along the intellectual roads to the theory and practice of special science. Now if there be genius in the scholar, that is, a delicate sensibility to the laws of the world, and the power to express them again in some new form, he is made to find his own way. He will greet joyfully the wise teacher, but colleges and teachers are no wise essential to him; he will find teachers everywhere.

I would have you rely on Nature ever,—wise, omnific, thousand-handed Nature, equal to each emergency, which can do very well without colleges, and, if the Latin, Greek, Algebra or Art were in the parents, it will be in the children, without being pasted on.

If your college and your literature are not felt, it is because the truth is not in them. When you say the times, the persons are prosaic, where is the feudal, or the Saracenic, or Egyptian architecture? where the romantic manners? where the Romish or the Calvinistic religion, which made a kind of poetry in the air for Milton, or Byron, or Belzoni? but to us it is barren,—you expose your atheism. Is a railroad, or a shoe-factory, or an insurance office, bank or bakery outside of the system and connection of things, or further from God than a sheep-pasture or a clam-bank? Is chemistry suspended? Do not the electricities and the imponderable influences play with all their magic undulations? Do not gravity and polarity keep their unerring watch on a needle and thread, on a cobbler's lapstone or a switchman's turntable as on the moon's orbit? Only bring a deep observer, and he will make light of the new shop or old cathedral—all one to him—or new circumstances that afflict you. He will find the circumstances not altered; as deep a cloud of mystery on the cause, as dazzling a glory on the invincible law. Is it so important whether a man wears a shoe-buckle or ties his shoe-lappet with a string?... Bring the insight, and he will find as many beauties and heroes and astounding strokes of genius close by him as Shakspeare or

Æschylus or Dante beheld. It was in a beggarly heath farm, it was in a mean country inn that Burns found his fancy so sprightly. You find the times and places mean. My friend, stretch a few threads over a common Æolian harp, and put it in your window, and listen to what it says of times and the heart of Nature. I do not think that you will believe that the miracle of Nature is less, the chemical power worn out. Watch the breaking morning, the enchantments of the sunset.

If I had young men to reach, I should say to them, Keep the intellect sacred. Reverse it. Give all to it. Its oracles countervail all. Attention is its acceptable prayer. Sit low and wait long; and know that, next to being its minister, like Aristotle, and perhaps better than that, is the profound reception and sympathy, without ambition which secularizes and trades it. Go sit with the Hermit in you, who knows more than you do. You will find life enhanced, and doors opened to grander entertainments. Yet all comes easily that he does, as snow and vapor, heat, wind and light. Power costs nothing to the powerful. I should say to them, Do what you can do. He that draws on his own talent cannot be overshadowed or supplanted.²⁸⁶⁴...Homage to truth discriminates good and evil. Power never departs from it.

Our colleges may differ much in the scale of requirements, and the examination for admission and the examination for degrees and honors may be lax in this college and severe in that, and you may find facilities, translations, syllabuses and tutors here or there to coach you through, but 't is very certain that an examination is yonder before us and an examining committee that cannot be escaped nor deceived, that every scholar is to be put fairly on his own powers and must hear the questions proposed, and answer them by himself, and receive honor or dishonor according to the fidelity shown. For the men and women of your time, the circle of

your friends and employers, your conditions, the invisible world, are the interrogators.²⁸⁶⁵ . . .

When the great painter was told by a dauber, "I have painted five pictures whilst you have made one," he replied, "*Pingo in æternitatem*." "Study for eternity smiled on me," says Van Helmont. And it were a good rule to read some lines at least every day that shall not be of the day's occasion or task, but of study for eternity.

I have detained you too long; but it is the privilege of the moral sentiment to be every moment new and commanding, and old men cannot see the powers of society, the institutions, the laws under which they have lived, passing, or soon to pass, into the hands of you and your contemporaries, without an earnest wish that you have caught sight of your high calling, your vast possibilities and inspiring duties.

III. COUNTRY LIFE

THE AIR is wise, the wind thinks well,
And all through which it blows;
If plant or brain, if egg or shell,
Or bird or biped knows.

What boots it here of Thebes or Rome,
Or lands of Eastern day?
In forests I am still at home
And there I cannot stray.

KEEN EARS can catch a syllable,
As if one spoke to another,
In the hemlocks tall, untamable,
And what the whispering grasses smother.

Wonderful verse of the gods,
Of one import, of varied tone;
They chant the bliss of their abodes
To man imprisoned in his own.

COUNTRY LIFE

THE TEUTONIC race have been marked in all ages by a trait which has received the name of Earth-hunger, a love of possessing land. It is not less visible in that branch of the family which inhabits America. Nor is it confined to farmers, speculators, and filibusters, or conquerors. The land, the care of land, seems to be the calling of the people of this new country, of those, at least, who have not some decided bias, driving them to a particular craft, as a born sailor or machinist. The capable and generous, let them spend their talent on the land. Plant it, adorn it, study it, it will develop in the cultivator the talent it requires.

The avarice of real estate native to us all covers instincts of great generosity, namely, all that is called the love of Nature, comprising the largest use and the whole beauty of a farm or landed estate. Travel and walking have this apology, that Nature has impressed on savage men periodical or secular impulses to emigrate, as upon lemmings, rats and birds. The Indians go in summer to the coast, for fishing; in winter, to the woods. The nomads wander over vast territory, to find their pasture. Other impulses hold us to other habits. As the increasing population finds new values in

the ground, the nomad life is given up for settled homes. But the necessity of exercise and the nomadic instinct are always stirring the wish to travel, and in the spring and summer, it commonly gets the victory. Chaucer notes of the month of April,

"Than longen folk to goon on pilgrimages,
And palmers for to seken straunge strondes,
To ferne halwes, couthe in sondry londes."²⁸⁶⁶

And, in the country, Nature is always inviting to the compromise of walking as soon as we are released from severe labor. Linnæus, early in life, read a discourse at the University of Upsala on the necessity of travelling in one's own country, based on the conviction that Nature was inexhaustibly rich, and that in every district were swamps, or beaches, or rocks, or mountains, which were now nuisances, but, if explored, and turned to account, were capable of yielding immense benefit. At Upsala, therefore, he instituted what were called *herborizations*: he summoned his class to go with him on excursions on foot into the country, to collect plants and insects, birds and eggs. These parties started at seven in the morning, and stayed out till nine in the evening; the Professor was generally attended by two hundred students, and, when they returned, they marched through the streets of Upsala in a festive procession, with flowers in their hats, to the music of drums and trumpets, and with loads of natural productions collected on the way.

Let me remind you what this walker found in his walks. He went into Oland, and found that the farms on the shore were perpetually encroached on by the sea, and ruined by blowing sand. He discovered that the *arundo arenaris*, or beach-grass, had long firm roots, and he taught them to plant it for the protection

of their shores. In Tornea, he found the people suffering every spring from the loss of their cattle, which died by some frightful distemper, to the number of fifty or a hundred in a year. Linnæus walked out to examine the meadow into which they were first turned out to grass, and found it a bog, where the water-hemlock grew in abundance, and had evidently been cropped plentifully by the animals in feeding. He found the plant also dried in their cut hay. He showed them that the whole evil might be prevented by employing a woman for a month to eradicate the noxious plants. When the ship-yards were infested with rot, Linnæus was sent to provide some remedy. He studied the insects that infested the timber, and found that they laid their eggs in the logs within certain days in April and he directed that during ten days, at that time of the year, the logs should be immersed under the water, which being done, the timber was found to be uninjured.

He found that the gout, to which he was subject, was cured by wood-strawberries. He had other remedies. When Kalm returned from America, Linnæus was laid up with severe gout. But the joy in his return, and the curiosity to see his plants, restored him instantly, and he found an old friend as good as the treatment by wood-strawberries. He learned the secret of making pearls in the river-pearl mussel. He found out that a terrible distemper which sometimes proves fatal in the north of Europe, was occasioned by an animalcule, which he called *Furia infernalis*, which falls from the air on the face, or hand, or other uncovered part, burrows into it, multiplies and kills the sufferer. By timely attention, it is easily extracted.

He examined eight thousand plants; and examined fishes, insects, birds, quadrupeds; and distributed the animal, vegetable and mineral kingdoms. And if, instead of running about in the hotels and theatres of Europe, we would, manlike, see what grows,

or might grow, in Massachusetts, stock its gardens, drain its bogs, plant its miles and miles of barren waste with oak and pine, and following what is usually the natural suggestion of these pursuits, ponder the moral secrets which, in her solitudes, Nature has to whisper to us, we were better patriots and happier men.

We have the finest climate in the world, for this purpose, in Massachusetts. If we have coarse days, and dogdays, and white days, and days that are like ice-blinks, we have also yellow days, and crystal days,—days which are neither hot nor cold, but the perfection of temperature. New England has a good climate,—yet, in choosing a farm, we like a southern exposure, whilst Massachusetts, it must be owned, is on the northern slope, towards the Arctic circle, and the Pole. Our climate is a series of surprises, and among our many prognostics of the weather, the only trustworthy one that I know is that, when it is warm, it is a sign that it is going to be cold. The climate needs, therefore, to be corrected by a little anthracite coal,—a little coal indoors, during much of the year, and thick coats and shoes must be recommended to walkers. I own I prefer the solar to the polar climates. “I have no enthusiasm for Nature,” said a French writer, “which the slightest chill will not instantly destroy.”

But we cannot overpraise the comfort and the beauty of the climate in the best days of the year. In summer, we have for weeks a sky of Calcutta, yielding the richest growth, maturing plants which require strongest sunshine, and scores of days when the heat is so rich, and yet so tempered, that it is delicious to live.

The importance to the intellect of exposing the body and brain to the fine mineral and imponderable agents of the air makes the chief interest in the subject. “So exquisite is the structure of the cortical glands,” said the old physiologist Malpighi, “that when the atmosphere is ever so slightly vitiated or altered, the brain is the

first part to sympathize and to undergo a change of state." We are very sensible of this, when, in midsummer, we go to the seashore, or to mountains, or when, after much confinement to the house, we go abroad into the landscape, with any leisure to attend to its soothing and expanding influences. The power of the air was the first explanation offered by the early philosophers of the mutual understanding that men have. "The air," said Anaximenes, "is the soul, and the essence of life. By breathing it, we become intelligent, and, because we breathe the same air, understand one another." Plutarch thought it contained the knowledge of the future. "If it be true that souls are naturally endowed with the faculty of prediction, and that the chief cause that excites that faculty is a certain temperature of air and winds," etc. Even Lord Bacon said, "The Stars inject their imagination or influence into the air."

The air that we breathe is an exhalation of all the solid material of the globe....It is the last finish of the work of the Creator. We might say, the Rock of Ages dissolves himself into the mineral air to build up this mystic constitution of man's mind and body.

Walking has the best value as gymnastics for the mind. "You shall never break down in a speech," said Sydney Smith, "on the day on which you have walked twelve miles." In the English universities, the reading men are daily performing their punctual training in the boat-clubs, or a long gallop of many miles in the saddle, or, taking their famed "constitutionals," walks of eight and ten miles. "Walking," said Rousseau, "has something which animates and vivifies my ideas." And Plato said of exercise that "it would almost cure a guilty conscience." "For the living out of doors, and simple fare, and gymnastic exercises, and the morals of companions, produce the greatest effect on the way of virtue and of vice."

Few men know how to take a walk. The qualifications of a professor are endurance, plain clothes, old shoes, an eye for

Nature, good humor, vast curiosity, good speech, good silence and nothing too much. If a man tells me that he has an intense love of Nature, I know, of course, that he has none. Good observers have the manners of trees and animals, their patient good sense, and if they add words, 't is only when words are better than silence. But a loud singer, or a story-teller, or a vain talker profanes the river and the forest, and is nothing like so good company as a dog.

There is also an effect on beauty....De Quincey said, "I have seen Wordsworth's eyes sometimes affected powerfully in this respect. His eyes are not under any circumstances bright, lustrous or piercing, but, after a long day's toil in walking, I have seen them assume an appearance the most solemn and spiritual that it is possible for the human eye to wear. The light which resides in them is at no time a superficial light, but, under favorable accidents, it is a light which seems to come from depths below all depths; in fact, it is more truly entitled to be held 'the light that never was on land or sea,' a light radiating from some far spiritual world, than any that can be named." But De Quincey prefixes to this description of Wordsworth a little piece of advice, which I wonder has not attracted more attention. "The depth and subtlety of the eyes varies exceedingly with the state of the stomach, and, if young ladies were aware of the magical transformations which can be wrought in the depth and sweetness of the eye by a few weeks' exercise, I fancy we should see their habits in this point altered greatly for the better."

For walking, you must have a broken country. In Illinois, everybody rides. There is no good walk in that state. The reason is, a square yard of it is as good as a hundred miles. You can distinguish from the cows a horse feeding, at the distance of five miles, with the naked eye. Hence, you have the monotony of Holland, and when you step out of the door can see all that you will have seen

when you come home. In Massachusetts, our land is agreeably broken, and is permeable like a park, and not like some towns in the more broken country of New Hampshire, built on three or four hills having each one side at forty-five degrees and the other side perpendicular: so that if you go a mile, you have only the choice whether you will climb the hill on your way out or on your way back. The more reason we have to be content with the felicity of our slopes in Massachusetts, undulating, rocky, broken and surprising, but without this alpine inconveniency. Twenty years ago in Northern Wisconsin the pinery was composed of trees so big, and so many of them, that it was impossible to walk in the country, and the traveller had nothing for it but to wade in the streams. One more inconveniency, I remember, they showed me in Illinois, that, in the bottom lands, the grass was fourteen feet high. We may well enumerate what compensating advantages we have over that country, for 't is a commonplace, which I have frequently heard spoken in Illinois, that it was a manifest leading of the Divine Providence that the New England states should have been first settled, before the Western country was known, or they would never have been settled at all.

The privilege of the countryman is the culture of the land, the laying out of grounds and gardens, the orchard and the forest. The Rosaceous tribe in botany, including the apple, pear, peach and cherry, are coeval with man. The apple is our national fruit. In October, the country is covered with its ornamental harvests. The American sun paints itself in these glowing balls amid the green leaves, the social fruit, in which Nature has deposited every possible flavor; whole zones and climates she has concentrated into apples. I am afraid you do not understand values. Look over the fence at the farmer who stands there. He makes every cloud in the sky, and every beam of the sun, serve him. His trees are full of

brandy. He saves every drop of sap, as if it were wine. A few years ago those trees were whipsicks. Now, every one of them is worth a hundred dollars. Observe their form; not a branch nor a twig is to spare. They look as if they were arms and fingers, holding out to you balls of fire and gold. One tree yields the rent of an acre of land. Yonder pear has every property which should belong to a tree. It is hardy, and almost immortal. It accepts every species of nourishment, and yet could live, like an Arab, on air and water. It grows like the ash Ygdrasil. It seems to me much that I have brought a skilful chemist into my ground, and keep him there overnight, all day, all summer, for an art he has, out of all kinds of refuse rubbish to manufacture Virgaliens, Bergamots, and Seckels, in a manner which no confectioner can approach, and his method of working is no less beautiful than the result.

In old towns there are always certain paradises known to the pedestrian, old and deserted farms, where the neglected orchard has been left to itself, and whilst some of its trees decay, the hardier have held their own. I know a whole district, Estabrook Farm, made up of wide, straggling orchards, where the apple-trees strive with and hold their ground against the native forest-trees: the apple growing with profusion that mocks the pains taken by careful cockneys, who come out into the country, plant young trees and watch them dwindling. Here, no hedges are wanted; the wide distance from any population is fence enough: the fence is a mile wide. Here are varieties of apple not found in Downing or Loudon. The "Tartaric" variety, and "Cow-apple," and the "Bite-me-if-you-dare," the "Beware-of-this." Apples of a kind which I remember in boyhood, each containing a barrel of wind and half a barrel of cider. But there was a contest between the old orchard and the invading forest-trees, for the possession of the ground, of

the whites against the Pequots, and if the handsome savages win, we shall not be losers.²⁸⁶⁷...

According to the common estimate of farmers, the wood-lot yields its gentle rent of six per cent., without any care or thought, when the owner sleeps or travels, and it is subject to no enemy but fire. Evelyn quotes Lord Caernarvon's saying, "Wood is an excrescence of the earth provided by God for the payment of debts."

When Nero advertised for a new luxury, a walk in the woods should have been offered. 'T is one of the secrets for dodging old age. For Nature makes a like impression on age as on youth. Then I recommend it to people who are growing old, against their will. A man in that predicament, if he stands before a mirror, or among young people, is made quite too sensible of the fact; but the forest awakes in him the same feeling it did when he was a boy, and he may draw a moral from the fact that 't is the old trees that have all the beauty and grandeur. I admire the taste which makes the avenue to a house, were the house never so small, through a wood; besides the beauty, it has a positive effect on manners, as it disposes the mind of the inhabitant and of his guests to the deference due to each. Some English reformers²⁸⁶⁸ thought the cattle made all this wide space necessary between house and house, and that, if there were no cows to pasture, less land would suffice. But a cow does not need so much land as the owner's eyes require between him and his neighbor.

Our Aryan progenitors in Asia celebrated the winds as the conveying Maruts, "traversers of places difficult of access. Stable is their birth-place in the sky, but they are agitators of heaven and earth, who shake all around like the top of a tree. Because they drive the clouds, they have harnessed the spotted deer to their chariot; they are coming with weapons, war-cries and

decorations. I hear the cracking of the whips in their hands. I praise their sportive resistless strength. They are the generators of speech. They drive before them in their course the long, vast, uninjurable, rain-retaining cloud. Wherever they pass, they fill the way with clamor. Every one hears their noise. The lightning roars like a parent cow that bellows for its calf, and the rain is set free by the Maruts. Maruts, as you have vigor, invigorate mankind! Aswins (Waters), long-armed, good-looking Aswins! bearers of wealth, guides of men, harness your car! Ambrosia is in you, in you are medicinal herbs." The Hindoos called fire Agni, born in the woods, bearer of oblations, smoke-bannered and light-shedding, lord of red coursers; the guest of man; protector of people in villages; the sacrificer visible to all, thousand-eyed, all-beholding, of graceful form and whose countenance is turned on all sides.

What uses that we know belong to the forest, and what countless uses that we know not! How an Indian helps himself with fibre of milkweed, or withe-bush, or wild hemp, or root of spruce, black or white, for strings; making his bow of hickory, birch, or even a fir-bough, at a pinch; hemlock bark for his roof, hair-moss or fern for his bed. He goes to a white birch-tree, and can fit his leg with a seamless boot, or a hat for his head. He can draw sugar from the maple, food and antidotes from a hundred plants. He knows his way in a straight line from watercourse to watercourse, and you cannot lose him in the woods. He consults by way of natural compass, when he travels: (1) large pine-trees, which bear more numerous branches on their southern side; (2) ant-hills, which have grass on their south and whortle-berries on the north; (3) aspens, whose bark is rough on the north and smooth on the south side. All his knowledge is for use, and it only appears in use, whilst white men have theirs also for talking purposes.

I am a very indifferent botanist, but I admire that perennial four-petalled flower, which has one gray petal, one green, one red, and one white. I think sometimes how many days could Methuselah go out and find something new! In January the new snow has changed the woods so that he does not know them; has built sudden cathedrals in a night. In the familiar forest he finds Norway and Russia in the masses of overloading snow which break all that they cannot bend. In March, the thaw, and the sounding of the south wind, and the splendor of the icicles. On the pond there is a cannonade of a hundred guns, but it is not in honor of election of any President. He went forth again after the rain; in the cold swamp, the buds are swollen, the *ictodes* prepares its flower, and the mallows and mouse-ear. The mallows the Greeks held sacred as giving the first sign of the sympathy of the earth with the celestial influences. The next day the Hylas were piping in every pool, and a new activity among the hardy birds, the premature arrival of the bluebird, and the first northward flight of the geese, who cannot keep their joy to themselves, and fly low over the farms. In May, the bursting of the leaf,—the oak and maple are red with the same colors on the new leaf which they will resume in autumn when it is ripe. In June, the miracle works faster,²⁸⁶⁹

Painting with white and red the moors
To draw the nations out of doors.

Man feels the blood of thousands in his body, and pumps the sap of all this forest through his arteries; the loquacity of all birds in the morning; and the immensity of life seems to make the world deep and wide. In August, when the corn is grown to be a resort and protection to woodcocks and small birds, and when the leaves whisper to each other in the wind, we observe already that

the leaf is sere, that a change has passed on the landscape. The world has nothing to offer more rich or entertaining than the days which October always bring us, when, after the first frosts, a steady shower of gold falls in the strong south wind from the chestnuts, maples and hickories: all the trees are wind-harps, filling the air with music; and all men become poets, and walk to the measure of rhymes they make or remember. The dullest churl begins to quaver. The forest in its coat of many colors reflects its varied splendor through the softest haze. The witch-hazel blooms to mark the last hour arrived, and that Nature has played out her summer score. The dry leaves rustle so loud, as we go rummaging through them, that we can hear nothing else. The leaf in our dry climate gets fully ripe, and, like the fruit when fully ripe, acquires fine color, whilst, in Europe, the damper climate decomposes it too soon.

But the pleasures of garden, orchard and wood must be alternated. We know the healing effect on the sick of change of air,—the action of new scenery on the mind is not less fruitful. We must remember that man is a natural nomad, and his old propensities will stir at midsummer, and send him, like an Indian, to the sea. The influence of the ocean on the love of liberty, I have mentioned elsewhere. Its power on the mind in sharpening the perceptions has made the sea the famous educator of our race. The history of the world,—what is it but the doings about the shores of the Mediterranean Sea, and the Atlantic?...

What freedom of grace has the sea with all this might!...The freedom makes the observer feel as a slave. Our expression is so thin and cramped! Can we not learn here a generous eloquence? This was the lesson our starving poverty wanted....At Niagara, I have noticed, that, as quick as I got out of the wetting of the Fall, all the grandeur changed into beauty. You cannot keep it grand, 't is so quickly beautiful; and the sea gave me the same experience. 'T

is great and formidable, when you lie down in it, among the rocks. But, on the shore, at one rod's distance, 't is changed into a beauty as of gems and clouds. Shores in sight of each other in a warm climate make boat-builders; and whenever we find a coast broken up into bays and harbors, we find an instant effect on the intellect and industry of the people.²⁸⁷⁰

On the seashore the play of the Atlantic with the coast! What wealth is here! Every wave is a fortune; one thinks of Etzlers and great projectors who will yet turn all this waste strength to account: what strength and fecundity, from the sea-monsters, hugest of animals, to the primary forms of which it is the immense cradle, and the phosphorescent infusories;—it is one vast rolling bed of life, and every sparkle is a fish. What freedom and grace with all this might! The seeing so excellent a spectacle is a certificate to the mind that all imaginable good shall yet be realized. The sea is the chemist that dissolves the mountain and the rock; pulverizes old continents, and builds new;—forever redistributing the solid matter of the globe; and performs an analogous office in perpetual new transplanting of the races of men over the surface, the Exodus of nations. We may well yield us for a time to its lessons. But the nomad instinct, as I said, persists to drive us to fresh fields and pastures new. Indeed the variety of our moods has an answering variety in the face of the world, and the sea drives us back to the hills.

Dr. Johnson said of the Scotch mountains, "The appearance is that of matter incapable of form or usefulness, dismissed by Nature from her care." The poor blear-eyed doctor was no poet. Like Charles Lamb, he loved the sweet security of streets. It was said of him that "he preferred the Strand to the Garden of the Hesperides." But this is not the experience of imaginative men, nor of men with good eyes and susceptible organizations. "For

my own part," says Linnæus, "I have enjoyed good health, except a slight languor, but as soon as I got upon the Norway Alps I seemed to have acquired a new existence. I felt as if relieved from a heavy burden. Then, spending a few days in the low country of Norway, though without committing the least excess, my languor or heaviness returned. When I again ascended the Alps, I revived as before." And he celebrates the health and performance of the Laps as the best walkers of Europe. "Not without admiration, I have watched my two Lap companions, in my journey to Finmark, one, my conductor, the other, my interpreter. For after having climbed the Alps, whilst I, a youth of twenty-five years, was spent and tired, like one dead, and lay down as if to die in those ends of the world, these two old men, one fifty, one seventy years, running and playing like boys, felt none of the inconveniences of the road, although they were both loaded heavily enough with my baggage. I saw men more than seventy years old put their heel on their own neck, without any exertion. O holy simplicity of diet, past all praise!"²⁸⁷¹

But beside their sanitary and gymnastic benefit, mountains are silent poets, and a view from a cliff over a wide country undoes a good deal of prose, and reinstates us wronged men in our rights. The imagination is touched. There is some pinch and narrowness to us, and we are glad to see the world, and what amplitudes it has, of meadow, stream, upland, forest and sea, which yet are lanes and crevices to the great space in which the world shines like a cockboat in the sea.

Of the finer influences, I shall say that they are not less positive, if they are indescribable. If you wish to know the shortcomings of poetry and language, try to reproduce the October picture to a city company,—and see what you make of it.²⁸⁷² There is somewhat finer in the sky than we have senses to appreciate. It escapes us,

and yet is only just beyond our reach. Is all this beauty to perish? Where is he who is to save the perfect moment, and cause that this beauty shall not be lost? Where is he who has senses fine enough to catch the inspiration of the landscape? The mountains in the horizon acquaint us with finer relations to our friends than any we sustain.

I think 't is the best of humanity that goes out to walk. In happy hours, I think all affairs may be wisely postponed for this walking. Can you hear what the morning says to you, and believe *that*? Can you bring home the summits of Wachusett, Greylock, and the New Hampshire hills? the Savin groves of Middlesex? the sedgy ripples of the old Colony ponds? the sunny shores of your own bay, and the low Indian hills of Rhode Island? the savageness of pine-woods? Can you bottle the efflux of a June noon, and bring home the tops of Uncanoonuc? The landscape is vast, complete, alive. We step about, dabble and dot, and attempt in poor linear ways to hobble after those angelic radiations. The gulf between our seeing and our doing is a symbol of that between faith and experience....

Our schools and colleges strangely neglect the general education of the eye. Every acquisition we make in the science of beauty is so sweet that I think it is cheaply paid for by what accompanies it, of course, the prating and affectation of connoisseurship. The facts disclosed by Winkelmann, Goethe, Bell, Greenough, Ruskin, Garbett, Penrose, are joyful possessions, which we cannot spare, and which we rank close beside the disclosures of natural history. There are probably many in this audience who have tried the experiment on a hilltop, and many who have not, of bending the head so as to look at the landscape with your eyes upside down. What new softness in the picture! It changes the landscape from November into June. My companion and I remarked from

the hilltop the prevailing sobriety of color, and agreed that russet was the hue of Massachusetts, but on trying this experiment of inverting the view he said, "There is the Campagna! and Italy is Massachusetts upside down." The effect is remarkable, and perhaps is not explained. An ingenious friend of mine suggested that it was because the upper part of the eye is little used, and therefore retains more susceptibility than the lower, and returns more delicate impressions.

Dr. Johnson said, "Few men know how to take a walk," and it is certain that Dr. Johnson was not one of the few. It is a fine art, requiring rare gifts and much experience. No man is suddenly a good walker. Many men begin with good resolution, but they do not hold out, and I have sometimes thought it would be well to publish an *Art of Walking, with Easy Lessons for Beginners*. These we call apprentices. Those who persist from year to year, and obtain at last an intimacy with the country, and know all the good points within ten miles, with the seasons for visiting each, know the lakes, the hills, where grapes, berries and nuts, where the rare plants are; where the best botanic ground; and where the noblest landscapes are seen, and are learning all the time;—these we call professors....

Nature kills egotism and conceit; deals strictly with us; and gives sanity; so that it was the practice of the Orientals, especially of the Persians, to let insane persons wander at their own will out of the towns, into the desert, and, if they liked, to associate with wild animals. In their belief, wild beasts, especially gazelles, collect around an insane person, and live with him on a friendly footing. The patient found something curative in that intercourse, by which he was quieted, and sometimes restored. But there are more insane persons than are called so, or are under treatment in hospitals. The crowd in the cities, at the hotels, theatres, card-

tables, the speculators who rush for investment, at ten per cent., twenty per cent., cent. per cent., are all more or less mad,—I need not say it now in the crash of bankruptcy;—these point the moral, and persuade us to seek in the fields the health of the mind.

I hold all these opinions on the power of the air to be substantially true. The poet affirms them; the religious man, going abroad, affirms them; the patriot on his mountains or his prairie affirms them; the contemplative man affirms them.

Nature tells everything once. Our microscopes are not necessary. She shows every fact in large bodies somewhere. On the seashore, she reveals to the eye, by the sea-line, the true curve of the globe. It does not need a barometer to find the height of mountains. The line of snow is surer than the barometer: and the zones of plants, the savin, the pine, vernal gentian, plum, linnæa and the various lichens and grapes are all thermometers which cannot be deceived, and will not lie. They are instruments by the best maker. The earthquake is the first chemist, goldsmith and brazier: he wrought to purpose in craters, and we borrowed the hint in crucibles. When I look at natural structures, as at a tree, or the teeth of a shark, or the anatomy of an elephant, I know that I am seeing an architecture and carpentry which has no sham, is solid and conscientious, which perfectly answers its end, and has nothing to spare. But in all works of human art there is deduction to be made for blunder and falsehood. Therefore Goethe, whose whole life was a study of the theory of art, said no man should be admitted to his Republic, who was not versed in Natural History.

The college is not so wise as the mechanic's shop, nor the quarter-deck as the fore-castle. Witness the insatiable interest of the white man about the Indian, the trapper, the hunter and sailor. In a water-party in which many scholars joined, I noted that the skipper of the boat was much the best companion. The scholars

made puns. The skipper saw instructive facts on every side, and there was no trifle to him. How startling are the hints of wit we detect in the horse and dog, and in the wild animals! By what compass the geese steer, and the herring migrate, we would so gladly know. What the dog knows, and how he knows it, piques us more than all we heard from the chair of metaphysics.

Is it not an eminent convenience to have in your town a person who knows where arnica grows, or sassafras, or pennyroyal, and the mints, or the scented goldenrod, or punk for slow-match; or the slippery-elm, or wild cherries, or wild pears? Where are the best hazel-nuts, chestnuts and shagbarks? Where the white grapes? Where are the choice apple-trees? And what are the poisons? Where is the Norway pine, where the beech, where the epigæa, the linnæa, or sanguinaria, or orchis pulcherrima, or sundew, or laurus benzoin, or pink huckleberry? where trout, woodcocks, wild bees, pigeons, where the bittern (stake-driver) can be seen and heard, where the Wilson's plover can be seen and heard?

The true naturalist can go wherever woods or waters go; almost where a squirrel or a bee can go, he can; and no man is asked for leave. Sometimes the farmer withstands him in crossing his lots, but 't is to no purpose; the farmer could as well hope to prevent the sparrows or tortoises. It was their land before it was his, and their title was precedent. My naturalist knew what was on their land, and the farmers did not, and sometimes he brought them ostentatiously gifts of flowers, fruits or rare shrubs they would gladly have paid a price for, and did not tell them that he gathered them in their own woods. Moreover the very time at which he used their land and water (for his boat glided like a trout everywhere unseen) was in hours when they were sound asleep. Before the sun was up, he went up and down to survey his possessions, and

passed onward and left them, before the second owners, as he called them, were awake.

If we should now say a few words on the advantages that belong to the conversation with Nature, I might set them so high as to make it a religious duty. 'T is the greatest use and the greatest beauty. 'T is the lesson we were put hither to learn. What truth, and what elegance belong to every fact of Nature, we know. And the study of them awakens the like truth and elegance in the student. One thing, the lover of Nature cannot tell the best thing he knows.²⁸⁷³...

What alone possesses interest for us is the *naturel* of each man. This is that which is the saliency, or principle of levity, the antagonist of matter and gravitation, and as good as they. This is forever a surprise, and engaging, and lovely. We can't be satiated with knowing it, and about it. It is related to the purest of the world, to gravity, the growth of grass, and the angles of crystals. Nature speaks to the imagination; first, through her grand style,—the hint of immense force and unity which her works convey; second, because her visible productions and changes are the nouns of language, and our only means of uttering the invisible thought. Every new perception of the method and beauty of Nature gives a new shock of surprise and pleasure; and always for this double reason: first, because they are so excellent in their primary fact, as frost, or cloud, or fire, or animal; and, secondly, because we have an instinct that they express a grander law.

'T is not easy to say again what Nature says to us. But it is the best part of poetry, merely to name natural objects well. A farmer's boy finds delight in reading the verses under the Zodiacal vignettes in the Almanac. What is the merit of Thomson's Seasons but copying a few of the pictures out of this vast book into words, without a hint of what they signify, and the best passages of great poets, old and

new, are often simple enumerations of some features of landscape. And as man is the object of Nature, what we study in Nature is man. 'T is true, that man only interests us. We are not to be imposed upon by the apparatus and the nomenclature of the physiologist. Agassiz studies year after year fishes and fossil anatomy of saurian, and lizard, and pterodactyl. But whatever he says, we know very well what he means. He pretends to be only busy with the foldings of the yolk of a turtle's egg. I can see very well what he is driving at; he means men and women. He talks about lizard, shell-fish and squid, he means John and Mary, Thomas and Ann. For Nature is only a mirror in which man is reflected colossally. Swedenborg or Behman or Plato tried to decipher this hieroglyphic, and explain what rock, what sand, what wood, what fire signified in regard to man.

They may have been right or wrong in any particulars of their interpretation, but it is only our ineradicable belief that the world answers to man, and part to part, that gives any interest in the subject. If we believed that Nature was foreign and unrelated,—some rock on which souls wandering in the Universe were shipwrecked, we should think all exploration of it frivolous waste of time. No, it is bone of our bone, flesh of our flesh, made of us, as we of it. External Nature is only a half. The geology, the astronomy, the anatomy, are all good, but 't is all a half, and—enlarge it by astronomy never so far—remains a half. It requires a will as perfectly organized,—requires man. Astronomy is a cold, desert science, with all its pompous figures,—depends a little too much on the glass-grinder, too little on the mind. 'T is of no use to show us more planets and systems. We know already what matter is, and more or less of it does not signify. He can dispose in his thought of more worlds, just as readily as of few, or one. It is his relation to

one, to the first, that imports. Nay, I will say, of the two facts, the world and man, man is by much the larger half.

I know that the imagination...is a coy, capricious power, and does not impart its secret to inquisitive persons. Sometimes a parlor in which fine persons are found, with beauty, culture and sensibility, answers our purpose still better. Striking the electric chain with which we are darkly bound, but that again is Nature, and there we have again the charm which landscape gives us, in a finer form; but the persons must have had the influence of Nature, must know her simple, cheap pleasures, must know what Pindar means when he says that "water is the best of things," and have manners that speak of reality and great elements, or we shall know no Olympus.

Matter, how immensely soever enlarged by the telescope, remains the lesser half. The very science by which it is shown to you argues the force of man. Nature is vast and strong, but as soon as man knows himself as its interpreter, knows that Nature and he are from one source, and that he, when humble and obedient, is nearer to the source, then all things fly into place, then is there a rider to the horse, an organized will, then Nature has a lord.

IV. CONCORD WALKS

NOT MANY men see beauty in the fogs
Of close, low pine-woods in a river town;
Yet unto me not morn's magnificence
Nor the red rainbow of a summer's eve,
Nor Rome, nor joyful Paris, nor the halls
Of rich men, blazing hospitable light,
Nor wit, nor eloquence,—no, nor even the song
Of any woman that is now alive,—
Hath such a soul, such divine influence,
Such resurrection of the happy past,
As is to me when I behold the morn
Ope in such low, moist roadside, and beneath
Peep the blue violets out of the black loam.

THERE IS no rood has not a star above it;
The cordial quality of pear or plum
Ascends as gladly in a single tree
As in broad orchards resonant with bees;
And every atom poises for itself,
And for the whole. The gentle deities
Showed me the love of color and of sounds,
The innumerable tenements of beauty,
The miracle of generative force,
Far-reaching concords of astronomy
Felt in the plants and in the punctual birds;
Better, the linked purpose of the whole.

CONCORD WALKS

WHEN I bought my farm, I did not know what a bargain I had in the bluebirds, bobolinks and thrushes, which were not charged in the bill; as little did I guess what sublime mornings and sunsets I was buying—what reaches of landscape, and what fields and lanes for a tramp. Neither did I fully consider what an indescribable luxury is our Indian river, the Musketaquid,—which runs parallel with the village street and to which every house on that long street has a back door, which leads down through the garden to the river-bank, when a skiff, or a dory, gives you, all summer, access to enchantments, new every day, and all winter, to miles of ice for the skater.²⁸⁷⁴ And because our river is no Hudson or Mississippi I have a problem long waiting for an engineer,—this,—to what height I must build a tower in my garden that shall show me the Atlantic Ocean from its top—the ocean twenty miles away.

Still less did I know what good and true neighbors I was buying, men of thought and virtue, some of them now known the country through for their learning, or subtlety, or active or patriotic power, but whom I had the pleasure of knowing long before the

Country did; and of other men not known widely but known at home, farmers,—not doctors of laws but doctors of land, skilled in turning a swamp or a sand-bank into a fruitful field, and, when witch-grass and nettles grew, causing a forest of apple-trees or miles of corn and rye to thrive.

I did not know what groups of interesting school-boys and fair school-girls were to greet me in the highway, and to take hold of one's heart at the School Exhibitions.²⁸⁷⁵

"Little joy has he who has no garden," said Saadi. Montaigne took much pains to be made a citizen of Rome; and our people are vain, when abroad, of having the freedom of foreign cities presented to them in a gold box. I much prefer to have the freedom of a garden presented me. When I go into a good garden, I think, if it were mine, I should never go out of it. It requires some geometry in the head to lay it out rightly, and there are many who can enjoy to one that can create it.

Linnæus, who was professor of the Royal Garden at Upsala, took the occasion of a public ceremony to say, "I thank God, who has ordered my fate, that I live in this time, and so ordered it that I live happier than the king of the Persians. You know, fathers and citizens, that I live entirely in the Academy Garden; here is my Vale of Tempe, say rather my Elysium. I possess here all that I desire of the spoils of the East and the West, and, unless I am very much mistaken, what is far more beautiful than Babylonian robes, or vases of the Chinese. Here I learn what I teach. Here I admire the wisdom of the Supreme Artist, disclosing Himself by proofs of every kind, and show them to others." Our people are learning that lesson year by year. As you know, nothing in Europe is more elaborately luxurious than the costly gardens,—as the Boboli at Florence, the Borghese, the Orsini at Rome, the Villa d' Este at Tivoli; with their greenhouses, conservatories, palm-houses, fish-ponds, sculptured

summer-houses and grottoes; but without going into the proud niceties of an European garden, there is happiness all the year round to be had from the square fruit-gardens which we plant in the front or rear of every farmhouse. In the orchard, we build monuments to Van Mons²⁸⁷⁶ annually.

The place where a thoughtful man in the country feels the joy of eminent domain is in his wood-lot. If he suffer from accident or low spirits, his spirits rise when he enters it. He can spend the entire day therein, with hatchet or pruning-shears, making paths, without remorse of wasting time. He can fancy that the birds know him and trust him, and even the trees make little speeches or hint them. Then he remembers that Allah in his allotment of life "does not count the time which the Arab spends in the chase."²⁸⁷⁷

If you can add to the garden a noble luxury, let it be an arboretum. In the arboretum you should have things which are of a solitary excellence, and which people who read of them are hungry to see. Thus plant the *Sequoia Gigantea*, give it room, and set it on its way of ten or fifteen centuries. Bayard Taylor planted two—one died, but I saw the other looking well. Plant the Banian, the Sandal-tree, the Lotus, the Upas, Ebony, Century Aloes, the Soma of the Vedas—*Asclepias Viminalis*, the Mandrake and Papyrus, Dittany, Asphodel, Nepenthe, Hæmony, Moly, Spikenard, Amomum.²⁸⁷⁸ Make a calendar—your own—of the year, that you may never miss your favorites in their month. As Linnæus made a dial of plants, so shall you of all the objects that guide your walks.

Learn to know the conspicuous planets in the heavens, and the chief constellations. Thus do not forget the 14th of November, when the meteors come, and on some years drop into your house-yard like sky-rockets. And 't is worth remarking, what a man may go through life without knowing, that a common spy-glass, which you carry in your pocket, will show the satellites of Jupiter, and

turned on the Pleiades, or Seven Stars, in which most eyes can only count six,—will show many more,—a telescope in an observatory will show two hundred. How many poems have been written, or, at least attempted, on the lost Pleiad! for though that pretty constellation is called for thousands of years the “Seven Stars,” most eyes can only count six.

Horses and carriages are costly toys, but the word park always charms me. I could not find it in my heart to chide the citizen who should ruin himself to buy a patch of heavy oak timber. I admire the taste which makes the avenue to the house—were the house never so small—through a wood;—as it disposes the mind of the inhabitant and of his guest to the deference due to each.

There are two companions, with one or other of whom 't is desirable to go out on a tramp. One is an artist, that is, who has an eye for beauty. If you use a good and skilful companion, you shall see through his eyes; and, if they be of great discernment, you will learn wonderful secrets. In walking with Allston, you shall see what was never before shown to the eye of man. And as the perception of beauty always exhilarates, if one is so happy as to find the company of a true artist, he is a perpetual holiday and benefactor, and ought only to be used like an oriflamme or a garland, for feasts and May-days, and parliaments of wit and love.

The other is a naturalist, for the reason that it is much better to learn the elements of geology, of botany, of ornithology and astronomy by word of mouth from a companion than dully from a book. There is so much, too, which a book cannot teach which an old friend can. A man should carry Nature in his head—should know the hour of the day or night, and the time of the year, by the sun and stars; should know the solstice and the equinox, the quarter of the moon and the daily tides.²⁸⁷⁹

This is my ideal of the powers of wealth. Find out what lake or sea Agassiz wishes to explore, and offer to carry him there, and he will make you acquainted with all its fishes: or what district Dr. Gray has not found the plants of,—carry him; or when Dr. Wyman wishes to find new anatomic structures or fossil remains; or when Dr. Charles Jackson or Mr. Hall would study chemistry or mines; and you secure the best company and the best teaching with every advantage.²⁸⁸⁰

But the countryman, as I said, has more than he paid for; the landscape is his. I am sorry to say the farmers seldom walk for pleasure. It is a fine art;—there are degrees of proficiency, and we distinguish the professors of that science from the apprentices. But there is a manifest increase in the taste for it. 'T is the consolation of mortal men. It is an old saying that physicians or naturalists are the only professional men who continue their tasks out of study-hours; and the naturalist has no barren places, no winter, and no night, pursuing his researches in the sea, in the ground, in barren moors, in the night even, because the woods exhibit a whole new world of nocturnal animals; in winter, because, remove the snow a little, a multitude of plants live and grow, and there is a perpetual push of buds, so that it is impossible to say when vegetation begins. I think no pursuit has more breath of immortality in it.

I admire in trees the creation of property so clean of tears, or crime, or even care. No lesson of chemistry is more impressive to me than this chemical fact that "Nineteen twentieths of the timber are drawn from the atmosphere." We knew the root was sucking juices from the ground. But the top of the tree is also a tap-root thrust into the public pocket of the atmosphere. This is a highwayman, to be sure. And I am always glad to remember that in proportion to the foliation is the addition of wood. Then they grow, when you wake and when you sleep, at nobody's cost, and

for everybody's comfort. Lord Abercorn, when some one praised the rapid growth of his trees, replied, "Sir, they have nothing else to do!"

That uncorrupted behavior which we admire in the animals, and in young children, belongs also to the farmer, the hunter, the sailor, the man who lives in the presence of Nature. Cities force the growth and make him talkative and entertaining, but they make him artificial. What alone possesses interest for us is the *nature* of each, that which is constitutional to him only. This is forever a surprise, and engaging, and lovely; we can't be satiated with knowing it, and about it, and this is that which the conversation with Nature goes to cherish and to guard.

The man finds himself expressed in Nature. Yet when he sees this annual reappearance of beautiful forms, the lovely carpet, the lovely tapestry of June, he may well ask himself the special meaning of the hieroglyphic, as well as the sense and scope of the whole—and there is a general sense which the best knowledge of the particular alphabet leaves unexplained.²⁸⁸¹

V. BOSTON

"WE ARE citizens of two fair cities," said the Genoese gentle man to a Florentine artist, "and if I were not a Genoese, I should wish to be Florentine." "And I," replied the artist, "if I were not Florentine—" "You would wish to be Genoese," said the other. "No," replied the artist, "I should wish to be Florentine."

THE ROCKY nook with hilltops three
 Looked eastward from the farms,
And twice each day the flowing sea
 Took Boston in its arms.

.

The sea returning day by day
 Restores the world-wide mart;
So let each dweller on the Bay
 Fold Boston in his heart.

Let the blood of her hundred thousands
 Throb in each manly vein,
And the wits of all her wisest
 Make sunshine in her brain.

And each shall care for other,
 And each to each shall bend,
To the poor a noble brother,
 To the good an equal friend.

A blessing through the ages thus
 Shield all thy roofs and towers!
GOD WITH THE FATHERS, SO WITH US,
 Thou darling town of ours!

BOSTON

THE OLD physiologists said, "There is in the air a hidden food of life;" and they watched the effect of different climates. They believed the air of mountains and the seashore a potent predisposer to rebellion. The air was a good republican, and it was remarked that insular people are versatile and addicted to change, both in religious and secular affairs.

The air that we breathe is an exhalation of all the solid material globe. An ærial fluid streams all day, all night, from every flower and leaf, from every water and soil, from every rock ledge; and from every stratum a different aroma and air according to its quality. According to quality and according to temperature, it must have effect on manners.²⁸⁸²

There is the climate of the Sahara: a climate where the sunbeams are vertical; where is day after day, sunstroke after sunstroke, with a frosty shadow between. "There are countries," said Howell, "where the heaven is a fiery furnace or a blowing bellows, or a dropping sponge, most parts of the year." Such is the assimilating force of the Indian climate that Sir Erskine Perry says "the usage and opinion of the Hindoos so invades men of all castes and colors

who deal with them that all take a Hindoo tint. Parsee, Mongol, Afghan, Israelite, Christian, have all passed under this influence and exchanged a good part of their patrimony of ideas for the notions, manner of seeing and habitual tone of Indian society." He compares it to the geologic phenomenon which the black soil of the Dhakkan offers,—the property, namely, of assimilating to itself every foreign substance introduced into its bosom.

How can we not believe in influences of climate and air, when, as true philosophers, we must believe that chemical atoms also have their spiritual cause why they are thus and not other; that carbon, oxygen, alum and iron, each has its origin in spiritual nature?

Even at this day men are to be found superstitious enough to believe that to certain spots on the surface of the planet special powers attach, and an exalted influence on the genius of man. And it appears as if some localities of the earth, through wholesome springs, or as the *habitat* of rare plants and minerals, or through ravishing beauties of Nature, were preferred before others. There is great testimony of discriminating persons to the effect that Rome is endowed with the enchanting property of inspiring a longing in men there to live and there to die.²⁸⁸³

Who lives one year in Boston ranges through all the climates of the globe. And if the character of the people has a larger range and greater versatility, causing them to exhibit equal dexterity in what are elsewhere reckoned incompatible works, perhaps they may thank their climate of extremes, which at one season gives them the splendor of the equator and a touch of Syria, and then runs down to a cold which approaches the temperature of the celestial spaces.

It is not a country of luxury or of pictures; of snows rather, of east winds and changing skies; visited by icebergs, which, floating by, nip with their cool breath our blossoms. Not a luxurious climate,—

but wisdom is not found with those who dwell at their ease. Give me a climate where people think well and construct well,—I will spend six months there, and you may have all the rest of my years.

What Vasari said, there hundred years ago, of the republican city of Florence might be said of Boston; "that the desire for glory and honor is powerfully generated by the air of that place, in the men of every profession; whereby all who possess talent are impelled to struggle that they may not remain in the same grade with those whom they perceive to be only men like themselves, even though they may acknowledge such indeed to be masters; but all labor by every means to be foremost."

We find no less stimulus in our native air; not less ambition in our blood, which Puritanism has not sufficiently chastised; and at least an equal freedom in our laws and customs, with as many and as tempting rewards to toil; with so many philanthropies, humanities, charities, soliciting us to be great and good.

New England is a sort of Scotland. 'T is hard to say why. Climate is much; then, old accumulation of the means,—books, schools, colleges, literary society;—as New Bedford is not nearer to the whales than New London or Portland, yet they have all the equipments for a whaler ready, and they hug an oil-cask like a brother.

I do not know that Charles River or Merrimac water is more clarifying to the brain than the Savannah or Alabama rivers, yet the men that drink it get up earlier, and some of the morning light lasts through the day. I notice that they who drink for some little time of the Potomac water lose their relish for the water of the Charles River, of the Merrimac and the Connecticut,—even of the Hudson. I think the Potomac water is a little acid, and should be corrected by copious infusions of these provincial streams.

Of great cities you cannot compute the influences. In New York, in Montreal, New Orleans and the farthest colonies,—in Guiana, in Guadaloupe,—a middle-aged gentleman is just embarking with all his property to fulfil the dream of his life and spend his old age in Paris; so that a fortune falls into the massive wealth of that city every day in the year. Astronomers come because there they can find apparatus and companions. Chemist, geologist, artist, musician, dancer, because there only are grandees and their patronage, appreciators and patrons. Demand and supply run into every invisible and unnamed province of whim and passion.

Each great city gathers these values and delights for mankind, and comes to be the brag of its age and population. The Greeks thought him unhappy who died without seeing the statue of Jove at Olympia. With still more reason, they praised Athens, the "Violet City." It was said of Rome in its proudest days, looking at the vast radiation of the privilege of Roman citizenship through the then-known world,—*"the extent of the city and of the world is the same"* (*spatium et urbis et orbis idem*). London now for a thousand years has been in an affirmative or energizing mood; has not stopped growing. Linnæus, like a naturalist, esteeming the globe a big egg, called London the *punctum saliens* in the yolk of the world.

This town of Boston has a history. It is not an accident, not a windmill, or a railroad station, or cross-roads tavern, or an army-barracks grown up by time and luck to a place of wealth; but a seat of humanity, of men of principle, obeying a sentiment and marching loyally whither that should lead them; so that its annals are great historical lines, inextricably national; part of the history of political liberty. I do not speak with any fondness, but the language of coldest history, when I say that Boston commands attention as

the town which was appointed in the destiny of nations to lead the civilization of North America.

A capital fact distinguishing this colony from all other colonies was that the persons composing it consented to come on the one condition that the charter should be transferred from the company in England to themselves; and so they brought the government with them.

On the 3d of November, 1620, King James incorporated forty of his subjects, Sir F. Gorges and others, the council established at Plymouth in the county of Devon for the planting, ruling, ordering and governing of New England in America. The territory—conferred on the patentees in absolute property, with unlimited jurisdiction, the sole power of legislation, the appointment of all officers and all forms of government—extended from the 40th to the 48th degree of north latitude, and in length from the Atlantic to the Pacific.

John Smith writes (1624): "Of all the four parts of the world that I have yet seen not inhabited, could I but have means to transplant a colony, I would rather live here than anywhere; and if it did not maintain itself, were we but once indifferently well fitted, let us starve. Here are many isles planted with corn, groves, mulberries, salvage gardens and good harbours. The seacoast, as you pass, shows you all along large cornfields and great troops of well-proportioned people." Massachusetts in particular, he calls "the paradise of these parts," notices its high mountain, and its river, "which doth pierce many days' journey into the entrails of that country." Morton arrived in 1622, in June, beheld the country, and "the more he looked, the more he liked it."

In sixty-eight years after the foundation of Boston, Dr. Mather writes of it, "The town hath indeed three elder Sisters in this colony, but it hath wonderfully outgrown them all, and her mother,

Old Boston in England, also; yea, within a few years after the first settlement it grew to be the metropolis of the whole English America."

How easy it is, after the city is built, to see where it ought to stand. In our beautiful bay, with its broad and deep waters covered with sails from every port; with its islands hospitably shining in the sun; with its waters bounded and marked by lighthouses, buoys and sea-marks; every foot sounded and charted; with its shores trending steadily from the two arms which the capes of Massachusetts stretch out to sea, down to the bottom of the bay where the city domes and spires sparkle through the haze,—a good boatman can easily find his way for the first time to the State House, and wonder that Governor Carver had not better eyes than to stop on the Plymouth Sands.

But it took ten years to find this out. The colony of 1620 had landed at Plymouth. It was December, and the ground was covered with snow. Snow and moonlight make all places alike; and the weariness of the sea, the shrinking from cold weather and the pangs of hunger must justify them.

But the next colony planted itself at Salem, and the next at Weymouth; another at Medford; before these men, instead of jumping on to the first land that offered, wisely judged that the best point for a city was at the bottom of a deep and islanded bay, where a copious river entered it, and where a bold shore was bounded by a country of rich undulating woodland.

The planters of Massachusetts do not appear to have been hardy men, rather, comfortable citizens, not at all accustomed to the rough task of discoverers; and they exaggerated their troubles. Bears and wolves were many; but early, they believed there were lions; Monadnoc was burned over to kill them. John Smith was

stung near to death by the most poisonous tail of a fish, called a sting-ray. In the journey of Rev. Peter Bulkeley and his company through the forest from Boston to Concord they fainted from the powerful odor of the sweetfern in the sun;—like what befell, still earlier, Biorn and Thorfinn, Northmen, in their expedition to the same coast; who ate so many grapes from the wild vines that they were reeling drunk. The lions have never appeared since,—nor before. Their crops suffered from pigeons and mice. Nature has never again indulged in these exasperations. It seems to have been the last outrage ever committed by the sting-rays or by the sweetfern or by the fox-grapes; they have been of peaceable behavior ever since.

Any geologist or engineer is accustomed to face more serious dangers than any enumerated, excepting the hostile Indians. But the awe was real and overpowering in the superstition with which every new object was magnified. The superstition which hung over the new ocean had not yet been scattered; the powers of the savage were not known; the dangers of the wilderness were unexplored; and in that time terrors of witchcraft, terrors of evil spirits, and a certain degree of terror still clouded the idea of God in the mind of the purest.

The divine will descends into the barbarous mind in some strange disguise; its pure truth not to be guessed from the rude vizard under which it goes masquerading. The common eye cannot tell what the bird will be, from the egg, nor the pure truth from the grotesque tenet which sheathes it. But by some secret tie it holds the poor savage to it, and he goes muttering his rude ritual or mythology, which yet conceals some grand commandment; as courage, veracity, honesty, or chastity and generosity.

So these Englishmen, with the Middle Ages still obscuring their reason, were filled with Christian thought. They had a culture of

their own. They read Milton, Thomas à Kempis, Bunyan and Flavel with religious awe and delight, not for entertainment. They were precisely the idealists of England; the most religious in a religious era. An old lady who remembered these pious people said of them that "they had to hold on hard to the huckleberry bushes to hinder themselves from being translated."

In our own age we are learning to look, as on chivalry, at the sweetness of that ancient piety which makes the genius of St. Bernard, Latimer, Scougal, Jeremy Taylor, Herbert and Leighton. Who can read the fiery ejaculations of Saint Augustine, a man of as clear a sight as almost any other; of Thomas à Kempis, of Milton, of Bunyan even, without feeling how rich and expansive a culture—not so much a culture as a higher life—they owed to the promptings of this sentiment; without contrasting their immortal heat with the cold complexion of our recent wits? Who can read the pious diaries of the Englishmen in the time of the Commonwealth and later, without a sigh that we write no diaries to-day? Who shall restore to us the odoriferous Sabbaths which made the earth and the humble roof a sanctity?

This spirit, of course, involved that of Stoicism, as, in its turn, Stoicism did this. Yet how much more attractive and true that this piety should be the central trait and the stern virtues follow than that Stoicism should face the gods and put Jove on his defence. That piety is a refutation of every skeptical doubt. These men are a bridge to us between the unparalleled piety of the Hebrew epoch and our own. These ancient men, like great gardens with great banks of flowers, send out their perfumed breath across the great tracts of time. How needful is David, Paul, Leighton, Fénelon, to our devotion. Of these writers, of this spirit which deified them, I will say with Confucius, "If in the morning I hear of the right way, and in the evening die, I can be happy."

I trace to this deep religious sentiment and to its culture great and salutary results to the people of New England; first, namely, the culture of the intellect, which has always been found in the Calvinistic Church. The colony was planted in 1620; in 1638 Harvard College was founded. The General Court of Massachusetts, in 1647, "To the end that learning may not be buried in the graves of the forefathers, ordered, that every township, after the Lord has increased them to the number of fifty householders, shall appoint one to teach all children to write and read; and where any town shall increase to the number of a hundred families, they shall set up a Grammar School, the Masters thereof being able to instruct youth so far as they may be fitted for the University."

Many and rich are the fruits of that simple statute. The universality of an elementary education in New England is her praise and her power in the whole world. To the schools succeeds the village lyceum,—now very general throughout all the country towns of New England,—where every week through the winter, lectures are read and debates sustained which prove a college for the young rustic. Hence it happens that the young farmers and mechanics, who work all summer in the field or shop, in the winter often go into a neighboring town to teach the district school arithmetic and grammar. As you know, too, New England supplies annually a large detachment of preachers and schoolmasters and private tutors to the interior of the South and West.

New England lies in the cold and hostile latitude, which by shutting men up in houses and tight and heated rooms a large part of the year, and then again shutting up the body in flannel and leather, defrauds the human being in some degree of his relations to external nature; takes from the muscles their suppleness, from the skin its exposure to the air; and the New Englander, like every

other Northerner, lacks that beauty and grace which the habit of living much in the air, and the activity of the limbs not in labor but in graceful exercise, tend to produce in climates nearer to the sun. Then the necessity, which always presses the Northerner, of providing fuel and many clothes and tight houses and much food against the long winter, makes him anxiously frugal, and generates in him that spirit of detail which is not grand and enlarging, but goes rather to pinch the features and degrade the character.

As an antidote to the spirit of commerce and of economy, the religious spirit—always enlarging, firing man, prompting the pursuit of the vast, the beautiful, the unattainable—was especially necessary to the culture of New England. In the midst of her laborious and economical and rude and awkward population, where is little elegance and no facility; with great accuracy in details, little spirit of society or knowledge of the world, you shall not unfrequently meet that refinement which no education and no habit of society can bestow; which makes the elegance of wealth look stupid, and unites itself by natural affinity to the highest minds of the world; nourishes itself on Plato and Dante, Michael Angelo and Milton; on whatever is pure and sublime in art,—and I may say, gave a hospitality in this country to the spirit of Coleridge and Wordsworth, and to the music of Beethoven, before yet their genius had found a hearty welcome in Great Britain.²⁸⁸⁴

I do not look to find in England better manners than the best manners here. We can show native examples, and I may almost say (travellers as we are) natives who never crossed the sea, who possess all the elements of noble behavior.

It is the property of the religious sentiment to be the most refining of all influences. No external advantages, no good birth or breeding, no culture of the taste, no habit of command, no association with the elegant,—even no depth of affection that

does not rise to a religious sentiment, can bestow that delicacy and grandeur of bearing which belong only to a mind accustomed to celestial conversation. All else is coarse and external; all else is tailoring and cosmetics beside this;²⁸⁸⁵ for thoughts are expressed in every look or gesture, and these thoughts are as if angels had talked with the child.

By this instinct we are lifted to higher ground. The religious sentiment gave the iron purpose and arm. That colonizing was a great and generous scheme, manly meant and manly done. When one thinks of the enterprises that are attempted in the heats of youth, the Zoars, New Harmonies and Brook Farms, Oakdales and Phalansteries, which have been so profoundly ventilated, but end in a protracted picnic which after a few weeks or months dismisses the partakers to their old homes, we see with new increased respect the solid, well-calculated scheme of these emigrants, sitting down hard and fast where they came, and building their empire by due degrees.

John Smith says, "Thirty, forty, or fifty sail went yearly in America only to trade and fish, but nothing would be done for a plantation, till about some hundred of your Brownists of England, Amsterdam and Leyden went to New Plymouth; whose humorous ignorances caused them for more than a year to endure a wonderful deal of misery, with an infinite patience."

What should hinder that this America, so long kept in reserve from the intellectual races until they should grow to it, glimpses being afforded which spoke to the imagination, yet the firm shore hid until science and art should be ripe to propose it as a fixed aim, and a man should be found who should sail steadily west sixty-eight days from the port of Palos to find it,—what should hinder that this New Atlantis should have its happy ports, its mountains of

security, its gardens fit for human abode where all elements were right for the health, power and virtue of man?

America is growing like a cloud, towns on towns, states on states; and wealth (always interesting, since from wealth power cannot be divorced) is piled in every form invented for comfort or pride.

If John Bull interest you at home, come and see him under new conditions, come and see the Jonathanization of John.²⁸⁸⁶

There are always men ready for adventures,—more in an over-governed, over-peopled country, where all the professions are crowded and all character suppressed, than elsewhere. This thirst for adventure is the vent which Destiny offers; a war, a crusade, a gold-mine, a new country, speak to the imagination and offer swing and play to the confined powers.

The American idea, Emancipation, appears in our freedom of intellection, in our reforms and in our bad politics; it has, of course, its sinister side, which is most felt by the drilled and scholastic, but if followed it leads to heavenly places.

European and American are each ridiculous out of his sphere. There is a Columbia of thought and art and character, which is the last and endless sequel of Columbus's adventure.

European critics regret the detachment of the Puritans to this country without aristocracy; which a little reminds one of the pity of the Swiss mountaineers when shown a handsome Englishman: "What a pity he has no goitre!" The future historian will regard the detachment of the Puritans without aristocracy the supreme fortune of the colony; as great a gain to mankind as the opening of this continent.

There is a little formula, couched in pure Saxon, which you may hear in the corners of streets and in the yard of the dame's school, from very little republicans: "I 'm as good as you be," which contains the essence of the Massachusetts Bill of Rights and of

the American Declaration of Independence. And this was at the bottom of Plymouth Rock and of Boston Stone; and this could be heard (by an acute ear) in the Petitions to the King, and the platforms of churches, and was said and rung in every tone of the psalmody of the Puritans; in every note of Old Hundred and Hallelujah and Short Particular Metre.

What is very conspicuous is the saucy independence which shines in all their eyes. They could say to themselves, Well, at least this yoke of man, of bishops, of courtiers, of dukes, is off my neck. We are a little too close to wolf and famine than that anybody should give himself airs here in the swamp.

London is a long way off, with beadles and pursuivants and horse-guards. Here in the clam-banks and the beech and chestnut forest, I shall take leave to breathe and think freely. If you do not like it, if you molest me, I can cross the brook and plant a new state out of reach of anything but squirrels and wild pigeons.

Bonaparte sighed for his republicans of 1789. The soul of a political party is by no means usually the officers and pets of the party, who wear the honors and fill the high seats and spend the salaries. No, but the theorists and extremists, the men who are never contented and never to be contented with the work actually accomplished, but who from conscience are engaged to what that party professes,—these men will work and watch and rally and never tire in carrying their point. The theology and the instinct of freedom that grew here in the dark in serious men furnished a certain rancor which consumed all opposition, fed the party and carried it, over every rampart and obstacle, to victory.

Boston never wanted a good principle of rebellion in it, from the planting until now; there is always a minority unconvinced, always a heresiarch, whom the governor and deputies labor with but cannot silence. Some new light, some new doctrinaire who makes

an unnecessary ado to establish his dogma; some Wheelwright or defender of Wheelwright; some protester against the cruelty of the magistrates to the Quakers; some tender minister hospitable to Whitfield against the counsel of all the ministers; some John Adams and Josiah Quincy and Governor Andrew to undertake and carry the defence of patriots in the courts against the uproar of all the province; some defender of the slave against the politician and the merchant; some champion of first principles of humanity against the rich and luxurious; some adversary of the death penalty; some pleader for peace; some noble protestant, who will not stoop to infamy when all are gone mad, but will stand for liberty and justice, if alone, until all come back to him.²⁸⁸⁷

I confess I do not find in our people, with all their education, a fair share of originality of thought;—not any remarkable book of wisdom; not any broad generalization, any equal power of imagination. No *Novum Organon*; no *Mécanique Céleste*; no *Principia*; no *Paradise Lost*; no *Hamlet*; no *Wealth of Nations*; no *National Anthem* have we yet contributed.

Nature is a frugal mother and never gives without measure. When she has work to do, she qualifies men for that and sends them equipped for that. In Massachusetts she did not want epic poems and dramas yet, but first, planters of towns, fellers of the forest, builders of mills and forges, builders of roads, and farmers to till and harvest corn for the world. Corn, yes, but honest corn; corn with thanks to the Giver of corn; and the best thanks, namely, obedience to his law; this was the office imposed on our Founders and people; liberty, clean and wise. It was to be built on Religion, the Emancipator; Religion which teaches equality of all men in view of the spirit which created man.

The seed of prosperity was planted. The people did not gather where they had not sown. They did not try to unlock the treasure of the world except by honest keys of labor and skill. They knew, as God knew, that command of Nature comes by obedience to Nature; that reward comes by faithful service; that the most noble motto was that of the Prince of Wales,—“I serve,”—and that he is greatest who serves best. There was no secret of labor which they disdained.

They accepted the divine ordination that man is for use; that intelligent being exists to the utmost use; and that his ruin is to live for pleasure and for show. And when within our memory some flippant senator wished to taunt the people of this country by calling them “the mudsills of society,” he paid them ignorantly a true praise; for good men are as the green plain of the earth is, as the rocks, and the beds of rivers are, the foundation and flooring and sills of the state.

The power of labor which belongs to the English race fell here into a climate which befriended it, and into a maritime country made for trade, where was no rival and no envious lawgiver. The sailor and the merchant made the law to suit themselves, so that there was never, I suppose, a more rapid expansion in population, wealth and all the elements of power, and in the citizens’ consciousness of power and sustained assertion of it, than was exhibited here.

Moral values become also money values. When men saw that these people, besides their industry and thrift, had a heart and soul, and would stand by each other at all hazards, they desired to come and live here. A house in Boston was worth as much again as a house just as good in a town of timorous people, because here the neighbors would defend each other against bad governors and against troops; quite naturally house-rents rose in Boston.

Besides, youth and health like a stirring town, above a torpid place where nothing is doing. In Boston they were sure to see something going forward before the year was out. For here was the moving principle itself, the *primum mobile*, a living mind agitating the mass and always afflicting the conservative class with some odious novelty or other; a new religious sect, a political point, a point of honor, a reform in education, a philanthropy.

From Roger Williams and Eliot and Robinson and the Quaker women who for a testimony walked naked into the streets, and as the record tells us "were arrested and publicly whipped,—the baggages that they were;"²⁸⁸⁸ from Wheelwright the Antinomian, and Ann Hutchinson, and Whitfield, and Mother Ann the first Shaker, down to Abner Kneeland, and Father Lamson, and William Garrison, there never was wanting some thorn of dissent and innovation and heresy to prick the sides of conservatism.

With all their love of his person, they took immense pleasure in turning out the governor and deputy and assistants, and contravening the counsel of the clergy; as they had come so far for the sweet satisfaction of resisting the Bishops and the King.

The Massachusetts colony grew and filled its own borders with a denser population than any other American State (Kossuth called it the City State), all the while sending out colonies to every part of New England; then South and West, until it has infused all the Union with its blood.

We are willing to see our sons emigrate, as to see our hives swarm. That is what they were made to do, and what the land wants and invites. The towns or countries in which the man lives and dies where he was born, and his son and son's son live and die where he did, are of no great account.

I know that this history contains many black lines of cruel injustice; murder, persecution, and execution of women for witchcraft.

I am afraid there are anecdotes of poverty and disease in Broad Street that match the dismal statistics of New York and London. No doubt all manner of vices can be found in this, as in every city; infinite meanness, scarlet crime. Granted. But there is yet in every city a certain permanent tone; a tendency to be in the right or in the wrong; audacity or slowness; labor or luxury; giving or parsimony; which side is it on? And I hold that a community, as a man, is entitled to be judged by his best.

We are often praised for what is least ours. Boston too is sometimes pushed into a theatrical attitude of virtue, to which she is not entitled and which she cannot keep. But the genius of Boston is seen in her real independence, productive power and northern acuteness of mind,—which is in nature hostile to oppression. It is a good city as cities go; Nature is good. The climate is electric, good for wit and good for character. What public souls have lived here, what social benefactors, what eloquent preachers, skilful workmen, stout captains, wise merchants; what fine artists, what gifted conversers, what mathematicians, what lawyers, what wits; and where is the middle class so able, virtuous and instructed?

And thus our little city thrives and enlarges, striking deep roots, and sending out boughs and buds, and propagating itself like a banyan over the continent. Greater cities there are that sprung from it, full of its blood and name and traditions. It is very willing to be outnumbered and outgrown, so long as they carry forward its life of civil and religious freedom, of education, of social order, and of loyalty to law.²⁸⁸⁹ It is very willing to be outrun in numbers, and in wealth; but it is very jealous of any superiority in these, its natural instinct and privilege. You cannot conquer it by numbers, or by square miles, or by counted millions of wealth. For it owes

its existence and its power to principles not of yesterday, and the deeper principle will always prevail over whatever material accumulations.

As long as she cleaves to her liberty, her education and to her spiritual faith as the foundation of these, she will teach the teachers and rule the rulers of America. Her mechanics, her farmers will toil better; she will repair mischief; she will furnish what is wanted in the hour of need; her sailors will man the Constitution; her mechanics repair the broken rail; her troops will be the first in the field to vindicate the majesty of a free nation, and remain last on the field to secure it. Her genius will write the laws and her historians record the fate of nations.

In an age of trade and material prosperity, we have stood a little stupefied by the elevation of our ancestors. We praised the Puritans because we did not find in ourselves the spirit to do the like. We praised with a certain adulation the invariable valor of the old war-gods and war-councillors of the Revolution. Washington has seemed an exceptional virtue. This praise was a concession of unworthiness in those who had so much to say of it. The heroes only shared this power of a sentiment, which, if it now breathes into us, will make it easy to us to understand them, and we shall not longer flatter them. Let us shame the fathers, by superior virtue in the sons.

It is almost a proverb that a great man has not a great son. Bacon, Newton and Washington were childless. But, in Boston, Nature is more indulgent, and has given good sons to good sires, or at least continued merit in the same blood. The elder President Adams has to divide voices of fame with the younger President Adams. The elder Otis could hardly excel the popular eloquence of the younger Otis; and the Quincy of the Revolution seems

compensated for the shortness of his bright career in the son who
so long lingers among the last of those bright clouds,

"That on the steady breeze of honor sail
In long succession calm and beautiful."²⁸⁹⁰

Here stands to-day, as of yore, our little city of the rocks; here
let it stand forever, on the man-bearing granite of the North! Let
her stand fast by herself! She has grown great. She is filled with
strangers, but she can only prosper by adhering to her faith. Let
every child that is born of her and every child of her adoption
see to it to keep the name of Boston as clean as the sun; and in
distant ages her motto shall be the prayer of millions on all the hills
that gird the town, "As with our Fathers, so God be with us!" SICUT
PATRIBUS, SIT DEUS NOBIS!

VI. MICHAEL ANGELO

"NEVER DID sculptor's dream unfold
A form which marble doth not hold
In its white block; yet it therein shall find
Only the hand secure and bold
Which still obeys the mind."

Michael Angelo's Sonnets.

"NON HA l' ottimo artista alcun concetto,
Ch' un marmo solo in sè non circoscriva
Col suo soverchio, e solo a quello arriva
La man che obbedisce all' intelletto."

M. Angelo, Sonnetto primo.

MICHAEL ANGELO

FEW LIVES of eminent men are harmonious; few that furnish, in all the facts, an image corresponding with their fame. But all things recorded of Michael Angelo Buonarotti agree together. He lived one life; he pursued one career. He accomplished extraordinary works; he uttered extraordinary words; and in this greatness was so little eccentricity, so true was he to the laws of the human mind, that his character and his works, like Sir Isaac Newton's, seem rather a part of Nature than arbitrary productions of the human will. Especially we venerate his moral fame. Whilst his name belongs to the highest class of genius, his life contains in it no injurious influence. Every line in his biography might be read to the human race with wholesome effect. The means, the materials of his activity, were coarse enough to be appreciated, being addressed for the most part to the eye; the results, sublime and all innocent. A purity severe and even terrible goes out from the lofty productions of his pencil and his chisel, and again from the more perfect sculpture of his own life, which heals and exalts. "He nothing common did, or mean,"²⁸⁹¹ and, dying at the end of near ninety years, had not yet

become old, but was engaged in executing his grand conceptions in the ineffaceable architecture of Saint Peter's.

Above all men whose history we know, Michael Angelo presents us with the perfect image of the artist. He is an eminent master in the four fine arts, Painting, Sculpture, Architecture and Poetry. In three of them by visible means, and in poetry by words, he strove to express the Idea of Beauty. This idea possessed him and determined all his activity. Beauty in the largest sense, beauty inward and outward, comprehending grandeur as a part, and reaching to goodness as its soul,—this to receive and this to impart, was his genius.

It is a happiness to find, amid the falsehood and griefs of the human race, a soul at intervals born to behold and create only Beauty. So shall not the indescribable charm of the natural world, the great spectacle of morn and evening which shut and open the most disastrous day, want observers. The ancient Greeks called the world κόσμος, *Beauty*; a name which, in our artificial state of society, sounds fanciful and impertinent. Yet, in proportion as man rises above the servitude to wealth and a pursuit of mean pleasures, he perceives that what is most real is most beautiful, and that, by the contemplation of such objects, he is taught and exalted. This truth, that perfect beauty and perfect goodness are one, was made known to Michael Angelo; and we shall endeavor by sketches from his life to show the direction and limitations of his search after this element.

In considering a life dedicated to the study of Beauty, it is natural to inquire, what is Beauty? Can this charming element be so abstracted by the human mind as to become a distinct and permanent object? Beauty cannot be defined. Like Truth, it is an ultimate aim of the human being. It does not lie within the limits of the understanding. "The nature of the beautiful"—we gladly

borrow the language of Moritz, a German critic—"consists herein, that because the understanding in the presence of the beautiful cannot ask, 'Why is it beautiful?' for that reason is it so. There is no standard whereby the understanding can determine whether objects are beautiful or otherwise. What other standard of the beautiful exists than the entire circuit of all harmonious proportions of the great system of Nature? All particular beauties scattered up and down in Nature are only so far beautiful as they suggest more or less in themselves this entire circuit of harmonious proportions." This great Whole the understanding cannot embrace. Beauty may be felt. It may be produced. But it cannot be defined.

The Italian artists sanction this view of Beauty by describing it as *il più nell' uno*, "the many in one," or multitude in unity, intimating that what is truly beautiful seems related to all Nature. A beautiful person has a kind of universality, and appears to have truer conformity to all pleasing objects in external Nature than another. Every great work of art seems to take up into itself the excellencies of all works, and to present, as it were, a miniature of Nature.

In relation to this element of Beauty, the minds of men divide themselves into two classes. In the first place, all men have an organization corresponding more or less to the entire system of Nature, and therefore a power of deriving pleasure from Beauty. This is Taste. In the second place, certain minds, more closely harmonized with Nature, possess the power of abstracting Beauty from things, and reproducing it in new forms, on any object to which accident may determine their activity; as stone, canvas, song, history. This is Art.

Since Beauty is thus an abstraction of the harmony and proportion that reigns in all Nature, it is therefore studied in Nature, and not in what does not exist. Hence the celebrated French maxim of Rhetoric, *Rien de beau que le vrai*; "Nothing is

beautiful but what is true." It has a much wider application than to Rhetoric; as wide, namely, as the terms of the proposition admit. In art, Michael Angelo is himself but a document or verification of this maxim. He labored to express the beautiful, in the entire conviction that it was only to be attained unto by knowledge of the true. The common eye is satisfied with the surface on which it rests. The wise eye knows that it is surface, and, if beautiful, only the result of interior harmonies, which, to him who knows them, compose the image of higher beauty. Moreover, he knew well that only by an understanding of the internal mechanism can the outside be faithfully delineated. The walls of houses are transparent to the architect. The symptoms disclose the constitution to the physician; and to the artist it belongs by a better knowledge of anatomy, and, within anatomy, of life and thought, to acquire the power of true drawing. "The human form," says Goethe, "cannot be comprehended through seeing its surface. It must be stripped of the muscles, its parts separated, its joints observed, its divisions marked, its action and counteraction learned; the hidden, the reposing, the foundation of the apparent, must be searched, if one would really see and imitate what moves as a beautiful, inseparable whole in living waves before the eye." Michael Angelo dedicated himself, from his childhood to his death, to a toilsome observation of Nature. The first anecdote recorded of him shows him to be already on the right road. Granacci, a painter's apprentice, having lent him, when a boy, a print of Saint Antony beaten by devils, together with some colors and pencils, he went to the fish-market to observe the form and color of fins and of the eyes of fish. Cardinal Farnese one day found him, when an old man, walking alone in the Coliseum, and expressed his surprise at finding him solitary amidst the ruins; to which he replied, "I go yet to school that I may continue to learn." And one of the last drawings in his

portfolio is a sublime hint of his own feeling; for it is a sketch of an old man with a long beard, in a go-cart, with an hour-glass before him; and the motto, *Ancora imparo*, "I still learn."

In this spirit he devoted himself to the study of anatomy for twelve years; we ought to say, rather, as long as he lived. The depth of his knowledge in anatomy has no parallel among the artists of modern times. Most of his designs, his contemporaries inform us, were made with a pen, and in the style of an engraving on copper or wood; a manner more expressive but not admitting of correction. When Michael Angelo would begin a statue, he made first on paper the *skeleton*; afterwards, upon another paper, the same figure clothed with muscles. The studies of the statue of Christ in the Church of Minerva at Rome, made in this manner, were long preserved.

Those who have never given attention to the arts of design are surprised that the artist should find so much to study in a fabric of such limited parts and dimensions as the human body. But reflection discloses evermore a closer analogy between the finite form and the infinite inhabitant. Man is the highest, and indeed the only proper object of plastic art. There needs no better proof of our instinctive feeling of the immense expression of which the human figure is capable than the uniform tendency which the religion of every country has betrayed towards Anthropomorphism, or attributing to the Deity the human form. And behold the effect of this familiar object every day! No acquaintance with the secrets of its mechanism, no degrading views of human nature, not the most swinish compost of mud and blood that was ever misnamed philosophy, can avail to hinder us from doing involuntary reverence to any exhibition of majesty or surpassing beauty in human clay.

Our knowledge of its highest expression we owe to the Fine Arts. Not easily in this age will any man acquire by himself such

perceptions of the dignity or grace of the human frame as the student of art owes to the remains of Phidias, to the Apollo, the Jove, the paintings and statues of Michael Angelo, and the works of Canova. There are now in Italy, both on canvas and in marble, forms and faces which the imagination is enriched by contemplating. Goethe says that he is but half himself who has never seen the Juno in the Rondanini Palace at Rome. Seeing these works true to human nature and yet superhuman, "we feel that we are greater than we know." Seeing these works, we appreciate the taste which led Michael Angelo, against the taste and against the admonition of his patrons, to cover the walls of churches with unclothed figures, "improper," says his biographer, "for the place, but proper for the exhibition of all the pomp of his profound knowledge."

The love of beauty which never passes beyond outline and color was too slight an object to occupy the powers of his genius. There is a closer relation than is commonly thought between the fine arts and the useful arts; and it is an essential fact in the history of Michael Angelo that his love of beauty is made solid and perfect by his deep understanding of the mechanic arts. Architecture is the bond that unites the elegant and the economical arts, and his skill in this is a pledge of his capacity in both kinds. His Titanic handwriting in marble and travertine is to be found in every part of Rome and Florence; and even at Venice, on defective evidence, he is said to have given the plan of the bridge of the Rialto. Nor was his a skill in ornament, or confined to the outline and designs of towers and façades, but a thorough acquaintance with all the secrets of the art, with all the details of economy and strength.

When the Florentines united themselves with Venice, England and France, to oppose the power of the Emperor Charles V., Michael Angelo was appointed Military Architect and Engineer, to superintend the erection of the necessary works. He visited

Bologna to inspect its celebrated fortifications, and, on his return, constructed a fortification on the heights of San Miniato, which commands the city and environs of Florence. On the 24th of October, 1529, the Prince of Orange, general of Charles V., encamped on the hills surrounding the city, and his first operation was to throw up a rampart to storm the bastion of San Miniato. His design was frustrated by the providence of Michael Angelo. Michael made such good resistance that the Prince directed the artillery to demolish the tower. The artist hung mattresses of wool on the side exposed to the attack, and by means of a bold projecting cornice, from which they were suspended, a considerable space was left between them and the wall. This simple expedient was sufficient, and the Prince was obliged to turn his siege into a blockade.

After an active and successful service to the city for six months, Michael Angelo was informed of a treachery that was ripening within the walls. He communicated it to the government with his advice upon it; but was mortified by receiving from the government reproaches at his credulity and fear. He replied that "it was useless for him to take care of the walls, if they were determined not to take care of themselves," and he withdrew privately from the city to Ferrara, and thence to Venice. The news of his departure occasioned a general concern in Florence, and he was instantly followed with apologies and importunities to return. He did so, and resumed his office. On the 21st of March, 1530, the Prince of Orange assaulted the city by storm. Michael Angelo is represented as having ordered his defence so vigorously that the Prince was compelled to retire. By the treachery, however, of the general of the Republic, Malatesta Baglioni, all his skill was rendered unavailing, and the city capitulated on the 9th of August. The excellence of the works constructed by our artist has been approved by Vauban, who visited them and took a plan of them.

In Rome, Michael Angelo was consulted by Pope Paul III. in building the fortifications of San Borgo. He built the stairs of Ara Celi leading to the church once the temple of Jupiter Capitolinus; he arranged the piazza of the Capitol, and built its porticos. He was charged with rebuilding the Pons Palatinus over the Tiber. He prepared, accordingly, a large quantity of blocks of travertine, and was proceeding with the work, when, through the intervention of his rivals, this work was taken from him and intrusted to Nanni di Bacio Bigio, who plays but a pitiful part in Michael's history. Nanni sold the travertine, and filled up the piers with gravel at a small expense. Michael Angelo made known his opinion that the bridge could not resist the force of the current; and one day riding over it on horseback, with his friend Vasari, he cried, "George, this bridge trembles under us; let us ride faster lest it fall whilst we are upon it." It fell, five years after it was built, in 1557, and is still called the "Broken Bridge."

Versatility of talent in men of undoubted ability always awakens the liveliest interest; and we observe with delight that, besides the sublimity and even extravagance of Michael Angelo, he possessed an unexpected dexterity in minute mechanical contrivances. When the Sistine Chapel was prepared for him, that he might paint the ceiling, he found the platform on which he was to work suspended by ropes which passed through the ceiling. Michael demanded of San Gallo, the pope's architect, how these holes were to be repaired in the picture. San Gallo replied: "That was for him to consider, for the platform could be constructed in no other way." Michael removed the whole, and constructed a movable platform to rest and roll upon the floor, which is believed to be the same simple contrivance which is used in Rome, at this day, to repair the walls of churches. He gave this model to a carpenter, who made it so profitable as to furnish a dowry for his two daughters. He

was so nice in tools that he made with his own hand the wimbles, the files, the rasps, the chisels and all other irons and instruments which he needed in sculpture; and in painting, he not only mixed but ground his colors himself, trusting no one.

And not only was this discoverer of Beauty, and its teacher among men, rooted and grounded in those severe laws of practical skill, which genius can never teach, and which must be learned by practice alone, but he was one of the most industrious men that ever lived. His diligence was so great that it is wonderful how he endured its fatigues. The midnight battles, the forced marches, the winter campaigns of Julius Cæsar or Charles XII. do not indicate greater strength of body or of mind. He finished the gigantic painting of the ceiling of the Sistine Chapel in twenty months, a fact which enlarges, it has been said, the known powers of man. Indeed he toiled so assiduously at this painful work, that, for a long time after, he was unable to see any picture but by holding it over his head. A little bread and wine was all his nourishment; and he told Vasari that he often slept in his clothes, both because he was too weary to undress, and because he would rise in the night and go immediately to work. "I have found," says his friend, "some of his designs in Florence, where, whilst may be seen the greatness of his genius, it may also be known that when he wished to take Minerva from the head of Jove, there needed the hammer of Vulcan." He used to make to a single figure nine, ten, or twelve heads before he could satisfy himself, seeking that there should be in the composition a certain universal grace such as Nature makes, saying that "he needed to have his compasses in his eye, and not in his hand, because the hands work whilst the eye judges." He was accustomed to say, "Those figures alone are good from which the labor is scraped off when the scaffolding is taken away."

At near eighty years, he began in marble a group of four figures for a dead Christ, because, he said, to exercise himself with the mallet was good for his health.

And what did he accomplish? It does not fall within our design to give an account of his works, yet for the sake of the completeness of our sketch we will name the principal ones. Sculpture, he called *his art*, and to it he regretted he had not singly given himself. The style of his paintings is monumental; and even his poetry partakes of that character. In sculpture, his greatest work is the statue of Moses in the Church of Pietro in Vincolo, in Rome. It is a sitting statue of colossal size, and is designed to embody the Hebrew Law. The law-giver is supposed to gaze upon the worshippers of the golden calf. The majestic wrath of the figure daunts the beholder. In the Piazza del Gran Duca at Florence, stands, in the open air, his David, about to hurl the stone at Goliath. In the church called the Minerva, at Rome, is his Christ; an object of so much devotion to the people that the right foot has been shod with a brazen sandal to prevent it from being kissed away. In Saint Peter's, is his Pietà, or dead Christ in the arms of his mother. In the mausoleum of the Medici at Florence are the tombs of Lorenzo and Cosmo, with the grand statues of Night and Day, and Aurora and Twilight. Several statues of less fame, and bas-reliefs, are in Rome and Florence and Paris.

His paintings are in the Sistine Chapel, of which he first covered the ceiling with the story of the Creation, in successive compartments, with the great series of the Prophets and Sibyls in alternate tablets, and a series of greater and smaller fancy pieces in the lunettes. This is his capital work painted in fresco. Every one of these pieces, every figure, every hand and foot and finger, is a study of anatomy and design. Slighting the secondary arts of coloring, and all the aids of graceful finish, he aimed exclusively,

as a stern designer, to express the vigor and magnificence of his conceptions. Upon the wall, over the altar, is painted the Last Judgment.

Of his designs, the most celebrated is the cartoon representing soldiers coming out of the bath and arming themselves; an incident of the war of Pisa. The wonderful merit of this drawing, which contrasts the extremes of relaxation and vigor, is conspicuous even in the coarsest prints.

Of his genius for architecture it is sufficient to say that he built Saint Peter's, an ornament of the earth. He said he would hang the Pantheon in the air; and he redeemed his pledge by suspending that vast cupola, without offence to grace or to stability, over the astonished beholder. He did not live to complete the work; but is there not something affecting in the spectacle of an old man, on the verge of ninety years, carrying steadily onward, with the heat and determination of manhood, his poetic conceptions into progressive execution, surmounting by the dignity of his purposes all obstacles and all enmities, and only hindered by the limits of life from fulfilling his designs? Very slowly came he, after months and years, to the dome. At last he began to model it very small in wax. When it was finished, he had it copied larger in wood, and by this model it was built. Long after it was completed, and often since, to this day, rumors are occasionally spread that it is giving way, and it is said to have been injured by unskilful attempts to repair it. Benedict XIV., during one of these panics, sent for the architect Marchese Polini, to come to Rome and examine it. Polini put an end to all the various projects of repairs, by the satisfying sentence: "The cupola does not start, and if it should start, nothing can be done but to pull it down."²⁸⁹²

The impulse of his grand style was instantaneous upon his contemporaries. Every stroke of his pencil moved the pencil in

Raphael's hand. Raphael said, "I bless God I live in the times of Michael Angelo." Sir Joshua Reynolds, two centuries later, declared to the British Institution, "I feel a self-congratulation in knowing myself capable of such sensations as he intended to excite."

A man of such habits and such deeds made good his pretensions to a perception and to delineation of external beauty. But inimitable as his works are, his whole life confessed that his hand was all inadequate to express his thought. "He alone," he said, "is an artist whose hands can perfectly execute what his mind has conceived;" and such was his own mastery that men said, "the marble was flexible in his hands." Yet, contemplating ever with love the idea of absolute beauty, he was still dissatisfied with his own work. The things proposed to him in his imagination were such that, for not being able with his hands to express so grand and terrible conceptions, he often abandoned his work. For this reason he often only blocked his statue. A little before he died, he burned a great number of designs, sketches and cartoons made by him, being impatient of their defects. Grace in living forms, except in very rare instances, did not satisfy him. He never made but one portrait (a cartoon of Messer Tommaso di Cavalieri), because he abhorred to draw a likeness unless it were of infinite beauty.²⁸⁹³

Such was his devotion to art. But let no man suppose that the images which his spirit worshipped were mere transcripts of external grace, or that this profound soul was taken or holden in the chains of superficial beauty. To him, of all men, it was transparent. Through it he beheld the eternal spiritual beauty which ever clothes itself with grand and graceful outlines, as its appropriate form. He called external grace "the frail and weary weed, in which God dresses the soul which he has called into Time." "As from the fire, heat cannot be divided, no more can beauty from the eternal." He was conscious in his efforts of higher aims than to

address the eye. He sought, through the eye, to reach the soul. Therefore, as, in the first place, he sought to approach the Beautiful by the study of the True, so he failed not to make the next step of progress, and to seek Beauty in its highest form, that of Goodness. The sublimity of his art is in his life. He did not only build a divine temple, and paint and carve saints and prophets. He lived out the same inspiration. There is no spot upon his fame. The fire and sanctity of his pencil breathe in his words. When he was informed that Paul IV. desired he should paint again the side of the chapel where the Last Judgment was painted, because of the indecorous nudity of the figures, he replied, "Tell the Pope that this is easily done. Let him reform the world and he will find the pictures will reform themselves." He saw clearly that if the corrupt and vulgar eyes that could see nothing but indecorum in his terrific prophets and angels could be purified as his own were pure, they would only find occasion for devotion in the same figures. As he refused to undo his work, Daniel di Volterra was employed to clothe the figures; hence ludicrously called *Il Braghettone*. When the Pope suggested to him that the chapel would be enriched if the figures were ornamented with gold, Michael Angelo replied, "In those days, gold was not worn; and the characters I have painted were neither rich nor desirous of wealth, but holy men, with whom gold was an object of contempt."

Not until he was in the seventy-third year of his age, he undertook the building of Saint Peter's. On the death of San Gallo, the architect of the church, Paul III. first entreated, then commanded the aged artist to assume the charge of this great work, which, though commenced forty years before, was only commenced by Bramante, and ill continued by San Gallo. Michael Angelo, who believed in his own ability as a sculptor, but distrusted his capacity as an architect, at first refused and then reluctantly complied. His

heroic stipulation with the Pope was worthy of the man and the work. He required that he should be permitted to accept this work without any fee or reward, because he undertook it as a religious act; and, furthermore, that he should be absolute master of the whole design, free to depart from the plans of San Gallo and to alter what had been already done.

This disinterestedness and spirit—no fee and no interference—reminds one of the reward named by the ancient Persian. When importuned to claim some compensation of the empire for the important services he had rendered it, he demanded “that he and his should neither command nor obey, but should be free.” However, as it was undertaken, so was it performed. When the Pope, delighted with one of his chapels, sent him one hundred crowns of gold, as one month’s wages, Michael sent them back. The Pope was angry, but the artist was immovable. Amidst endless annoyances from the envy and interest of the office-holders and agents in the work whom he had displaced, he steadily ripened and executed his vast ideas. The combined desire to fulfil, in everlasting stone, the conceptions of his mind, and to complete his worthy offering to Almighty God, sustained him through numberless vexations with unbroken spirit. In answer to the importunate solicitations of the Duke of Tuscany that he would come to Florence, he replies that “to leave Saint Peter’s in the state in which it now was would be to ruin the structure, and thereby be guilty of a great sin;” that he hoped he should shortly see the execution of his plans brought to such a point that they could no longer be interfered with, and this was the capital object of his wishes, “if,” he adds, “I do not commit a great crime by disappointing the cormorants who are daily hoping to get rid of me.”

A natural fruit of the nobility of his spirit is his admiration of Dante, to whom two of his sonnets are addressed. He shared

Dante's "deep contempt of the vulgar, not of the simple inhabitants of lowly streets or humble cottages, but of that sordid and abject crowd of all classes and all places who obscure, as much as in them lies, every beam of beauty in the universe." In like manner, he possessed an intense love of solitude. He lived alone, and never or very rarely took his meals with any person. As will be supposed, he had a passion for the country, and in old age speaks with extreme pleasure of his residence with the hermits in the mountains of Spoleto; so much so that he says he is "only half in Rome, since, truly, peace is only to be found in the woods." Traits of an almost savage independence mark all his history. Although he was rich, he lived like a poor man, and never would receive a present from any person; because it seemed to him that if a man gave him anything, he was always obligated to that individual. His friend Vasari mentions one occasion on which his scruples were overcome. It seems that Michael was accustomed to work at night with a pasteboard cap or helmet on his head, into which he stuck a candle, that his work might be lighted and his hands at liberty. Vasari observed that he did not use wax candles, but a better sort made of the tallow of goats. He therefore sent him four bundles of them, containing forty pounds. His servant brought them after nightfall, and presented them to him. Michael Angelo refused to receive them. "Look you, Messer Michael Angelo," replied the man, "these candles have well-nigh broken my arm, and I will not carry them back; but just here, before your door, is a spot of soft mud, and they will stand upright in it very well, and there I will light them all." "Put them down, then," returned Michael, "since you shall not make a bonfire at my gate." Meantime he was liberal to profusion to his old domestic Urbino, to whom he gave at one time two thousand crowns, and made him rich in his service.

Michael Angelo was of that class of men who are too superior to the multitude around them to command a full and perfect sympathy. They stand in the attitude rather of appeal from their contemporaries to their race. It has been the defect of some great men that they did not duly appreciate or did not confess the talents and virtues of others, and so lacked one of the richest sources of happiness and one of the best elements of humanity. This apathy perhaps happens as often from preoccupied attention as from jealousy. It has been supposed that artists more than others are liable to this defect. But Michael Angelo's praise on many works is to this day the stamp of fame. Michael Angelo said of Masaccio's pictures that when they were first painted they must have been alive. He said of his predecessor, the architect Bramante, that he laid the first stone of Saint Peter's, clear, insulated, luminous, with fit design for a vast structure. He often expressed his admiration of Cellini's bust of Altoviti. He loved to express admiration of Titian, of Donatello, of Ghiberti, of Brunelleschi. And it is said that when he left Florence to go to Rome, to build Saint Peter's, he turned his horse's head on the last hill from which the noble dome of the cathedral (built by Brunelleschi) is visible, and said, "Like you, I will not build; better than you I cannot." Indeed, as we have said, the reputation of many works of art now in Italy derives a sanction from the tradition of his praise. It is more commendation to say, "This was Michael Angelo's favorite," than to say, "This was carried to Paris by Napoleon." Michael, however, had the philosophy to say, "Only an inventor can use the inventions of others."

There is yet one more trait in Michael Angelo's history, which humanizes his character without lessening its loftiness; this is his platonic love. He was deeply enamoured of the most accomplished lady of the time, Vittoria Colonna, the widow of the Marquis di Pescara, who, after the death of her husband, devoted herself

to letters, and to the writing of religious poetry. She was also an admirer of his genius, and came to Rome repeatedly to see him. To her his sonnets are addressed; and they all breathe a chaste and divine regard, unparalleled in any amatory poetry except that of Dante and Petrarch. They are founded on the thought that beauty is the virtue of the body, as virtue is the beauty of the soul; that a beautiful person is sent into the world as an image of the divine beauty, not to provoke but to purify the sensual into an intellectual and divine love. He enthrones his mistress as a benignant angel, who is to refine and perfect his own character. Condivi, his friend, has left this testimony: "I have often heard Michael Angelo reason and discourse upon love, but never heard him speak otherwise than upon platonic love. As for me, I am ignorant what Plato has said upon this subject; but this I know very well, that, in a long intimacy, I never heard from his mouth a single word that was not perfectly decorous and having for its object to extinguish in youth every improper desire, and that his own nature is a stranger to depravity." The poems themselves cannot be read without awakening sentiments of virtue. An eloquent vindication of their philosophy may be found in a paper by Signor Radici in the *London Retrospective Review*, and, by the Italian scholar, in the *Discourse of Benedetto Varchi* upon one sonnet of Michael Angelo, contained in the volume of his poems published by Biagioli, from which, in substance, the views of Radici are taken.

Towards his end, there seems to have grown in him an invincible appetite of dying, for he knew that his spirit could only enjoy contentment after death. So vehement was this desire that, he says, "my soul can no longer be appeased by the wonted seductions of painting and sculpture." A fine melancholy, not unrelieved by his habitual heroism, pervades his thoughts on this subject. At the age of eighty years, he wrote to Vasari, sending him various spiritual

sonnets he had written, and tells him he "is at the end of his life, that he is careful where he bends his thoughts, that he sees it is already twenty-four o'clock, and no fancy arose in his mind but DEATH was sculptured on it." In conversing upon this subject with one of his friends, that person remarked that Michael might well grieve that one who was incessant in his creative labors should have no restoration. "No," replied Michael, "it is nothing; for if life pleases us, death, being a work of the same master, ought not to displease us." But a nobler sentiment, uttered by him, is contained in his reply to a letter of Vasari, who had informed him of the rejoicings made at the house of his nephew Lionardo, at Florence, over the birth of another Buonarotti. Michael admonishes him that "a man ought not to smile, when all those around him weep; and that we ought not to show that joy when a child is born, which should be reserved for the death of one who has lived well."

Amidst all these witnesses to his independence, his generosity, his purity and his devotion, are we not authorized to say that this man was penetrated with the love of the highest beauty, that is, goodness; that his was a soul so enamoured of grace that it could not stoop to meanness or depravity; that art was to him no means of livelihood or road to fame, but the end of living, as it was the organ through which he sought to suggest lessons of an unutterable wisdom; that here was a man who lived to demonstrate that to the human faculties, on every hand, worlds of grandeur and grace are opened, which no profane eye and no indolent eye can behold, but which, to see and to enjoy, demands the severest discipline of all the physical, intellectual and moral faculties of the individual?

The city of Florence, on the river Arno, still treasures the fame of this man. There, his picture hangs in every window; there, the tradition of his opinions meets the traveller in every spot. "Do you see that statue of Saint George? Michael Angelo asked it why it

did not speak."²⁸⁹⁴—"Do you see this fine church of Santa Maria Novella? It is that which Michael Angelo called 'his bride.'"—"Look at these bronze gates of the Baptistery, with their high reliefs, cast by Ghiberti five hundred years ago. Michael Angelo said, 'they were fit to be the gates of Paradise.'" Here is the church, the palace, the Laurentian library, he built. Here is his own house. In the church of Santa Croce are his mortal remains. Whilst he was yet alive, he asked that he might be buried in that church, in such a spot that the dome of the cathedral might be visible from his tomb when the doors of the church stood open. And there and so is he laid. The innumerable pilgrims whom the genius of Italy draws to the city duly visit this church, which is to Florence what Westminster Abbey is to England. There, near the tomb of Nicholas Macchiavelli, the historian and philosopher; of Galileo, the great-hearted astronomer; of Boccaccio, and of Alfieri, stands the monument of Michael Angelo Buonarotti. Three significant garlands are sculptured on the tomb; they should be four, but that his countrymen feared their own partiality. The forehead of the bust, esteemed a faithful likeness, is furrowed with eight deep wrinkles one above another.²⁸⁹⁵ The traveller from a distant continent, who gazes on that marble brow, feels that he is not a stranger in the foreign church; for the great name of Michael Angelo sounds hospitably in his ear. He was not a citizen of any country; he belonged to the human race; he was a brother and a friend to all who acknowledge the beauty that beams in universal Nature, and who seek by labor and self-denial to approach its source in perfect goodness.²⁸⁹⁶

VII. MILTON

I FRAMED his tongue to music,
I armed his hand with skill,
I moulded his face to beauty,
And his heart the throne of will.

MILTON

THE DISCOVERY of the lost work of Milton, the treatise *Of the Christian Doctrine*, in 1823, drew a sudden attention to his name. For a short time the literary journals were filled with disquisitions on his genius; new editions of his works, and new compilations of his life, were published. But the new-found book having in itself less attraction than any other work of Milton, the curiosity of the public as quickly subsided, and left the poet to the enjoyment of his permanent fame, or to such increase or abatement of it only as is incidental to a sublime genius, quite independent of the momentary challenge of universal attention to his claims.

But if the new and temporary renown of the poet is silent again, it is nevertheless true that he has gained, in this age, some increase of permanent praise. The fame of a great man is not rigid and stony like his bust. It changes with time. It needs time to give it due perspective. It was very easy to remark an altered tone in the criticism when Milton reappeared as an author, fifteen years ago, from any that had been bestowed on the same subject before. It implied merit indisputable and illustrious; yet so near to the modern mind as to be still alive and life-giving. The aspect

of Milton, to this generation, will be part of the history of the nineteenth century. There is no name in English literature between his age and ours that rises into any approach to his own. And as a man's fame, of course, characterizes those who give it, as much as him who receives it, the new criticism indicated a change in the public taste, and a change which the poet himself might claim to have wrought.

The reputation of Milton had already undergone one or two revolutions long anterior to its recent aspects. In his lifetime, he was little or not at all known as a poet, but obtained great respect from his contemporaries as an accomplished scholar and a formidable pamphleteer. His poem fell unregarded among his countrymen.²⁸⁹⁷ His prose writings, especially the *Defence of the English People*, seem to have been read with avidity. These tracts are remarkable compositions. They are earnest, spiritual, rich with allusion, sparkling with innumerable ornaments; but as writings designed to gain a practical point, they fail. They are not effective, like similar productions of Swift and Burke; or, like what became also controversial tracts, several masterly speeches in the history of the American Congress. Milton seldom deigns a glance at the obstacles that are to be overcome before that which he proposes can be done. There is no attempt to conciliate,—no mediate, no preparatory course suggested,—but, peremptory and impassioned, he demands, on the instant, an ideal justice. Therein they are discriminated from modern writings, in which a regard to the actual is all but universal.

Their rhetorical excellence must also suffer some deduction. They have no perfectness. These writings are wonderful for the truth, the learning, the subtilty and pomp of the language; but the whole is sacrificed to the particular. Eager to do fit justice to each thought, he does not subordinate it so as to project the main

argument. He writes whilst he is heated; the piece shows all the rambles and resources of indignation, but he has never *integrated* the parts of the argument in his mind. The reader is fatigued with admiration, but is not yet master of the subject.

Two of his pieces may be excepted from this description, one for its faults, the other for its excellence. The Defence of the People of England, on which his contemporary fame was founded, is, when divested of its pure Latinity, the worst of his works. Only its general aim, and a few elevated passages, can save it. We could be well content if the flames to which it was condemned at Paris, at Toulouse, and at London, had utterly consumed it. The lover of his genius will always regret that he should not have taken counsel of his own lofty heart at this, as at other times, and have written from the deep convictions of love and right, which are the foundations of civil liberty. There is little poetry or prophecy in this mean and ribald scolding. To insult Salmasius, not to acquit England, is the main design. What under heaven had Madame de Saumaise, or the manner of living of Saumaise, or Salmasius, or his blunders of grammar, or his niceties of diction, to do with the solemn question whether Charles Stuart had been rightly slain?²⁸⁹⁸ Though it evinces learning and critical skill, yet, as an historical argument, it cannot be valued with similar disquisitions of Robertson and Hallam, and even less celebrated scholars. But when he comes to speak of the reason of the thing, then he always recovers himself. The voice of the mob is silent, and Milton speaks. And the peroration, in which he implores his countrymen to refute this adversary by their great deeds, is in a just spirit. The other piece is his *Areopagitica*, the discourse, addressed to the Parliament, in favor of removing the censorship of the press; the most splendid of his prose works. It is, as Luther said of one of Melancthon's writings, "alive, hath hands and feet,—and not like Erasmus's sentences, which were made,

not grown." The weight of the thought is equalled by the vivacity of the expression, and it cheers as well as teaches. This tract is far the best known and the most read of all, and is still a magazine of reasons for the freedom of the press. It is valuable in history as an argument addressed to a government to produce a practical end, and plainly presupposes a very peculiar state of society.

But deeply as that peculiar state of society, in which and for which Milton wrote, has engraved itself in the remembrance of the world, it shares the destiny which overtakes everything local and personal in Nature; and the accidental facts on which a battle of principles was fought have already passed, or are fast passing, into oblivion. We have lost all interest in Milton as the redoubted disputant of a sect; but by his own innate worth this man has steadily risen in the world's reverence, and occupies a more imposing place in the mind of men at this hour than ever before.

It is the aspect which he presents to this generation, that alone concerns us. Milton the polemic has lost his popularity long ago; and if we skip the pages of *Paradise Lost* where "God the Father argues like a school divine," so did the next age to his own. But, we are persuaded, he kindles a love and emulation in us which he did not in foregoing generations. We think we have seen and heard criticism upon the poems, which the bard himself would have more valued than the recorded praise of Dryden, Addison and Johnson, because it came nearer to the mark; was finer and closer appreciation; the praise of intimate knowledge and delight; and, of course, more welcome to the poet than the general and vague acknowledgment of his genius by those able but unsympathizing critics. We think we have heard the recitation of his verses by genius which found in them that which itself would say; recitation which told, in the diamond sharpness of every articulation, that now first was such perception and enjoyment possible; the

perception and enjoyment of all his varied rhythm, and his perfect fusion of the classic and the English styles. This is a poet's right; for every masterpiece of art goes on for some ages reconciling the world unto itself, and despotically fashioning the public ear. The opposition to it, always greatest at first, continually decreases and at last ends; and a new race grows up in the taste and spirit of the work, with the utmost advantage for seeing intimately its power and beauty.²⁸⁹⁹

But it would be great injustice to Milton to consider him as enjoying merely a critical reputation. It is the prerogative of this great man to stand at this hour foremost of all men in literary history, and so (shall we not say?) of all men, in the power to *inspire*. Virtue goes out of him into others. Leaving out of view the pretensions of our contemporaries (always an incalculable influence), we think no man can be named whose mind still acts on the cultivated intellect of England and America with an energy comparable to that of Milton. As a poet, Shakspeare undoubtedly transcends, and far surpasses him in his popularity with foreign nations; but Shakspeare is a voice merely; who and what he was that sang, that sings, we know not. Milton stands erect, commanding, still visible as a man among men, and reads the laws of the moral sentiment to the new-born race. There is something pleasing in the affection with which we can regard a man who died a hundred and sixty years ago in the other hemisphere, who, in respect to personal relations, is to us as the wind, yet by an influence purely spiritual makes us jealous for his fame as for that of a near friend. He is identified in the mind with all select and holy images, with the supreme interests of the human race. If hereby we attain any more precision, we proceed to say that we think no man in these later ages, and few men ever, possessed so great a conception of the manly character. Better than any other he has discharged

the office of every great man, namely, to raise the idea of Man in the minds of his contemporaries and of posterity,—to draw after Nature a life of man, exhibiting such a composition of grace, of strength and of virtue, as poet had not described nor hero lived. Human nature in these ages is indebted to him for its best portrait. Many philosophers in England, France and Germany have formally dedicated their study to this problem; and we think it impossible to recall one in those countries who communicates the same vibration of hope, of self-reverence, of piety, of delight in beauty, which the name of Milton awakens. Lord Bacon, who has written much and with prodigious ability on this science, shrinks and falters before the absolute and uncourtly Puritan. Bacon's Essays are the portrait of an ambitious and profound calculator,—a great man of the vulgar sort. Of the upper world of man's being they speak few and faint words. The man of Locke is virtuous without enthusiasm, and intelligent without poetry. Addison, Pope, Hume and Johnson, students, with very unlike temper and success, of the same subject, cannot, taken together, make any pretension to the amount or the quality of Milton's inspirations. The man of Lord Chesterfield is unworthy to touch his garment's hem. Franklin's man is a frugal, inoffensive, thrifty citizen, but savors of nothing heroic. The genius of France has not, even in her best days, yet culminated in any one head—not in Rousseau, not in Pascal, not in Fénelon—into such perception of all the attributes of humanity as to entitle it to any rivalry in these lists. In Germany, the greatest writers are still too recent to institute a comparison; and yet we are tempted to say that art and not life seems to be the end of their effort. But the idea of a purer existence than any he saw around him, to be realized in the life and conversation of men, inspired every act and every writing of John Milton. He defined the object of education to be, "to fit a man to perform justly, skilfully and

magnanimously all the offices, both private and public, of peace and war." He declared that "he who would aspire to write well hereafter in laudable things, ought himself to be a true poem; that is, a composition and pattern of the best and honorablest things, not presuming to sing high praises of heroic men or famous cities, unless he have in himself the experience and the practice of all that which is praiseworthy." Nor is there in literature a more noble outline of a wise external education than that which he drew up, at the age of thirty-six, in his Letter to Samuel Hartlib.²⁹⁰⁰ The muscles, the nerves and the flesh with which this skeleton is to be filled up and covered exist in his works and must be sought there.

For the delineation of this heroic image of man, Milton enjoyed singular advantages. Perfections of body and of mind are attributed to him by his biographers, that, if the anecdotes had come down from a greater distance of time, or had not been in part furnished or corroborated by political enemies, would lead us to suspect the portraits were ideal, like the Cyrus of Xenophon, the Telemachus of Fénelon, or the popular traditions of Alfred the Great.

Handsome to a proverb, he was called the lady of his college. Aubrey says, "This harmonical and ingenuous soul dwelt in a beautiful, well-proportioned body." His manners and his carriage did him no injustice. Wood, his political opponent, relates that "his deportment was affable, his gait erect and manly, bespeaking courage and undauntedness." Aubrey adds a sharp trait, that "he pronounced the letter R very hard, a certain sign of satirical genius." He had the senses of a Greek. His eye was quick, and he was accounted an excellent master of his rapier. His ear for music was so acute that he was not only enthusiastic in his love, but a skilful performer himself; and his voice, we are told, was delicately

sweet and harmonious. He insists that music shall make a part of a generous education.

With these keen perceptions, he naturally received a love of Nature and a rare susceptibility to impressions from external beauty. In the midst of London, he seems, like the creatures of the field and the forest, to have been tuned in concord with the order of the world; for, he believed, his poetic vein only flowed from the autumnal to the vernal equinox; and in his essay on Education, he doubts whether, in the fine days of spring, any study can be accomplished by young men. "In those vernal seasons of the year, when the air is calm and pleasant, it were an injury and sullenness against Nature not to go out and see her riches and partake in her rejoicing with heaven and earth." His sensibility to impressions from beauty needs no proof from his history; it shines through every page. The form and the voice of Leonora Baroni seemed to have captivated him in Rome, and to her he addressed his Italian sonnets and Latin epigrams.

To these endowments it must be added that his address and his conversation were worthy of his fame. His house was resorted to by men of wit, and foreigners came to England, we are told, "to see the Lord Protector and Mr. Milton." In a letter to one of his foreign correspondents, Emeric Bigot, and in reply apparently to some compliment on his powers of conversation, he writes: "Many have been celebrated for their compositions, whose common conversation and intercourse have betrayed no marks of sublimity or genius. But as far as possible, I aim to show myself equal in thought and speech to what I have written, if I have written anything well."

These endowments received the benefit of a careful and happy discipline. His father's care, seconded by his own endeavor, introduced him to a profound skill in all the treasures of Latin,

Greek, Hebrew and Italian tongues; and, to enlarge and enliven his elegant learning, he was sent into Italy, where he beheld the remains of ancient art, and the rival works of Raphael, Michael Angelo and Correggio; where, also, he received social and academical honors from the learned and the great. In Paris, he became acquainted with Grotius; in Florence or Rome, with Galileo; and probably no traveller ever entered that country of history with better right to its hospitality, none upon whom its influences could have fallen more congenially.

Among the advantages of his foreign travel, Milton certainly did not count it the least that it contributed to forge and polish that great weapon of which he acquired such extraordinary mastery,—his power of language. His lore of foreign tongues added daily to his consummate skill in the use of his own. He was a benefactor of the English tongue by showing its capabilities.²⁹⁰¹ Very early in life he became conscious that he had more to say to his fellow men than they had fit words to embody. At nineteen years, in a college exercise, he addresses his native language, saying to it that it would be his choice to leave trifles for a grave argument,—

"Such as may make thee search thy coffers round,
Before thou clothe my fancy in fit sound;
Such where the deep transported mind may soar
Above the wheeling poles, and at Heaven's door
Look in, and see each blissful deity,
How he before the thunderous throne doth lie."²⁹⁰²

Michael Angelo calls "him alone an artist, whose hands can execute what his mind has conceived." The world, no doubt, contains many of that class of men whom Wordsworth denominates *silent poets*, whose minds teem with images which

they want words to clothe. But Milton's mind seems to have no thought or emotion which refused to be recorded. His mastery of his native tongue was more than to use it as well as any other; he cast it into new forms. He uttered in it things unheard before. Not imitating but rivalling Shakspeare, he scattered, in tones of prolonged and delicate melody, his pastoral and romantic fancies; then, soaring into unattempted strains, he made it capable of an unknown majesty, and bent it to express every trait of beauty, every shade of thought; and searched the kennel and jakes as well as the palaces of sound for the harsh discords of his polemic wrath. We may even apply to his performance on the instrument of language, his own description of music:—

"Notes, with many a winding bout
Of linked sweetness long drawn out,
With wanton heed and giddy cunning,
The melting voice through mazes running,
Untwisting all the chains that tie
The hidden soul of harmony."²⁹⁰³

But whilst Milton was conscious of possessing this intellectual voice, penetrating through ages and propelling its melodious undulations forward through the coming world, he knew that this mastery of language was a secondary power, and he respected the mysterious source whence it had its spring; namely, clear conceptions and a devoted heart. "For me," he said, in his *Apology for Smectymnuus*, "although I cannot say that I am utterly untrained in those rules which best rhetoricians have given, or unacquainted with those examples which the prime authors of eloquence have written in any learned tongue, yet true eloquence I find to be none but the serious and hearty love of truth; and that whose

mind soever is fully possessed with a fervent desire to know good things, and with the dearest charity to infuse the knowledge of them into others, when such a man would speak, his words, by what I can express, like so many nimble and airy servitors, trip about him at command, and in well-ordered files, as he would wish, fall aptly into their own places."

But as basis or fountain of his rare physical and intellectual accomplishments, the man Milton was just and devout. He is rightly dear to mankind, because in him, among so many perverse and partial men of genius,—in him humanity rights itself; the old eternal goodness finds a home in his breast, and for once shows itself beautiful. His gifts are subordinated to his moral sentiments; and his virtues are so graceful that they seem rather talents than labors. Among so many contrivances as the world has seen to make holiness ugly, in Milton at least it was so pure a flame that the foremost impression his character makes is that of elegance. The victories of the conscience in him are gained by the commanding charm which all the severe and restrictive virtues have for him. His virtues remind us of what Plutarch said of Timoleon's victories, that they resembled Homer's verses, they ran so easy and natural. His habits of living were austere. He was abstemious in diet, chaste, an early riser, and industrious. He tells us, in a Latin poem, that the lyrist may indulge in wine and in a freer life; but that he who would write an epic to the nations must eat beans and drink water. Yet in his severity is no grimace or effort. He serves from love, not from fear. He is innocent and exact, because his taste was so pure and delicate. He acknowledges to his friend Diodati, at the age of twenty-one, that he is enamoured, if ever any was, of moral perfection: "For whatever the Deity may have bestowed upon me in other respects, he has certainly inspired me, if any ever were inspired, with a passion for the good and fair. Nor did Ceres,

according to the fable, ever seek her daughter Proserpine with such unceasing solicitude as I have sought this τοῦ καλοῦ ἰδέαν, this perfect model of the beautiful in all forms and appearances of things."²⁹⁰⁴

When he was charged with loose habits of living, he declares that "a certain niceness of nature, an honest haughtiness and self-esteem either of what I was or what I might be, and a modesty, kept me still above those low descents of mind beneath which he must deject and plunge himself that can agree" to such degradation. "His mind gave him," he said, "that every free and gentle spirit, without that oath of chastity, ought to be born a knight; nor needed to expect the gilt spur, or the laying of a sword upon his shoulder, to stir him up, by his counsel and his arm, to secure and protect" attempted innocence.

He states these things, he says, "to show that though Christianity had been but slightly taught him, yet a certain reservedness of natural disposition and moral discipline, learned out of the noblest philosophy, was enough to keep him in disdain of far less incontinences than these" that had been charged on him. In like spirit, he replies to the suspicious calumny respecting his morning haunts. "Those morning haunts are where they should be, at home; not sleeping, or concocting the surfeits of an irregular feast, but up and stirring, in winter, often ere the sound of any bell awake men to labor or devotion; in summer, as oft with the bird that first rouses, or not much tardier, to read good authors, or cause them to be read, till the attention be weary, or memory have its perfect fraught; then with useful and generous labors preserving the body's health and hardiness, to render lightsome, clear and not lumpish obedience to the mind, to the cause of religion and our country's liberty, when it shall require firm hearts in sound bodies to stand and cover their stations. These are the

morning practices."²⁹⁰⁵ This native honor never forsook him. It is the spirit of Comus, the loftiest song in the praise of chastity that is in any language. It always sparkles in his eyes. It breathed itself over his decent form. It refined his amusements, which consisted in gardening, in exercise with the sword and in playing on the organ. It engaged his interest in chivalry, in courtesy, in whatsoever savored of generosity and nobleness. This magnanimity shines in all his life. He accepts a high impulse at every risk, and deliberately undertakes the defence of the English people, when advised by his physicians that he does it at the cost of sight. There is a forbearance even in his polemics. He opens the war and strikes the first blow. When he had cut down his opponents, he left the details of death and plunder to meaner partisans. He said, "he had learned the prudence of the Roman soldier, not to stand breaking of legs, when the breath was quite out of the body."

To this antique heroism, Milton added the genius of the Christian sanctity. Few men could be cited who have so well understood what is peculiar in the Christian ethics, and the precise aid it has brought to men, in being an emphatic affirmation of the omnipotence of spiritual laws, and, by way of marking the contrast to vulgar opinions, laying its chief stress on humility. The indifference of a wise mind to what is called high and low, and the fact that true greatness is a perfect humility, are revelations of Christianity which Milton well understood. They give an inexhaustible truth to all his compositions. His firm grasp of this truth is his weapon against the prelates. He celebrates in the martyrs "the irresistible might of weakness." He told the bishops that "instead of showing the reason of their lowly condition from divine example and command, they seek to prove their high preëminence from human consent and authority." He advises that in country places, rather than to trudge many miles to a church, public worship be maintained nearer

home, as in a house or barn. "For notwithstanding the gaudy superstition of some still devoted ignorantly to temples, we may be well assured that he who disdained not to be born in a manger disdains not to be preached in a barn." And the following passage, in the Reason of Church Government, indicates his own perception of the doctrine of humility. "Albeit I must confess to be half in doubt whether I should bring it forth or no, it being so contrary to the eye of the world, that I shall endanger either not to be regarded, or not to be understood. For who is there, almost, that measures wisdom by simplicity, strength by suffering, dignity by lowliness?" Obeying this sentiment, Milton deserved the apostrophe of Wordsworth:—

"Pure as the naked heavens, majestic, free,
So didst thou travel on life's common way
In cheerful godliness; and yet thy heart
The lowliest duties on itself did lay."²⁹⁰⁶

He laid on himself the lowliest duties. Johnson petulantly taunts Milton with "great promise and small performance," in returning from Italy because his country was in danger, and then opening a private school. Milton, wiser, felt no absurdity in this conduct. He returned into his revolutionized country, and assumed an honest and useful task, by which he might serve the state daily, whilst he launched from time to time his formidable bolts against the enemies of liberty. He felt the heats of that "love" which "esteems no office mean." He compiled a logic for boys; he wrote a grammar; and devoted much of his time to the preparing of a Latin dictionary. But the religious sentiment warmed his writings and conduct with the highest affection of faith. The memorable covenant, which in his youth, in the second book of the Reason

of Church Government, he makes with God and his reader, expressed the faith of his old age. For the first time since many ages, the invocations of the Eternal Spirit in the commencement of his books are not poetic forms, but are thoughts, and so are still read with delight. His views of choice of profession, and choice in marriage, equally expect a divine leading.²⁹⁰⁷

Thus chosen, by the felicity of his nature and of his breeding, for the clear perception of all that is graceful and all that is great in man, Milton was not less happy in his times. His birth fell upon the agitated years when the discontents of the English Puritans were fast drawing to a head against the tyranny of the Stuarts. No period has surpassed that in the general activity of mind. It is said that no opinion, no civil, religious, moral dogma can be produced that was not broached in the fertile brain of that age. Questions that involve all social and personal rights were hasting to be decided by the sword, and were searched by eyes to which the love of freedom, civil and religious, lent new illumination. Milton, gentle, learned, delicately bred in all the elegance of art and learning, was set down in England in the stern, almost fanatic society of the Puritans. The part he took, the zeal of his fellowship, make us acquainted with the greatness of his spirit as in tranquil times we could not have known it. Susceptible as Burke to the attractions of historical prescription, of royalty, of chivalry, of an ancient church illustrated by old martyrdoms and installed in cathedrals,—he threw himself, the flower of elegance, on the side of the reeking conventicle; the side of humanity, but unlearned and unadorned. His muse was brave and humane, as well as sweet.²⁹⁰⁸ He felt the dear love of native land and native language. The humanity which warms his pages begins, as it should, at home. He preferred his own English, so manlike he was, to the Latin, which contained all the treasures of his memory. "My mother bore me," he said, "a

speaker of what God made mine own, and not a translator." He told the Parliament that "the imprimaturs of Lambeth House had been writ in Latin; for that our English, the language of men ever famous and foremost in the achievements of liberty, will not easily find servile letters enow to spell such a dictatory presumption." At one time he meditated writing a poem on the settlement of Britain, and a history of England was one of the three main tasks which he proposed to himself. He proceeded in it no further than to the Conquest. He studied with care the character of his countrymen, and once in the History, and once again in the Reason of Church Government, he has recorded his judgment of the English genius.

Thus drawn into the great controversies of the times, in them he is never lost in a party. His private opinions and private conscience always distinguish him. That which drew him to the party was his love of liberty, ideal liberty; this therefore he could not sacrifice to any party. Toland tells us, "As he looked upon true and absolute freedom to be the greatest happiness of this life, whether to societies or single persons, so he thought constraint of any sort to be the utmost misery; for which reason he used to tell those about him the entire satisfaction of his mind that he had constantly employed his strength and faculties in the defence of liberty, and in direct opposition to slavery." Truly he was an apostle of freedom; of freedom in the house, in the state, in the church; freedom of speech, freedom of the press; yet in his own mind discriminated from savage license, because that which he desired was the liberty of the wise man, containing itself in the limits of virtue. He pushed, as far as any in that democratic age, his ideas of *civil* liberty. He proposed to establish a republic, of which the federal power was weak and loosely defined, and the substantial power should remain with primary assemblies. He maintained that a nation may try, judge and slay their king, if he

be a tyrant. He pushed as far his views of *ecclesiastical* liberty. He taught the doctrine of unlimited toleration. One of his tracts is writ to prove that no power on earth can compel in matters of religion. He maintained the doctrine of *literary* liberty, denouncing the censorship of the press, and insisting that a book shall come into the world as freely as a man, so only it bear the name of author or printer, and be responsible for itself like a man. He maintained the doctrine of *domestic* liberty, or the liberty of divorce, on the ground that unfit disposition of mind was a better reason for the act of divorce than infirmity of body, which was good ground in law. The tracts he wrote on these topics are, for the most part, as fresh and pertinent to-day as they were then. The events which produced them, the practical issues to which they tend, are mere occasions for this philanthropist to blow his trumpet for human rights. They are all varied applications of one principle, the liberty of the wise man. He sought absolute truth, not accommodating truth. His opinions on all subjects are formed for man as he ought to be, for a nation of Miltons. He would be divorced when he finds in his consort unfit disposition; knowing that he should not abuse that liberty, because with his whole heart he abhors licentiousness and loves chastity. He defends the slaying of the king, because a king is a king no longer than he governs by the laws; "it would be right to kill Philip of Spain making an inroad into England, and what right the king of Spain hath to govern us at all, the same hath the king Charles to govern tyrannically." He would remove hirelings out of the church, and support preachers by voluntary contributions; requiring that such only should preach as have faith enough to accept so self-denying and precarious a mode of life, scorning to take thought for the aspects of prudence and expediency. The most devout man of his time, he frequented no church;²⁹⁰⁹ probably from a disgust at the fierce spirit of the

pulpits. And so, throughout all his actions and opinions, is he a consistent spiritualist, or believer in the omnipotence of spiritual laws. He wished that his writings should be communicated only to those who desired to see them. He thought nothing honest was low. He thought he could be famous only in proportion as he enjoyed the approbation of the good. He admonished his friend "not to admire military prowess, or things in which force is of most avail. For it would not be matter of rational wonder, if the wethers of our country should be born with horns that could batter down cities and towns. Learn to estimate great characters, not by the amount of animal strength, but by the habitual justice and temperance of their conduct."

Was there not a fitness in the undertaking of such a person to write a poem on the subject of Adam, the first man? By his sympathy with all Nature; by the proportion of his powers; by great knowledge, and by religion, he would reascend to the height from which our nature is supposed to have descended. From a just knowledge of what man should be, he described what he was. He beholds him as he walked in Eden:—

"His fair large front and eye sublime declared
Absolute rule; and hyacinthine locks
Round from his parted forelock manly hung
Clustering, but not beneath his shoulders broad."²⁹¹⁰

And the soul of this divine creature is excellent as his form. The tone of his thought and passion is as healthful, as even and as vigorous as befits the new and perfect model of a race of gods.

The perception we have attributed to Milton, of a purer ideal of humanity, modifies his poetic genius. The man is paramount to the poet. His fancy is never transcendent, extravagant; but as Bacon's

imagination was said to be "the noblest that ever contented itself to minister to the understanding," so Milton's ministers to the character. Milton's sublimest song, bursting into heaven with its peals of melodious thunder, is the voice of Milton still. Indeed, throughout his poems, one may see, under a thin veil, the opinions, the feelings, even the incidents of the poet's life, still reappearing. The sonnets are all occasional poems. *L' Allegro* and *Il Penseroso* are but a finer autobiography of his youthful fancies at Harefield; the *Comus* a transcript, in charming numbers, of that philosophy of chastity, which, in the *Apology for Smectymnuus*, and in the *Reason of Church Government*, he declares to be his defence and religion. The *Samson Agonistes* is too broad an expression of his private griefs to be mistaken, and is a version of the Doctrine and Discipline of Divorce. The most affecting passages in *Paradise Lost* are personal allusions; and when we are fairly in Eden, Adam and Milton are often difficult to be separated. Again, in *Paradise Regained*, we have the most distinct marks of the progress of the poet's mind, in the revision and enlargement of his religious opinions. This may be thought to abridge his praise as a poet. It is true of Homer and Shakspeare that they do not appear in their poems; that those prodigious geniuses did cast themselves so totally into their song that their individuality vanishes, and the poet towers to the sky, whilst the man quite disappears. The fact is memorable. Shall we say that in our admiration and joy in these wonderful poems we have even a feeling of regret that the men knew not what they did; that they were too passive in their great service; were channels through which streams of thought flowed from a higher source, which they did not appropriate, did not blend with their own being? Like prophets, they seem but imperfectly aware of the import of their own utterances. We hesitate to say such things, and say them only to the displeasing dualism, when the

man and the poet show like a double consciousness. Perhaps we speak to no fact, but to mere fables, of an idle mendicant Homer, and of a Shakspeare content with a mean and jocular way of life. Be it how it may, the genius and office of Milton were different, namely, to ascend by the aids of his learning and his religion—by an equal perception, that is, of the past and the future—to a higher insight and more lively delineation of the heroic life of man. This was his poem; whereof all his indignant pamphlets and all his soaring verses are only single cantos or detached stanzas. It was plainly needful that his poetry should be a version of his own life, in order to give weight and solemnity to his thoughts; by which they might penetrate and possess the imagination and the will of mankind. The creations of Shakspeare are cast into the world of thought to no further end than to delight. Their intrinsic beauty is their excuse for being. Milton, fired “with dearest charity to infuse the knowledge of good things into others,” tasked his giant imagination and exhausted the stores of his intellect for an end beyond, namely, to teach. His own conviction it is which gives such authority to his strain. Its reality is its force. If out of the heart it came, to the heart it must go. What schools and epochs of common rhymers would it need to make a counterbalance to the severe oracles of his muse:—

“In them is plainest taught and easiest learnt,
What makes a nation happy, and keeps it so.”²⁹¹¹

The lover of Milton reads one sense in his prose and in his metrical compositions; and sometimes the muse soars highest in the former, because the thought is more sincere. Of his prose in general, not the style alone but the argument also is poetic; according to Lord Bacon’s definition of poetry, following that of Aristotle, “Poetry,

not finding the actual world exactly conformed to its idea of good and fair, seeks to accommodate the shows of things to the desires of the mind, and to create an ideal world better than the world of experience." Such certainly is the explanation of Milton's tracts. Such is the apology to be entered for the plea for freedom of divorce; an essay, which, from the first, until now, has brought a degree of obloquy on his name. It was a sally of the extravagant spirit of the time, overjoyed, as in the French Revolution, with the sudden victories it had gained, and eager to carry on the standard of truth to new heights. It is to be regarded as a poem on one of the griefs of man's condition, namely, unfit marriage. And as many poems have been written upon unfit society, commending solitude, yet have not been proceeded against, though their end was hostile to the state; so should this receive that charity which an angelic soul, suffering more keenly than others from the unavoidable evils of human life, is entitled to.

We have offered no apology for expanding to such length our commentary on the character of John Milton; who, in old age, in solitude, in neglect, and blind, wrote the *Paradise Lost*; a man whom labor or danger never deterred from whatever efforts a love of the supreme interests of man prompted. For are we not the better; are not all men fortified by the remembrance of the bravery, the purity, the temperance, the toil, the independence and the angelic devotion of this man, who, in a revolutionary age, taking counsel only of himself, endeavored, in his writings and in his life, to carry out the life of man to new heights of spiritual grace and dignity, without any abatement of its strength?

VIII. ART AND CRITICISM

TO CLOTHE the fiery thought
In simple words succeeds,
For still the craft of genius is
To mask a king in weeds.

ART AND CRITICISM

LITERATURE IS but a poor trick, you will say, when it busies itself to make words pass for things; and yet I am far from thinking this subordinate service unimportant. The secondary services of literature may be classed under the name of Rhetoric, and are quite as important in letters as iron is in war. An enumeration of the few principal weapons of the poet or writer will at once suggest their value.

Writing is the greatest of arts, the subtilest, and of most miraculous effect; and to it the education is costliest. On the writer the choicest influences are concentrated,—nothing that does not go to his costly equipment: a war, an earthquake, revival of letters, the new dispensation by Jesus, or by Angels; Heaven, Hell, power, science, the *Néant*,²⁹¹² exist to him as colors for his brush.

In this art modern society has introduced a new element, by introducing a new audience. The decline of the privileged orders, all over the world; the advance of the Third Estate; the transformation of the laborer into reader and writer has compelled the learned and the thinkers to address them. Chiefly in this

country, the common school has added two or three audiences: once, we had only the boxes; now, the galleries and the pit.²⁹¹³

There is, in every nation, a style which never becomes obsolete, a certain mode of phraseology so consonant and congenial to the analogy and principles of its respective language as to remain settled and unaltered. This style is probably to be sought in the common intercourse of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hope of finding or making better; those who wish for distinction forsake the vulgar, when the vulgar is right; but there is a conversation above grossness and below refinement where prosperity resides, and where Shakspeare seems to have gathered his comic dialogue. Goethe valued himself not on his learning or eccentric flights, but that he knew how to write German. And many of his poems are so idiomatic, so strongly rooted in the German soil, that they are the terror of translators, who say they cannot be rendered into any other language without loss of vigor, as we say of any darling passage of our own masters. "*Le style c'est l'homme*," said Buffon; and Goethe said, "Poetry here, poetry there, I have learned to speak German." And when I read of various extraordinary polyglots, self-made or college-made, who can understand fifty languages, I answer that I shall be glad and surprised to find that they know one. For if I were asked how many masters of English idiom I know, I shall be perplexed to count five.

Ought not the scholar to convey his meaning in terms as short and strong as the smith and the drover use to convey theirs? You know the history of the eminent English writer on gypsies, George Borrow; he had one clear perception, that the key to every country was command of the language of the common people. He therefore mastered the *patois* of the gypsies, called Romany,

which is spoken by them in all countries where they wander, in Europe, Asia, Africa. Yet much of the raw material of the street-talk is absolutely untranslatable into print, and one must learn from Burke how to be severe without being unparliamentary. Rabelais and Montaigne are masters of this Romany, but cannot be read aloud, and so far fall short. Whitman is our American master, but has not got out of the Fire-Club and gained the *entrée* of the sitting-rooms. Bacon, if "he could out-cant a London surgeon," must have possessed the Romany under his brocade robes. Luther said, "I preach coarsely; that giveth content to all. Hebrew, Greek and Latin I spare, until we learned ones come together, and then we make it so curled and finical that God himself wondereth at us." He who would be powerful must have the terrible gift of familiarity,—Mirabeau, Chatham, Fox, Burke, O'Connell, Patrick Henry; and among writers, Swift, De Foe and Carlyle.

Look at this forlorn caravan of travellers who wander over Europe dumb,—never exchange a word, in the mother tongue of either, with prince or peasant; but condemned to the company of a courier and of the padrone when they cannot take refuge in the society of countrymen. A well-chosen series of stereoscopic views would have served a better purpose, which they can explore at home, sauced with joyful discourse and with reference to all the books in your library.

Speak with the vulgar, think with the wise. See how Plato managed it, with an imagination so gorgeous, and a taste so patrician, that Jove, if he descended, was to speak in his style. Into the exquisite refinement of his Academy, he introduces the low-born Socrates, relieving the purple diction by his perverse talk, his gallipots, and cook, and trencher, and cart-wheels—and steadily kept this coarseness to flavor a dish else too luscious. Everybody knows the points in which the mob has the advantage of the Academy,

and all able men have known how to import the petulance of the street into correct discourse. I heard, when a great bank president was expounding the virtues of his party and of the government to a silent circle of bank pensioners, a grave Methodist exclaimed "Fiddle-sticks!" The whole party were surprised and cheered, except the bank president, though it would be difficult to explain the propriety of the expression, as no music or fiddle was so much as thought of.

Not only low style, but the lowest classifying words outvalue arguments; as, upstart, dab, cockney, prig, granny, lubber, puppy, peacock—"A cocktail House of Commons." I remember when a venerable divine [Dr. Osgood] called the young preacher's sermon "patty cake." The *sans-culottes* at Versailles cried out, "Let our little Mother Mirabeau speak!" Who has not heard in the street how forcible is bosh, gammon and gas. The short Saxon words with which the people help themselves are better than Latin. The language of the street is always strong. I envy the boys the force of the double negative (no shoes, no money, no nothing), though clean contrary to our grammar rules, and I confess to some titillation of my ears from a rattling oath.²⁹¹⁴

In the infinite variety of talents, 't is certain that some men swear with genius. I knew a poet in whose talent Nature carried this freak so far that his only graceful verses were pretty blasphemies. "The better the worse," you will say; and I own it reminds one of Vathek's collection of monstrous men with humps of a picturesque peak, and horns of exquisite polish.²⁹¹⁵ What traveller has not listened to the vigor of the *Sacre!* of the French postilion, the *Sia ammazato!* of the Italian contadino, or the deep stomach of an English drayman's execration. I remember an occasion when a proficient in this style came from North Street to Cambridge and drew a crowd of young critics in the college yard, who found his

wrath so æsthetic and fertilizing that they took notes, and even over-stayed the hour of the mathematical professor.

'T is odd what revolutions occur. We were educated in horror of Satan, but Goethe remarked that all men like to hear him named. Burns took him into compassion and expressed a blind wish for his reformation.

"Ye aiblins might, I dinna ken,
Still have a stake."²⁹¹⁶

And George Sand finds a whole nation who regard him as a personage who has been greatly wronged, and in which he is really the subject of a covert worship. As a study in language, the use of this word is curious, to see how words help us and must be philosophical. The Devil in philosophy is absolute negation, falsehood, nothing; and in the popular mind, the Devil is a malignant person. Yet all our speech expresses the first sense. "The Devil a monk was he," means, *he was no monk*, and "The Devil you did!" means *you did not*. Natural science gives us the inks, the shades; ink of Erebus—night of Chaos.²⁹¹⁷...Goethe, who had collected all the diabolical hints in men and nature for traits for his *Walpurgis Nacht*, continued the humor of collecting such horrors after this first occasion had passed, and professed to point his guest to his Walpurgis Sack, or Acherontian Bag, in which, he said, he put all his dire hints and images, and into which, he said, he should be afraid to fall himself, lest he should be burnt up. Dante is the professor that shall teach both the noble low style, the power of working up all his experience into heaven and hell; also the sculpture of compression.

The next virtue of rhetoric is compression, the science of omitting, which makes good the old verse of Hesiod, "Fools, they did not

know that half was better than the whole." The French have a neat phrase, that the secret of boring you is that of telling all,—"*Le secret d'ennuyer est celui de tout dire*;" which we translate short, "Touch and go." The silences, pauses, of an orator are as telling as his words.²⁹¹⁸ What the poet omits exalts every syllable that he writes. In good hands it will never become sterility. A good writer must convey the feeling of a flamboyant witness, and at the same time of chemic selection,—as if in his densest period was no cramp, but room to turn a chariot and horses between his valid words. There is hardly danger in America of excess of condensation; there must be no cramp insufficiency, but the superfluous must be omitted. In the Hindoo mythology, "Viswaharmán" placed the sun on his lathe to grind off some of his effulgence, and in this manner reduced it to an eighth,—more was inseparable....

In architecture the beauty is increased in the degree in which the material is safely diminished; as when you break up a prose wall, and leave all the strength in the poetry of columns. As soon as you read aloud, you will find what sentences drag. Blot them out, and read again, you will find the words that drag. 'T is like a pebble inserted in a mosaic. Resolute blotting rids you of all those phrases that sound like something and mean nothing, with which scriptural forms play a large part. Never say, "I beg not to be misunderstood." It is only graceful in the case when you are afraid that what is called a better meaning will be taken, and you wish to insist on a worse; a man has a right to pass, like Dean Swift, for a worse man than he is, but not for a better.

And I sometimes wish that the Board of Education might carry out the project of a college for graduates of our universities, to which editors and members of Congress and writers of books might repair, and learn to sink what we could best spare of our words; to gazette those Americanisms which offend us in all

journals. Some of these are odious. *Some* as an adverb—"reeled some;" *considerable* as an adverb for *much*; "quite a number;" *slim* for *bad*; the adjective *graphic*, which means *what is written*,—graphic arts and oral arts, arts of writing, and arts of speech and song,—but is used as if it meant *descriptive*: "Minerva's graphic thread." A Mr. Randall, M. C., who appeared before the committee of the House of Commons on the subject of the American mode of closing a debate, said, "that the one-hour rule worked well; made the debate short and graphic." 'T is the worst praise you can give a speech that it is as if written.

Never use the word *development*, and be wary of the whole family of *Fero*.²⁹¹⁹ Dangerous words in like kind are *display*, *improvement*, *peruse*, *circumstances*, *commence* for *begin*. Vulgarisms to be gazetted, *moiety* used for *a small part*;—"nothing would answer but;" "there is none but what"—"there being scarce a person of any note in England but what some time or other paid a visit or sent a present to our Lady of Walsingham" (Bishop Parcy); "might have to go;" "I have been to Europe;" "in our midst;" *considerable*—"it is considerable of a compliment;" "under considerable of a cloud;" *balance* for *remainder*—"spent the balance of his life;" "*as a general thing*;" "*after all*." Confusions of *lie* and *lay*, *sit* and *set*, *shall* and *will*.

Persons have been named from their abuse of certain phrases, as "Pyramid" Lambert, "Finality" Russell, "Humanity" Martin, "Horizon" Turner.

Every age gazettes a quantity of words which it has used up. We are now offended with "Standpoint,"²⁹²⁰ "Myth," "Subjective," "the Good and the True" and "the Cause."

A list might be made of showy words that tempt young writers: *asphodel*, *harbinger*, *chalice*, *flamboyant*,²⁹²¹ *golden*, *diamond*,

amethyst, opal and the rest of the precious stones, *carcanet, diadem*.

But these cardinal rules of rhetoric find best examples in the great masters, and are main sources of the delight they give. Shakspeare might be studied for his dexterity in the use of these weapons, if it were not for his heroic strength. There is no such master of low style as he, and therefore none can securely soar so high. I do not mean that he delights in comedy, exults in bringing the street itself, uproarious with laughter and animal joy, on to the scene, with Falstaff and Touchstone and Trinculo and the fools; but that in the conduct of the play, and the speech of the heroes, he keeps the level tone which is the tone of high and low alike, and most widely understood. A man of experience altogether, his very sonnets are as solid and close to facts as the Banker's Gazette; and the only check on the detail of each of his portraits is his own universality, which made bias or fixed ideas impossible—his impartiality is like a sunbeam.

His fun is as wise as his earnest, its foundations are below the frost.²⁹²² His muse is moral simply from its depth, and I value the intermixture of the common and the transcendental as in Nature. One would say Shakspeare must have been a thousand years old when he wrote his first piece; so thoroughly is his thought familiar to him, so solidly worded, as if it were already a proverb, and not only hereafter to become one. Well, that millennium is really only a little acceleration in his process of thought; his loom is better toothed, cranked and pedalled than other people's, and he can turn off a hundred yards to their one. Shakspeare is nothing but a large utterance. We cannot find that anything in his age was more worth expression than anything in ours; nor give any account of his existence, but only the fact that there was a wonderful symbolizer

and expressor, who has no rival in all ages and who has thrown an accidental lustre over his time and subject.

My friend thinks the reason why the French mind is so shallow, and still to seek, running into vagaries and blind alleys, is because they do not read Shakspeare; whilst the English and Germans, who read Shakspeare and the Bible, have a great onward march. Shakspeare would have sufficed for the culture of a nation for vast periods. The Chinese have got on so long with their solitary Confucius and Mencius; the Arabs with their Mahomet; the Scandinavians with their Snorre Sturleson; and if the English island had been larger and the Straits of Dover wider, to keep it at pleasure a little out of the imbroglio of Europe, they might have managed to feed on Shakspeare for some ages yet; as the camel in the desert is fed by his humps, in long absence from food.

Montaigne must have the credit of giving to literature that which we listen for in bar-rooms, the low speech,—words and phrases that no scholar coined; street-cries and war-cries; words of the boatman, the farmer and the lord; that have neatness and necessity, through their use in the vocabulary of work and appetite, like the pebbles which the incessant attrition of the sea has rounded. Every historic autobiographic trait authenticating the man adds to the value of the book. We can't afford to take the horse out of the Essays; it would take the rider too.

Herrick is a remarkable example of the low style. He is, therefore, a good example of the modernness of an old English writer. So Latimer, so Chaucer, so the Bible. He found his subject where he stood, between his feet, in his house, pantry, barn, poultry-yard, in his village, neighbors' gossip and scandal. Like Montaigne in this, that his subject cost him nothing, and he knew what he spake of, and did not write up to it, but could write down (a main secret),²⁹²³ and took his level, so that he had all his strength, the easiness of

strength; he took what he knew, and "took it easy," as we say. The Germans praise in Goethe the comfortable stoutness. Herrick's merit is the simplicity and manliness of his utterance, and, rarely, the weight of his sentence. He has, and knows that he has, a noble, idiomatic English, a perfect, plain style, from which he can soar to a fine, lyric delicacy, or descend to coarsest sarcasm, without losing his firm footing. This flower of speech is accompanied with an assurance of fame. We have an artist who in this merit of which I speak will easily cope with these celebrities.

In Carlyle as in Byron one is more struck with the rhetoric than with the matter. He has manly superiority rather than intellectuality, and so makes hard hits all the time. There's more character than intellect in every sentence—herein strongly resembling Samuel Johnson. The best service Carlyle has rendered is to rhetoric, or art of writing. In his books the vicious conventions of writing are all dropped. You have no board interposed between you and the writer's mind, but he talks flexibly, now high, now low, in loud emphasis, in undertones, then laughs till the walls ring, then calmly moderates, then hints, or raises an eyebrow. He has gone nigher to the wind than any other craft.

Carlyle, with his inimitable ways of saying the thing, is next best to the inventor of the thing, and I think of him when I read the famous inscription on the pyramid, "I King Saib built this pyramid. I, when I had built it, covered it with satin. Let him who cometh after me, and says he is equal to me, cover it with mats." What he has said shall be proverb, nobody shall be able to say it otherwise. No book can any longer be tolerable in the old husky Neal-on-the-Puritans model. In short, I think the revolution wrought by Carlyle is precisely parallel to that going forward in picture, by the stereoscope. Until history is interesting, it is not yet written.

Here has come into the country, three months ago, a History of Friedrich, infinitely the wittiest book that ever was written; a book that, one would think, the English people would rise up in a mass to thank him for, by cordial acclamation, and signify, by crowning him with chaplet of oak-leaves, their joy that such a head existed among them, and sympathizing and much-reading America would make a new treaty or send a minister extraordinary to offer congratulations of honoring delight to England in acknowledgment of such a donation; a book holding so many memorable and heroic facts, working directly on practice; with new heroes, things unvoiced before—the German Plutarch, now that we have exhausted the Greek and Roman and British biography—with a range, too, of thought and wisdom, so large, so colloquially elastic, that we not so much read a stereotype page as we see the eyes of the writer looking into ours, whilst he is humming and chuckling, with undertones, and trumpet-tones, and shrugs, and long commanding glances, stereoscoping every figure that passes, and every hill, river, wood, hummock and pebble in the long perspective, with its wonderful mnemonics, whereby great and insignificant men are ineffaceably marked and medalled in the memory by what they were, had and did; and withal a book that is a judgment-day for its moral verdict on the men and nations and manners of modern times. And this book makes no noise. I have hardly seen a notice of it in any newspaper or journal, and you would think there was no such book. I am not aware that Mr. Buchanan has sent a special messenger to Great Cheyne Row, Chelsea; but the secret interior wits and hearts of men take note of it, not the less surely. They have said nothing lately in praise of the air, or of fire, or of the blessing of love, and yet, I suppose, they are sensible of these, and not less of this Book, which is like these.

After Low Style and Compression what the books call *Metonymy* is a principal power of rhetoric. It means, using one word or image for another. It is a low idealism. Idealism regards the world as symbolic, and all these symbols or forms as fugitive and convertible expressions. The power of the poet is in controlling these symbols; in using every fact in Nature, however great and stable, as a fluent symbol, and in measuring his strength by the facility with which he makes the mood of mind give its color to things. The world, history, the powers of Nature,—he can make them speak what sense he will.

All conversation, as all literature, appears to me the pleasure of rhetoric, or, I may say, of *metonymy*. "To make of motes mountains, and of mountains motes," Isocrates said, "was the orator's office." Well, that is what poetry and thinking do. Whatever new object we see, we perceive to be only a new version of our familiar experience, and we set about translating it at once into our parallel facts. We have hereby our vocabulary.

Everything has two handles. Pindar when the victor in a race by mules offered him a trifling present, pretended to be hurt at thought of writing on demi-asses. When, however, he offered a sufficient present, he composed the poem:—

"Hail, daughters of the tempest-footed horse,
That skims like wind along the course."

That was the other handle. I passed at one time through a place called New City, then supposed, like each of a hundred others, to be destined to greatness. I fell in with one of the founders who showed its advantages and its river and port and the capabilities: "Sixty houses, sir, were built in a night, like tents." After Chicago had secured the confluence of the railroads to itself, I chanced to

meet my founder again, but now removed to Chicago. He had transferred to that city the magnificent dreams which he had once communicated to me, and no longer remembered his first emporium. "Where is the town? Was there not," I asked, "a river and a harbor there?" "Oh yes, there was a guzzle out of a sand-bank." "And the town?" "There are still the sixty houses, but when I passed it, one owl was the only inhabitant." When Samuel Dexter, long since, argued the claims of South Boston Bridge, he had to meet loud complaints of the shutting out of the coasting-trade by the proposed improvements. "Now," said he, "I come to the grand charge that we have obstructed the commerce and navigation of Roxbury Ditch." 'T is very easy to call the gracious spring "poor goody herb-wife," or to represent the farm, which stands for the organization of the gravest needs, as a poor trifle of pea-vines, turnips and hen-roosts. Everything has two handles. Shakspeare says, "A plague of opinion; a man can wear it on both sides, like a leather jerkin."

Here is my friend E.,²⁹²⁴ the model of opinionists. He is the April day incarnated and walking, soft sunshine and hailstones, sour east wind and flowery southwest—alternating, and each sovereign, and painting all things its own color. He has it all his own way. He complains of Nature,—too many leaves, too windy and grassy, and I suppose the birds are too feathery and the horses too leggy. He thinks Egypt a humbug, and Palestine used up, and England a flash in the pan; and that the only art is landscape-painting. But when we came, in the woods, to a clump of goldenrod,—“Ah!” he says, “here they are! these things consume a great deal of time. I don’t know but they are of more importance than any other of our investments.” Well, this is the game that goes on every day in all companies; this is the ball that is tossed in every court of law, in every legislature and in literature, and in the history of every

mind by sovereignty of thought to make facts and men obey our present humor or belief.

I designed to speak of one point more, the touching a principal question in criticism in recent times—the Classic and Romantic, or what is classic?

The art of writing is the highest of those permitted to man as drawing directly from the soul, and the means or material it uses are also of the soul. It brings man into alliance with what is great and eternal. It discloses to him the variety and splendor of his resources. And there is much in literature that draws us with a sublime charm—the superincumbent necessity by which each writer, an infirm, capricious, fragmentary soul, is made to utter his part in the chorus of humanity, is enriched by thoughts which flow from all past minds, shares the hopes of all existing minds; so that, whilst the world is made of youthful, helpless children of a day, literature resounds with the music of united vast ideas of affirmation and of moral truth.

What is the Classic? Classic art is the art of necessity; organic; modern or romantic bears the stamp of caprice or chance. One is the product of inclination, of caprice, of haphazard; the other carries its law and necessity within itself.

The politics of monarchy, when all hangs on the accidents of life and temper of a single person, may be called romantic politics. The democratic, when the power proceeds organically from the people and is responsible to them, are classic politics. The classic unfolds, the romantic adds. The classic *should*, the modern *would*. The classic is healthy, the romantic is sick. The classic draws its rule from the genius of that which it does, and not from by-ends. It does not make a novel to establish a principle of political economy.

Don't set out to please; you will displease. The Augsburg Allgemeine Zeitung deprecates an observatory founded for the benefit of navigation. Nor can we promise that our School of Design will secure a lucrative post to the pupils.

When I read Plutarch, or look at a Greek vase, I incline to accept the common opinion of scholars, that the Greeks had clearer wits than any other people. But there is anything but time in my idea of the antique. A clear or natural expression by word or deed is that which we mean when we love and praise the antique. In society I do not find it, in modern books, seldom; but when I come into the pastures, I find antiquity again. Once in the fields with the lowing cattle, the birds, trees and waters and satisfying curves of the landscape, and I cannot tell whether this is Thessaly and Enna, or whether Concord and Acton.

A man of genius or a work of love or beauty will not come to order, can't be compounded by the best rules, but is always a new and incalculable result, like health. Don't rattle your rules in our ears; we must behave as we can. Criticism is an art when it does not stop at the words of the poet, but looks at the order of his thoughts and the essential quality of his mind. Then the critic is poet. 'T is a question not of talents but of tone; and not particular merits, but the mood of mind into which one and another can bring us.²⁹²⁵

IX. PAPERS FROM THE DIAL

THE TONGUE is prone to lose the way;
Not so the pen, for in a letter
We have not better things to say,
But surely say them better.

I. THOUGHTS ON MODERN LITERATURE

IN OUR fidelity to the higher truth we need not disown our debt, in our actual state of culture, in the twilights of experience, to these rude helpers. They keep alive the memory and the hope of a better day. When we flout all particular books as initial merely, we truly express the privilege of spiritual nature, but alas, not the fact and fortune of this low Massachusetts and Boston, of these humble Junes and Decembers of mortal life. Our souls are not self-fed, but do eat and drink of chemical water and wheat. Let us not forget the genial miraculous force we have known to proceed from a book. We go musing into the vault of day and night; no constellation shines, no muse descends, the stars are white points, the roses, brick-colored leaves, and frogs pipe, mice cheep, and wagons creak along the road. We return to the house and take up Plutarch or Augustine, and read a few sentences or pages, and lo! the air swims with life, secrets of magnanimity and grandeur invite us on every hand, life is made up of them. Such is our debt to a book. Observe moreover that we ought to credit literature with much more than the bare word it gives us. I have just been reading poems which now in memory shine with a certain steady, warm,

autumnal light. That is not in their grammatical construction which they give me. If I analyze the sentences, it eludes me, but is the genius and suggestion of the whole. Over every true poem lingers a certain wild beauty, immeasurable; a happiness lightsome and delicious fills the heart and brain, as they say every man walks environed by his proper atmosphere, extending to some distance around him. This beautiful result must be credited to literature also in casting its account.

In looking at the library of the Present Age, we are first struck with the fact of the immense miscellany. It can hardly be characterized by any species of book, for every opinion, old and new, every hope and fear, every whim and folly, has an organ. It exhibits a vast carcass of tradition every year with as much solemnity as a new revelation. Along with these it vents books that breathe of new morning, that seem to heave with the life of millions, books for which men and women peak and pine; books which take the rose out of the cheek of him that wrote them, and give him to the midnight a sad, solitary, diseased man; which leave no man where they found him, but make him better or worse; and which work dubiously on society and seem to inoculate it with a venom before any healthy result appears.

In order to any complete view of the literature of the present age, an inquiry should include what it quotes, what it writes and what it wishes to write. In our present attempt to enumerate some traits of the recent literature, we shall have somewhat to offer on each of these topics, but we cannot promise to set in very exact order what we have to say.

In the first place it has all books. It reprints the wisdom of the world. How can the age be a bad one which gives me Plato and Paul and Plutarch, Saint Augustine, Spinoza, Chapman, Beaumont and Fletcher, Donne and Sir Thomas Browne, beside its own riches?

Our presses groan every year with new editions of all the select pieces of the first of mankind,—meditations, history, classifications, opinions, epics, lyrics, which the age adopts by quoting them. If we should designate favorite studies in which the age delights more than in the rest of this great mass of the permanent literature of the human race, one or two instances would be conspicuous. First; the prodigious growth and influence of the genius of Shakspeare, in the last one hundred and fifty years, is itself a fact of the first importance. It almost alone has called out the genius of the German nation into an activity which, spreading from the poetic into the scientific, religious and philosophical domains, has made theirs now at last the paramount intellectual influence of the world, reacting with great energy on England and America. And thus, and not by mechanical diffusion, does an original genius work and spread himself.²⁹²⁶

The poetry and speculation of the age are marked by a certain philosophic turn, which discriminates them from the works of earlier times. The poet is not content to see how "Fair hangs the apple from the rock," "What music a sunbeam awoke in the groves," nor of Hardiknute, how

"Stately stept he east the wa,
And stately stept he west,"

but he now revolves, What is the apple to me? and what the birds to me? and what is Hardiknute to me? and what am I? And this is called subjectiveness, as the eye is withdrawn from the object and fixed on the subject or mind.

We can easily concede that a steadfast tendency of this sort appears in modern literature. It is the new consciousness of the one mind, which predominates in criticism. It is the uprise of the

soul, and not the decline. It is founded on that insatiable demand for unity, the need to recognize one nature in all the variety of objects, which always characterizes a genius of the first order. Accustomed always to behold the presence of the universe in every part, the soul will not condescend to look at any new part as a stranger, but saith,—“I know all already, and what art thou? Show me thy relations to me, to all, and I will entertain thee also.”

There is a pernicious ambiguity in the use of the term *subjective*. We say, in accordance with the general view I have stated, that the single soul feels its right to be no longer confounded with numbers, but itself to sit in judgment on history and literature, and to summon all facts and parties before its tribunal. And in this sense the age is subjective.

But, in all ages, and now more, the narrow-minded have no interest in anything but in its relation to their personality. What will help them to be delivered from some burden, eased in some circumstance, flattered or pardoned or enriched; what will help to marry or to divorce them, to prolong or to sweeten life, is sure of their interest; and nothing else. Every form under the whole heaven they behold in this most partial light or darkness of intense selfishness, until we hate their being. And this habit of intellectual selfishness has acquired in our day the fine name of subjectiveness.

Nor is the distinction between these two habits to be found in the circumstance of using the first person singular, or reciting facts and feelings of personal history. A man may say I, and never refer to himself as an individual; and a man may recite passages of his life with no feeling of egotism. Nor need a man have a vicious subjectiveness because he deals in abstract propositions.²⁹²⁷

But the criterion which discriminates these two habits in the poet's mind is the tendency of his composition; namely, whether it leads us to Nature, or to the person of the writer. The great always

introduce us to facts; small men introduce us always to themselves. The great man, even whilst he relates a private fact personal to him, is really leading us away from him to an universal experience. His own affection is in Nature, in *what is*, and, of course, all his communication leads outward to it, starting from whatsoever point. The great never with their own consent become a load on the minds they instruct. The more they draw us to them, the farther from them or more independent of them we are, because they have brought us to the knowledge of somewhat deeper than both them and us. The great never hinder us; for their activity is coincident with the sun and moon, with the course of the rivers and of the winds, with the stream of laborers in the street and with all the activity and well-being of the race. The great lead us to Nature, and in our age to metaphysical Nature, to the invisible awful facts, to moral abstractions, which are not less Nature than is a river, or a coal-mine,—nay, they are far more Nature,—but its essence and soul.

But the weak and wicked, led also to analyze, saw nothing in thought but luxury. Thought for the selfish became selfish. They invited us to contemplate Nature, and showed us an abominable self. Would you know the genius of the writer? Do not enumerate his talents or his feats, but ask thyself, What spirit is he of? Do gladness and hope and fortitude flow from his page into thy heart? Has he led thee to Nature because his own soul was too happy in beholding her power and love? Or is his passion for the wilderness only the sensibility of the sick, the exhibition of a talent which only shines whilst you praise it; which has no root in the character, and can thus minister to the vanity but not to the happiness of the possessor; and which derives all its *éclat* from our conventional education, but would not make itself intelligible to the wise man of another age or country? The water we wash with

never speaks of itself, nor does fire or wind or tree. Neither does the noble natural man: he yields himself to your occasion and use, but his act expresses a reference to universal good.

Another element of the modern poetry akin to this subjective tendency, or rather the direction of that same on the question of resources, is the Feeling of the Infinite. Of the perception now fast becoming a conscious fact,—that there is One Mind, and that all the powers and privileges which lie in any, lie in all; that I, as a man, may claim and appropriate whatever of true or fair or good or strong has anywhere been exhibited; that Moses and Confucius, Montaigne and Leibnitz, are not so much individuals as they are parts of man and parts of me, and my intelligence proves them my own,—literature is far the best expression. It is true, this is not the only nor the obvious lesson it teaches. A selfish commerce and government have caught the eye and usurped the hand of the masses. It is not to be contested that selfishness and the senses write the laws under which we live, and that the street seems to be built, and the men and women in it moving, not in reference to pure and grand ends, but rather to very short and sordid ones. Perhaps no considerable minority, no one man, leads a quite clean and lofty life. What then? We concede in sadness the fact. But we say that these low customary ways are not all that survives in human beings. There is that in us which mutters, and that which groans, and that which triumphs, and that which aspires. There are facts on which men of the world superciliously smile, which are worth all their trade and politics; which drive young men into gardens and solitary places, and cause extravagant gestures, starts, distortions of the countenance and passionate exclamations; sentiments, which find no aliment or language for themselves on the wharves, in court, or market, but which are soothed by silence, by darkness, by the pale stars, and the presence of Nature.

All over the modern world the educated and susceptible have betrayed their discontent with the limits of our municipal life, and with the poverty of our dogmas of religion and philosophy. They betray this impatience by fleeing for resource to a conversation with Nature, which is courted in a certain moody and exploring spirit, as if they anticipated a more intimate union of man with the world than has been known in recent ages. Those who cannot tell what they desire or expect still sigh and struggle with indefinite thoughts and vast wishes. The very child in the nursery prattles mysticism, and doubts and philosophizes. A wild striving to express a more inward and infinite sense characterizes the works of every art. The music of Beethoven is said, by those who understand it, to labor with vaster conceptions and aspirations than music has attempted before. This feeling of the Infinite has deeply colored the poetry of the period. This new love of the vast, always native in Germany, was imported into France by De Staël, appeared in England in Coleridge, Wordsworth, Byron, Shelley, Felicia Hemans, and finds a most genial climate in the American mind. Scott and Crabbe, who formed themselves on the past, had none of this tendency; their poetry is objective. In Byron, on the other hand, it predominates; but in Byron it is blind, it sees not its true end—an infinite good, alive and beautiful, a life nourished on absolute beatitudes, descending into Nature to behold itself reflected there. His will is perverted, he worships the accidents of society, and his praise of Nature is thieving and selfish.²⁹²⁸

Nothing certifies the prevalence of this taste in the people more than the circulation of the poems—one would say most incongruously united by some bookseller—of Coleridge, Shelley and Keats. The only unity is in the subjectiveness and the aspiration common to the three writers. Shelley, though a poetic mind, is never a poet. His muse is uniformly imitative; all his poems composite. A

good English scholar he is, with ear, taste and memory; much more, he is a character full of noble and prophetic traits; but imagination, the original, authentic fire of the bard, he has not. He is clearly modern, and shares with Richter, Châteaubriand, Manzoni and Wordsworth the feeling of the Infinite, which so labors for expression in their different genius. But all his lines are arbitrary, not necessary. When we read poetry, the mind asks,—Was this verse one of twenty which the author might have written as well; or is this what that man was created to say? But whilst every line of the true poet will be genuine, he is in a boundless power and freedom to say a million things. And the reason why he can say one thing well is because his vision extends to the sight of all things, and so he describes each as one who knows many and all.

The fame of Wordsworth is a leading fact in modern literature, when it is considered how hostile his genius at first seemed to the reigning taste, and with what limited poetic talents his great and steadily growing dominion has been established. More than any poet his success has been not his own but that of the idea which he shared with his coevals, and which he has rarely succeeded in adequately expressing. The *Excursion* awakened in every lover of Nature the right feeling. We saw stars shine, we felt the awe of mountains, we heard the rustle of the wind in the grass, and knew again the ineffable secret of solitude. It was a great joy. It was nearer to Nature than anything we had before. But the interest of the poem ended almost with the narrative of the influences of Nature on the mind of the Boy, in the First Book. Obviously for that passage the poem was written, and with the exception of this and of a few strains of the like character in the sequel, the whole poem was dull. Here was no poem, but here was poetry, and a sure index where the subtle muse was about to pitch her tent and find the argument of her song. It was the human soul

in these last ages striving for a just publication of itself. Add to this, however, the great praise of Wordsworth, that more than any other contemporary bard he is pervaded with a reverence of somewhat higher than (conscious) thought. There is in him that property common to all great poets, a wisdom of humanity, which is superior to any talents which they exert. It is the wisest part of Shakspeare and of Milton. For they are poets by the free course which they allow to the informing soul, which through their eyes beholdeth again and blesseth the things which it hath made. The soul is superior to its knowledge, wiser than any of its works.²⁹²⁹

With the name of Wordsworth rises to our recollection the name of his contemporary and friend, Walter Savage Landor—a man working in a very different and peculiar spirit, yet one whose genius and accomplishments deserve a wiser criticism than we have yet seen applied to them, and the rather that his name does not readily associate itself with any school of writers. Of Thomas Carlyle, also, we shall say nothing at this time, since the quality and energy of his influence on the youth of this country will require at our hands, ere long, a distinct and faithful acknowledgment.²⁹³⁰

But of all men he who has united in himself, and that in the most extraordinary degree, the tendencies of the era, is the German poet, naturalist and philosopher, Goethe. Whatever the age inherited or invented, he made his own. He has owed to Commerce and to the victories of the Understanding, all their spoils. Such was his capacity that the magazines of the world's ancient or modern wealth, which arts and intercourse and skepticism could command,—he wanted them all. Had there been twice so much, he could have used it as well. Geologist, mechanic, merchant, chemist, king, radical, painter, composer,—all worked for him, and a thousand men seemed to look through his eyes. He learned as readily as other men breathe. Of all the men of this time, not one has seemed so

much at home in it as he. He was not afraid to live. And in him this encyclopædia of facts, which it has been the boast of the age to compile, wrought an equal effect. He was knowing; he was brave; he was clean from all narrowness; he has a perfect propriety and taste,—a quality by no means common to the German writers. Nay, since the earth as we said had become a reading-room, the new opportunities seem to have aided him to be that resolute realist he is, and seconded his sturdy determination to see things for what they are. To look at him one would say there was never an observer before. What sagacity, what industry of observation. To read his record is a frugality of time, for you shall find no word that does not stand for a thing, and he is of that comprehension which can see the value of truth. His love of Nature has seemed to give a new meaning to that word. There was never man more domesticated in this world than he. And he is an apology for the analytic spirit of the period, because, of his analysis, always wholes were the result.²⁹³¹ All conventions, all traditions he rejected. And yet he felt his entire right and duty to stand before and try and judge every fact in Nature. He thought it necessary to dot round with his own pen the entire sphere of knowables; and for many of his stories, this seems the only reason: Here is a piece of humanity I had hitherto omitted to sketch;—take this. He does not say so in syllables, yet a sort of conscientious feeling he had to be *up* to the universe is the best account and apology for many of them. He shared also the subjectiveness of the age, and that too in both the senses I have discriminated. With the sharpest eye for form, color, botany, engraving, medals, persons and manners, he never stopped at surface, but pierced the purpose of a thing and studied to reconcile that purpose with his own being. What he could so reconcile was good; what he could not, was false. Hence a certain greatness encircles every fact he treats; for to him it has a

soul, an eternal reason why it was so, and not otherwise. This is the secret of that deep realism, which went about among all objects he beheld, to find the cause why they must be what they are. It was with him a favorite task to find a theory of every institution, custom, art, work of art, which he observed. Witness his explanation of the Italian mode of reckoning the hours of the day, as growing out of the Italian climate; of the obelisk of Egypt, as growing out of a common natural fracture in the granite parallelopiped in Upper Egypt; of the Doric architecture, and the Gothic; of the Venetian music of the gondolier, originating in the habit of the fishers' wives of the Lido singing on shore to their husbands on the sea; of the amphitheatre, which is the enclosure of the natural cup of heads that arranges itself round every spectacle in the street; of the coloring of Titian and Paul Veronese, which one may verify in common daylight in Venice every afternoon; of the Carnival at Rome; of the domestic rural architecture in Italy; and many the like examples.

But also that other vicious subjectiveness, that vice of the time, infected him also. We are provoked with his Olympian self-complacency, the patronizing air with which he vouchsafes to tolerate the genius and performances of other mortals, "the good Hiller," "our excellent Kant," "the friendly Wieland," etc. There is a good letter from Wieland to Merck, in which Wieland relates that Goethe read to a select party his journal of a tour in Switzerland with the Grand Duke, and their passage through the Vallais and over the St. Gothard. "It was," says Wieland, "as good as Xenophon's *Anabasis*. The piece is one of the most masterly productions, and is thought and written with the greatness peculiar to him. The fair hearers were enthusiastic at the nature in this piece; I liked the sly art in the composition, whereof they saw nothing, still better. It is a true poem, so concealed is the art too. But what most

remarkably in this, as in all his other works, distinguishes him from Homer and Shakspeare is that the *Me*, the *Ille ego*, everywhere glimmers through, although without any boasting and with an infinite fineness." This subtle element of egotism in Goethe certainly does not seem to deform his compositions, but to lower the moral influence of the man. He differs from all the great in the total want of frankness. Who saw Milton, who saw Shakspeare, saw them do their best, and utter their whole heart manlike among their brethren. No man was permitted to call Goethe brother. He hid himself, and worked always to astonish, which is egotism, and therefore little.

If we try Goethe by the ordinary canons of criticism, we should say that his thinking is of great altitude, and all level; not a succession of summits, but a high Asiatic table-land. Dramatic power, the rarest talent in literature, he has very little. He has an eye constant to the fact of life and that never pauses in its advance. But the great felicities, the miracles of poetry, he has never. It is all design with him, just thought and instructed expression, analogies, allusion, illustration, which knowledge and correct thinking supply; but of Shakspeare and the transcendent muse, no syllable. Yet in the court and law to which we ordinarily speak, and without adverting to absolute standards, we claim for him the praise of truth, of fidelity to his intellectual nature. He is the king of all scholars. In these days and in this country, where the scholars are few and idle, where men read easy books and sleep after dinner, it seems as if no book could so safely be put in the hands of young men as the letters of Goethe, which attest the incessant activity of this man, to eighty years, in an endless variety of studies, with uniform cheerfulness and greatness of mind. They cannot be read without shaming us into an emulating industry. Let him have the praise of the love of truth. We think, when we contemplate the

stupendous glory of the world, that it were life enough for one man merely to lift his hands and cry with Saint Augustine, "Wrangle who pleases, I will wonder." Well, this he did. Here was a man who, in the feeling that the thing itself was so admirable as to leave all comment behind, went up and down, from object to object, lifting the veil from every one, and did no more. What he said of Lavater, may truelier be said of him, that "it was fearful to stand in the presence of one before whom all the boundaries within which Nature has circumscribed our being were laid flat." His are the bright and terrible eyes which meet the modern student in every sacred chapel of thought, in every public enclosure.

But now, that we may not seem to dodge the question which all men ask, nor pay a great man so ill a compliment as to praise him only in the conventional and comparative speech, let us honestly record our thought upon the total worth and influence of this genius. Does he represent, not only the achievement of that age in which he lived, but that which it would be and is now becoming? And what shall we think of that absence of the moral sentiment, that singular equivalence to him of good and evil in action, which discredit his compositions to the pure? The spirit of his biography, of his poems, of his tales, is identical, and we may here set down by way of comment of his genius the impressions recently awakened in us by the story of Wilhelm Meister.

All great men have written proudly, nor cared to explain. They knew that the intelligent reader would come at last, and would thank them. So did Dante, so did Macchiavel. Goethe has done this in Meister. We can fancy him saying to himself: 'There are poets enough of the Ideal; let me paint the Actual, as, after years of dreams, it will still appear and reappear to wise men. That all shall right itself in the long Morrow, I may well allow, and my novel may wait for the same regeneration. The age, that can damn it as

false and falsifying, will see that it is deeply one with the genius and history of all the centuries. I have given my characters a bias to error. Men have the same. I have let mischance befall instead of good fortune. They do so daily. And out of many vices and misfortunes, I have let a great success grow, as I had known in my own and many other examples. Fierce churchmen and effeminate aspirants will chide and hate my name, but every keen beholder of life will justify my truth, and will acquit me of prejudging the cause of humanity by painting it with this morose fidelity. To a profound soul is not austere truth the sweetest flattery?’

Yes, O Goethe! but the ideal is truer than the actual. That is ephemeral, but this changes not. Moreover, because Nature is moral, that mind only can see, in which the same order entirely obtains. An interchangeable Truth, Beauty and Goodness, each wholly interfused in the other, must make the humors of that eye which would see causes reaching to their last effect and reproducing the world forever. The least inequality of mixture, the excess of one element over the other, in that degree diminishes the transparency of things, makes the world opaque to the observer, and destroys so far the value of his experience. No particular gifts can countervail this defect. In reading Meister, I am charmed with the insight; to use a phrase of Ben Jonson’s, “it is rammed with life.” I find there actual men and women even too faithfully painted. I am moreover instructed in the possibility of a highly accomplished society, and taught to look for great talent and culture under a gray coat. But this is all. The limits of artificial society are never quite out of sight. The vicious conventions, which hem us in like prison walls and which the poet should explode at his touch, stand for all they are worth in the newspaper. We are never lifted above ourselves, we are not transported out of the dominion of the

senses, or cheered with an infinite tenderness, or armed with a grand trust.

Goethe, then, must be set down as the poet of the Actual, not of the Ideal; the poet of limitation, not of possibility; of this world, and not of religion and hope; in short, if we may say so, the poet of prose, and not of poetry. He accepts the base doctrine of Fate, and gleans what straggling joys may yet remain out of its ban. He is like a banker or a weaver with a passion for the country; he steals out of the hot streets before sunrise, or after sunset, or on a rare holiday, to get a draft of sweet air and a gaze at the magnificence of summer, but dares not break from his slavery and lead a man's life in a man's relation to Nature. In that which should be his own place, he feels like a truant, and is scourged back presently to his task and his cell. Poetry is with Goethe thus external, the gilding of the chain, the mitigation of his fate; but the Muse never assays those thunder-tones which cause to vibrate the sun and the moon, which dissipate by dreadful melody all this iron network of circumstance, and abolish the old heavens and the old earth before the free will or Godhead of man. That Goethe had not a moral perception proportionate to his other powers is not, then, merely a circumstance, as we might relate of a man that he had or had not the sense of tune or an eye for colors, but it is the cardinal fact of health or disease; since, lacking this, he failed in the high sense to be a creator, and, with divine endowments, drops by irreversible decree into the common history of genius. He was content to fall into the track of vulgar poets and spend on common aims his splendid endowments, and has declined the office proffered to now and then a man in many centuries in the power of his genius, of a Redeemer of the human mind. He has written better than other poets only as his talent was subtler, but the ambition of creation he refused. Life for him is prettier, easier,

wiser, decenter, has a gem or two more on its robe, but its old eternal burden is not relieved; no drop of healthier blood flows yet in its veins. Let him pass. Humanity must wait for its physician still at the side of the road, and confess as this man goes out that they have served it better, who assured it out of the innocent hope in their hearts that a Physician will come, than this majestic Artist, with all the treasures of wit, of science, and of power at his command.²⁹³²

The criticism, which is not so much spoken as felt in reference to Goethe, instructs us directly in the hope of literature. We feel that a man gifted like him should not leave the world as he found it. It is true, though somewhat sad, that every fine genius teaches us how to blame himself. Being so much, we cannot forgive him for not being more. When one of these grand monads is incarnated whom Nature seems to design for eternal men and draw to her bosom, we think that the old weariness of Europe and Asia, the trivial forms of daily life will now end, and a new morning break on us all. What is Austria? What is England? What is our graduated and petrified social scale of ranks and employments? Shall not a poet redeem us from these idolatries, and pale their legendary lustre before the fires of the Divine Wisdom which burn in his heart? All that in our sovereign moments each of us has divined of the powers of thought, all the hints of omnipresence and energy which we have caught, this man should unfold, and constitute facts.

And this is the insatiable craving which alternately saddens and gladdens men at this day. The Doctrine of the Life of Man established after the truth through all his faculties;—this is the thought which the literature of this hour meditates and labors to say. This is that which tunes the tongue and fires the eye and sits in the silence of the youth. Verily it will not long want articulate and melodious expression. There is nothing in the heart but comes

presently to the lips. The very depth of the sentiment, which is the author of all the cutaneous life we see, is guarantee for the riches of science and of song in the age to come. He who doubts whether this age or this country can yield any contribution to the literature of the world only betrays his own blindness to the necessities of the human soul. Has the power of poetry ceased, or the need? Have the eyes ceased to see that which they would have, and which they have not? Have they ceased to see other eyes? Are there no lonely, anxious, wondering children, who must tell their tale? Are we not evermore whipped by thoughts?

"In sorrow steeped, and steeped in love
Of thoughts not yet incarnated."²⁹³³

The heart beats in this age as of old, and the passions are busy as ever. Nature has not lost one ringlet of her beauty, one impulse of resistance and valor. From the necessity of loving none are exempt, and he that loves must utter his desires. A charm as radiant as beauty ever beamed, a love that fainteth at the sight of its object, is new to-day.

"The world does not run smoother than of old,
There are sad haps that must be told."

Man is not so far lost but that he suffers ever the great Discontent which is the elegy of his loss and the prediction of his recovery. In the gay saloon he laments that these figures are not what Raphael and Guercino painted. Withered though he stand, and trifler though he be, the august spirit of the world looks out from his eyes. In his heart he knows the ache of spiritual pain, and his thought can animate the sea and land. What, then, shall hinder the

Genius of the time from speaking its thought? It cannot be silent, if it would. It will write in a higher spirit and a wider knowledge and with a grander practical aim than ever yet guided the pen of poet. It will write the annals of a changed world, and record the descent of principles into practice, of love into Government, of love into Trade. It will describe the new heroic life of man, the now unbelieved possibility of simple living and of clean and noble relations with men. Religion will bind again these that were sometime frivolous, customary, enemies, skeptics, self-seekers, into a joyful reverence for the circumambient Whole, and that which was ecstasy shall become daily bread.

II. WALTER SAVAGE LANDOR

WE SOMETIMES meet in a stage-coach in New England an erect, muscular man, with fresh complexion and a smooth hat, whose nervous speech instantly betrays the English traveller;—a man nowise cautious to conceal his name or that of his native country, or his very slight esteem for the persons and the country that surround him. When Mr. Bull rides in an American coach, he speaks quick and strong; he is very ready to confess his ignorance of everything about him,—persons, manners, customs, politics, geography. He wonders that the Americans should build with wood, whilst all this stone is lying in the roadside; and is astonished to learn that a wooden house may last a hundred years; nor will he remember the fact as many minutes after it has been told him: he wonders that they do not make elder-wine and cherry-bounce, since here are cherries, and every mile is crammed with elder-bushes. He has never seen a good horse in America, nor a good coach, nor a good inn. Here is very good earth and water and plenty of them; that he is free to allow; to all other gifts of Nature or man his eyes are sealed by the inexorable demand for the precise conveniences to which he is accustomed in England. Add

to this proud blindness the better quality of great downrightness in speaking the truth, and the love of fair play, on all occasions, and moreover the peculiarity which is alleged of the Englishman, that his virtues do not come out until he quarrels.

Transfer these traits to a very elegant and accomplished mind, and we shall have no bad picture of Walter Savage Landor, who may stand as a favorable impersonation of the genius of his countrymen at the present day. A sharp, dogmatic man, with a great deal of knowledge, a great deal of worth, and a great deal of pride; with a profound contempt for all that he does not understand; a master of all elegant learning, and capable of the utmost delicacy of sentiment, and yet prone to indulge a sort of ostentation of coarse imagery and language. His partialities and dislikes are by no means culpable, but are often whimsical and amusing; yet they are quite sincere, and, like those of Johnson and Coleridge, are easily separable from the man. What he says of Wordsworth is true of himself, that he delights to throw a clod of dirt on the table, and cry, "Gentlemen, there is a better man than all of you." Bolivar, Mina and General Jackson will never be greater soldiers than Napoleon and Alexander, let Mr. Landor think as he will; nor will he persuade us to burn Plato and Xenophon, out of our admiration of Bishop Patrick, or Lucas on Happiness, or Lucas on Holiness, or even Barrow's Sermons. Yet a man may love a paradox without either losing his wit or his honesty. A less pardonable eccentricity is the cold and gratuitous obtrusion of licentious images, not so much the suggestion of merriment as of bitterness. Montaigne assigns as a reason for his license of speech that he is tired of seeing his Essays on the work-tables of ladies, and he is determined they shall for the future put them out of sight. In Mr. Landor's coarseness there is a certain air of defiance, and the rude word seems sometimes to arise from a disgust at

niceness and over-refinement. Before a well-dressed company he plunges his fingers into a cesspool, as if to expose the whiteness of his hands and the jewels of his ring. Afterward, he washes them in water, he washes them in wine; but you are never secure from his freaks. A sort of Earl Peterborough in literature, his eccentricity is too decided not to have diminished his greatness. He has capital enough to have furnished the brain of fifty stock authors, yet has written no book.

But we have spoken all our discontent. Possibly his writings are open to harsher censure; but we love the man, from sympathy as well as for reasons to be assigned; and have no wish, if we were able, to put an argument in the mouth of his critics. Now for twenty years we have still found the *Imaginary Conversations* a sure resource in solitude, and it seems to us as original in its form as in its matter. Nay, when we remember his rich and ample page, wherein we are always sure to find free and sustained thought, a keen and precise understanding, an affluent and ready memory familiar with all chosen books, an industrious observation in every department of life, an experience to which nothing has occurred in vain, honor for every just and generous sentiment and a scourge like that of Furies for every oppressor, whether public or private,—we feel how dignified is this perpetual Censor in his curule chair, and we wish to thank a benefactor of the reading world.

Mr. Landor is one of the foremost of that small class who make good in the nineteenth century the claims of pure literature. In these busy days of avarice and ambition, when there is so little disposition to profound thought or to any but the most superficial intellectual entertainments, a faithful scholar, receiving from past ages the treasures of wit and enlarging them by his own love, is a friend and consoler of mankind. When we pronounce the names of Homer and Æschylus; Horace, Ovid and Plutarch; Erasmus,

Scaliger and Montaigne; Ben Jonson and Isaak Walton; Dryden and Pope,—we pass at once out of trivial associations and enter into a region of the purest pleasure accessible to human nature. We have quitted all beneath the moon and entered that crystal sphere in which everything in the world of matter reappears, but transfigured and immortal. Literature is the effort of man to indemnify himself for the wrongs of his condition. The existence of the poorest playwright and the humblest scrivener is a good omen. A charm attaches to the most inferior names which have in any manner got themselves enrolled in the registers of the House of Fame, even as porters and grooms in the courts; to Creech and Fenton, Theobald and Dennis, Aubrey and Spence. From the moment of entering a library and opening a desired book, we cease to be citizens, creditors, debtors, housekeepers and men of care and fear. What boundless leisure! what original jurisdiction! the old constellations have set, new and brighter have arisen; an Elysian light tinges all objects:—

“In the afternoon we came unto a land
In which it seemed always afternoon.”²⁹³⁴

And this sweet asylum of an intellectual life must appear to have the sanction of Nature, as long as so many men are born with so decided an aptitude for reading and writing. Let us thankfully allow every faculty and art which opens new scope to a life so confined as ours. There are vast spaces in a thought: a slave, to whom the religious sentiment is opened, has a freedom which makes his master's freedom a slavery.²⁹³⁵ Let us not be so illiberal with our schemes for the renovation of society and Nature as to disesteem or deny the literary spirit. Certainly there are heights in Nature which command this; there are many more which this

commands. It is vain to call it a luxury, and as saints and reformers are apt to do, decry it as a species of day-dreaming. What else are sanctities, and reforms, and all other things? Whatever can make for itself an element, means, organs, servants and the most profound and permanent existence in the hearts and heads of millions of men, must have a reason for its being. Its excellency is reason and vindication enough. If rhyme rejoices us, there should be rhyme, as much as if fire cheers us, we should bring wood and coals. Each kind of excellence takes place for its hour and excludes everything else. Do not brag of your actions, as if they were better than Homer's verses or Raphael's pictures. Raphael and Homer feel that action is pitiful beside their enchantments. They could act too, if the stake was worthy of them; but now all that is good in the universe urges them to their task. Whoever writes for the love of truth and beauty, and not with ulterior ends, belongs to this sacred class; and among these, few men of the present age have a better claim to be numbered than Mr. Landor. Wherever genius or taste has existed, wherever freedom and justice are threatened, which he values as the element in which genius may work, his interest is sure to be commanded. His love of beauty is passionate, and betrays itself in all petulant and contemptuous expressions.

But beyond his delight in genius and his love of individual and civil liberty, Mr. Landor has a perception that is much more rare, the appreciation of character. This is the more remarkable considered with his intense nationality, to which we have already alluded. He is buttoned in English broadcloth to the chin. He hates the Austrians, the Italians, the French, the Scotch and the Irish. He has the common prejudices of an English landholder; values his pedigree, his acres and the syllables of his name; loves all his advantages, is not insensible to the beauty of his watch-seal, or the Turk's head on his umbrella; yet with all this miscellaneous

pride there is a noble nature within him which instructs him that he is so rich that he can well spare all his trappings, and, leaving to others the painting of circumstance, aspire to the office of delineating character. He draws his own portrait in the costume of a village schoolmaster, and a sailor, and serenely enjoys the victory of Nature over fortune. Not only the elaborated story of Normanby, but the whimsical selection of his heads proves this taste. He draws with evident pleasure the portrait of a man who never said anything right and never did anything wrong. But in the character of Pericles he has found full play for beauty and greatness of behavior, where the circumstances are in harmony with the man. These portraits, though mere sketches, must be valued as attempts in the very highest kind of narrative, which not only has very few examples to exhibit of any success, but very few competitors in the attempt. The word Character is in all mouths; it is a force which we all feel; yet who has analyzed it? What is the nature of that subtle and majestic principle which attaches us to a few persons, not so much by personal as by the most spiritual ties? What is the quality of the persons who, without being public men, or literary men, or rich men, or active men, or (in the popular sense) religious men, have a certain salutary omnipresence in all our life's history, almost giving their own quality to the atmosphere and the landscape? A moral force, yet wholly unmindful of creed and catechism, intellectual, but scornful of books, it works directly and without means, and though it may be resisted at any time, yet resistance to it is a suicide. For the person who stands in this lofty relation to his fellow men is always the impersonation to them of their conscience. It is a sufficient proof of the extreme delicacy of this element, evanescent before any but the most sympathetic vision, that it has so seldom been employed in the drama and in

novels. Mr. Landor, almost alone among living English writers, has indicated his perception of it.

These merits make Mr. Landor's position in the republic of letters one of great mark and dignity. He exercises with a grandeur of spirit the office of writer, and carries it with an air of old and unquestionable nobility. We do not recollect an example of more complete independence in literary history. He has no clanship, no friendships that warp him. He was one of the first to pronounce Wordsworth the great poet of the age, yet he discriminates his faults with the greater freedom. He loves Pindar, Æschylus, Euripides, Aristophanes, Demosthenes, Virgil, yet with open eyes. His position is by no means the highest in literature: he is not a poet or a philosopher. He is a man full of thoughts, but not, like Coleridge, a man of ideas. Only from a mind conversant with the First Philosophy can definitions be expected. Coleridge has contributed many valuable ones to modern literature. Mr. Landor's definitions are only enumerations of particulars; the generic law is not seized. But as it is not from the highest Alps or Andes but from less elevated summits that the most attractive landscape is commanded, so is Mr. Landor the most useful and agreeable of critics. He has commented on a wide variety of writers, with a closeness and extent of view which has enhanced the value of those authors to his readers. His Dialogue on the Epicurean philosophy is a theory of the genius of Epicurus. The Dialogue between Barrow and Newton is the best of all criticisms on the essays of Bacon. His picture of Demosthenes in three several Dialogues is new and adequate. He has illustrated the genius of Homer, Æschylus, Pindar, Euripides, Thucydides. Then he has examined before he has expatiated, and the minuteness of his verbal criticism gives a confidence in his fidelity when he speaks the language of meditation or of passion. His acquaintance

with the English tongue is unsurpassed. He "hates false words, and seeks with care, difficulty and moroseness those that fit the thing." He knows the value of his own words. "They are not," he says, "written on slate." He never stoops to explanation, nor uses seven words where one will do. He is a master of condensation and suppression, and that in no vulgar way. He knows the wide difference between compression and an obscure elliptical style. The dense writer has yet ample room and choice of phrase, and even a game-some mood often between his valid words. There is no inadequacy or disagreeable contraction in his sentence, any more than in a human face, where in a square space of a few inches is found room for every possible variety of expression.²⁹³⁶

Yet it is not as an artist that Mr. Landor commends himself to us. He is not epic or dramatic, he has not the high, overpowering method by which the master gives unity and integrity to a work of many parts. He is too wilful, and never abandons himself to his genius. His books are a strange mixture of politics, etymology, allegory, sentiment, and personal history; and what skill of transition he may possess is superficial, not spiritual. His merit must rest, at last, not on the spirit of the dialogue or the symmetry of any of his historical portraits, but on the value of his sentences. Many of these will secure their own immortality in English literature; and this, rightly considered, is no mean merit. These are not plants and animals, but the genetical atoms of which both are composed. All our great debt to the Oriental world is of this kind, not utensils and statues of the precious metal, but bullion and gold-dust. Of many of Mr. Landor's sentences we are fain to remember what was said of those of Socrates; that they are cubes, which will stand firm, place them how or where you will.²⁹³⁷

III. PRAYERS

"Not with fond shekels of the tested gold,
Nor gems whose rates are either rich or poor
As fancy values them: but with true prayers,
That shall be up at heaven and enter there
Ere sunrise; prayers from preservèd souls,
From fasting maids, whose minds are delicate
To nothing temporal."

—Shakspeare.²⁹³⁸

PYTHAGORAS SAID that the time when men are honestest is when they present themselves before the gods. If we can overhear the prayer we shall know the man. But prayers are not made to be overheard, or to be printed, so that we seldom have the prayer otherwise than it can be inferred from the man and his fortunes, which are the answer to the prayer, and always accord with it. Yet there are scattered about in the earth a few records of these devout hours, which it would edify us to read, could they be collected in a more catholic spirit than the wretched and repulsive volumes which usurp that name. Let us not have the prayers of one sect, nor

of the Christian Church, but of men in all ages and religions who have prayed well. The prayer of Jesus is (as it deserves) become a form for the human race. Many men have contributed a single expression, a single word to the language of devotion, which is immediately caught and stereotyped in the prayers of their church and nation. Among the remains of Euripides we have this prayer: "Thou God of all! infuse light into the souls of men, whereby they may be enabled to know what is the root from whence all their evils spring, and by what means they may avoid them." In the *Phædrus* of Plato, we find this petition in the mouth of Socrates: "O gracious Pan! and ye other gods who preside over this place! grant that I may be beautiful within; and that those external things which I have may be such as may best agree with a right internal disposition of mine; and that I may account him to be rich, who is wise and just." Wacîc the Caliph, who died A. D. 845, ended his life, the Arabian historians tell us, with these words: "O thou whose kingdom never passes away, pity one whose dignity is so transient." But what led us to these remembrances was the happy accident which in this undevout age lately brought us acquainted with two or three diaries, which attest, if there be need of attestation, the eternity of the sentiment and its equality to itself through all the variety of expression. The first is the prayer of a deaf and dumb boy:—

"When my long-attached friend comes to me, I have pleasure to converse with him, and I rejoice to pass my eyes over his countenance; but soon I am weary of spending my time causelessly and unimproved, and I desire to leave him (but not in rudeness), because I wished to be engaged in my business. But thou, O my Father, knowest I always delight to commune with thee in my lone and silent heart; I am never full of thee; I am never weary

of thee; I am always desiring thee. I hunger with strong hope and affection for thee, and I thirst for thy grace and spirit.

"When I go to visit my friends, I must put on my best garments, and I must think of my manner to please them. I am tired to stay long, because my mind is not free, and they sometimes talk gossip with me. But O my Father, thou visitest me in my work, and I can lift up my desires to thee, and my heart is cheered and at rest with thy presence, and I am always alone with thee, and thou dost not steal my time by foolishness. I always ask in my heart, where can I find thee?"

The next is a voice out of a solitude as strict and sacred as that in which Nature had isolated this eloquent mute:—

"My Father, when I cannot be cheerful or happy, I can be true and obedient, and I will not forget that joy has been, and may still be. If there is no hour of solitude granted me, still I will commune with thee. If I may not search out and pierce thy thought, so much the more may my living praise thee. At whatever price, I must be alone with thee; this must be the demand I make. These duties are not the life, but the means which enable us to show forth the life. So must I take up this cross, and bear it willingly. Why should I feel reproved when a busy one enters the room? I am not idle, though I sit with folded hands, but instantly I must seek some cover. For that shame I reprove myself. Are they only the valuable members of society who labor to dress and feed it? Shall we never ask the aim of all this hurry and foam, of this aimless activity? Let the purpose for which I live be always before me; let every thought and word go to confirm and illuminate that end; namely, that I must become near and dear to thee; that now I am beyond the reach of all but thee.

"How can we not be reconciled to thy will? I will know the joy of giving to my friend the dearest treasure I have. I know that sorrow comes not at

once only. We cannot meet it and say, now it is overcome, but again, and yet again, its flood pours over us, and as full as at first.

"If but this tedious battle could be fought,
Like Sparta's heroes at one rocky pass,
'One day be spent in dying,' men had sought
The spot, and been cut down like mower's grass."

The next is in a metrical form. It is the aspiration of a different mind, in quite other regions of power and duty, yet they all accord at last.

"Great God, I ask thee for no meaner pelf
Than that I may not disappoint myself,
That in my action I may soar as high,
As I can now discern with this clear eye.

And next in value, which thy kindness lends,
That I may greatly disappoint my friends,
Howe'er they think or hope that it may be,
They may not dream how thou'st distinguished me.

That my weak hand may equal my firm faith,
And my life practice more than my tongue saith;
That my low conduct may not show,
Nor my relenting lines,
That I thy purpose did not know,
Or overrated thy designs."

The last of the four orisons is written in a singularly calm and healthful spirit, and contains this petition:—

"My Father: I now come to thee with a desire to thank thee for the continuance of our love, the one for the other. I feel that without thy love in me I should be alone here in the flesh. I cannot express my gratitude for what thou hast been and continuest to be to me. But thou knowest what my feelings are. When nought on earth seemeth pleasant to me, thou dost make thyself known to me, and teach that which is needful for me, and dost cheer my travels on. I know that thou hast not created me and placed me here on earth, amidst its toils and troubles and the follies of those around me, and told me to be like thyself when I see so little of thee here to profit by; thou hast not done this, and then left me here to myself, a poor, weak man, scarcely able to earn my bread. No; thou art my Father and I will love thee, for thou didst first love me, and lovest me still. We will ever be parent and child. Wilt thou give me strength to persevere in this great work of redemption. Wilt thou show me the true means of accomplishing it....I thank thee for the knowledge that I have attained of thee by thy sons who have been before me, and especially for him who brought me so perfect a type of thy goodness and love to men....I know that thou wilt deal with me as I deserve. I place myself therefore in thy hand, knowing that thou wilt keep me from harm so long as I consent to live under thy protecting care."

Let these few scattered leaves, which a chance (as men say, but which to us shall be holy) brought under our eye nearly at the same moment, stand as an example of innumerable similar expressions which no mortal witness has reported, and be a sign of the times. Might they be suggestion to many a heart of yet higher secret experiences which are ineffable! But we must not tie up the rosary on which we have strung these few white beads, without adding a pearl of great price from that book of prayer, the Confessions of Saint Augustine.

"And being admonished to reflect upon myself, I entered into the very inward parts of my soul, by thy conduct; and I was able to do it, because now thou wert become my helper. I entered and discerned with the eye of my soul (such as it was), even beyond my soul and mind itself, the Light unchangeable. Not this vulgar light which all flesh may look upon, nor as it were a greater of the same kind, as though the brightness of this should be manifold greater and with its greatness take up all space. Not such was this light, but other, yea, far other from all these. Neither was it so above my understanding, as oil swims above water, or as the heaven is above the earth. But it is above me, because it made me; and I am under it, because I was made by it. He that knows truth or verity knows what that light is, and he that knows it knows eternity, and it is known by charity. O eternal Verity! and true Charity! and dear Eternity! thou art my God, to thee do I sigh day and night. Thee when I first knew, thou liftedst me up that I might see, there was what I might see, and that I was not yet such as to see. And thou didst beat back my weak sight upon myself, shooting out beams upon me after a vehement manner; and I even trembled between love and horror, and I found myself to be far off, and even in the very region of dissimilitude from thee."

IV. AGRICULTURE OF MASSACHUSETTS

IN AN afternoon in April, after a long walk, I traversed an orchard where boys were grafting apple-trees, and found the Farmer in his cornfield. He was holding the plough, and his son driving the oxen. This man always impresses me with respect, he is so manly, so sweet-tempered, so faithful, so disdainful of all appearances; excellent and reverable in his old weather-worn cap and blue frock bedaubed with the soil of the field; so honest withal that he always needs to be watched lest he should cheat himself. I still remember with some shame that in some dealing we had together a long time ago, I found that he had been looking to my interest in the affair, and I had been looking to my interest, and nobody had looked to his part. As I drew near this brave laborer in the midst of his own acres, I could not help feeling for him the highest respect. Here is the Cæsar, the Alexander of the soil, conquering and to conquer, after how many and many a hard-fought summer's day and winter's day; not like Napoleon, hero of sixty battles only, but of six thousand, and out of every one he has come victor; and here he stands, with Atlantic strength and cheer, invincible still. These slight and useless city limbs of ours will come to shame before

this strong soldier, for his have done his own work and ours too. What good this man has or has had, he has earned. No rich father or father-in-law left him any inheritance of land or money. He borrowed the money with which he bought his farm, and has bred up a large family, given them a good education, and improved his land in every way year by year, and this without prejudice to himself the landlord, for here he is, a man every inch of him, and reminds us of the hero of the Robin Hood ballad,—

"Much, the miller's son,
There was no inch of his body
But it was worth a groom."

Innocence and justice have written their names on his brow. Toil has not broken his spirit. His laugh rings with the sweetness and hilarity of a child; yet he is a man of a strongly intellectual taste, of much reading, and of an erect good sense and independent spirit which can neither brook usurpation nor falsehood in any shape. I walked up and down the field, as he ploughed his furrow, and we talked as we walked. Our conversation naturally turned on the season and its new labors. He had been reading the report of the Agricultural Survey of the Commonwealth, and had found good things in it; but it was easy to see that he felt toward the author much as soldiers do toward the historiographer who follows the camp, more good nature than reverence for the gownsman.

The First Report, he said, is better than the last, as I observe the first sermon of a minister is often his best, for every man has one thing which he specially wishes to say, and that comes out at first. But who is this book written for? Not for farmers; no pains are taken to send it to them; it was by accident that this volume came into my hands for a few days. And it is not for them. They could

not afford to follow such advice as is given here; they have sterner teachers; their own business teaches them better. No; this was written for the literary men. But in that case, the state should not be taxed to pay for it. Let us see. The account of the maple sugar,—that is very good and entertaining, and, I suppose, true. The story of the farmer's daughter, whom education had spoiled for everything useful on a farm,—that is good, too, and we have much that is like it in Thomas's Almanack. But why this recommendation of stone houses? They are not so cheap, not so dry, and not so fit for us. Our roads are always changing their direction, and after a man has built at great cost a stone house, a new road is opened, and he finds himself a mile or two from the highway. Then our people are not stationary, like those of old countries, but always alert to better themselves, and will remove from town to town as a new market opens or a better farm is to be had, and do not wish to spend too much on their buildings.

The Commissioner advises the farmers to sell their cattle and their hay in the fall, and buy again in the spring. But we farmers always know what our interest dictates, and do accordingly. We have no choice in this matter; our way is but too plain. Down below, where manure is cheap and hay dear, they will sell their oxen in November; but for me to sell my cattle and my produce in the fall would be to sell my farm, for I should have no manure to renew a crop in the spring. And thus Necessity farms it; necessity finds out when to go to Brighton, and when to feed in the stall, better than Mr. Colman can tell us.

But especially observe what is said throughout these Reports of the model farms and model farmers. One would think that Mr. D. and Major S. were the pillars of the Commonwealth. The good Commissioner takes off his hat when he approaches them, distrusts the value of "his feeble praise," and repeats his compliments as

often as their names are introduced. And yet, in my opinion, Mr. D., with all his knowledge and present skill, would starve in two years on any one of fifty poor farms in this neighborhood on each of which now a farmer manages to get a good living. Mr. D. inherited a farm, and spends on it every year from other resources; otherwise his farm had ruined him long since;—and as for the Major, he never got rich by his skill in making land produce, but in making men produce. The truth is, a farm will not make an honest man rich in money. I do not know of a single instance in which a man has honestly got rich by farming alone. It cannot be done. The way in which men who have farms grow rich is either by other resources, or by trade, or by getting their labor for nothing, or by other methods of which I could tell you many sad anecdotes. What does the Agricultural Surveyor know of all this? What can he know? He is the victim of the Reports, that are sent him, of particular farms. He cannot go behind the estimates to know how the contracts were made, and how the sales were effected. The true men of skill, the poor farmers, who, by the sweat of their face, without an inheritance and without offence to their conscience have reared a family of valuable citizens and matrons to the state, reduced a stubborn soil to a good farm, although their buildings are many of them shabby, are the only right subjects of this Report; yet these make no figure in it. These should be holden up to imitation, and their methods detailed; yet their houses are very uninviting and inconspicuous to State Commissioners. So with these premiums to farms, and premiums at cattle-shows. The class that I describe must pay the premium which is awarded to the rich. Yet the premium obviously ought to be given for the good management of a poor farm.

In this strain the Farmer proceeded, adding many special criticisms. He had a good opinion of the Surveyor, and acquitted

him of any blame in the matter, but was incorrigible in his skepticism concerning the benefits conferred by legislatures on the agriculture of Massachusetts.

I believe that my friend is a little stiff and inconvertible in his own opinions, and that there is another side to be heard; but so much wisdom seemed to lie under all his statement that it deserved a record.

V. EUROPE AND EUROPEAN BOOKS

IT WAS a brighter day than we have often known in our literary calendar, when within a twelvemonth a single London advertisement announced a new volume of poems by Wordsworth, poems by Tennyson, and a play by Henry Taylor. Wordsworth's nature or character has had all the time it needed in order to make its mark and supply the want of talent. We have learned how to read him. We have ceased to expect that which he cannot give. He has the merit of just moral perception, but not that of deft poetic execution. How would Milton curl his lip at such slipshod newspaper style. Many of his poems, as for example the Rylstone Doe, might be all improvised. Nothing of Milton, nothing of Marvell, of Herbert, of Dryden, could be. These are such verses as in a just state of culture should be *vers de société*, such as every gentleman could write but none would think of printing, or of claiming the poet's laurel on their merit. The Pindar, the Shakspeare, the Dante, whilst they have the just and open soul, have also the eye to see the dimmest star that glimmers in the Milky Way, the serratures of every leaf, the test-objects of the microscope, and then the tongue to utter the same things in words that engrave them on all

the ears of mankind. The poet demands all gifts, and not one or two only.²⁹³⁹

The poet, like the electric rod, must reach from a point nearer the sky than all surrounding objects, down to the earth, and into the dark wet soil, or neither is of use. The poet must not only converse with pure thought, but he must demonstrate it almost to the senses. His words must be pictures, his verses must be spheres and cubes, to be seen and smelled and handled. His fable must be a good story, and its meaning must hold as pure truth. In the debates on the Copyright Bill, in the English Parliament, Mr. Sergeant Wakley, the coroner, quoted Wordsworth's poetry in derision, and asked the roaring House of Commons what that meant, and whether a man should have public reward for writing such stuff. Homer, Horace, Milton and Chaucer would defy the coroner. Whilst they have wisdom to the wise, he would see that to the external they have external meaning. Coleridge excellently said of poetry, that poetry must first be good sense; as a palace might well be magnificent, but first it must be a house.

Wordsworth is open to ridicule of this kind. And yet Wordsworth, though satisfied if he can suggest to a sympathetic mind his own mood, and though setting a private and exaggerated value on his compositions; though confounding his accidental with the universal consciousness, and taking the public to task for not admiring his poetry, is really a master of the English language, and his poems evince a power of diction that is no more rivalled by his contemporaries than is his poetic insight.²⁹⁴⁰ But the capital merit of Wordsworth is that he has done more for the sanity of this generation than any other writer. Early in life, at a crisis it is said in his private affairs, he made his election between assuming and defending some legal rights, with the chances of wealth and a position in the world, and the inward promptings of his heavenly

genius; he took his part; he accepted the call to be a poet, and sat down, far from cities, with coarse clothing and plain fare to obey the heavenly vision. The choice he had made in his will manifested itself in every line to be real. We have poets who write the poetry of society, of the patrician and conventional Europe, as Scott and Moore, and others who, like Byron or Bulwer, write the poetry of vice and disease. But Wordsworth threw himself into his place, made no reserves or stipulations; man and writer were not to be divided. He sat at the foot of Helvellyn and on the margin of Windermere, and took their lustrous mornings and their sublime midnights for his theme, and not Marlowe nor Massinger, not Horace nor Milton nor Dante. He once for all forsook the styles and standards and modes of thinking of London and Paris, and the books read there and the aims pursued, and wrote Helvellyn and Windermere and the dim spirits which these haunts harbored. There was not the least attempt to reconcile these with the spirit of fashion and selfishness, nor to show, with great deference to the superior judgment of dukes and earls, that although London was the home for men of great parts, yet Westmoreland had these consolations for such as fate had condemned to the country life,—but with a complete satisfaction he pitied and rebuked their false lives, and celebrated his own with the religion of a true priest. Hence the antagonism which was immediately felt between his poetry and the spirit of the age, that here not only criticism but conscience and will were parties; the spirit of literature and the modes of living and the conventional theories of the conduct of life were called in question on wholly new grounds,—not from Platonism, not from Christianity, but from the lessons which the country muse taught a stout pedestrian climbing a mountain and following a river from its parent rill down to the sea. The Cannings and Jeffreys of the capital, the Court Journals and Literary Gazettes

were not well pleased, and voted the poet a bore. But that which rose in him so high as to the lips, rose in many others as high as to the heart. What he said, they were prepared to hear and confirm. The influence was in the air, and was wafted up and down into lone and into populous places, resisting the popular taste, modifying opinions which it did not change, and soon came to be felt in poetry, in criticism, in plans of life, and at last in legislation. In this country it very early found a stronghold, and its effect may be traced on all the poetry both of England and America.

But, notwithstanding all Wordsworth's grand merits, it was a great pleasure to know that Alfred Tennyson's two volumes were coming out in the same ship; it was a great pleasure to receive them. The elegance, the wit and subtlety of this writer, his rich fancy, his power of language, his metrical skill, his independence of any living masters, his peculiar topics, his taste for the costly and gorgeous, discriminate the musky poet of gardens and conservatories, of parks and palaces.²⁹⁴¹ Perhaps we felt the popular objection that he wants rude truth; he is too fine. In these boudoirs of damask and alabaster, one is farther off from stern Nature and human life than in Lalla Rookh and the Loves of the Angels. Amid swinging censers and perfumed lamps, amidst velvet and glory, we long for rain and frost. Otto-of-roses is good, but wild air is better. A critical friend of ours affirms that the vice which bereaved modern painters of their power is the ambition to begin where their fathers ended; to equal the masters in their exquisite finish, instead of their religious purpose. The painters are not willing to paint ill enough; they will not paint for their times, agitated by the spirit which agitates their country; so should their picture picture us, and draw all men after them; but they copy the technics of their predecessors, and paint for their predecessors' public. It seems as if the same vice had worked in poetry. Tennyson's compositions are not so much

poems as studies in poetry, or sketches after the styles of sundry old masters. He is not the husband who builds the homestead after his own necessity, from foundation-stone to chimney-top and turret, but a tasteful bachelor who collects quaint staircases and groined ceilings. We have no right to such superfineness. We must not make our bread of pure sugar. These delicacies and splendors are then legitimate when they are the excess of substantial and necessary expenditure. The best songs in English poetry are by that heavy, hard, pedantic poet, Ben Jonson. Jonson is rude, and only on rare occasions gay. Tennyson is always fine, but Jonson's beauty is more grateful than Tennyson's. It is a natural manly grace of a robust workman. Ben's flowers are not in pots at a city florist's, arranged on a flower-stand, but he is a countryman at a harvest-home, attending his ox-cart from the fields, loaded with potatoes and apples, with grapes and plums, with nuts and berries, and stuck with boughs of hemlock and sweetbriar, with ferns and pond-lilies which the children have gathered. But let us not quarrel with our benefactors. Perhaps Tennyson is too quaint and elegant. What then? It is long since we have had as good a lyrist; it will be long before we have his superior. *Godiva* is a noble poem that will tell the legend a thousand years. The poem of all the poetry of the present age for which we predict the longest term is *Abou ben Adhem*, of Leigh Hunt.²⁹⁴² Fortune will still have her part in every victory, and it is strange that one of the best poems should be written by a man who has hardly written any other. And *Godiva* is a parable which belongs to the same gospel. *Locksley Hall* and *The Two Voices* are meditative poems, which were slowly written to be slowly read. *The Talking Oak*, though a little hurt by its wit and ingenuity, is beautiful, and the most poetic of the volume. *Ulysses* belongs to a high class of poetry, destined to be the highest, and to be more cultivated in the next generation. *Ænone* was a sketch

of the same kind. One of the best specimens we have of the class is Wordsworth's *Laodamia*, of which no special merit it can possess equals the total merit of having selected such a subject in such a spirit.²⁹⁴³

Next to the poetry, the novels, which come to us in every ship from England, have an importance increased by the immense extension of their circulation through the new cheap press, which sends them to so many willing thousands. We have heard it alleged with some evidence that the prominence given to intellectual power in Bulwer's romances has proved a main stimulus to mental culture in thousands of young men in England and America. The effect on manners cannot be less sensible, and we can easily believe that the behavior of the ball-room and of the hotel has not failed to draw some addition of dignity and grace from the fair ideals with which the imagination of a novelist has filled the heads of the most imitative class.

We are not very well versed in these books, yet we have read Mr. Bulwer enough to see that the story is rapid and interesting; he has really seen London society, and does not draw ignorant caricatures. He is not a genius, but his novels are marked with great energy and with a courage of experiment which in each instance had its degree of success. The story of *Zanoni* was one of those world-fables which is so agreeable to the human imagination that it is found in some form in the language of every country, and is always reappearing in literature. Many of the details of this novel preserve a poetic truth. We read *Zanoni* with pleasure, because magic is natural. It is implied in all superior culture that a complete man would need no auxiliaries to his personal presence. The eye and the word are certainly far subtler and stronger weapons than either money or knives. Whoever looked on the hero would consent to his will, being certified that his aims were universal,

not selfish; and he would be obeyed as naturally as the rain and the sunshine are. For this reason, children delight in fairy tales. Nature is described in them as the servant of man, which they feel ought to be true. But Zanonì pains us and the author loses our respect, because he speedily betrays that he does not see the true limitations of the charm; because the power with which his hero is armed is a toy, inasmuch as the power does not flow from its legitimate fountains in the mind, is a power for London; a divine power converted into a burglar's false key or a highwayman's pistol to rob and kill with.²⁹⁴⁴

But Mr. Bulwer's recent stories have given us who do not read novels occasion to think of this department of literature, supposed to be the natural fruit and expression of the age. We conceive that the obvious division of modern romance is into two kinds: first, the novels of costume or of circumstance, which is the old style, and vastly the most numerous. In this class, the hero, without any particular character, is in a very particular circumstance; he is greatly in want of a fortune or of a wife, and usually of both, and the business of the piece is to provide him suitably. This is the problem to be solved in thousands of English romances, including the Porter novels and the more splendid examples of the Edgeworth and Scott romances.

It is curious how sleepy and foolish we are, that these tales will so take us. Again and again we have been caught in that old foolish trap. Had one noble thought, opening the chambers of the intellect, one sentiment from the heart of God been spoken by them, the reader had been made a participator of their triumph; he too had been an invited and eternal guest; but this reward granted them is property, all-excluding property, a little cake baked for them to eat and for none other, nay, a preference and cossetting which is rude and insulting to all but the minion.

Except in the stories of Edgeworth and Scott, whose talent knew how to give to the book a thousand adventitious graces, the novels of costume are all one, and there is but one standard English novel, like the one orthodox sermon, which with slight variation is repeated every Sunday from so many pulpits.

But the other novel, of which *Wilhelm Meister* is the best specimen, the novel of *character*, treats the reader with more respect; the development of character being the problem, the reader is made a partaker of the whole prosperity. Everything good in such a story remains with the reader when the book is closed. A noble book was *Wilhelm Meister*. It gave the hint of a cultivated society which we found nowhere else. It was founded on power to do what was necessary, each person finding it an indispensable qualification of membership that he could do something useful, as in mechanics or agriculture or other indispensable art; then a probity, a justice was to be its element, symbolized by the insisting that each property should be cleared of privilege, and should pay its full tax to the state. Then a perception of beauty was the equally indispensable element of the association, by which each was dignified and all were dignified; then each was to obey his genius to the length of abandonment. They watched each candidate vigilantly, without his knowing that he was observed, and when he had given proof that he was a faithful man, then all doors, all houses, all relations were open to him; high behavior fraternized with high behavior, without question of heraldry, and the only power recognized is the force of character.²⁹⁴⁵

The novels of Fashion, of Disraeli, Mrs. Gore, Mr. Ward, belong to the class of novels of costume, because the aim is purely external success. Of the tales of fashionable life, by far the most agreeable and the most efficient was *Vivian Grey*. Young men were and still are the readers and victims. Byron ruled for a time, but Vivian,

with no tithe of Byron's genius, rules longer.²⁹⁴⁶ One can distinguish the Vivians in all companies. They would quiz their father and mother and lover and friend. They discuss sun and planets, liberty and fate, love and death, over the soup. They never sleep, go nowhere, stay nowhere, eat nothing, and know nobody, but are up to anything, though it were the genesis of Nature, or the last cataclysm,—Festus-like, Faust-like, Jove-like, and could write an Iliad any rainy morning, if fame were not such a bore. Men, women, though the greatest and fairest, are stupid things; but a rifle, and a mild pleasant gunpowder, a spaniel, and a cheroot, are themes for Olympus. I fear it was in part the influence of such pictures on living society which made the style of manners of which we have so many pictures, as, for example, in the following account of the English fashionist. "His highest triumph is to appear with the most wooden manners, as little polished as will suffice to avoid castigation, nay, to contrive even his civilities so that they may appear as near as may be to affronts; instead of a noble high-bred ease, to have the courage to offend against every restraint of decorum, to invert the relation in which our sex stand to women, so that they appear the attacking, and he the passive or defensive party."

We must here check our gossip in mid-volley and adjourn the rest of our critical chapter to a more convenient season.

VI. PAST AND PRESENT

HERE IS Carlyle's new poem, his Iliad of English woes, to follow his poem on France, entitled the History of the French Revolution. In its first aspect it is a political tract, and since Burke, since Milton, we have had nothing to compare with it. It grapples honestly with the facts lying before all men, groups and disposes them with a master's mind, and, with a heart full of manly tenderness, offers his best counsel to his brothers. Obviously, it is the book of a powerful and accomplished thinker, who has looked with naked eyes at the dreadful political signs in England for the last few years, has conversed much on these topics with such wise men of all ranks and parties as are drawn to a scholar's house, until such daily and nightly meditation has grown into a great connection, if not a system of thoughts; and the topic of English politics becomes the best vehicle for the expression of his recent thinking, recommended to him by the desire to give some timely counsels, and to strip the worst mischiefs of their plausibility. It is a brave and just book, and not a semblance. "No new truth," say the critics on all sides. Is it so? Truth is very old, but the merit of seers is not to invent but to dispose objects in their right places, and he is the

commander who is always in the mount, whose eye not only sees details, but throws crowds of details into their right arrangement and a larger and juster totality than any other. The book makes great approaches to true contemporary history, a very rare success, and firmly holds up to daylight the absurdities still tolerated in the English and European system. It is such an appeal to the conscience and honor of England as cannot be forgotten, or be feigned to be forgotten. It has the merit which belongs to every honest book, that it was self-examining before it was eloquent, and so hits all other men, and, as the country people say of good preaching, "comes bounce down into every pew." Every reader shall carry away something. The scholar shall read and write, the farmer and mechanic shall toil, with new resolution, nor forget the book when they resume their labor.

Though no theocrat, and more than most philosophers a believer in political systems, Mr. Carlyle very fairly finds the calamity of the times, not in bad bills of Parliament, nor the remedy in good bills, but the vice in false and superficial aims of the people, and the remedy in honesty and insight. Like every work of genius, its great value is in telling such simple truths. As we recall the topics, we are struck with the force given to the plain truths; the picture of the English nation all sitting enchanted,—the poor, enchanted so that they cannot work, the rich, enchanted so that they cannot enjoy, and are rich in vain; the exposure of the progress of fraud into all parts and social activities; the proposition that the laborer must have a greater share in his earnings; that the principle of permanence shall be admitted into all contracts of mutual service; that the state shall provide at least schoolmaster's education for all the citizens; the exhortation to the workman that he shall respect the work and not the wages;²⁹⁴⁷ to the scholar, that he shall be there for light; to the idle, that no man shall sit idle; the picture of Abbot

Samson, the true governor, who "is not there to expect reason and nobleness of others, he is there to give them of his own reason and nobleness;" and the assumption throughout the book, that a new chivalry and nobility, namely, the dynasty of labor, is replacing the old nobilities. These things strike us with a force which reminds us of the morals of the Oriental or early Greek masters, and of no modern book. Truly in these things is great reward. It is not by sitting still at a grand distance and calling the human race *larvæ*, that men are to be helped, nor by helping the depraved after their own foolish fashion, but by doing unweariedly the particular work we were born to do. Let no man think himself absolved because he does a generous action and befriends the poor, but let him see whether he so holds his property that a benefit goes from it to all. A man's diet should be what is simplest and readiest to be had, because it is so private a good. His house should be better, because that is for the use of hundreds, perhaps of thousands, and is the property of the traveller.²⁹⁴⁸ But his speech is a perpetual and public instrument; let that always side with the race and yield neither a lie nor a sneer. His manners,—let them be hospitable and civilizing, so that no Phidias or Raphael shall have taught anything better in canvas or stone; and his acts should be representative of the human race, as one who makes them rich in his having, and poor in his want.

It requires great courage in a man of letters to handle the contemporary practical questions; not because he then has all men for his rivals, but because of the infinite entanglements of the problem, and the waste of strength in gathering unripe fruits. The task is superhuman; and the poet knows well that a little time will do more than the most puissant genius. Time stills the loud noise of opinions, sinks the small, raises the great, so that the true emerges without effort and in perfect harmony to all eyes; but the

truth of the present hour, except in particulars and single relations, is unattainable. Each man can very well know his own part of duty, if he will; but to bring out the truth for beauty, and as literature, surmounts the powers of art. The most elaborate history of to-day will have the oddest dislocated look in the next generation. The historian of to-day is yet three ages off. The poet cannot descend into the turbid present without injury to his rarest gifts. Hence that necessity of isolation which genius has always felt. He must stand on his glass tripod, if he would keep his electricity.

But when the political aspects are so calamitous that the sympathies of the man overpower the habits of the poet, a higher than literary inspiration may succor him. It is a costly proof of character that the most renowned scholar of England should take his reputation in his hand and should descend into the ring; and he has added to his love whatever honor his opinions may forfeit. To atone for this departure from the vows of the scholar and his eternal duties to this secular charity, we have at least this gain, that here is a message which those to whom it was addressed cannot choose but hear. Though they die, they must listen. It is plain that whether by hope or by fear, or were it only by delight in this panorama of brilliant images, all the great classes of English society must read, even those whose existence it proscribes. Poor Queen Victoria,—poor Sir Robert Peel,—poor Primate and Bishops,—poor Dukes and Lords! There is no help in place or pride, or in looking another way; a grain of wit is more penetrating than the lightning of the night-storm, which no curtains or shutters will keep out. Here is a book which will be read, no thanks to anybody but itself. What pains, what hopes, what vows, shall come of the reading! Here is a book as full of treason as an egg is full of meat, and every lordship and worship and high form and ceremony of English conservatism tossed like a football into the air, and kept

in the air, with merciless kicks and rebounds, and yet not a word is punishable by statute. The wit has eluded all official zeal; and yet these dire jokes, these cunning thrusts, this flaming sword of Cherubim waved high in air, illuminates the whole horizon, and shows to the eyes of the universe every wound it inflicts. Worst of all for the party attacked, it bereaves them beforehand of all sympathy, by anticipating the plea of poetic and humane conservatism, and impressing the reader with the conviction that the satirist himself has the truest love for everything old and excellent in English land and institutions, and a genuine respect for the basis of truth in those whom he exposes.

We are at some loss how to state what strikes us as the fault of this remarkable book, for the variety and excellence of the talent displayed in it is pretty sure to leave all special criticism in the wrong. And we may easily fail in expressing the general objection which we feel. It appears to us as a certain disproportion in the picture, caused by the obtrusion of the whims of the painter. In this work, as in his former labors, Mr. Carlyle reminds us of a sick giant. His humors are expressed with so much force of constitution that his fancies are more attractive and more credible than the sanity of duller men. But the habitual exaggeration of the tone wearies whilst it stimulates. It is felt to be so much deduction from the universality of the picture.²⁹⁴⁹ It is not serene sunshine, but everything is seen in lurid storm-lights. Every object attitudinizes, to the very mountains and stars almost, under the refraction of this wonderful humorist; and instead of the common earth and sky, we have a Martin's Creation or Judgment Day. A crisis has always arrived which requires a *deus ex machinâ*. One can hardly credit, whilst under the spell of this magician, that the world always had the same bankrupt look, to foregoing ages as to us,—as of a failed world just re-collecting its old withered forces to begin again and

try to do a little business. It was perhaps inseparable from the attempt to write a book of wit and imagination on English politics that a certain local emphasis and love of effect, such as is the vice of preaching, should appear,—producing on the reader a feeling of forlornness by the excess of value attributed to circumstances. But the splendor of wit cannot outdazzle the calm daylight, which always shows every individual man in balance with his age, and able to work out his own salvation from all the follies of that, and no such glaring contrasts or severalties in that or this.²⁹⁵⁰ Each age has its own follies, as its majority is made up of foolish young people; its superstitions appear no superstitions to itself; and if you should ask the contemporary, he would tell you, with pride or with regret (according as he was practical or poetic), that he had none. But after a short time, down go its follies and weakness and the memory of them; its virtues alone remain, and its limitation assumes the poetic form of a beautiful superstition, as the dimness of our sight clothes the objects in the horizon with mist and color. The revelation of Reason is this of the unchangeableness of the fact of humanity under all its subjective aspects; that to the cowering it always cowers, to the daring it opens great avenues. The ancients are only venerable to us because distance has destroyed what was trivial; as the sun and stars affect us only grandly, because we cannot reach to their smoke and surfaces and say, Is that all?

And yet the gravity of the times, the manifold and increasing dangers of the English State, may easily excuse some over-coloring of the picture; and we at this distance are not so far removed from any of the specific evils, and are deeply participant in too many, not to share the gloom and thank the love and the courage of the counsellor. This book is full of humanity, and nothing is more excellent in this as in all Mr. Carlyle's works than the attitude of the writer. He has the dignity of a man of letters, who knows what

belongs to him, and never deviates from his sphere; a continuer of the great line of scholars, he sustains their office in the highest credit and honor. If the good heaven have any good word to impart to this unworthy generation, here is one scribe qualified and clothed for its occasion. One excellence he has in an age of Mammon and of criticism, that he never suffers the eye of his wonder to close. Let who will be the dupe of trifles, he cannot keep his eye off from that gracious Infinite which embosoms us.

As a literary artist he has great merits, beginning with the main one that he never wrote one dull line. How well-read, how adroit, that thousand arts in his one art of writing; with his expedient for expressing those unproven opinions which he entertains but will not endorse, by summoning one of his men of straw from the cell,—and the respectable Sauerteig, or Teufelsdröckh, or Dryasdust, or Picturesque Traveller, says what is put into his mouth, and disappears. That morbid temperament has given his rhetoric a somewhat bloated character; a luxury to many imaginative and learned persons, like a showery south wind with its sunbursts and rapid chasing of lights and glooms over the landscape, and yet its offensiveness to multitudes of reluctant lovers makes us often wish some concession were possible on the part of the humorist.²⁹⁵¹ Yet it must not be forgotten that in all his fun of castanets, or playing of tunes with a whiplash like some renowned charioteers,—in all this glad and needful venting of his redundant spirits, he does yet, ever and anon, as if catching the glance of one wise man in the crowd, quit his tempestuous key, and lance at him in clear level tone the very word, and then with new glee return to his game. He is like a lover or an outlaw who wraps up his message in a serenade, which is nonsense to the sentinel, but salvation to the ear for which it is meant. He does not dodge the question, but gives sincerity where it is due.

One word more respecting this remarkable style. We have in literature few specimens of magnificence. Plato is the purple ancient, and Bacon and Milton the moderns of the richest strains. Burke sometimes reaches to that exuberant fulness, though deficient in depth. Carlyle, in his strange, half-mad way, has entered the Field of the Cloth of Gold, and shown a vigor and wealth of resource which has no rival in the tourney-play of these times;—the indubitable champion of England. Carlyle is the first domestication of the modern system, with its infinity of details, into style. We have been civilizing very fast, building London and Paris, and now planting New England and India, New Holland and Oregon,—and it has not appeared in literature; there has been no analogous expansion and recomposition in books. Carlyle's style is the first emergence of all this wealth and labor with which the world has gone with child so long. London and Europe, tunnelled, graded, corn-lawed, with trade-nobility, and East and West Indies for dependencies; and America, with the Rocky Hills in the horizon, have never before been conquered in literature. This is the first invasion and conquest. How like an air-balloon or bird of Jove does he seem to float over the continent, and, stooping here and there, pounce on a fact as a symbol which was never a symbol before. This is the first experiment, and something of rudeness and haste must be pardoned to so great an achievement. It will be done again and again, sharper, simpler; but fortunate is he who did it first, though never so giant-like and fabulous. This grandiose character pervades his wit and his imagination. We have never had anything in literature so like earthquakes as the laughter of Carlyle. He "shakes with his mountain mirth." It is like the laughter of the Genii in the horizon. These jokes shake down Parliament House and Windsor Castle, Temple and Tower, and the future shall echo the dangerous peals. The other particular of magnificence

is in his rhymes. Carlyle is a poet who is altogether too burly in his frame and habit to submit to the limits of metre. Yet he is full of rhythm, not only in the perpetual melody of his periods, but in the burdens, refrains, and grand returns of his sense and music. Whatever thought or motto has once appeared to him fraught with meaning, becomes an omen to him henceforward, and is sure to return with deeper tones and weightier import, now as threat, now as confirmation, in gigantic reverberation, as if the hills, the horizon, and the next ages returned the sound.²⁹⁵²

VII. A LETTER

AS WE are very liable, in common with the letter-writing world, to fall behind-hand in our correspondence; and a little more liable because in consequence of our editorial function we receive more epistles than our individual share, we have thought that we might clear our account by writing a quarterly catholic letter to all and several who have honored us, in verse or prose, with their confidence, and expressed a curiosity to know our opinion. We shall be compelled to dispose very rapidly of quite miscellaneous topics.

And first, in regard to the writer who has given us his speculations on Railroads and Air-roads, our correspondent shall have his own way. To the railway, we must say,—like the courageous lord may or at his first hunting, when told the hare was coming,—“Let it come, in Heaven’s name, I am not afraid on ‘t.” Very unlooked-for political and social effects of the iron road are fast appearing. It will require an expansion of the police of the old world. When a railroad train shoots through Europe every day from Brussels to Vienna, from Vienna to Constantinople, it cannot stop every twenty or thirty miles at a German custom-house, for examination

of property and passports. But when our correspondent proceeds to flying-machines, we have no longer the smallest taper-light of credible information and experience left, and must speak on *a priori* grounds.

Shortly, then, we think the population is not yet quite fit for them, and therefore there will be none. Our friend suggests so many inconveniences from piracy out of the high air to orchards and lone houses, and also to other high fliers, and the total inadequacy of the present system of defence, that we have not the heart to break the sleep of the good public by the repetition of these details. When children come into the library, we put the inkstand and the watch on the high shelf until they be a little older; and Nature has set the sun and moon in plain sight and use, but laid them on the high shelf where her roystering boys may not in some mad Saturday afternoon pull them down or burn their fingers. The sea and the iron road are safer toys for such ungrown people; we are not yet ripe to be birds.

In the next place, to fifteen letters on Communities, and the Prospects of Culture, and the destinies of the cultivated class,—what answer? Excellent reasons have been shown us why the writers, obviously persons of sincerity and elegance, should be dissatisfied with the life they lead, and with their company. They have exhausted all its benefit, and will not bear it much longer. Excellent reasons they have shown why something better should be tried. They want a friend to whom they can speak and from whom they may hear now and then a reasonable word. They are willing to work, so it be with friends. They do not entertain anything absurd or even difficult. They do not wish to force society into hated reforms, nor to break with society. They do not wish a township or any large expenditure or incorporated association, but simply a concentration of chosen people. By the slightest

possible concert, persevered in through four or five years, they think that a neighborhood might be formed of friends who would provoke each other to the best activity. They believe that this society would fill up the terrific chasm of ennui, and would give their genius that inspiration which it seems to wait in vain.

But, 'the selfishness!' One of the writers relentingly says, "What shall my uncles and aunts do without me?" and desires distinctly to be understood not to propose the Indian mode of giving decrepit relatives as much of the mud of holy Ganges as they can swallow, and more, but to begin the enterprise of concentration by concentrating all uncles and aunts in one delightful village by themselves!—so heedless is our correspondent of putting all the dough into one pan, and all the leaven into another. Another objection seems to have occurred to a subtle but ardent advocate. Is it, he writes, a too great wilfulness and intermeddling with life,—which is better accepted than calculated? Perhaps so; but let us not be too curiously good. The Buddhist is a practical Necessitarian; the Yankee is not. We do a great many selfish things every day; among them all let us do one thing of enlightened selfishness. It were fit to forbid concert and calculation in this particular, if that were our system, if we were up to the mark of self-denial and faith in our general activity. But to be prudent in all the particulars of life, and in this one thing alone religiously forbearing; prudent to secure to ourselves an injurious society, temptations to folly and despair, degrading examples, and enemies; and only abstinent when it is proposed to provide ourselves with guides, examples, lovers!

We shall hardly trust ourselves to reply to arguments by which we would gladly be persuaded. The more discontent, the better we like it. It is not for nothing, we assure ourselves, that our people are busied with these projects of a better social state, and that

sincere persons of all parties are demanding somewhat vital and poetic of our stagnant society. How fantastic and unrepresentable soever the theory has hitherto seemed, how swiftly shrinking from the examination of practical men, let us not lose the warning of that most significant dream. How joyfully we have felt the admonition of larger natures which despised our aims and pursuits, conscious that a voice out of heaven spoke to us in that scorn. But it would be unjust not to remind our younger friends that whilst this aspiration has always made its mark in the lives of men of thought, in vigorous individuals it does not remain a detached object, but is satisfied along with the satisfaction of other aims. To live solitary and unexpressed is painful,—painful in proportion to one's consciousness of ripeness and equality to the offices of friendship. But herein we are never quite forsaken by the Divine Providence. The loneliest man, after twenty years, discovers that he stood in a circle of friends, who will then show like a close fraternity held by some masonic tie. But we are impatient of the tedious introductions of Destiny, and a little faithless, and would venture something to accelerate them. One thing is plain, that discontent and the luxury of tears will bring nothing to pass. Regrets and Bohemian castles and æsthetic villages are not a very self-helping class of productions, but are the voices of debility. Especially to one importunate correspondent we must say that there is no chance for the æsthetic village. Every one of the villagers has committed his several blunder; his genius was good, his stars consenting, but he was a marplot. And though the recuperative force in every man may be relied on infinitely, it must be relied on before it will exert itself. As long as he sleeps in the shade of the present error, the after-nature does not betray its resources. Whilst he dwells in the old sin, he will pay the old fine.

More letters we have on the subject of the position of young men, which accord well enough with what we see and hear. There is an American disease, a paralysis of the active faculties, which falls on young men of this country as soon as they have finished their college education, which strips them of all manly aims and bereaves them of animal spirits; so that the noblest youths are in a few years converted into pale Caryatides to uphold the temple of conventions. They are in the state of the young Persians, when "that mighty Yezdam prophet" addressed them and said, "Behold the signs of evil days are come; there is now no longer any right course of action, nor any self-devotion left among the Iranis." As soon as they have arrived at this term, there are no employments to satisfy them, they are educated above the work of their times and country, and disdain it. Many of the more acute minds pass into a lofty criticism of these things, which only embitters their sensibility to the evil and widens the feeling of hostility between them and the citizens at large. From this cause, companies of the best-educated young men in the Atlantic states every week take their departure for Europe; for no business that they have in that country, but simply because they shall so be hid from the reproachful eyes of their countrymen and agreeably entertained for one or two years, with some lurking hope, no doubt, that something may turn up to give them a decided direction. It is easy to see that this is only a postponement of their proper work, with the additional disadvantage of a two years' vacation. Add that this class is rapidly increasing by the infatuation of the active class, who, whilst they regard these young Athenians with suspicion and dislike, educate their own children in the same courses, and use all possible endeavors to secure to them the same result.

Certainly we are not insensible to this calamity, as described by the observers or witnessed by ourselves. It is not quite new

and peculiar; though we should not know where to find in literature any record of so much unbalanced intellectuality, such undeniable apprehension without talent, so much power without equal applicability, as our young men pretend to. Yet in Theodore Mundt's account of Frederic Hölderlin's *Hyperion*, we were not a little struck with the following Jeremiad of the despair of Germany, whose tone is still so familiar that we were somewhat mortified to find that it was written in 1799. "Then came I to the Germans. I cannot conceive of a people more disjointed than the Germans. Mechanics you shall see, but no man. Is it not like some battle-field, where hands and arms and all members lie scattered about, whilst the life-blood runs away into the sand? Let every man mind his own, you say, and I say the same. Only let him mind it with all his heart, and not with this cold study,—literally, hypocritically, to appear that which he passes for,—but in good earnest, and in all love, let him be that which he is; then there is a soul in his deed. And is he driven into a circumstance where the spirit must not live? Let him thrust it from him with scorn, and learn to dig and plough. There is nothing holy which is not desecrated, which is not degraded to a mean end among this people. It is heartrending to see your poet, your artist, and all who still revere genius, who love and foster the Beautiful. The Good! They live in the world as strangers in their own house; they are like the patient Ulysses whilst he sat in the guise of a beggar at his own door, whilst shameless rioters shouted in the hall and asked, Who brought the ragamuffin here? Full of love, talent and hope spring up the darlings of the muse among the Germans; some seven years later, and they flit about like ghosts, cold and silent; they are like a soil which an enemy has sown with poison, that it will not bear a blade of grass. On earth all is imperfect! is the old proverb of the German. Aye, but if one should say to these God-forsaken, that with them all is imperfect

only because they leave nothing pure which they do not pollute, nothing holy which they do not defile with their fumbling hands; that with them nothing prospers because the godlike nature which is the root of all prosperity they do not revere; that with them, truly, life is shallow and anxious and full of discord, because they despise genius, which brings power and nobleness into manly action, cheerfulness into endurance, and love and brotherhood into towns and houses. Where a people honors genius in its artists, there breathes like an atmosphere a universal soul, to which the shy sensibility opens, which melts self-conceit,—all hearts become pious and great, and it adds fire to heroes. The home of all men is with such a people, and there will the stranger gladly abide. But where the divine nature and the artist is crushed, the sweetness of life is gone, and every other planet is better than the earth. Men deteriorate, folly increases, and a gross mind with it; drunkenness comes with a disaster; with the wantonness of the tongue and with the anxiety for a livelihood the blessing of every year becomes a curse, and all the gods depart."

The steep antagonism between the money-getting and the academic class must be freely admitted, and perhaps is the more violent that whilst our work is imposed by the soil and the sea, our culture is the tradition of Europe. But we cannot share the desperation of our contemporaries; least of all should we think a preternatural enlargement of the intellect a calamity. A new perception, the smallest new activity given to the perceptive power, is a victory won to the living universe from Chaos and old Night, and cheaply bought by any amounts of hard fare and false social position. The balance of mind and body will redress itself fast enough. Superficialness is the real distemper. In all the cases we have ever seen where people were supposed to suffer from too much wit, or, as men said, from a blade too sharp for the

scabbard, it turned out that they had not wit enough. It may easily happen that we are grown very idle, and must go to work, and that the times must be worse before they are better. It is very certain that speculation is no succedaneum for life. What we would know, we must do. As if any taste or imagination could take the place of fidelity! The old Duty is the old God. And we may come to this by the rudest teaching. A friend of ours went five years ago to Illinois to buy a farm for his son. Though there were crowds of emigrants in the roads, the country was open on both sides, and long intervals between hamlets and houses. Now after five years he has just been to visit the young farmer and see how he prospered, and reports that a miracle had been wrought. From Massachusetts to Illinois the land is fenced in and builded over, almost like New England itself, and the proofs of thrifty cultivation abound;—a result not so much owing to the natural increase of population as to the hard times, which, driving men out of cities and trade, forced them to take off their coats and go to work on the land; which has rewarded them not only with wheat but with habits of labor. Perhaps the adversities of our commerce have not yet been pushed to the wholesomest degree of severity. Apathies and total want of work, and reflection on the imaginative character of American life, etc., etc., are like sea-sickness, and never will obtain any sympathy if there is a wood-pile in the yard, or an unweeded patch in the garden; not to mention the graver absurdity of a youth of noble aims who can find no field for his energies, whilst the colossal wrongs of the Indian, of the Negro, of the emigrant, remain unmitigated, and the religious, civil and judicial forms of the country are confessedly effete and offensive. We must refer our clients back to themselves, believing that every man knows in his heart the cure for the disease he so ostentatiously bewails.

As far as our correspondents have entangled their private griefs with the cause of American Literature, we counsel them to disengage themselves as fast as possible. In Cambridge orations and elsewhere there is much inquiry for that great absentee American Literature. What can have become of it? The least said is best. A literature is no man's private concern, but a secular and generic result, and is the affair of a power which works by a prodigality of life and force very dismaying to behold,—every trait of beauty purchased by hecatombs of private tragedy. The pruning in the wild gardens of Nature is never forborne. Many of the best must die of consumption, many of despair, and many be stupid and insane, before the one great and fortunate life which they each predicted can shoot up into a thrifty and beneficent existence.²⁹⁵³

VIII. THE TRAGIC

HE HAS seen but half the universe who never has been shown the house of Pain. As the salt sea covers more than two thirds of the surface of the globe, so sorrow encroaches in man on felicity. The conversation of men is a mixture of regrets and apprehensions. I do not know but the prevalent hue of things to the eye of leisure is melancholy. In the dark hours, our existence seems to be a defensive war, a struggle against the encroaching All, which threatens surely to engulf us soon, and is impatient of our short reprieve. How slender the possession that yet remains to us; how faint the animation! how the spirit seems already to contract its domain, retiring within narrower walls by the loss of memory, leaving its planted fields to erasure and annihilation. Already our thoughts and words have an alien sound. There is a simultaneous diminution of memory and hope. Projects that once we laughed and leapt to execute find us now sleepy and preparing to lie down in the snow. And in the serene hours we have no courage to spare. We cannot afford to let go any advantages. The riches of body or of mind which we do not need to-day are the reserved fund against the calamity that may arrive to-morrow. It is usually

agreed that some nations have a more sombre temperament, and one would say that history gave no record of any society in which despondency came so readily to heart as we see it and feel it in ours. Melancholy cleaves to the English mind in both hemispheres as closely as to the strings of an Æolian harp. Men and women at thirty years, and even earlier, have lost all spring and vivacity, and if they fail in their first enterprises, they throw up the game. But whether we and those who are next to us are more or less vulnerable, no theory of life can have any right which leaves out of account the values of vice, pain, disease, poverty, insecurity, disunion, fear and death.

What are the conspicuous tragic elements in human nature? The bitterest tragic element in life to be derived from an intellectual source is the belief in a brute Fate or Destiny; the belief that the order of Nature and events is controlled by a law not adapted to man, nor man to that, but which holds on its way to the end, serving him if his wishes chance to lie in the same course, crushing him if his wishes lie contrary to it, and heedless whether it serves or crushes him. This is the terrible meaning that lies at the foundation of the old Greek tragedy, and makes the *Œdipus* and *Antigone* and *Orestes* objects of such hopeless commiseration. They must perish, and there is no overgod to stop or to mollify this hideous enginery that grinds or thunders, and snatches them up into its terrific system. The same idea makes the paralyzing terror with which the East Indian mythology haunts the imagination. The same thought is the predestination of the Turk. And universally, in uneducated and unreflecting persons on whom too the religious sentiment exerts little force, we discover traits of the same superstition: "If you balk water you will be drowned the next time;" "if you count ten stars you will fall down dead;" "if you spill the salt;" "if your fork sticks upright in the floor;" "if you say the Lord's prayer

backwards;"—and so on, a several penalty, nowise grounded in the nature of the thing, but on an arbitrary will. But this terror of contravening an unascertained and unascertainable will cannot co-exist with reflection: it disappears with civilization, and can no more be reproduced than the fear of ghosts after childhood. It is discriminated from the doctrine of Philosophical Necessity herein: that the last is an Optimism, and therefore the suffering individual finds his good consulted in the good of all, of which he is a part. But in destiny, it is not the good of the whole or the *best will* that is enacted, but only *one particular will*. Destiny properly is not a will at all, but an immense whim; and this the only ground of terror and despair in the rational mind, and of tragedy in literature. Hence the antique tragedy, which was founded on this faith, can never be reproduced.²⁹⁵⁴

After reason and faith have introduced a better public and private tradition, the tragic element is somewhat circumscribed. There must always remain, however, the hindrance of our private satisfaction by the laws of the world. The law which establishes nature and the human race, continually thwarts the will of ignorant individuals, and this in the particulars of disease, want, insecurity and disunion.

But the essence of tragedy does not seem to me to lie in any list of particular evils. After we have enumerated famine, fever, inaptitude, mutilation, rack, madness and loss of friends, we have not yet included the proper tragic element, which is Terror, and which does not respect definite evils but indefinite; an ominous spirit which haunts the afternoon and the night, idleness and solitude.

A low, haggard sprite sits by our side, "casting the fashion of uncertain evils"—a sinister presentiment, a power of the imagination to dislocate things orderly and cheerful and show

them in startling array. Hark! what sounds on the night wind, the cry of Murder in that friendly house; see these marks of stamping feet, of hidden riot. The whisper overheard, the detected glance, the glare of malignity, ungrounded fears, suspicions, half-knowledge and mistakes, darken the brow and chill the heart of men. And accordingly it is natures not clear, not of quick and steady perceptions, but imperfect characters from which somewhat is hidden that all others see, who suffer most from these causes. In those persons who move the profoundest pity, tragedy seems to consist in temperament, not in events. There are people who have an appetite for grief, pleasure is not strong enough and they crave pain, mithridatic stomachs which must be fed on poisoned bread, natures so doomed that no prosperity can soothe their ragged and dishevelled desolation. They mis-hear and mis-behold, they suspect and dread. They handle every nettle and ivy in the hedge, and tread on every snake in the meadow.

"Come bad chance,
And we add it to our strength,
And we teach it art and length,
Itself o'er us to advance."²⁹⁵⁵

Frankly, then, it is necessary to say that all sorrow dwells in a low region. It is superficial; for the most part fantastic, or in the appearance and not in things. Tragedy is in the eye of the observer, and not in the heart of the sufferer. It looks like an insupportable load under which earth moans aloud. But analyze it; it is not I, it is not you, it is always another person who is tormented. If a man says, Lo! I suffer—it is apparent that he suffers not, for grief is dumb. It is so distributed as not to destroy. That which would rend you falls on tougher textures. That which seems intolerable reproach

or bereavement does not take from the accused or bereaved man or woman appetite or sleep. Some men are above grief, and some below it. Few are capable of love. In phlegmatic natures calamity is unaffecting, in shallow natures it is rhetorical. Tragedy must be somewhat which I can respect. A querulous habit is not tragedy. A panic such as frequently in ancient or savage nations put a troop or an army to flight without an enemy; a fear of ghosts; a terror of freezing to death that seizes a man in a winter midnight on the moors; a fright at uncertain sounds heard by a family at night in the cellar or on the stairs,—are terrors that make the knees knock and the teeth clatter, but are no tragedy, any more than seasickness, which may also destroy life. It is full of illusion. As it comes, it has its support. The most exposed classes, soldiers, sailors, paupers, are nowise destitute of animal spirits. The spirit is true to itself, and finds its own support in any condition, learns to live in what is called calamity as easily as in what is called felicity; as the frailest glass bell will support a weight of a thousand pounds of water at the bottom of a river or sea, if filled with the same.

A man should not commit his tranquillity to things, but should keep as much as possible the reins in his own hands, rarely giving way to extreme emotion of joy or grief. It is observed that the earliest works of the art of sculpture are countenances of sublime tranquillity. The Egyptian sphinxes, which sit to-day as they sat when the Greek came and saw them and departed, and when the Roman came and saw them and departed, and as they will still sit when the Turk, the Frenchman and the Englishman, who visit them now, shall have passed by,—“with their stony eyes fixed on the East and on the Nile,” have countenances expressive of complacency and repose, an expression of health, deserving their longevity, and verifying the primeval sentence of history on the permanency of that people, “Their strength is to sit still.”²⁹⁵⁶ To this architectural

stability of the human form, the Greek genius added an ideal beauty, without disturbing the seals of serenity; permitting no violence of mirth, or wrath, or suffering. This was true to human nature. For in life, actions are few, opinions even fewer, prayers few; loves, hatreds, or any emissions of the soul. All that life demands of us through the greater part of the day is an equilibrium, a readiness, open eyes and ears, and free hands. Society asks this, and truth, and love, and the genius of our life. There is a fire in some men which demands an outlet in some rude action; they betray their impatience of quiet by an irregular Catilinarian gait; by irregular, faltering, disturbed speech, too emphatic for the occasion. They treat trifles with a tragic air. This is not beautiful. Could they not lay a rod or two of stone wall, and work off this superabundant irritability? When two strangers meet in the highway, what each demands of the other is that the aspect should show a firm mind, ready for any event of good or ill, prepared alike to give death or to give life, as the emergency of the next moment may require. We must walk as guests in Nature; not impassioned, but cool and disengaged. A man should try Time, and his face should wear the expression of a just judge, who has nowise made up his opinion, who fears nothing, and even hopes nothing, but who puts Nature and fortune on their merits: he will hear the case out, and then decide.²⁹⁵⁷ For all melancholy, as all passion, belongs to the exterior life. Whilst a man is not grounded in the divine life by his proper roots, he clings by some tendrils of affection to society—mayhap to what is best and greatest in it, and in calm times it will not appear that he is adrift and not moored; but let any shock take place in society, any revolution of custom, of law, of opinion, and at once his type of permanence is shaken. The disorder of his neighbors appears to him universal disorder; chaos is come again. But in truth he was already a driving wreck before the wind arose, which

only revealed to him his vagabond state. If a man is centred, men and events appear to him a fair image or reflection of that which he knoweth beforehand in himself. If any perversity or profligacy break out in society, he will join with others to avert the mischief, but it will not arouse resentment or fear, because he discerns its impassable limits. He sees already in the ebullition of sin the simultaneous redress.²⁹⁵⁸

Particular reliefs, also, fit themselves to human calamities; for the world will be in equilibrium, and hates all manner of exaggeration.

Time the consoler, Time the rich carrier of all changes, dries the freshest tears by obtruding new figures, new costumes, new roads, on our eye, new voices on our ear. As the west wind lifts up again the heads of the wheat which were bent down and lodged in the storm, and combs out the matted and dishevelled grass as it lay in night-locks on the ground, so we let in Time as a drying wind into the seed-field of thoughts which are dark and wet and low bent. Time restores to them temper and elasticity. How fast we forget the blow that threatened to cripple us. Nature will not sit still; the faculties will do somewhat; new hopes spring, new affections twine, and the broken is whole again.

Time consoles, but Temperament resists the impression of pain. Nature proportions her defence to the assault. Our human being is wonderfully plastic; if it cannot win this satisfaction here, it makes itself amends by running out there and winning that. It is like a stream of water, which, if dammed up on one bank, overruns the other, and flows equally at its own convenience over sand, or mud, or marble. Most suffering is only apparent. We fancy it is torture; the patient has his own compensations. A tender American girl doubts of Divine Providence whilst she reads the horrors of "the middle passage;" and they are bad enough at the mildest; but to such as she these crucifixions do not come; they

come to the obtuse and barbarous, to whom they are not horrid, but only a little worse than the old sufferings. They exchange a cannibal war for the stench of the hold. They have gratifications which would be none to the civilized girl. The market-man never damned the lady because she had not paid her bill, but the stout Irishwoman has to take that once a month. She, however, never feels weakness in her back because of the slave-trade. This self-adapting strength is especially seen in disease. "It is my duty," says Sir Charles Bell, "to visit certain wards of the hospital where there is no patient admitted but with that complaint which most fills the imagination with the idea of insupportable pain and certain death. Yet these wards are not the least remarkable for the composure and cheerfulness of their inmates. The individual who suffers has a mysterious counterbalance to that condition, which, to us who look upon her, appears to be attended with no alleviating circumstance." Analogous supplies are made to those individuals whose character leads them to vast exertions of body and mind. Napoleon said to one of his friends at St. Helena, "Nature seems to have calculated that I should have great reverses to endure, for she has given me a temperament like a block of marble. Thunder cannot move it; the shaft merely glides along. The great events of my life have slipped over me without making any demand on my moral or physical nature."²⁹⁵⁹

The intellect is a consoler, which delights in detaching or putting an interval between a man and his fortune, and so converts the sufferer into a spectator and his pain into poetry. It yields the joys of conversation, of letters and of science. Hence also the torments of life become tuneful tragedy, solemn and soft with music, and garnished with rich dark pictures. But higher still than the activities of art, the intellect in its purity and the moral sense in its purity are

not distinguished from each other, and both ravish us into a region whereunto these passionate clouds of sorrow cannot rise.

NOTES

NATURE, ADDRESSES AND LECTURES

NATURE

IN HIS boyish poem "Good-bye," Mr. Emerson told how, among the cedar and barberry thickets of Roxbury, he found that

Man in the bush with God may meet.

In his boyhood, though city born, the doors of his grandfather's house by Concord River were always open to him. He knew well those meadows, the hills of Waltham and Newton, and the Chelmsford woods in his schoolboy and school-teaching days. The attractions of beautiful and living Nature grew with the increasing repulsion which he felt during his ministry from formalism and Hebraism.

As the little book *Nature* was Mr. Emerson's first venture in letters, yet is still held as one of his most notable works, it seems justifiable to recall, even at some length, its history and the reception it met with in America and in England.

In his journals it does not appear how long he had been meditating this book. The first mention of it occurs in his diary on shipboard, returning from his earliest visit to Europe in 1833. Just

three years later the book appeared. It will be remembered that these had been sad and unsettled days for him. His home had been broken up by the death of his young wife, and his recoil from certain forms and rites in worship had driven him to part from his church. He had made the journey to Italy, France, and England to recruit his strength and prepare for a changed life. He writes, September 6, "I like my book about nature, and wish I knew when and where I ought to live. God will show me. I am glad to be on my way home, yet not so glad as others, and my way to the bottom I could find, perchance, with less regret, for I think it would not hurt me, that is, the ducking or drowning."

In November, 1834, Mr. Emerson came to make his home in Concord and lived for a time with his venerable step-grandfather, Dr. Ezra Ripley. There, in the little room in the southern gable, since known as the Prophet's Chamber, where later Hawthorne wrote the *Mosses from an Old Manse*, he worked on his book. Mr. Cabot in his Memoir¹⁰ says that probably the first five chapters had been for some time in hand, that the seventh and eighth chapters seem to have been written after his removal to Concord, and the sixth (Idealism) last of all, as the connection of the two. In writing to his brother William, he says:—

CONCORD, JUNE 28, 1836.

My little book is nearly done. Its title is *Nature*... My design is to follow it with another essay, *Spirit*, and the two shall make a decent volume.

¹⁰ *A Memoir of Ralph Waldo Emerson*. By James Elliot Cabot.

AUGUST 8.

The book of *Nature* still lies on the table; there is, as always, one crack in it, not easy to be soldered or welded; but if this week I should be left alone, I may finish it.

It was published in September, anonymously; only five hundred copies were printed, and of these many remained long unsold, so that a second edition was not called for until 1849.

In this essay, as in the *Sermon on the Lord's Supper*, it is interesting to note a more ordered presentation of the ideas—such as was usual in sermons—than Mr. Emerson in the later writings cared to attempt.

Mr. Cabot in his Memoir says that "by the *Christian Examiner*, the chief organ of the Unitarians, *Nature* was treated rather indulgently as a poetical rhapsody containing much beautiful writing and not devoid of sound philosophy, but, on the whole, producing the impression of a disordered dream." He adds, "Transcendentalism was attacked (though more often sneered at) as a threat, however impotent, of radical revolution, but not often, I think, in the person of Emerson. In him, it would be felt, revolution was like the revolutions of Nature, who does not cast off her old leaves until she has got ready the new."

The *Examiner's* view of the work as a poetical rhapsody suggests Dr. Holmes's account of it. "*Nature* is a reflective prose poem. It is divided into eight chapters, which might almost as well have been called cantos. Beginning simply enough, it took more and more the character of a rhapsody, until, as if lifted off his feet by the deepened and stronger undercurrent of his thought, the writer dropped his personality, and repeated the words which 'a certain poet sang to him.'" It is, however, very possible that the passage

referred to, in the last chapter of *Nature*, was a poetical rendering of the thoughts of his new-found friend, Mr. Alcott.

Immediately on the appearance of *Nature*, Emerson wrote to Carlyle:—

"I send you a little book I have just now published; an entering wedge, I hope, to something more worthy and significant. This is only a naming of topics on which I would gladly speak and gladlier hear."

Carlyle thus hailed its appearance:—

"Your little azure-coloured *Nature* gave me true satisfaction. I read it and then lent it about to all my acquaintance that had a sense for such things, from whom a similar verdict always came back. You say it is the first chapter of something greater. I call it rather a Foundation and Ground-plan on which you may build whatsoever of great and true has been given you to build. It is the true Apocalypse, this where the 'Open Secret' becomes revealed to a man. I rejoice much in the glad serenity of soul with which you look out on this wondrous Dwelling-place of yours and mine,—with an ear for the *Ewigen Melodien* which pipe in the winds round us and utter themselves forth in all sounds and sights and things: *not* to be written down by gamut machinery, but which all right writing is a kind of attempt to write down. You will see what the years will bring you."

In a letter written in April, 1839, he tells that "people are beginning to quote you here: *tant pis pour eux*. I have found you in two Cambridge books; a certain Mr. Richard Monckton Milnes, M. P., a beautiful little Tory dilettante poet and politician, whom I love much, applied to me for *Nature*, that he might write upon it."

And soon after he received this greeting in a letter from Sterling:¹¹—

SEPTEMBER 30, 1839.

I have read very, very little modern English writing that has struck and pleased me so much; among recent productions, almost only those of our friend Carlyle, whose shaggy-browed and deep-eyed thoughts have often a likeness to yours which is very attractive and impressive, neither evidently being the double of the other....I trust that you will long continue to diffuse, by your example as well as doctrine, the knowledge that the Sun and Earth and Plato and Shakspeare are what they are by working each in his vocation; and that we can be anything better than mountebanks living, and scarecrows dead, only by doing so likewise. For my better assurance of this truth, as well as for much and cordial kindness, I shall always remain your debtor.

In this essay Emerson announced his doctrine of the Oversoul, the Universal Mind, which runs through all his work. Its keynote is given in the words "The noblest ministry of Nature is to stand as the apparition of God. It is the organ through which the universal spirit speaks to the individual and strives to lead back the individual to it....The world proceeds from the same spirit as the body of man. It is a remoter and inferior incarnation of God, a projection of God in the unconscious. But it differs from the body in one important respect. It is not, like that, now subjected to the human will. Its serene order is inviolable by us. It is, therefore, to us, the present

¹¹ John Sterling, a writer of prose and verse (*The Onyx Ring; The Sexton's Daughter and Other Poems; Strafford, a Tragedy*, etc.), now, however, best known as the subject of biographies by Carlyle and Archdeacon Hare. With this brilliant and inspiring man Emerson formed a close friendship by letters, though they never met, lasting until Sterling's early death in 1847. See *A Correspondence between Sterling and Emerson*, published by Messrs. Houghton, Mifflin & Co., 1897.

expositor of the divine mind. It is a fixed point whereby we may measure our departure."

N0001: Mr. Emerson loved to place a motto at the head of his chapter. Dr. Holmes suggested that the hereditary use of a text before a discourse survived thus in him. Before *Nature* in the first edition he placed the words of Plotinus: "Nature is but an image or imitation of wisdom, the last thing of the soul; Nature being a thing which doth only do, but not know."

Of the verse containing the doctrine of Evolution which he wrote for the second edition, and which still stands before the Essay, something has been said in the biographical sketch.

The present motto was placed at the beginning of *Nature* in its second edition in 1849 instead of the sentence of Plotinus. But in the new one, Mr. William T. Harris¹² finds this thought of Plotinus, whom he thus quotes: "We might say that all beings, not only rational ones, but even irrational ones, the plants, and even the soil that bears them, aspire to attain conscious knowledge," and credits to Plotinus "the suggestion of those fine poetic dreams of Schelling and Oken,—that reason dreams in the plant, and feels in the animal, and thinks in man." As has been said in the biographical sketch, Plato and his followers had prepared Mr. Emerson's mind to welcome the dawning evolution theories of Lamarck and others, which probably came to him through Lyell's work on Geology, and in conversation with scholars of science. Darwin's *Origin of Species* was not published until 1859.

During his short stay in Paris in 1833, Mr. Emerson visited the *Jardin des Plantes*, and in a lecture called *The Uses of Natural History*, read before the Boston Natural History Society in November of

¹² *Memoir of Bronson Alcott*, by F. B. Sanborn and W. T. Harris.

that year, told of what he saw. In it he said: "The eye is satisfied with seeing, and strange thoughts arise. The universe is a more amazing puzzle than ever as you look along this bewildering series of animated forces....While I stand there I am impressed with a singular conviction that not a form so grotesque, so savage, or so beautiful, but is an expression of something in man the observer. We feel that there is an occult relation between the very worm, the crawling scorpions, and man. I am moved by strange sympathies. I say I will listen to this invitation. I will be a naturalist."

N0002: Compare the line in "The Sphinx," *Poems*:—

Thou art the unanswered question.

N0003: It should be remembered to how large a part of the educated world the first chapter of *Genesis* stood in 1836 as the sole and final authority on Creation. Geology and paleontology were in their infancy, comparative anatomy little advanced, and biology hardly born. The new philosophic ideas of progressive development and amelioration, fortified by the new science, were welcomed by Mr. Emerson as harmonizing with the laws of spirit.

N0004: In the heavenly bodies Emerson early found his teachers: symbols of light and law, in their beauty, their vast excursion and sure return, they guide his thought and illuminate his works. (See especially "The Poet" [*Poems*, Appendix], "Woodnotes," II., "Character," and "Uriel.") His early journals show that the system of Copernicus widened his views as a minister. In 1833, in Florence, he did homage at the tomb of Galileo. He read the lives of Kepler and Newton, and Herschel's *Astronomy*, and often expressed the hope that old age might bring him leisure to study the stars. It was

his counsel "Hitch your wagon to a star." ("Civilization," *Society and Solitude*.)

N0005: Compare the sentence in a note-book of Mr. Emerson's from Plutarch's essay in the *Morals*, "Why the Pythian Priestess ceases her Oracles in Verse:"—

"The Sun is the cause that all men are ignorant of Apollo, by sense withdrawing the rational intellect from that which is to that which appears."

N0006: This sentence and what follows are distinctly autobiographical, representing the life that Mr. Emerson led in Concord, going almost daily alone to the woods to attune himself to receive through their symbolic life hints of the spiritual life.

N0007:

Sheen will tarnish, honey cloy,
And merry is only a mask of sad,
But sober on a fund of joy,
The woods at heart are glad.

"Waldeinsamkeit," *Poems*.

N0008: Here first appears in his published writings Emerson's doctrine of the Universal Mind or the Over-soul, which thereafter ran through all his works.

The little poem "Pan" (see *Poems*, Appendix) is called to mind by this passage.

N0009:

Methought the sky looked scornful down
On all was base in man,
And airy tongues did taunt the town,
'Achieve our peace who can!'

"Walden," *Poems*, Appendix.

N0010: In the journal for 1855 is written this little prose poem:—

THE YEAR.

There is no flower so sweet as the four-petalled flower which science
much neglects; one grey petal it has, one green, one red, and one white.

N0011: George Herbert's poem "Man," five stanzas of which are given in chapter viii. of this essay.

N0012: Mr. Emerson's friend, Henry Thoreau, wrote: "I do not go there [to the woods] to get my dinner, but to get that sustenance which dinners only preserve me to enjoy."

N0013: See first page of "Spiritual Laws," *Essays, First Series*.

N0014: The poem "Sunrise," written probably at the same time, while Mr. Emerson lived at the Old Manse, describes the morning seen from the hill opposite. (*Poems*, Appendix.)

N0015:

Ah! well I mind the calendar,

Faithful through a thousand years,
Of the painted race of flowers, etc.

"May-Day," *Poems*.

N0016: Compare quatrain "Northman," in *Poems*.

N0017:

Thee, gliding through the sea of form, etc.

"Ode to Beauty," *Poems*.

N0018: "Each and All" and "Xenophanes," *Poems*.

N0019: The theme of "The Rhodora," *Poems*.

N0020: This Trinity of the different manifestations of Spirit through the universe, symbolized in matter by the Protean aspects, of light, heat, motion, was a basal thought with Emerson. It is expressed again in the chapter "Spirit" in this essay, in "The Transcendentalist" in this volume, and in the end of "Art," *Society and Solitude*, and as the "three children of the Universe" in the first pages of "The Poet," *Essays, Second Series*. Sidney Lanier, in his last lecture before his death, at the Johns Hopkins University,¹³ spoke of this Trinity of Emerson's.

In Thomas Taylor's *Substance of Porphyry's Life of Plotinus*, Plato's and Plotinus's Trinity, the Good, Intellect and the Soul, is discussed, and the author adds, "This theory, the progeny of the most consummate science, is in perfect conformity with the theology of the Chaldæans. And hence is it said in one of their oracles, 'In

¹³ "Moral Purpose in Art," published in the *Century Magazine* for May, 1883.

every world a triad shines forth, of which a monad is the ruling principle.”

N0021: Πάντα ῥεῖ, the doctrine of the flowing of all things, taught by Heracleitus of Ephesus (536–470 B.C.), and often quoted by Plato.

Far seen, the river glides below,
Tossing one sparkle to the eyes.
I catch thy meaning, wizard wave;
The river of my life replies.

“Walden,” *Poems*, Appendix.

The ripples in rhymes the oar forsake.

“Woodnotes,” II., *Poems*.

N0022:

To clothe the fiery thought
In simple words succeeds,
For still the craft of genius is
To mask a king in weeds.

Quatrain “Poet,” *Poems*.

N0023:

The mountain utters the same sense
Unchanged in its intelligence,
For ages sheds its walnut leaves,
One joy it joys, one grief it grieves.

“Nature,” *Fragments*, *Poems*, Appendix.

See also the last passage in the poem "Monadnoc."

N0024: "Can such things be?" etc. Shakespeare, *Macbeth*, iii. 4.

N0025: Ἀεὶ γὰρ εὖ πίπτουσιν οἱ Διὸς κύβοι. *The dice of Zeus ever fall aright*. From a lost play of Sophocles, Fragment 763; used also in "Compensation," *Essays, First Series*; also "Worship," *Conduct of Life*.

N0026: This doctrine expanded in "Sovereignty of Ethics," *Lectures and Biographical Sketches*; ten commandments; compare end of "Prudence," *Essays, First Series*.

N0027: The oracle of Nature is overheard by the listener in the wood; "Fragments on the Poet," IV., *Poems*, Appendix.

N0028:

Teach me your mood, O patient stars!
Who climb each night the ancient sky,
Leaving on space no stain, no scars,
No trace of age, no fear to die.

"Fragments on the Poet," *Poems*, Appendix.

N0029: See "Xenophanes," *Poems*.

Xenophanes of Elea, the rhapsodist and philosopher (570–480 B.C.), taught the unity of God and Nature. His doctrine, "Ἐν καὶ πᾶν, the One and the All, constantly recurs in Emerson's writings. Xenophanes said, "There is one God, the greatest among gods and men, comparable to mortals neither in form nor thought." Mr. Arthur K. Rogers, in his *Student's History of Philosophy*, says that

what Xenophanes taught was "that what we name God is the one immutable and comprehensive material universe which holds within it and determines all those minor phenomena to which an enlightened philosophy will reduce the many deities of the popular faith. The conception is not unlike that of Spinoza in later times."

N0030: This passage occurs in a lecture given in December, 1832, before the Boston Society of Natural History.

N0031: Although the "degradation" was a Platonic doctrine, I think it so contrary to Mr. Emerson's steady belief in amelioration that the expression here implies merely that the animals are lower steps in an ascending series.

N0032: This image, slightly varied, is found in "Pan," *Poems*, Appendix.

N0033: Mr. Emerson's brilliant brothers, Edward Bliss Emerson and Charles Chauncy Emerson, had died within the two years before the publication of *Nature*. Of Edward's powers and nobility, his brother tells in his poem, "The Dirge." Of Charles he wrote: "Beautiful without any parallel in my experience of young men was his life....I have felt in him the inestimable advantage, when God allows it, of finding a brother and a friend in one."

N0034: Mr. Emerson wrote in one of his Journals, "I remember when a child, in the pew on Sundays, amusing myself with saying over common words, as 'black,' 'white,' 'board,' etc., twenty or thirty times, until the words lost all meaning and fixedness, and I began to doubt which was the right name for the thing, when I saw

that neither had any natural relation, but were all arbitrary. It was a child's first lesson in Idealism."

N0035: The flowing universe is told of in many of the poems, as in "Woodnotes," II., "The rushing metamorphosis," etc., and later "Onward and on, the eternal Pan," etc.

N0036: Shakspeare, Sonnet lxx.

N0037: Shakspeare, Sonnet cxxiv.

N0038: In a letter written in December, 1838, to Rev. James Freeman Clarke, then editing in Ohio *The Western Messenger*, to which Mr. Emerson contributed "The Humble-Bee," he says:—

"I remember in your letter you mentioned the remark of some friend of yours that the verses, 'Take, O take those lips away,' were not Shakspeare's; I think they are. Beaumont, nor Fletcher, nor both together were ever, I think, visited by such a starry gleam as that stanza. I know it is in *Rollo*, but it is in *Measure for Measure* also; and I remember noticing that the Malones, and Stevens, and critical gentry were about evenly divided, these for Shakspeare, and those for Beaumont and Fletcher. But the internal evidence is all for one, none for the other. If he did not write it, they did not, and we shall have some fourth unknown singer. What care we who sung this or that? It is we at last who sing."

N0039:

The solid, solid universe
Is pervious to love, etc.

"Cupido," *Poems*.

N0040: Leonhard Euler (1707–1783), a Swiss mathematician of remarkable gifts; also a man of character and wide culture. He was called by Catherine of Russia to the Academy of St. Petersburg as professor of physics, and later of mathematics. Frederick the Great induced him to come to Berlin, where he remained many years, returning, however, to Russia. In total blindness during his last years, he did important work.

N0041: Proverbs viii. 23, 27, 28, 30.

N0042: Plotinus (204–269 A.D.), of Lycopolis in Egypt, a disciple of Ammonius Saccus of Alexandria, sometimes called the founder of Neo-Platonism, went to Rome and taught philosophy there. Plotinus accompanied the Emperor Gordian in his expedition into Persia, and thus came in contact with the teachings of Zoroaster. He said, "The sensuous life is a mere stage play—all misery in it is only imaginary, all grief a mere cheat of the players; the soul is not in the game; it looks on."—*Student's History of Philosophy*, by Arthur K. Rogers.

N0043: "The Bohemian Hymn," *Poems*, Appendix.

N0044: Milton, *Comus*, 13, 14.

N0045: This passage refers to Mr. Emerson's visit to the *Jardin des Plantes* in Paris a few months before. See note^{N0001} to the motto of this essay.

N0046: It is very possible that Mr. William T. Harris is right where he says, in speaking of Mr. Alcott's philosophy: "I have been obliged to think...that Mr. Emerson attempted to preserve in the

last chapter of his book on *Nature*...a picture of Mr. Alcott as 'Orphic Poet' by writing out in his own words and with an effort to reproduce the style of thought, words and delivery of Mr. Alcott, the idealistic theory which he had heard with such great interest."—*Memoir of Bronson Alcott*, by F. B. Sanborn and W. T. Harris.

N0047: "He who desires to signify divine concerns through symbols is orphic, and, in short, accords with those who write myths concerning the Gods."—Proclus, *Theology of Plato*, I. iv.

N0048: Alexander Leopold Franz Emmerich Hohenlohe (1794–1849), a priest, born at Würtemberg, of a princely family, known for the miraculous cures, attributed to his prayers, in Germany and England, and at Washington, of a Mrs. Mattingly, in 1824.

N0049: I am indebted to Dr. Ralph Barton Perry, of Harvard University, for the following information with regard to these expressions: "The phrase (*vespertina cognitio*) signifies the twilight knowledge of man that is contrasted with the full-day knowledge of God (*matutina cognitio*). Knowledge of things in their several natures and particularity is twilight knowledge, while the knowledge of the ideas that constitute the plan of creation is day knowledge. This distinction corresponds to the technical distinction between *a posteriori* and *a priori* knowledge. The distinction between morning and evening knowledge refers to the *direction* of the partial knowledge. To glorify God, or to see him from the standpoint of darkness, is *cognitio matutina*; to fall away to darkness is *cognitio vespertina*. The angels have both in one, the *vespertina* being contained in the *matutina*. The angels have the *vespertina* in so far as they know the lower only through the higher—or see the higher in the lower—and so always glorify

God. The use of these phrases is very curiously mingled with the problem of morning and evening as applying to the period preceding the creation of the sun and moon.—See St. Augustine's *City of God*, Book XI., chapters vii and xxix, Dods's translation. Also the *Summa Theologiæ* of St. Thomas Aquinas, Part I., Quæstio lviii, Art. 6; Quæstio lxxiv, Art. 3."

N0050:

Wiser far than human seer, etc.

"The Humble-Bee," *Poems*.

Also:—

Let me go where'er I will,
I hear a sky-born music still.

"Fragments on The Poet," *Poems*, Appendix.

THE AMERICAN SCHOLAR

IN 1834 Mr. Emerson had been chosen to give the Poem at the annual meeting of the Phi Beta Kappa Society in Cambridge. Three years later he was invited to give the Address. A month before the meeting he wrote in his Journal:—

29 JULY, 1837.

If the All-wise would give me light, I should write for the Cambridge men a theory of the Scholar's office. It is not all books which it behooves him to know, least of all to be a book-worshipper, but he must be able to read in all books that which alone gives value to books—in all to read one, the one incorruptible text of Truth. That alone of their style is intelligible, acceptable to him.

In his *Memoir of Emerson* Mr. Cabot speaks of this address as “a much needed monition to the cultivated class of persons in New England to think for themselves instead of taking their opinions from Europe or from books.”

Mr. Lowell, speaking of this epoch of “the Newness,” as the spiritual awakening of New England was sometimes called, said,

"The Puritan revolt had made us ecclesiastically, and the Revolution politically independent, but we were still socially and intellectually moored to English thought, till Emerson cut the cable and gave us a chance at the dangers and the glories of blue water....His oration before the Phi Beta Kappa Society at Cambridge, some thirty years ago, was an event without any former parallel in our literary annals, a scene to be always treasured in the memory for its picturesqueness and its inspiration. What crowded and breathless aisles, what windows clustering with eager heads, what enthusiasm of approval, what grim silence of foregone dissent!"¹⁴

Dr. Holmes records in his *Life of Emerson* that rarely has any one of the annual addresses before the Phi Beta Kappa Society been listened to with such profound attention and interest. He spoke of it as "Our intellectual Declaration of Independence."

"Nothing like it had been heard in the halls of Harvard since Samuel Adams supported the affirmative of the question, 'Whether it be lawful to trust the chief magistrate, if the commonwealth cannot otherwise be preserved.' It was easy to find fault with an expression here and there. The dignity, not to say the formality of an academic assembly, was startled by the realism that looked for the infinite in 'the meal in the firkin; the milk in the pan.' They could understand the deep thoughts suggested by 'the meanest flower that blows,' but these domestic illustrations had a kind of nursery homeliness about them which the grave professors and sedate clergymen were unused to expect on so stately an occasion. But the young men went out from it as if a prophet had been proclaiming to them, 'Thus saith the Lord.' No listener ever forgot that address, and among all the noble utterances of the speaker it may be questioned if one ever contained more truth in language more like that of immediate inspiration."

¹⁴ Essay on Thoreau, *My Study Windows*.

Carlyle wrote to Emerson about the oration: "My friend! you know not what you have done for me there....Lo, out of the West comes a clear utterance, clearly recognizable as a *man's* voice, and I *have* a kinsman and brother: God be thanked for it. I could have *wept* to read that speech; the clear high melody of it went tingling through my heart....Miss Martineau tells me, 'Some say it is inspired, some say it is mad.' Exactly so; no *say* could be suitabler. But for you, my dear friend, I *say* and pray heartily: May God grant you strength; for you have a *fearful* work to do! Fearful I call it; and yet it is great, and the greatest."

N0051: In the opening passages of an editorial paper in the *Dial* (April, 1843), "Europe and European Books," Mr. Emerson speaks of these as still dominant here, but prophesies thus: "This powerful star, it is thought, will soon culminate and descend, and the impending reduction of the Transatlantic excess of influence... is already a matter of easy and frequent computation. Our eyes will be turned westward and a new and stronger tone of literature will result. The Kentucky stump-oratory, the exploits of Boone and David Crockett, the journals of western pioneers, agriculturalists, and socialists, and the letters of Jack Downing, are genuine growths which are sought with avidity in Europe, where our European-like books are of no value." He further says that the moving centre of population and property of the English race will in time "certainly fall within the American coast, so that the writers of the English tongue shall write to the American and not to the island public, and then shall the great Yankee be born."

In editing this paper for *Natural History of Intellect* Mr. Cabot omitted the first three pages.

N0052: In the "Symposium" of Plato is a version of this fable, but in his Introduction to Professor Goodwin's edition of Plutarch's *Morals*, Mr. Emerson says,—“What noble words we owe to him! ‘God divided man into men that they might help each other.’” This idea, differently expressed, is found in the chapter “Of Brotherly Love” in the *Morals*, vol. iii. p. 37.

N0053:

The horseman serves the horse, etc.

“Ode inscribed to W. H. Channing,” *Poems*.

N0054:

Line in nature is not found;
Unit and universe are round;
In vain produced, all rays return, etc.

“Uriel,” *Poems*.

N0055: In this address, and throughout the Essays, and equally the Poems, are evidences of Mr. Emerson's reading in the works of the Masters of Science,—Newton, Laplace, Hunter, Linnæus, Lamarck, Herschel, Owen, Lyell, Faraday,—and his use of their facts on another plane.

N0056: In one of the Journals, Mr. Emerson quotes a French author's *mot*: “Whether or no there be a God, it is certain that there will be.”

N0057: This recalls the definition of Art as “Nature passed through the alembic of man,” in *Nature*, chapter iii.

N0058: Emerson, Thoreau, and Lowell, three young men at that epoch, who set an example to American scholars of independence in thought and originality in expression, spent much of their time during their college terms exploring and reading in the Library at the expense of the prescribed curriculum, thereby incurring censure at the time.

N0059: All the influence Mr. Emerson hoped to exert on others was to show them the right of the spirit and the intellect to the same freedom as was claimed for the body. In his Journal for 1856 he writes: "I have been writing and speaking what were once called novelties for twenty-five or thirty years, and have not now one disciple." The would-be disciple must go to the fountain of truth open in himself to every man, and might well get a more generous draught than he.

Compare his poem "Étienne de la Boëce."

N0060: Mr. Emerson followed his counsel to the scholar to "read a little proudly." He soon found in a book the passages written for him and lightly passed over the others.

N0061: In the addresses called "The Man of Letters" and "The Scholar," which are included in *Lectures and Biographical Sketches*, as well as in this speech, Mr. Emerson steadily holds up to the scholar the duty of active and brave manhood especially imposed upon him by his privileged lot.

N0062: The "other me" implies a quite different view from the "Non Ego" of the metaphysician.

N0063:

What prizes the town and tower?
Only what the pine-tree yields, etc.

"Woodnotes," II., *Poems*.

N0064:

Who telleth one of my secrets
Is master of all I am.

"The Sphinx," *Poems*.

N0065: In an address delivered before the Anti-slavery Society in New York, March 7, 1854, Mr. Emerson said that one comes at last to learn "that self-reliance, the height and perfection of man, is reliance on God." This sentence is the reconciliation of the essays on "Self-Reliance" and "The Over-Soul."

N0066: Mr. Emerson wrote in his Journal after this oration: "It was the happiest turn to my old thrum which Charles Henry Warren gave as a toast at the Phi Beta Kappa dinner: 'Mr. President,' he said, 'I suppose all know where the orator comes from; and I suppose all know what he has said. I give you—the Spirit of Concord—it makes us all of one mind.'"

N0067: Mr. Emerson devotes a chapter to Swedenborg, the Mystic, in *Representative Men*.

N0068: The writings of Pestalozzi, the earnest Swiss reformer, whose teachings have wrought so much in the improvement in education in Europe and America, had begun to be read in

America. Pestalozzi's beneficent course was dogged through life by apparent failures, partly due to lack of administrative ability in himself, largely to the condition of Switzerland during the Napoleonic wars. Mr. Emerson's friend, Mr. Alcott, in 1825, when he knew little of Pestalozzi, independently introduced a very similar system into his village school at Cheshire, and later in Boston.

N0069: This sentence might well stand as a prophecy of much of Mr. Emerson's own history.

ADDRESS TO THE SENIOR CLASS OF THE DIVINITY SCHOOL

THIS ADDRESS was given by Mr. Emerson to the Seniors in the Divinity School in Cambridge at their request. The professors in charge of the school had no official part in the choice of a speaker, and therefore were not responsible for his opinions, as, after the address, they clearly made known. Mr. Emerson's journals for the year preceding its delivery contain many expressions of disappointment in the preaching which he, then a regular and hopeful attendant, heard. In the rugged and eloquent prayer and preaching of "Father Taylor" at the Sailors' Bethel, however, he delighted,¹⁵ and spoke of him as "the Shakspeare of the sailor and the poor."

The address was given in the middle of July. On March 14th, he wrote in his Journal:—

"There is no better subject for effective writing than the clergy. I ought to sit and think, and then write a discourse to the American clergy, showing

¹⁵ Rev. Edward T. Taylor, once a seaman, later a Methodist preacher. A passage from Mr. Emerson's diary expressing his admiration for this "Wonderful Man" is printed in full in Mr. Cabot's *Memoir*, vol. i. p. 327.

them the ugliness and unprofitableness of theology and churches at this day, and the glory and sweetness of the moral nature out of whose pale they are almost wholly shut."

The opportunity to free his mind soon came. He was approached by some youths from the Divinity School—probably a committee to invite him to make the Annual Address.

Journal, 1st April. "The Divinity School youths wished to talk with me concerning Theism. I went rather heavy-hearted, for I always find that my views chill or shock people at the first opening. But the conversation went well, and I came away cheered. I told them that the preacher should be a poet smit with the love of the harmonies of moral nature: and yet look at the Unitarian Association and see if its aspect is poetic. They all smiled No. A minister, nowadays, is plainest prose, the prose of prose. He is a warming-pan...at sick beds and rheumatic souls, and the fire of the minstrel's eye, and the vivacity of his word is exchanged for intense grumbling enunciation of the Cambridge sort, and for Scripture phraseology."

Although he knew that what he should say must needs shock many of the elder clergy, because, tried by his standards, they were found wanting, it seemed a clear duty that had come to him to open the minds of these young apostles to the great possibilities of their calling.

The address provoked a great reaction. The authorities of the school publicly washed their hands of all complicity in the occasion. Professor Andrews Norton, a man of great worth and weight among the more liberal clergy of the day, strongly attacked the views of Emerson in the *Boston Advertiser*, as making light of revealed Christianity and nearly approaching atheism. Mr. Emerson's revered friend with whom he had been associated in the Second Church, Rev. Henry Ware, then a professor in the

Divinity School, felt that such a doctrine as that "the soul knows no persons" must be resisted, and soon after preached a sermon to the school on this and other points. He sent the sermon to his former colleague with a kind letter, wishing that he be not understood as attacking the new views as Emerson's, not being perfectly aware of the precise nature of his opinions, or the arguments by which they might be justified to his mind. Mr. Cabot in his Memoir says:—

"Emerson replied in a letter which has often been quoted,¹⁶ as it deserves to be, for the entire serenity of temper it displays, but also as a confession that he was incapable of reasoning. There is no one, he says, less willing or less able to be polemic. 'I could not possibly give you one of the "arguments" you cruelly hint at on which any doctrine of mine stands; for I do not know what arguments mean in reference to any expression of a thought.' He was trying to rouse his contemporaries to a livelier sense of the facts of religion, and this could never be done by argument."

In an early poem, printed after his death, in the Appendix to the *Poems*, "The Bohemian Hymn," which is referred to elsewhere in these notes, Emerson's thought of the inadequacy of man to express Deity is embodied. He said: "I deny personality to God because it is too little, not too much. Life, personal life, is faint and cold to the energy of God. For Reason and Love and Beauty, or that which is all these,—it is life of life, the reason of reason, the love of love." Mr. Cabot explains that "what he means by personality seems to be nothing more than limitation to an individual...He did not deny self-consciousness to the Supreme Being." He did not want the informing Soul of the universe shut up in Jehovah.

¹⁶ The correspondence between these friends, which does honor to both, is printed in full in an Appendix to Mr. Cabot's *Memoir of Emerson*.

Though much abhorrence or disavowal of the views of this address was publicly expressed, not all the hearers were troubled. Miss Elizabeth Peabody, in a letter to Mr. Alexander Ireland, of Manchester, England, relates that "Dr. Channing regarded the address at Divinity Hall as an entirely justifiable and needed criticism on the perfunctory character of service creeping over the Unitarian churches at the time. He hailed the commotion of thought it stirred up as a sign that 'something did live in the embers' of that spirit which had developed Unitarianism out of the decaying Puritan churches." Mr. Moncure D. Conway tells how the young Theodore Parker went home and wrote in his Journal: "I shall give no abstract, so beautiful, so just and terribly sublime was his picture of the church in its present condition. My soul is roused, and this week I shall write the long-meditated sermons on the state of the church and the duties of these times."

In the circle of Boston and Cambridge there was much disturbance for a time, and, indeed, nearly thirty years passed by before it was felt at the University that Mr. Emerson was a safe or desirable person to be called upon to take any active part in its functions.

In the controversy at the time, as Dr. Holmes wittily says: "Emerson had little more than the part of Patroclus when the Greeks fought over his body." The apparent result of his address must have been somewhat disappointing, and the temporary notoriety was disagreeable to him. He had faithfully delivered his message; let it work according to its truth. He withdrew himself to Concord to work at his other tasks.

The poem "Uriel," if carefully read, will be seen to be an account, sublimed and impersonal, but accurate in detail, of this experience when a soul, looking from a commanding central point, like the Archangel of the Sun, sees and announces a truth, new

and astounding to those whose view, from their position, is more limited and eccentric, so that they cannot see all things moving and returning in their vast orbits in accordance with the beautiful law of the Universe.

On one account only had Mr. Emerson to take immediate action, involving disappointment because of the reception of his address. He had at this time great hopes that Carlyle would come to America, perhaps even to stay, and now had to urge his friend by no means to come until this "foolish clamor be overblown" about his own "infidelity," "pantheism," or "atheism;" mentioning, however, that if he (Emerson) lived, his "neighbors must look for a great many more shocks, and perhaps harder to bear."

N0070: The omnipotence and omnipresence of the perfect law, moral, intellectual, and physical, an inseparable trinity, is everywhere insisted on by Mr. Emerson. "The universe is moral." In the end of "The Poet" (*Poems*, Appendix), the sweetness of the Law is celebrated. See also the motto "Worship," *Poems*:—

More near than aught thou callest thine own,
Yet, greeted in another's eyes,
Disconcerts with glad surprise, etc.

N0071: This passage, probably a very startling one to the clergymen present, has in it the doctrine to be found in "The Over-Soul," *Essays, First Series*.

N0072: Compare the lines on humility from Keats's "Hyperion," quoted in "The Sovereignty of Ethics," *Lectures and Biographical Sketches*:—

One avenue was shaded from thine eyes
Through which I wandered to eternal truth.

N0073: Emerson's favorite doctrine of Compensation. See also "Worship" in *Poems*:—

This is he men miscall Fate, etc.

N0074: Hence he did not attack others' belief, sure that the good when rightly shown, without irritating argument or ridicule, would displace the evil.

Whispered the Muse in Saadi's cot, etc.

"Saadi," *Poems*.

N0075:

Around the man who seeks a noble end,
Not angels but divinities attend.

"Fragments on Life," *Poems*, Appendix.

N0076: Suggesting the lines in Wordsworth's "Ode to Duty:"—

Thou dost preserve the stars from wrong;
And the most ancient heavens through thee are fresh and strong.

N0077: To the same purpose as the stanza beginning:—

Brother, sweeter is the Law
Than all the grace Love ever saw, etc.

"The Poet," *Poems*, Appendix.

N0078: In *Representative Men* the debt of Plato to the ancient wisdom of the East is spoken of. Emerson acknowledged the same. His mind prepared for them by Plato and the Neo-Platonists, he early found the Scriptures of the Orient, and, later, delighted in their poets, especially Saadi and Hafiz; so much in the first, that in several of his poems he adopted *Saadi* or *Seyd* as a generic name for the Poet.

N0079: "The divine nature," that is, the over-soul, the divine element shared in measure by every soul. The regeneration of the Calvinist was instantaneous; the regeneration which Emerson found was continuous, if man would only open the gates of his soul to the flood of Spirit.

Ever the words of the Gods resound,
But the porches of man's ear
Seldom in this low life's round
Are unsealed that he may hear.

"My Garden," *Poems*.

N0080:

For what need I of Book or priest, etc.

"Fragments on the Poet," *Poems*, Appendix.

N0081: Mr. Cabot in his Memoir says that Mr. Emerson "was surprised to find his intention so far mistaken as to leave many of his Unitarian brethren to suppose that he was trying to belittle the character of Jesus. Far from this, he was trying to place the reverence for Jesus upon its true ground, out of reach of the reaction that was sure to set in when the claim of exclusive revelation should lose its

force." Mr. Cabot further mentions that Miss Elizabeth Peabody said in her *Reminiscences of Dr. Channing* that a passage to this effect was omitted by Mr. Emerson for want of time in the reading of the address, and she urged him to restore it in the printing, but that he on reflection preferred to let the paper stand as it was read. He would not explain it by what might seem an afterthought.

Miss Peabody urged him at least to put a capital F to the "friend of man," but Mr. Emerson answered, "If I did so, they would all go to sleep."

N0082: Wordsworth, *Miscellaneous Sonnets*, "The world is too much with us."

N0083: The sublimed doctrine of Self-Reliance.

N0084:

Love's hearts are faithful, but not fond, etc,

"The Celestial Love," *Poems*.

N0085: To call the prophets and saints Bards was to Emerson giving them their due honor, but, perhaps, might seem to some of his clerical hearers making fiddlers of them. In the passage from the Journal, April 1, quoted in the introductory note to this address, he spoke of his wish to make a preacher a true poet.

N0086: This is told in verse in "The Problem," *Poems*.

N0087: Mr. Emerson once spoke in his Journal of "The corpse-cold Unitarianism of Brattle Street."

N0088:

The Dervish whined to Seyd,
Thou didst not tarry while I prayed, etc.

"The Poet," *Poems*, Appendix.

Journal, 1837. "Among provocations the next best thing to good preaching is bad preaching. I have even more thoughts during or enduring it than at other times."

N0089: "Day creeps after day, each full of facts, dull, strange, despised things that we cannot enough despise.... And presently the aroused intellect finds gold and gems in one of these scorned facts,—then finds that the day of facts is a rock of diamonds; that a fact is an Epiphany of God."—"Education," *Lectures and Biographical Sketches*.

N0090: The same thoughts in "The Sphinx," *Poems*.

N0091: The text "For what is a man profited if he gain the whole world and lose his own soul: or what shall a man give in exchange for his soul," stated freshly.

N0092: "Give all to Love," fourth stanza, *Poems*.

N0093: Journal, November, 1839. "The Sabbath is my best debt to the Past and binds me to some gratitude still. It brings me that frankincense out of a sacred antiquity."

N0094: In parting from his people of the Second Church, Mr. Emerson thus indicated his hope to continue through life to be a

preacher of the truth. Of the minister's office he said: "It has many duties for which I am feebly qualified. It has some that it will always be my delight to discharge according to my ability, wherever I exist. And whilst the recollection of its claims oppresses me with a sense of my unworthiness, I am consoled by the hope that no time and no change can deprive me of the satisfaction of pursuing and exercising its highest functions."

N0095:

Line in nature is not found;
Unit and universe are round;
In vain produced, all rays return;
Evil will bless, and ice will burn.

"Uriel," *Poems*.

See also the second paragraph in this address, and the chapter "Circles" in *Essays, First Series*.

LITERARY ETHICS

MR. EMERSON, writing to his friend Carlyle, August 6, 1838, thanking him for his "friendliest seeking of friends for the poor oration" ("The American Scholar") says: "I have written and read a kind of sermon to the Senior Class of our Cambridge Theological School a fortnight ago; and an address to the Literary Societies of Dartmouth College, for though I hate American pleniloquence, I cannot easily say No to young men who bid me speak also....The first, I hear, is very offensive. I will now try to hold my tongue till next winter."

The Dartmouth address followed with but nine days' interval that to the Cambridge Divinity students. Newspapers then had only local circulation, and there was no Northern railroad; indeed it was a two days' journey by stage which Mr. Emerson made in company with a friend and neighbor, John Keyes, Esq. (a graduate of Dartmouth), and his son, to reach Hanover. "If any rumor of the former discourse," said Dr. Holmes, "had reached Dartmouth, the audience must have been prepared for a much more startling performance than that to which they listened. The bold avowal which fluttered the dovescotes of Cambridge would have sounded

like the crash of doom to the cautious old tenants of the Hanover aviary. If there were any drops of false or questionable doctrine in the silver shower of eloquence under which they had been sitting, the plumage of orthodoxy glistened with unctuous repellents, and a shake or two on coming out of church left the sturdy old dogmatists as dry as ever. Those who remember the Dartmouth College of that day cannot help smiling at the thought of the contrast in the way of thinking between the speaker and the larger part, or at least the older part, of his audience.... Perhaps, however, the extreme difference between the fundamental conceptions of Mr. Emerson and the endemic orthodoxy of that place and time was too great for any hostile feelings to be awakened by the sweet-voiced and peaceful-mannered speaker."

N0096: This opening passage was no formal compliment, but rather a confidential and characteristic utterance by Mr. Emerson to the young scholars of his interest in them, and of his feeling, elsewhere expressed, that "the Scholar has drawn the white lot in life."

N0097: Mr. Emerson wrote in his Journal of 1833, speaking of his brother, "Charles's *naïf* censure last night provoked me to show him a fact, apparently entirely new to him, that my entire success, such as it is, is composed wholly of particular failures, every public work of mine of the least importance having been, probably without exception, noted at the time as a failure."

N0098: In another essay, Mr. Emerson thus asserts his belief: "He did not make his thought: no, the thought made him, and the sun and the stars also."

N0099: In the Journal, from which this sentence comes, "The lovely *invention* of the dew" is the expression. The same simile is found in the early poem "Sunrise" in *Poems*, "Fragments on Nature."

N0100: Mr. Alexander Ireland of Manchester, England, in the motto to his book on Emerson, calls attention to the following passage in Plutarch's *Life of Cicero*, telling of his consulting the oracle at Delphi, in his youth. "Upon his inquiring by what means he might rise to the greatest glory, the priestess bade him 'follow nature and not take the opinion of the multitude for his guide in life.'"

N0101: Mr. Emerson was of the opinion of that admirable American officer, the late General Crook, who told his officers that he thought little of the effect of general orders, saying, "Example is the best general order," and living up to his belief. Mr. Emerson greatly valued biographies, from Plutarch down, and constantly illustrated his lectures by anecdotes.

N0102: His interest in Cudworth was not so much in the views of the author, but in Plato, whom he first came upon in Cudworth's pages, when a boy in college. The same is probably true of Tennemann, whose writings on Plato and other philosophers were accessible to him in translations.

N0103: The poetical speculations and beliefs of the ancient philosophers were as attractive to him as the systems of the modern metaphysicians were uninteresting. It was the freedom and beauty of the Law, as reported by the prophets and singers, that he cared for. The dogmatic distinctions of the system-makers seemed unprofitable to him.

N0104: In a letter, when a Divinity student, to his spiritual confessor, his Aunt Mary Moody Emerson (for his account of whom see *Lectures and Biographical Sketches*), he called himself "Ever the Dupe of Hope." Later in life, he would hardly have said "dupe." He liked to read in Plutarch of Bias's question and answer: "How do the wise differ from the unwise? In a good hope."

N0105:

I see it all now; when I wanted a king

'T was the kingship that lacked in myself I was seeking.

Lowell, "Two Scenes in the Life of Blondel."

N0106:

This passing moment is an edifice

Which the Omnipotent cannot rebuild.

"Fragments on Life," *Poems*, Appendix.

N0107: At village meetings for good causes, as the old Lyceum, in which debates were sometimes held, or those stirring ones in the days of the Antislavery and Free State movements, Mr. Emerson always attended, and heard with respect and often admired the good and forcible speaking of his neighbors. It was especially so at town meetings.

Journal. "The most hard-fisted, disagreeably restless, thought-paralyzing companion sometimes turns out in the town-meeting to be a fluent, various, and effective orator. Now I find what all that excess of power which chafed and fretted me so much in —— was for." Extempore speech was always very difficult for him.

N0108:

In dreamy woods what thoughts abound
That elsewhere never poet found;
Here voices ring, and pictures burn,
And grace on grace where'er I turn.

Fragments from *Notebook*.

N0109: This passage shows the thought which justified to Mr. Emerson his plan of writing on *The Natural Method of Mental Philosophy*, which late in his life was partially accomplished in his philosophy courses at Cambridge (see *Natural History of Intellect*). Mr. Cabot says in his *Memoir*: "He had long cherished the thought of a more fruitful method for the study of the mind founded on the parallelism of the mental laws with the laws of external nature."

N0110: Heracleitus's Πάντα ῥεῖ, the fluidity of all things, and the reappearance of the one in protean disguises. These doctrines appear everywhere in Emerson's prose and verse.

N0111: Mr. Emerson used to say, "My doom and my strength is to be solitary." The gifts of solitude for the scholar are told in "Woodnotes," II., in the *Poems*.

N0112: The necessity of the contact with the world and doing one's part there, of action alternating with thought, and the acquiring of facts to translate into thought, is urged alike in the early and later writings.

N0113: Mr. Emerson's "lay pulpit," the Lyceum platform, gave such a character as this paragraph suggests to his essays, which

were first delivered in country towns and frontier settlements all over the North and West, as well as before cultivated audiences in cities. He would not write down to his audience, but had faith in the perception of humble people. On the other hand, he wrote strong English in short sentences, and in delivery introduced frequent anecdotes which would appeal to them, as they always did to him. Many of these were omitted in the severe pruning of the essays for publication.

N0114:

Ever the words of the Gods resound, etc.

"My Garden," Poems.

THE METHOD OF NATURE

IN JULY, 1841, Mr. Emerson betook himself to the single hotel by the beautiful and lonely beach at Nantasket, to write this oration.

He found there delicious airs and sunniest waters, reminding him of the Mediterranean, as he wrote to his brother, saying, "I hoped there to write an oration, but only my outline grew larger and larger, until it seemed to defy all possibility of completion. Desperate of success, I rushed home again." Mr. Cabot hints that in the oration is "a touch of the sea, 'inexact and boundless,' yet distinct in its tone of suggestion."

In his letter to Carlyle, Mr. Emerson, remembering his friend's constant praise of Silence, wrote: "As usual at this season of the year I, incorrigible spouting Yankee, am writing an oration to deliver to the boys in one of our little country colleges nine days hence. You will say I do not deserve the aid of any Muse. O but if you knew how natural it is to me to run to these places! Besides, I am always lured on by the hope of saying something which shall stick by the good boys."

N0115: (From the letter quoted above.) "My whole philosophy—which is very real—teaches acquiescence and optimism. Only when I see how much work is to be done, what room for a poet—for any spiritualist—in this great, intelligent, sensual, avaricious America, I lament my fumbling fingers and stammering tongue."

N0116: Mr. Emerson would have rejoiced in William Morris's word about a work of industrial art, that it should be "a joy to the maker as well as the user," and that the cotton, or whatever, would be the better, not worse.

N0117: To him spiritual matters were out of the possibilities of argument. There was no gainsaying the universal goodness or wisdom or beauty. It was either perceived or not perceived. He said, with Saint Augustine, "Wrangle who will, I will wonder."

N0118: The ways were full of "monotones," as Mr. Emerson called them, in those days. Journal. "I so readily imputed symmetry to my fine geniuses in perceiving their excellence in some insight. How could I doubt that...[each] was the master mind which in some act he appeared? No;...in new conditions he was inexpert, and in new company he was dumb. The revolving light resembles the man who oscillates from insignificance to glory."

But he received each new guest, even the young student or the visitors of his children, and questioned them as if he thought that the best word might yet come from their mouths.

N0119: It was indeed as hazardous a venture as that of Empedocles in his quoted assertion for a speaker to say in the presence of divines and professors, at a New England college festival in those days, that God appeared in man; that by

obedience he became a channel through which deity was poured out in measure on the earth. Had the oration been called a sermon and given on Sunday, its heresy would have been challenged, but, as often happened, Mr. Emerson found that on a week-day people would listen even with pleasure to words against which on Sunday they would have been on their guard. Any lapse in the speaker's life due to indulgence of the lower self might have given the satisfaction to the theologians that the casting forth by Ætna of the sandal of Empedocles did to the Sicilians.

N0120: The ancient doctrine of "the Flowing" passing into the modern doctrine of Evolution.

N0121:

Line in Nature is not found;
Unit and universe are round, etc.

"Uriel," *Poems*.

N0122: This paragraph and much that follows is rendered poetically in "Woodnotes," II., in the verses beginning:—

Hark, in thy ear I will tell a sign, etc.

N0123 "Here is another of those almost lyrical passages which seem to long for the music of rhythm and the resonance of rhyme: 'The great Pan of old,' etc."—*Ralph Waldo Emerson*, by Dr. O. W. Holmes.

N0124: That men should *listen* in solitude for the Voice, should obey it, and report its message exactly to others was Emerson's chief doctrine.

N0125: In this passage he makes what he considered the distinction between genius and talent.

N0126: Compare the passage in the Divinity School Address where he speaks of the great teachers and prophets as bards. The common preacher argues and proses, the true poet charms and uplifts.

N0127:

Stars taunt us with their mystery.

"The World-Soul," *Poems*.

N0128: Mr. Emerson elsewhere quotes Plato as saying: "The man who is master of himself knocks in vain at the door of poetry."

N0129: Probably quoted from Taylor's translation of Proclus, in which the Chaldean oracles are often referred to.

N0130: The respect for the high ideals of the men who planted New England, who brought with them the spirit of Cromwell and of Milton, always remained with Mr. Emerson. The fiery faith and noble asceticism of these men and women living in the presence of the other world, outweighed their narrowness and sternness, in his estimation. He often spoke of a wish to write the story of Calvinism in New England, but did not do so. Yet in his "Historical Discourse at Concord" (*Miscellanies*), the "Historic Notes of Life

and Letters in New England" (*Lectures and Biographical Sketches*), and the essay "Boston" (*Natural History of Intellect*), he deals with the subject, as also in the Address to the New England Society in New York in 1870, which has been recently printed, with other addresses, by that society.

N0131: Ali Ibn Abu Talib, who married the daughter of Mahomet and became caliph.

MAN THE REFORMER

THE MECHANICS' Apprentices' Library Association, before which this Address was delivered, is mentioned by Mr. Winsor in his *Historic Boston* as doing a modest work with its library of some five thousand volumes as late as the year 1873.

N0132: Compare with the passage at the beginning of "The Over-Soul." "We give up the past to the objector, and yet we hope... We grant that human life is mean, but how did we find out that it was mean?"

N0133: A stronger statement of his belief, which appears in so many ways in the prose and poems, that a thought will unsettle the solidest seeming facts; that the scholar's far sight recognizes the true real.

N0134: Emerson and many of his friends and contemporaries lived to see their ideas and reforms eagerly claimed by the men of the church, the exchange, or the forum who had rejected, derided, or even persecuted them.

N0135: Mr. Alcott and his companions in the short-lived Fruitlands community were confronted by the dilemma that they needed land for their social experiment, yet felt that land could not be rightfully purchased; so they paid money to “redeem from human ownership” their acres of unpromising soil.

N0136: Only a few months before the delivery of this lecture, the community at Brook Farm, in West Roxbury, under the leadership of Mr. George Ripley, began an effort to secure for each member the benefits of labor of the body and mind, and for the community the advantages of division of labor. See “Historic Notes of Life and Letters in New England,” *Lectures and Biographical Sketches*.

N0137: Mr. Emerson had neither the aptitude nor the training for carrying on a farm, or even a large garden, but, especially in his early years as a Concord householder, he took some care of his garden, and preferably of his orchard. But in household matters he disliked to be served by others, especially to call upon servants. He liked the verse from Horace:

At mihi succurrit pro Ganymede manus
(My own right hand my cup-bearer shall be),

and a proverb, perhaps from the Persian,—

The king's servant is the king himself.

N0138: His respect for labor was great, and is told in Oriental form in the verses,—

Said Saadi, When I stood before

Hassan the camel-driver's door, etc.

"Fragments on the Poet," *Poems*, Appendix.

N0139: This passage suggests the lines of George Herbert in his "Church Porch:"—

Some great estates provide, but not
A mastering mind; so both are lost thereby.

N0140: A motto for those days in New England might have been the words put in Rob Roy's mouth by Wordsworth:—

Of old things all are over old,
Of good things none are good enough;
We'll show that we can help to frame
A world of other stuff.

N0141: In Mr. John Albee's excellent *Remembrances of Emerson*, speaking of the many young men whom "his voice reached in the most obscure and unexpected places," he says that Mr. Emerson "received us each and all with his unfailing suavity and deference. His manner towards young men.... I know no word for but expectancy, as if the world-problem was now finally to be solved, and we were the beardless Ædipuses for whom he had been faithfully waiting.... His magnanimous spirit soothed and reassured us, and to the little we brought he added a full store, inserting...a silver cup in our coarse sacks of common grain, so that we returned to our brethren with gladness and praise."

N0142: Omar the caliph, Mahomet's distant cousin and second successor, who, first warring against him, later became converted.

During his reign the Moslems were everywhere victorious. He was rigorously ascetic in his habits. This passage suggests two recent parallels,—the habit of General Gordon of going into the bloody battles of the Chinese war with only a cane in his hand, and the astonishing feat of the religious fanatics, followers of the Mahdi, who, armed with sword and shield and some primitive firearms, broke the square of the English, furnished with the best modern arms, at Tel-el-Kebir, in daylight and open country.

N0143: The relation of employer and servants (at that period almost invariably New Englanders from neighboring towns) seemed to Mr. Emerson to put the parties in so false a position that, with his wife's concurrence, the help were invited to sit at the same table at meals. The matter was quickly solved from the kitchen side, for the woman who waited on table explained that the cook was shy and unwilling to eat with Mr. and Mrs. Emerson, and that she herself did not wish to leave the cook alone.

N0144: *Treatise of Synesius on Providence*, translated by Thomas Taylor and printed with his *Select Works of Plotinus*, London, 1817. Synesius was later a convert to Christianity and became Bishop of Cyrene; he lived in the early part of the Fifth Century.

N0145:

Times wore he as his clothing-weeds,
He sowed the sun and moon for seeds.

"The Poet," *Poems*, Appendix.

Sun and moon must fall amain
Like sower's seeds into his brain,

There quickened to be born again.

"Fragments on the Poet," *Poems*, Appendix.

THE TIMES

THIS WAS the Introductory Lecture of a course of eight lectures on "The Times" given by Mr. Emerson at the Masonic Temple in Boston, in the winter of 1841–42. The others were "The Conservative," "The Poet," "The Transcendentalist," "Manners," "Character," "Relation to Nature," "Prospects."

"The Times," "The Conservative" and "The Transcendentalist," also included in this volume, were printed in the *Dial* (July, 1842, October, 1842, January, 1843).

"The Poet," in part, is printed in "Poetry and Imagination," in *Letters and Social Aims*, "Manners" and also "Character," in part, in *Essays, Second Series*.

N0146: This image of godlike days humbly disguised appears several times in Mr. Emerson's writings, especially in the poem "Days," and in "May-Day."

N0147: As he puts it in his Journal, "Love is the solution of mine and thine."

N0148: In this and the next pages appears the ancient doctrine of the Flowing, but applied to the human stream slowly ascending, as spirit more and more informs the clay.

N0149: From his boyhood up, Mr. Emerson delighted in oratory. The brilliant, if florid, declamations of some students in college, especially John Everett and certain youths from the South, had a charm which caused their words to remain in his memory from those days, hard to conceive of now, when the whole college flocked to hear the Seniors declaim. As a youth he would walk far to hear Webster's mighty speech, and keenly enjoyed the graceful and studied eloquence of Edward Everett. He admired the elegant bearing, cool mastery of speech, and cutting denunciation of Wendell Phillips, who was never fully himself until challenged or menaced.

Mr. Emerson's own delivery was agreeable, his voice flexible, admirably modulated, especially in reading poetry, and of unexpected power at the right moment. Mr. N. P. Willis, in an amusing article (*Hurrygraphs*, New York, 1851), describes his first hearing of Emerson, and, among other things, says this of the surprise of his voice: "A heavy and vase-like blossom of a magnolia with fragrance enough to perfume a whole wilderness, which should be lifted by a whirlwind and dropped into a branch of an aspen, would not seem more as if it never could have grown there than Emerson's voice seems inspired, and foreign to his visible and natural body."

N0150: In Mr. Emerson's copy of Taylor's translation of Plotinus, he marked the definition of time by Archytas the Pythagorean,—a *continued and indivisible flux of hours*.

N0151: It should be remembered that this lecture was written in the days when New England bristled with reforms; and their advocates, striving to outdo one another in the radical quality or the refinements of their schemes, flocked to Mr. Emerson because of his well-known hospitality to thoughts. Therefore his combination of good sense with sympathy, of good temper and of humor with just criticism, and his ability to look on these crowding causes with a due perspective, is remarkable.

N0152: Mr. Emerson valued highly the prose as well as the poetry of Milton, especially the *Areopagitica*.

N0153: Of this paragraph Dr. Holmes says: "All this and much more like it would hardly have been listened to by the ardent advocates of the various reforms, if anybody but Mr. Emerson had said it. He undervalued no sincere action except to suggest a wiser and better one....The charm of his imagination and the music of his words took away all the sting from the thoughts that penetrated to the very marrow of the entranced listeners."

N0154:

Teach me your mood, O patient stars!
Who climb each night the ancient sky,
Leaving on space no shade, no scars,
No trace of age, no fear to die.

"Fragments on the Poet," *Poems*, Appendix.

N0155: When the *Dial* was under consideration, Mr. Emerson wrote in his diary, "It ought to contain the best advice on the topics of Government, Temperance, Abolition, Trade and Domestic Life.

It might well add such poetry and sentiment as will now constitute its best merit." When he was urged to edit it, he wrote: "I wish it to live, but I do not wish to be its life. Neither do I like to put it into the hands of the Humanity and Reform men, because they trample on letters and poetry, nor into the hands of the Scholars, for they are dead and dry." Yet he made it always a point of honor to defend or help the reformers at critical times.

N0156: An ancestor of Mr. Emerson's, one of the Moodys, a forcible preacher, thus urged his parishioners: "And when ye know not what to do, do not do ye know not what!"

N0157: In the poem "Blight" is a very similar passage.

N0158: The doctrine of the Oneness of Being, taught by Paul at Athens, and the resulting Immortality. The same in Oriental form appears in "Brahma" (*Poems*).

N0159: This passage is almost autobiographical, as is also a very similar one about Osman (an ideal man) towards the end of the chapter, "Manners," *Essays, Second Series*.

THE CONSERVATIVE

THIS LECTURE, as has been said elsewhere, was the second in the course on "The Times" given by Mr. Emerson in Boston in the winter of 1841–42. It was first printed in the *Dial* (October, 1842). Dr. Holmes says, in his Memoir of Mr. Emerson, that "it was a time of great excitement among the members of that circle of which he was the spiritual leader. Never did Emerson show the perfect sanity which characterized his practical judgment more beautifully than in this lecture, and in his whole course with reference to the intellectual agitation of the period. He is as fair to the conservative as to the reformer.... He has his beliefs and, if you will, his prejudices, but he loves fair play, and, though he sides with the party of the future, he will not be unjust to the present or the past."

N0160: Mr. Emerson's eager listening to the men of science and his use of their facts on a higher plane is everywhere shown in his prose and verse. In "The American Scholar" he speaks of "every trifle bristling with *Polarity* that ranges it instantly on an eternal law;" in "Compensation" he devotes a paragraph to it, and it appears in the fourth verse of "The Sphinx" and elsewhere.

N0161: Suggesting the lines in the end of "Threnody:"—

Silent rushes the swift Lord
Through ruined systems still restored, etc.

Protagoras's doctrine of "becoming" in Plato's "Theætetus" is also called to mind.

N0162: Mr. Emerson's own strength being purely individual, and his sympathies and hopes for society primarily in the advance of the individual, his respectful allowance of the use of organization and the value of the guardians of what the Past seems to have established, coupled with his perception of the weaknesses of the reforming class, is the more interesting.

N0163: "The strength of the Egyptians is to sit still." Isaiah xxx. 7.

N0164: Not merely the crack-brained or narrow reformers, "the monotones," as he called them, visited Mr. Emerson, but high-minded and brave protestants against the humdrum selfishness or artificiality of life as they found it were his neighbors and friends.

In their first reaction they undervalued the arrangements they found. Thoreau cared little for the roads, and Mr. Alcott, when called on for his tax, said that he used the fields as much, so, since they thought their money was often misapplied, they would not pay. Mr. Emerson's level head was, in the long run, a useful corrective to his friends' extreme views.

E. sits in a mystery calm and intense,
And looks coolly round him with sharp common sense.

Lowell, "Fable for Critics."

N0165: This paragraph, written in 1841, concerning the hero's resolve, and therefore his own ideal, might with little change have served for Mr. Emerson's epitaph. He respected the laws, written or unwritten, results of the better tendencies of mankind in the past, yet his individual life, not dependent on these, helped to amend them.

THE TRANSCENDENTALIST

THIS LECTURE was the fourth in the course on "The Times," but did not, as might seem natural, follow immediately, for contrast's sake, as in this volume, on "The Conservative." "The Poet" came in as a golden mean between the extremes, which he was showing. For Mr. Emerson, when called a philosopher, said, "I am in all my theory, ethics and politics a poet," and, as Sir Leslie Stephen said, "he ridiculed the impression that his transcendentalism was a known and fixed element, like salt or meal, a rigid definite creed. All the argument and all the wisdom, he declares, is not in the treatise on metaphysics, but in the sonnet or the play." The intervening lecture "The Poet" was not, however, the essay by that name in the Second Series, but another, much of which he printed later, with liberal additions, in "Poetry and Imagination" in the volume *Letters and Social Aims*.

Dr. Holmes, after speaking of the prejudice naturally existing against "the Transcendentalists" at the time of this lecture, says:—

"On the other hand we have the evidence of a visitor who knew a good deal of the world as to the impression they produced upon him:—

"‘There has sprung up in Boston,’ says Dickens, in his *American Notes*, ‘a set of philosophers known as the Transcendentalists. On inquiring what this appellation might be supposed to signify, I was given to understand that whatever was unintelligible would be certainly Transcendental. Not deriving much comfort from this elucidation, I pursued the inquiry still further, and found that the Transcendentalists are followers of my friend Mr. Carlyle, or, I should rather say, of a follower of his, Mr. Ralph Waldo Emerson. This gentleman has written a volume of Essays, in which among much that is dreamy and fanciful (if he will pardon me for saying so), there is much more that is true and manly, honest and bold. Transcendentalism has its occasional vagaries (what school has not?), but it has good healthful qualities in spite of them; not least among the number a hearty disgust of Cant, and an aptitude to detect her in all the million varieties of her everlasting wardrobe. And therefore, if I were a Bostonian, I think I would be a Transcendentalist.’"

N0166: Here, as everywhere, appears the sure faith in evolution and ascension in God's own time. In the opening passages of the essay "Poetry and Imagination" above referred to, the natural advance of the mind from materialism to idealism is described.

N0167: In his Journal for 1838 he says, "The physician tends always to invert man, to look upon the body as the cause of the soul, to look upon man as tyrannized over by his members."

N0168: It was charged as heresy to Mr. Emerson that he did not believe in miracles. The happiness of his life lay in his contemplation of the daily miracle wrought by sure and perfect law.

N0169: Friedrich Heinrich Jacobi, a contemporary of Goethe, and a writer first of romances, then of treatises, both of a

philosophic character. A believer in intuition or divine impulse, he was impatient of the formal systems of the metaphysicians.

N0170: Yet in these very years a few of the reformers were led by their enthusiasm and faith to apostolic experiments, to go forth to share with others the light that seemed to them so important, taking no thought for the morrow,—not only bachelors, but men with families. They were bitterly condemned and ridiculed by those who claimed to believe absolutely and *literally* in the words of Jesus: “Consider the lilies of the field; they toil not, neither do they spin,” etc., or “There is no man that hath left house or brethren or sisters or father or mother or wife or children or lands, for my sake and the gospel’s, but he shall receive an hundredfold now in this time, . . . and in the world to come eternal life.”

N0171: In this passage it is Mr. Alcott that his friend alludes to. He wrote of him to Carlyle in 1839: “A man named Bronson Alcott is a majestic soul with whom conversation is possible. He is capable of truth.” Later he said of him, “Alcott astonishes by the grandeur of his angle of vision and the heaps of particulars.” And again: “He is good as a lens, a mirror, a beautiful susceptibility, every impression on which is to be accounted for, and, until accounted for, registered as an addition to our catalogue of natural facts. It needs one acquainted with the lens by frequent use to make allowance for defects, but ‘tis the best instrument I ever met with.”

N0172:

The civil world will much forgive, etc.

“The Poet,” IV., Poems, Appendix.

N0173:

Well and wisely said the Greek,
Be thou faithful, but not fond;
To the altar's foot thy fellow seek,—
The Furies wait beyond.

"Pericles," Quatrains, *Poems*.

N0174: The change to the first person in this paragraph—very likely due to a sheet introduced after the main part of the essay was written—does not mean that Mr. Emerson states here his own views. In this and what follows he only continues to be a mouthpiece for the views of these "children" with whose faith he admits a sympathy, but it is a measured one.

N0175: Quoted from Walter Savage Landor's *Pericles and Aspasia*.

N0176: This Trinity appears in the first pages of "The Poet," *Essays, Second Series*, and in "Art," *Society and Solitude*.

N0177: Sometimes, when "weary of dealing with people each cased in his several insanity," outcries came, in the Journal at least, yet with a touch of humor and always a basis of kindness, as thus:—
Journal, 1842. "Could they not die? or succeed? or help themselves? or draw others? or draw me? or offend me? in any manner, I care not how, could they not be disposed of and cease to hang there in the horizon, an unsettled appearance, too great to be neglected, and not great enough to be of any aid or comfort to this great craving humanity?"

N0178: The above passage is a good example of Mr. Emerson's light hand in dealing with a movement that surely had absurd aspects, but more that approached the sublime.

Journal. "Shall it be said of the hero that he opposed all contemporary good because it was not grand? I think it better to get their humble good, and to catch the golden boon of purity and temperance and mercy from these poor" [preachers and reformers].

N0179: Mr. Emerson perhaps had here in mind some lines of Juvenal which described the "Sons of the Morning" for whose coming he was ever on the watch:—

Juvenes queis arte benigna
Et meliore luto finxit praecordia Titan.

"Blest youths, though few, whose hearts the god of Day
Fashioned with loving hand and from a nobler clay."

THE YOUNG AMERICAN

CONCERNING THE Mercantile Library Association, before which this Address was given, Winsor, in his *Historic Boston*, says that it was founded in 1820, antedating that of New York; that "it was floated for some years by the most popular system of public lectures in town," and that it succumbed in 1877 before the advancing Public Library, becoming the South End Branch of that institution.

"The Young American" was printed in the April number of the *Dial* for 1844. Two passages in the first pages of the Address as there printed, which Mr. Emerson chose to omit when he printed it among the *Miscellanies*, have now a historic interest which seemed to justify the reprinting of the greater part of them in the notes below. The first of these tells of the reading of the young scholars in the first third of the century. The second describes the additions won from the sea for Boston and the building up of the town into a city, the making of the early railroads, the coming of the Irish laborers and their endurance and cheerfulness under unmerciful taskmasters, and gives a hopeful prophecy for their future.

N0180: This passage, printed in the *Dial*, is omitted:—

"Our books are European. We were born within the fame and sphere of Shakspeare and Milton, of Bacon, Dryden, and Pope. Our college text-books are the writings of Butler, Locke, Paley, Blackstone, and Stewart; and our domestic reading has been Clarendon and Hume, Addison and Johnson, Young and Cowper, Edgeworth and Scott, Southey, Coleridge, and Wordsworth, and the *Edinburgh* and *Quarterly Reviews*. We are sent to a feudal school to learn democracy."

N0181: From the *Dial* version:—

"Their alleged effect to augment disproportionately the size of cities is in rapid course of fulfilment in this metropolis of New England. The growth of Boston, never slow, has been so accelerated since the railroads have been opened, which join it to Providence, to Albany, and to Portland, that the extreme depression of general trade has not concealed it from the most careless eye. The narrow peninsula, which a few years ago easily held its thirty or forty thousand people, with many pastures and waste lands, not to mention the large private gardens in the midst of the town, has been found too strait when forty are swelled to a hundred thousand. The waste lands have been fenced in and builded over, the private gardens, one after the other, have become streets. Boston proper consisted of seven hundred and twenty acres of land. Acre after acre has been since won from the sea, and in a short time the antiquary will find it difficult to trace the peninsular topography. Within the last year...from twelve to fifteen hundred buildings...have been erected, many of them of a rich and durable character. And because each of the new avenues of iron road ramifies like the bough of a tree, the growth of the city proceeds at a geometrical rate. Already a new road is shooting northwest towards the Connecticut and Montreal, and every line of road that is completed

makes cross-sections from road to road more practicable, so that the land will presently be wrapped in a network of iron. This rage for road-building is beneficent for America, where vast distance is so main a consideration in our domestic politics and trade, inasmuch as the great political promise of the invention is to hold the Union staunch, whose days seemed already numbered by the mere inconvenience of transporting representatives, judges, and officers across such tedious distances of land and water. Not only is distance annihilated, but when, as now, the locomotive and the steamboat, like enormous shuttles, shoot every day across the thousand various threads of national descent and employment, and bind them fast in one web, an hourly assimilation goes forward and there is no danger that local peculiarities and hostilities should be preserved.

"The new power is hardly less noticeable in its relation to the immigrant population, chiefly to the people of Ireland, as having given employment to hundreds of thousands of the natives of that country, who are continually arriving in every vessel from Great Britain.

"In an uneven country the railroad is a fine object in the making. It has introduced a multitude of picturesque traits into our pastoral scenery. The tunnelling of mountains, the bridging of streams, the bold mole carried out into the broad, silent meadow, silent and unvisited by any but its own neighbors since the planting of the region; the encounter at short distances along the track of gangs of laborers; the energy with which they strain at their tasks; the cries of the overseer or *boss*; the character of the work itself which so violates and revolutionizes the primal and immemorial forms of nature; the village of shanties at the edge of the beautiful lakes, until now the undisturbed haunt of the wild duck, and in the most sequestered nooks of the forest, around which the wives and children of the Irish are seen; the number of foreigners, men and women, whom now the woodsman encounters singly in the forest paths; the blowing of rocks, explosions all day, with the occasional alarm of frightful accident, and the indefinite promise of what the new channel of trade may do and undo for

the rural towns, keep the senses and imagination active; and the varied aspects of the enterprise make it the topic of all companies, in cars and boats, and by firesides.

"This picture is a little saddened, when too nearly seen, by the wrongs that are done in the contracts that are made with the laborers. Our hospitality to the poor Irishman has not much merit in it. We pay the poor fellow very ill. To work from dark to dark for sixty or even fifty cents a day is but pitiful wages for a married man. It is a pittance when paid in cash, but when, as generally happens, through the extreme wants of the one party, met by the shrewdness of the other, he draws his pay in clothes and food, and in other articles of necessity, his case is still worse; he buys everything at disadvantage, and has no adviser or protector. Besides, the labor done is excessive, and the sight of it reminds one of negro-driving. Good farmers and sturdy laborers say that they have never seen so much work got out of a man in a day. Poor fellows! Hear their stories of their exodus from the old country, and their landing in the new, and their fortunes appear as little under their own control as the leaves of the forest around them. As soon as the ship that brought them is anchored, one is whirled off to Albany, one to Ohio, one digs at the levee at New Orleans, and one beside the water-wheels at Lowell; some fetch and carry on the wharves of New York and Boston, some in the woods of Maine. They have too little money, and too little knowledge, to allow them the exercise of much more election of whither to go, or what to do, than the leaf that is blown into this dike or that brook to perish.

"And yet their plight is not so grievous as it seems. The escape from the squalid despair of their condition at home into the unlimited opportunities of their existence here, must be reckoned a gain. The Irish father and mother are very ill paid, and are victims of fraud and private oppression; but their children are instantly received into the schools of the country; they grow up in perfect communication and equality with the native children, and owe to the parents a vigor of constitution which promises

them at least an even chance in the competitions of the new generation. Whether it is this confidence that puts a drop of sweetness in their cup, or whether the buoyant spirits natural to the race, it is certain that they seem to have almost a monopoly of the vivacity and good nature in our towns, and contrast broadly, in that particular, with the native people. In the village where I reside, through which a railroad is being built, the charitable ladies, who, moved by a report of the wrongs and distresses of the newly arrived laborers, explored the shanties with offers of relief, were surprised to find the most civil reception, and the most bounding sportfulness from the oldest to the youngest. Perhaps they may thank these dull shovels as safe vents for peccant humors; and this grim day's work of fifteen or sixteen hours, though deplored by all the humanity of the neighborhood, is a better police than the sheriff and his deputies."

N0182: Mr. Emerson's own life and his influence on his countrymen was greatly affected by the rapid spreading of the branches of the Railroad tree then recently planted by the Atlantic coast. The seventeen winters following the delivery of this address, excepting that of 1847, spent in England, were passed in arduous and exposing travel, giving lectures in answer to calls from cities, villages, and recent settlements from Maine to the Mississippi, and finally beyond that stream, then dangerous enough in winter.

N0183: From the *Medea* of Euripides.

N0184: In the Journal of 1838 Mr. Emerson thus acknowledged his own debt:—

"If my garden had only made me acquainted with the muck-worm, the bugs, the grasses, and the swamp of plenty in August, I should willingly pay a free tuition. But every process is lucrative to me far beyond its economy."

The next June he admits that when tried with too much talk of the visiting philosophers, he meditates flight beyond the Acton hills. "But my garden is nearer, and my good hoe as it bites the ground revenges my wrongs...I confess I work at first with a little venom, lay to a little unnecessary strength, but by smoothing the rough hillocks, I smooth my temper; by extracting the long roots of the pipe-grass I draw out my own splinters, and in a short time I can hear the bobolink's song, and see the blessed deluge of light and color that rolls around me."

N0185: In these very days, George William Curtis and his brother were working as laborers on the farm of Captain Nathan Barrett, and Hawthorne, recently married, was living in the Manse (built by Mr. Emerson's grandfather), all three having served an agricultural and domestic apprenticeship in the community at Brook Farm.

N0186: Journal, 1838. "I think Tennyson got his inspiration in gardens, and that in this country, where there are no gardens, his musky verses could not be written. The Villa d' Este is a memorable poem in my life."

N0187: The garden at home did not prove always helpful to thought, and a few months after this sentence was written, he bought the beautiful pines, that he had often looked wistfully to while weeding,—his "Sacred Grove" on the shore of Walden. It was there that his young friend, Henry Thoreau, built his cabin the next year, and lived for a time. Two years later, Mr. Emerson wrote to Carlyle of his "new plaything, the best I ever had, "which was the high wood-circled Walden Ledge on the farther shore of the pond. Of this he wrote:—

"In these May days, when maples, poplars, oaks, birches, walnut and pine are in their spring glory, I go thither every afternoon, and cut with my hatchet an Indian path through the thicket all along the bold shore, and open the finest pictures." The poem, "My Garden," describes this spot, and what its owner found there. It was close to the new Fitchburg Railroad, and later he wrote how his woods reproached him as he passed by in the train to Boston.

N0188: These were the days when the factories, rising along the course of every river in New England, were tempting the boys and girls away from their work beside their fathers in the fields, and their mothers in the farm-house. The first wave of the immigration of the Irish peasantry to build the new railroads made this possible, for most of these, when the railroads were built, sought employment in the country towns.

N0189:

And I affirm my actions smack of the soil.

"Hamatreya," *Poems*.

N0190: In a letter written shortly before this time to his unseen friend in England, John Sterling, he had said:—

"It seems to me that so great a task is imposed on the young men of this generation that life and health have a new value. The problems of reform are losing their local and sectarian character, and becoming generous, profound, and poetic."

N0191: Mr. Emerson's optimism was of a patient kind. He often notices the small balance to the account of good. In his "Historical

Discourse at Concord" (*Miscellanies*) he is glad that in the town meetings "if the good counsel prevailed, the sneaking counsel did not fail to be suggested; freedom and virtue, if they triumphed, triumphed in a fair field. And so be it an everlasting testimony for them, and so much ground of assurance of man's capacity for self-government."

N0192: The principle of "effort" recognized by Lamarck, though ridiculed and misrepresented for more than a half century after he announced it, was recognized by Mr. Emerson as consonant with the laws which the great minds of antiquity had announced.

N0193: The last part of the "World-Soul" (*Poems*) is a rendering of this passage in verse. The Darwinian doctrine of the Survival of the Fittest appears here.

N0194: In the essay "Nature" (*Essays, Second Series*) he speaks of morning sanity, when, "after every foolish day, we sleep off the fumes and furies of its hours," as the lesson of the little blue self-heal that grows beneath his study windows.

N0195: The three Communities in Massachusetts here alluded to are:—

I. Brook Farm, of which he tells in "Historic Notes of Life and Letters in New England" in *Lectures and Biographical Sketches*. Mr. Charles Lane contributed a paper on the subject to the *Dial*, January, 1844. The magazines contain several articles on Brook Farm, notably those contributed by members of the community,

Mr. George P. Bradford,¹⁷ Mrs. Sedgwick,¹⁸ and Mrs. Kirby.¹⁹ Hawthorne was a member, and many amusing comments on the life there are found in his published journals. George William Curtis, also a member, told of his experience in his letters to Mr. John S. Dwight.²⁰

II. Fruitlands, Mr. Alcott's community at Harvard, Mass., an account of which is given in the very interesting *Memoir of Bronson Alcott*, by F. B. Sanborn and W. T. Harris. An official communication from Fruitlands, by Mr. Alcott and his English coadjutor, Charles Lane, appears in the *Dial*, "Intelligence," in July, 1843, and Mr. Emerson's account of his visit there, and of his forebodings, are given in Mr. Cabot's *Memoir* (vol. ii. page 439), and in *Emerson in Concord*, by E. W. Emerson (p. 203).

III. Hopedale, near Milford, in Worcester County, founded by Rev. Adin Ballou. Its organ was a paper called the *Non-Resistant and Practical Christian*. The Hopedale Home School was established by this community.

All of these Communities were short-lived.

N0196: François Marie Charles Fourier (1772–1837), a Frenchman of an artistic temperament and philosophic mind, with a broad humanity. After a short mercantile experience which gave him the opportunity of seeing other countries, yet disgusted him with the selfishness of trade and the social organization, he was swept into the French Revolution, and, after narrowly escaping

²⁰ *Early Letters of George William Curtis to John S. Dwight*. Edited by George Willis Cooke, Harper & Bros., 1893.

the guillotine, served as a trooper until disqualified by ill health. In 1808 he published his *Théories des quatre Mouvements, et Destinées générales*, which, after six years' neglect, attracted general notice. His later important work (1822) was the *Traité de l'Association domestique-agricole*, and the *Journal de Phalanstère*. On his gravestone were inscribed his three principles: I. The series distributes the harmonies of the world (*i. e.*) all the harmonies of the universe grow out of a regular and uniform order). II. Attractions are proportioned to destinies (*i. e.*) all beings are led and kept in their true sphere, not by a principle of external force, but of internal attraction.) III. Analogy is universal. He urged that association of capital, science, and labor would prepare the way for true society; that the living in communities of some eighteen hundred persons each would be economical, secure just and appropriate division of labor, and by variety and sociability rob labor of its irksomeness, and that all the gifts of the members would be used for the common profit and pleasure. Fourier never himself succeeded in carrying out his ideas, but they had much influence in France, England, and America for a time. Mr. Emerson wrote in the *Dial* for July, 1842, "Fourierism and the Socialists," and published the advocacy of these ideas by Albert Brisbane, criticising them good-naturedly himself. Miss Elizabeth P. Peabody wrote the article "Fourierism" in the April number, 1844.

N0197: This theme is enlarged on in the essay "Aristocracy," originally called "Natural Aristocracy," *Lectures and Biographical Sketches*.

N0198: One of the young men valued by Mr. Emerson, and moved by his teachings, Charles Russell Lowell, in his valedictory oration at Cambridge on the "Reverence due from Old Men to

Young," said: "Therefore the old men...cannot teach us of the present what should be, for that we know as well as they or better" they should not teach us what can be, *for the world always advances by impossibilities achieved.*" His work in his few years in civil life was remarkable. During the Civil War, as captain in the United States Cavalry, Colonel of the Second Massachusetts Cavalry, and finally as commander of the Reserve Brigade of Cavalry, he showed again and again a power of doing the apparently impossible. He had a share in turning the flood of disaster at Cedar Creek, and died in the moment of victory.

N0199:

Tu regere imperio populos, Romane, memento,
(Hae tibi erunt artes) pacisque imponere morem,
Parcere subjectis et debellare superbos.

Virgil, *Aeneid*, VI.

N0200: At the dark and seemingly hopeless period of the agitation against slavery, it seemed to many abolitionists that, if they failed to do away with it, or check its advance, it might become the duty of the Northern States to repudiate their share in the national crime by secession.

N0201: This lecture was delivered during the period of suffering in England, increased next year by the famine, and two years before the triumph of the Anti-corn Law League led by Cobden.

N0202: In his second visit to England, although it seemed to Mr. Emerson that the prospects for better social conditions were

increasing, and a longer stay there perhaps modified a little the views here expressed, he did not fail to bravely speak his public word, even in the face of some remonstrance, against false, and for real aristocracy.

ESSAYS: FIRST SERIES

After the publication of *Nature*, the first hint that appears of the collection by Mr. Emerson of his writings into a second book, occurs in the end of a letter to Mr. Alcott, written April 16, 1839, which Mr. Sanborn gives in his *Memoir of Bronson Alcott*: "I have been writing a little, and arranging old papers more, and by and by I hope to get a shapely book of Genesis."

In a letter written in April, 1840, to Carlyle, Mr. Emerson thus alludes to the *Essays*:—

"I am here at work now for a fortnight to spin some single cord out of my thousand and one strands of every color and texture that lie ravelled around me in old snarls. We need to be possessed with a mountainous conviction of the value of our advice to our contemporaries, if we will take such pains to find what that is. But no, it is the pleasure of the spinning that betrays poor spinners into the loss of so much good time. I shall work with the more diligence on this book-to-be of mine, that you inform me again and again that my penny tracts²¹ are still extant; nay, that beside

²¹ *Nature*, and the various addresses, published at first separately in pamphlet form.

friendly men, learned and poetic men read and even review them. I am like Scholasticus of the Greek Primer, who was ashamed to bring out so small a dead child before such grand people. Pygmalion shall try if he cannot fashion a better,—certainly a bigger." Four months later he tells of the problems at home,—“a good deal of movement and tendency emerging into sight every day in church and state, in social modes and in letters. You will naturally ask me if I try my hand at the history of all this....No, not in the near and practical way in which they seem to invite. I incline to write philosophy, poetry, possibility—anything but history. And yet this phantom of the next age limns himself sometimes so large and plain that every feature is apprehensible and challenges a painter....I dot evermore in my endless journal, a line on every knowable in nature; but the arrangement loiters long, and I get a brick-kiln instead of a house.”

Soon after the coming in of the new year he sends word: “In a fortnight or three weeks my little raft will be afloat. Expect nothing more of my powers of construction,—no ship-building, no clipper, smack, nor skiff even, only boards and logs tied together.”

In his Journal he wrote, in January, 1841: “All my thoughts are foresters. I have scarce a day-dream on which the breath of the pines has not blown and their shadows waved. Shall I not therefore call my little book *Forest Essays*?”

The book was published in March, 1841, in Boston, by James Munroe and Company.

Soon after *Nature* had appeared, Carlyle had written to his friend: “There is a man here called John Sterling,...whom I love better than any one I have met with, since a certain sky-messenger alighted to me at Craigenputtock and vanished in the Blue again.²²... Well, and what then, cry you? Why then, this John Sterling has fallen

22 Alluding to Emerson's first visit to him among the moors of Nithsdale in 1833.

overhead in love with a certain Waldo Emerson; that is all. He saw the *little* book *Nature* lying here; and, across a whole *silva silvarum* of prejudices, discerned what was in it, took it to his heart,—and indeed into his pocket....This is the small piece of pleasant news, that two sky-messengers(such they were, both of them, to me) have met and recognized each other, and by God's blessing there shall one day be a trio of us; call you that nothing?" Sterling wrote to Emerson and a noble friendship resulted. Although they never met in the body, these friends had more in common with each other in their hope, their courage, and their desire for expression in poetry than either had with Carlyle. Sterling died in 1844.

Emerson sent Sterling his *Essays*, saying, "They are not yet a fortnight old. I have written your name in a copy and sent it to Carlyle by the same steamer....I wish, but scarce dare hope, you may find in it any thing of the pristine sacredness of thought. All thoughts are holy when they come floating up to us in magical newness from the hidden Life, and 't is no wonder we are enamoured with these Muses and Graces, until, in our devotion to particular beauties and in our efforts at artificial disposition, we lose somewhat of our universal sense and the sovereign eye of Proportion. All sins, literary and æsthetic and scientific, as well as moral, grow out of unbelief at last. We must needs meddle ambitiously, and cannot quite trust that there is life, self-evolving and indestructible, but which cannot be hastened, at the heart of every physical and metaphysical fact. Yet how we thank and greet, almost adore the person who has once or twice in a lifetime treated any thing sublimely, and certified us that he beheld the Law. The silence and obscurity in which he acted are of no account, for every thing is equally related to the soul.

"I certainly did not mean, when I took up this paper, to write an essay on Faith, and yet I am always willing to declare how indigent I think our poetry and all literature is become for want of that. My thought had only this scope, no more: that though I had long ago grown extremely discontented with my little book, yet were the thoughts in it honest in their first rising and honestly reported, but that I am very sensible how much in this, as in very much greater matters, interference, or what we miscall art, will spoil true things."²³

Carlyle now had opportunity to return his friend's kindness in introducing him to American readers. In a letter written to Emerson on June 25, 1841, he said: "My second piece of news...is that Emerson's *Essays*, the book so called, is to be reprinted here; nay, I think, is even now at press....Fraser undertakes it on 'half profits;' T. Carlyle writing a preface, which accordingly he did.... The edition is of Seven Hundred and Fifty....With what joy shall I sack up the small Ten Pounds Sterling perhaps of 'Half Profits,' and remit them to the man Emerson; saying: 'There, Man! tit for tat, the reciprocity *not* all on one side!' I ought to say, moreover, that this was a volunteer scheme of Fraser's; the risk is all his, the origin of it was with him: I advised him to have it reviewed, as being a really noteworthy Book. 'Write you a Preface,' said he, and 'I will reprint it,' to which, after due delay and meditation, I consented."

In a curious and characteristic preface, among other things, Carlyle said:—

"The name of Ralph Waldo Emerson is not entirely new, in England; distinguished travellers bring us tidings of such a man; fractions of his writings have found their way into the hands of the curious here; fitful

²³ A Correspondence between John Sterling and Ralph Waldo Emerson.

hints that there is in New England some spiritual notability called Emerson glide through the reviews and magazines.

"Emerson's writings and speakings amount to something; and yet, hitherto, as it seems to me, this Emerson is far less notable for what he has spoken or done than for the many things he has not spoken and has forborne to do....

"For myself, I have looked over with no common feeling to this brave Emerson, seated by his rustic hearth on the other side of the ocean (yet not altogether parted from me either), silently communing with his own soul and with the God's World it finds itself alive in yonder. Pleasures of Virtue, Progress of the Species, Black Emancipation, New Tariff, Eclecticism, Locofoeism, Ghost of Improved Socinianism,—these, with many other Ghosts and substances, are squeaking, jabbering according to their capabilities round this man. To one man among the sixteen millions their jabber is all unmusical. The silent voices of the stars above and of the green earth beneath are profitable to him—tell him gradually that these others are but ghosts which will shortly have to vanish; that the life-fountain these proceed out of does not vanish....

"Emerson, I understand, was bred to theology; of which primary bent his latest way of thought still bears traces. In a very enigmatic way, we hear much of the 'Universal Soul of the,' etc., flickering like bright bodiless northern streamers. Notions and half-notions of a metaphysic, theosophic kind are seldom long wanting in these *Essays*. I do not advise the British public to trouble itself much with all that: still less to take offence at it.... That this little book has no system, and points or stretches far beyond all systems, is one of its merits. We will call it the soliloquy of a true soul alone under the stars, in this day."

Mr. George W. Cooke, in his careful study of the life of Mr. Emerson,²⁴ relates that five years later the Countess d'Agoult, who

²⁴ Ralph Waldo Emerson, *his Life, Writings, and Philosophy*. Bostons J. R. Osgood & Co. 1887.

wrote under the *nom de plume* of "Daniel Stern," told in the *Revue Indépendante* (July) how having read a mention of the *Essays* by Philarète Chasles in an article on literary tendencies in America, and later heard a quotation from them in a lecture by a foreign poet, Mickiewicz, she tried to obtain the book in Paris, but had to send to London for it. She was greatly pleased, and in her article expressed surprise at the general ignorance concerning the writer. "The singular charm of the *Essays*," she said, "is that we hold him accountable for nothing, because he pretends to nothing. He draws you after him with irresistible *bonhomie*. There is no difficulty in following him, for we breathe a salubrious atmosphere in his work. Nothing offends, not even the discords, because all is resolved and harmonized in the sentiment of a superior truth."

In Berlin, Herman Grimm (who later wrote the lives of Michelangelo and Raphael), while waiting his turn in the parlor of the American dentist, chanced to pick up the *Essays* from the table; "read a page, and was startled to find that I had understood nothing, though tolerably well acquainted with English. I inquired as to the author. In reply I was told that he was the first writer in America, an eminently gifted man, but somewhat crazed at times, and often unable to explain his own words. Notwithstanding, no one was held in such esteem for his character and for his prose writings. In short, the opinion fell upon my ears as so strange that I reopened the book. Some sentences, upon a second reading, short like a beam of light into my very soul, and I was moved to put the book in my pocket, that I might read it more attentively at home....I took Webster's Dictionary and began to read. The construction of the sentences struck me as very extraordinary. I soon discovered the secret: they were real thoughts, an individual language, a sincere man that I had before me; naught superficial, second-hand. Enough! I bought the book! From that time I have

never ceased to read Emerson's works, and whenever I take up a volume anew it seems to me as if I were reading it for the first time."

But at home the book was not well received in all quarters.

Mr. Cooke, in his biography, quotes an author in the *Princeton Review* who had found the *Essays* "more devoid of real meaning than any other book which ever fell into his hands, and thought such essays could be produced through a lifetime as rapidly as a human pen could be made to move."

Another critic, a distinguished classical scholar connected with one of the universities, seems to have recognized Mr. Emerson's debt to the Greek and, through these, the Oriental philosophers, seeing in the ideas set forth "ancient errors, mistaken for new truths and disguised in the drapery of a misty rhetoric."

HISTORY

THE FIRST essay in the volume, "History," was not delivered as a single lecture, but in writing it Mr. Emerson made use of passages from lectures in three distinct courses; namely, that on "English Literature" (1835–36), on "The Philosophy of History" (1836–37), and on "Human Life" (1837–38), as is shown by Mr. Cabot in the chronological list of lectures and addresses in the Appendix (F) to his Memoir.

The essay is a fit gateway to those that lie behind, for on its threshold is the doctrine of the Universal Mind, and beyond will be found those depending on and illustrating this, the Unity underlying the Flowing of Nature through endless cycles of Protean disguises, the Symbolism of Nature, the beauty of Law, working forward and upward alike in Nature, in races, and in the individual and his works.

The course on "The Philosophy of History" (1836–37) had the following lectures, many of which appear as such or in their matter in the *Essays*.

I. Introduction (History has been ill written; its meaning and future, etc.)

II. Humanity of Science.

III. Art.

IV. Literature.

V. Politics.

VI. Religion.

VII. Society.

VIII. Trades and Professions.

IX. Manners.

X. Ethics.

XI. Present Age.

XII. Individualism.

In his Journal, Mr. Emerson thus lays out the course in advance, with the belief in the Over-Soul as the foundation of all.

There is one soul.

It is related to the world.

Art is its action thereon.

Science finds its methods.

Literature is its record.

Religion is the emotion of reverence that it inspires.

Ethics is the soul illustrated in human life.

Society is the finding of this soul by individuals in each other.

Trades are the learning the soul in nature by labor.

Politics is the activity of the soul illustrated in power.

Manners are silent and mediate expressions of soul.

N0203: Both of these mottoes appear in the first edition: in both is the thought of the Over-Soul, which later appeared in Oriental form in Brahma. The desire to express himself in verse, which Mr.

Emerson felt so strongly, had so far overcome his humility that during the months in which he was preparing this essay he had contributed to the first number of the *Dial* "The Problem," and "The Sphinx" appeared in the third.

N0204: It will be remembered that the Sphinx's fatal riddle, which Ædipus solved, related to Man in his infancy, his prime and his decline.

In the end of *Nature* (vol. i.), man as a microcosm had been considered, and Herbert brought to testify in his beautiful poem "Man."

N0205: In this passage, and one in "Self-Reliance,"—"An institution is the lengthened shadow of one man," with the work of St. Anthony, Luther, Fox, Wesley and Clarkson as instances,—came out Mr. Emerson's belief in the duty and the power of the man of thought, a messenger of the Eternal Mind.

N0206: In the affectionate sympathy for reading boys, which crops out so often in his books, memories of his boyhood and of his brothers and some near friends, like Dr. William H. Furness, come to light.

N0207:

Methought the sky looked scornful down
On all was base in man.

"Walden," *Poems*, Appendix.

N0208: Mr. Emerson often used to speak of the pitiful figure that certain scholars and statesmen presented, uttering elevated

sentiments about Liberty and Justice in 1776, and being dumb on the subject of the flagrant violation of these principles in their own day.

N0209: That a man was principally of value for his "atmosphere," and an event for the soul of it which survived for an example or in a poem, was a favorite idea with Mr. Emerson. He praised Sterling's line in *Alfred the Harper*,—

Still lives the song, though Regnar dies!

With Swedenborg he valued Nature as a symbol.

N0210: I am indebted to Professor Charles Eliot Norton for calling my attention to the probable compounding of the name Marmaduke Robinson, through a slip of Mr. Emerson's memory, out of the names of the two Quakers hung on Boston Common in 1659, Marmaduke Stevenson and William Robinson.

N0211: In "The Problem" he describes the evolution of the grand architecture, the temples and cathedrals, "out of Thought's interior sphere," and Nature's ready adoption of them as her own.

N0212: Mr. Emerson was much more alive to the beauty of form than of color. Sculpture appealed to him more than painting.

N0213: The doctrine of the pervading unity which appears in the poem "Xenophanes," written in 1834, hence one of the earliest of the published poems.

N0214: In the month of April, 1839, Carlyle sent Raphael Morghen's engraving of the Aurora, by Guido in the Rospigliosi palace in Rome, to Mr. Emerson, saying, "It is my wife's memorial to your wife....Two houses divided by wide seas are to understand always that they are united nevertheless." The picture still hangs in the parlor of Mr. Emerson's home, with the inscription which accompanied it: "Will the lady of Concord hang up this Italian sun-chariot somewhere in her Drawing Room, and, looking at it, think sometimes of a household here which has good cause never to forget hers. T. CARLYLE."

Mr. Emerson used to point out to his children how the varied repetition of the manes, heads and prancing forefeet of the horses were imitations of the curved folds of a great cumulus cloud.

N0215: Here, as in the two essays on Art, in this volume and in *Society and Solitude*, the same thought appears, embodied also in "The Problem" in the lines beginning,—

The hand that rounded Peter's dome, etc.

N0216:

Come see the north wind's masonry, etc.

"The Snow-Storm," Poems.

N0217: The works of Heeren and others on Egypt, and the architectural handbooks of Fergusson and Garbett, with some of Ruskin's writings, were read with interest by Mr. Emerson. The idea of Evolution, whether in the works of Nature or of man, early and always appealed to him.

Perhaps the first suggestion of the ideas on this page came to him in his boyhood, in the welcome form of Scott's description of Melrose Abbey in the *Lay of the Last Minstrel*:—

The moon on the east oriel shone
Through slender shafts of shapely stone,
By foliated tracery combined;
Thou wouldst have thought some fairy's hand
'Twixt poplars straight the osier wand
In many a freakish knot had twined,
Then framed a spell when the work was done,
And changed the willow wreaths to stone.

N0218: Astaboras was a river of Æthiopia mentioned by Strabo.

N0219: The following is the version of the remainder of this paragraph in the first edition of the *Essays*:—

"The difference between men in this respect is the faculty of rapid domestication, the power to find his chair and bed everywhere which one man has, and another has not. Some men have so much of the Indian left, have constitutionally such habits of accommodation, that at sea, or in the forest, or in the snow, they sleep as warm and dine with as good appetite and associate as happily as in their own house. And, to push this old fact one degree nearer, we may find it a representative of a permanent fact in human nature. The intellectual nomadism is the faculty of objectiveness, or of eyes which everywhere feed themselves. Who hath such eyes everywhere falls into easy relation with his fellow-men. Every man, every thing, is a prize, a study, a property to him, and this love smooths his brow, joins him to men, and makes him beautiful and beloved in their sight. His house is a wagon: he roams through all latitudes as easily as a Calmuc."

N0220: And well he loved to quit his home

And Calmuc in his wagon roam
To read new landscapes and old skies.

"The Poet," *Poems*, Appendix.

N0221: In the balancing of the claims on the scholar of society and solitude, so frequent in his writings, Mr. Emerson always gives most weight to solitude, yet admitting the necessity, for his sanity, his character, and his supply of raw material to work on, of mingling with the world and sharing the common exposures and experiences.

In his journal of his first trip to Europe, it is remarkable how little he found to detain him and how anxious he was to return to his proper field of action and work. The same feeling was very marked during his visit to Europe and Egypt in his old age.

N0222: The freedom, the dignity and profit of self-help was a rule of practice, not a mere theory, with Mr. Emerson.

N0223: Many strange pilgrims were on the road in those days, ridiculous enough to the eye of the average New Englander, and these were attracted to Concord by the report that there hospitality to thought could be found. Their host ministered to their physical wants, and to their hunger to be heard. He took them by "their best handle,"—and, as he wrote of his ideal man, "The madness which he harbored he did not share."

N0224: The respect for the old religion that made New England, remained deeply ingrained in Mr. Emerson, though he had left that phase of belief and spiritual growth behind. Yet it

was always before him in the fiery faith of his Aunt Mary, and in his own household in the devoted Christianity of his mother and his wife. He was aware of the losses that might well accompany too extreme reaction from early faith, and the Luther anecdote might well have had something akin to it in his domestic experience.

N0225: Compare Byron's *Prometheus*.

Titan, to whose immortal eye
The sufferings of mortality,
Seen in their sad reality,
Were not as things that gods despise, etc.

N0226: The power of true vision to unsettle and move and elevate everything, indeed the old doctrine of "The Flowing" of Heracleitus, the dance of the trees and the very mountains that Orpheus led, occurs in the prose, but especially in Mr. Emerson's "Poet" in the Appendix to the *Poems*.

N0227:

I drank at thy fountains
False waters of thirst.

"Ode to Beauty," *Poems*.

N0228: "We probably perceive the influence of these latent inheritances" [dormant tendencies to suppressed bestial parts or traits] "when, in the battle of existence, species undergo retrograde changes, or, as naturalists phrase it, revert to a lower state of being....In the moral as well as the physical world, we may see these hidden seeds of ancestral impulse, when no longer

overshadowed by the newer and therefore stronger motives, spring into activity and win the creature back to a lower estate.”—*The Interpretation of Nature*, by Professor N. S. Shaler. Boston, 1893.

N0229: See the opening paragraphs of “The Poet,” *Essays*, *second series*, and “Poetry and Imagination,” *Letters and Social Aims*, for the true use of facts.

Mr. Emerson eagerly sought facts, not for themselves, but as oracles from which he was to draw the hidden but universal meaning. In his Journal in 1847, he speaks of the avarice with which he looks at the Insurance Office, and his longing to be admitted to hear the gossip of the notables of the village there: “For an hour to be invisible and hear the best informed men retail their information he would pay great prices, but every company dissolves at his approach. He so eager and they so coy....

“We want society on our own terms. Each man has facts that I want, and, though I talk with him, I cannot get at them for want of the clue. He does not know what to do with his facts: I know....Here is all Boston,—all railroads, all manufactures and trade, in the head of this well-informed merchant at my side....Here is Agassiz with his theory of anatomy and nature; I am in his chamber and I do not know what question to put....Here is all Fourier in Brisbane’s head; all language in Kraitser’s; all Swedenborg in Reed’s; all the Revolution in old Adams’s head; all modern Europe and America in John Quincy Adams’s, and I cannot appropriate a fragment of all their experience....Now if I could cast a spell on this man at my side, and see his pictures without his intervention or organs, and having learned that lesson, turn the spell on another, lift up the cover of another hive, and see the cells and suck the honey...they were not the poorer and I the richer.”

N0230: When asked by one of his children whether some verse of Shakspeare, or perhaps it was a picture by Michelangelo, really was meant to carry with it the significance attributed to it, Mr. Emerson answered: "Everyone has a right to be credited with whatever of good another can find in his work."

N0231: *Perceforest* was a mediæval French historical romance, its scene being Britain in the pre-Arthurian period.

Amadis de Gaul, a romance written in the fourteenth century, by Vasco de Lobeira, in Portugal, but which became very popular in later versions in other tongues.

The Boy and the Mantle, an ancient English ballad. See *Percy's Reliques*.

N0232: This passage with regard to man's faculties occurred in a lecture called "The Doctrine of the Hands" in the course on "Human Culture," 1837–38.

N0233: See Shakspeare's *Henry VI.*, Part I., Act II., Scene iii.

N0234: It was a characteristic of Mr. Emerson's writings to concentrate attention on some aspect of the matter on which he was speaking. He did not weaken a sentence, a paragraph, even, in some cases, a whole poem or lecture, by much qualification of his statement. He reserved the counter-statement, the other aspect, to present as neatly in another place. Hence, if but one essay be read, his position with reference to the church, or towards society, or reform, might be misunderstood.

N0235: This passage appears in verse in "Limits," *Poems*, Appendix.

SELF-RELIANCE

DURING THE period of Mr. Emerson's ministry in Boston he had written thus in his Journal:—

CHARDON ST., OCT. 14TH, 1832.

"The great difficulty is that men do not think enough of themselves, do not consider what it is that they are sacrificing when they follow in a herd, or when they cater for their establishment. They know not how divine is a Man. I know you say such a man thinks too much of himself. Alas! he is wholly ignorant. He yet wanders in the outer darkness, in the skirts and shadows of himself, and has not seen his inner light.

"Would it not be a text of a useful discourse to young men, *that every man must learn in a different way*? How much is lost by imitation. Our best friends may be our worst enemies. A man should learn to detect and foster that gleam of light which flashes across his mind from within far more than the lustre of the whole firmament without. Yet he dismisses without notice his peculiar thought *because* it is peculiar. The time will come when he will postpone all acquired knowledge to this spontaneous wisdom, and will watch for this illumination more than those who watch for the morning. For this is the principle by which the other is to be arranged. This thinking

would go to show the significance of self-education, that in reality there is no other, for all other is nought without this."

This entry is continued by the passage now appearing in the latter part of "Self-Reliance" beginning, "That which each can do best, none but his Maker can teach him," ending with the sentence about "the Scipionism of Scipio." After several more jottings as to what might be said on the subject, he writes:—

"Landor knows many things—treats of the continual appeal that is made from the facts to the feelings, from the world to the high, inward, infallible Judge, ever suggesting a grander creation," etc.

In the entry of the preceding day he transcribes various sentences from Landor's *Imaginary Conversations* (mostly from the talk of Epicurus with his friends), among them this: "Since all transcendent, all true and genuine greatness must be of a man's own raising, and only on the foundation that the hand of God has laid, do not let any touch it: keep them off civilly, but keep them off."

Thus it appears that the writings of Landor, read the year before Mr. Emerson sought him out in Rome, may have given the original push towards the writing of this essay on "Self-Reliance." A small portion of the essay came from the lecture "Individualism," the last in the course on "The Philosophy of History" in 1836–37, and other passages from the lectures "School," "Genius," and "Duty" in the course on "Human Life," 1838–39.

In reading this essay, it is well to call to mind, 1st, Mr. Emerson's fear of weakening the effect of his presentation of a subject by qualification; 2d, That the Self he refers to is the higher self, man's share of divinity. Hence "The Over-Soul" should be read after "Self-Reliance."

Journal, Oct. 23, 1840. "And must I go and do somewhat if I would learn new secrets of self-reliance? for my chapter is not finished. But self-reliance is precisely that secret to make your supposed deficiency redundancy. If I am true, the theory is, the very want of action, my very impotency, shall become a greater excelling than all skill and toil."

N0236: Perhaps these were the poems of Washington Allston. His "Paint-King" is quoted in the chapter on Plato in *Representative Men*. If not these, it is probable that William Blake's remarkable poems are alluded to.

N0237: This image recalls the departure of the Day in his poem, when the thoughtless poet from among her proffered gifts chose—

A few herbs and apples...
...I, too late,
Under her solemn fillet saw the scorn.

N0238: The doctrine of "The Over-Soul."

N0239: Sympathy for children, loving reverence for unspoiled boys and girls, was part of Mr. Emerson's character, and appears throughout his writings, especially in "Domestic Life" and "Education."

N0240: An annoyance at the notoriety which followed his action with regard to the rite of the Last Supper in his church, and later, on his simple statement to the Divinity students of the message that came to him with regard to the torpor of the church of that day, and their resulting duties, shows in Mr. Emerson's letters and

journals at these times rather than any deeper trouble. It is that "sad self-knowledge" of Uriel.

N0241: A characteristic case of his presentation of aspects. "But it is the fault of our rhetoric that we cannot strongly state one fact without seeming to belie some other."—"History."

N0242: Of his "own poor" and his own causes, Mr. Emerson was mindful, and his hand was free.

N0243: It need hardly be said that Mr. Emerson was an independent in politics, as in social or ecclesiastical movements. He writes in his Journal: "The relation of men of thought to society is always the same; they refuse that necessity of mediocre men, to take sides. They keep their own equilibrium. The sun's path is never parallel to the equator."

N0244: Mr. Emerson said, "I deny personality to God because it is too little—not too much."

N0245: It may be interesting to reproduce here the version of the first edition with a ruder vigor, more adapted to delivery in the Lyceum.

"With consistency a great soul has simply nothing to do. He may as well concern himself with his shadow on the wall. Out upon your guarded lips! Sew them up with pack-thread, do! else, if you would be a man, speak what you think to-day in words as hard as cannon-balls, and to-morrow speak what to-morrow thinks in hard words again, though it contradict everything you said to-day. Ah, then, exclaim the aged ladies, you shall be sure to be misunderstood! Misunderstood! It is a right fool's words. Is

it so bad then to be misunderstood? Pythagoras was misunderstood, and Socrates, and Jesus, and Luther, and Copernicus, and Galileo, and Newton, and every pure and wise spirit that ever took flesh. To be great is to be misunderstood."

N0246:

As sunbeams stream through liberal space
And nothing jostle or displace,
So waved the pine-tree through my thought
And fanned the dreams it never brought.

"Woodnotes," II., *Poems*.

N0247: Mr. Emerson's reading was largely in biographies. For novels and romances he cared little, but the human, the heroic, the individual in historic characters, he was keen to find out, and equally so the natural speech, the independent action and native refinement in persons whom he met, whether high or low. From his childhood he copied anecdotes of persons, and he read them to his scholars. Plutarch was his delight. Dr. Holmes interested himself in making a list of the persons most often referred to by Mr. Emerson, and found that after Shakspeare, Napoleon, and Plato came Plutarch, and there were seventy references to him.

N0248: A version of this story is the Induction of *The Taming of the Shrew*.

N0249: This paragraph furnishes two instances of the nicety of Mr. Emerson's choice of words in closest accordance with their derivation to make clear his thought. His doctrine,—that there was one great source of all special manifestation of spirit, which

was from the beginning [*ab origine*—"In the Beginning was the Word"]; that this spirit was self-renewed in each one who would listen, by teachings from within [*in-tuitions*], and could go out from the receiver to help the world [*tuitions*],—made clearer by exactly fitting words, shows the real Self on which men shall rely.

N0250: He went alone to the woods to *listen*. Perhaps his early friends among the Quakers at New Bedford had confirmed this tendency in him to wait until the Spirit spoke. He felt himself the mere ambassador charged to faithfully deliver the message committed to him. This must be its own evidence and it was not for him to argue about it.

N0251: Compare the seventh stanza of "The Sphinx."

N0252: Though Mr. Emerson's is by no means a Latin style, the training of his youth shows often in the use of words of Latin origin, not as adjectives but as present participles; as "man, agent and patient," and here "power not confident but agent."

N0253:

Hold of the Maker, not the Made;
Sit with the Cause, or grim or glad.

"Fragments on The Poet," *Poems*, Appendix.

N0254: "Respect the child, respect him to the end, but also respect yourself. Be the companion of his thought, the friend of his friendship, the lover of his virtue,—but no kinsman of his sin. Let him find you so true to yourself that you are the irreconcilable

hater of his vice and the imperturbable slighter of his trifling."—"Education," *Lectures and Biographical Sketches*.

N0255: After the somewhat startling and radical counsels of the last paragraph, it is well that some mitigation of their drastic quality should follow. Dr. Holmes does well in calling attention to what follows to show how Mr. Emerson "guarded his proclamation of self-reliance as the guide of mankind."

N0256: In the first half of the nineteenth century, many a New England boy thus acquired experience and laid the foundations of his fortune, pecuniary or intellectual. Mr. Alcott went on foot with his pack more than once through Virginia and the Carolinas, furnishing Connecticut wares or teaching, at the option of the owners of the plantations.

N0257: While studying divinity, Mr. Emerson one day, as he worked in his uncle's hayfield beside a Methodist farm-hand, fell into talk with him. This man maintained that men are always praying, and that all prayers are answered. This statement interested Mr. Emerson, and on this theme he wrote his first sermon, adding for a third point that it behooves men to well consider these acted prayers. After his "approbation to preach," he read this sermon in the pulpit of his kind uncle, Rev. Mr. Samuel Ripley, of Waltham, and the next day a stranger addressed him in the stage-coach, saying, "Young man, you'll never preach a better sermon than that."

A short paper, "Prayers," originally printed in the *Dial*, is included in the volume *Natural History of Intellect*.

N0258:

The inevitable morning
Finds them who in cellars be.

"The World-Soul," *Poems*.

N0259: Mr. Emerson, when he first went abroad in 1833, was sick and sad, with prospects all unsettled, and he was little engaged by the novelty and beauty of the sights which met his eye when, after a short stay in Malta, he landed at Naples. This paragraph reflects the tone of his journals, and in them he wrote verses recording his feeling at Naples and at Rome. Both of these are printed in the Appendix to the *Poems*.

But his call to his appointed work made him through life a bad visitor, and also traveller, except in the line of his duty, when his lines in "Woodnotes" were true for him:—

Go where he will, the wise man is at home, . . .
Where his clear spirit leads him, there's his road,
By God's own light illumined and foreshowed.

N0260: Most of the paragraph up to this point was from the entry in the Journal in 1832, mentioned in the introduction to this essay, when the thought of writing on this theme first came to him.

N0261: The checks in development, later much emphasized by the Evolutionists, seem to have been early apprehended by him.

N0262: This saying of Ali is rendered in the last lines of the second motto of "Compensation."

COMPENSATION

WHEN IN 1865 Mr. Emerson met by invitation many of the ladies who, as girls, had attended the finishing school for young ladies kept in Boston by his brother William and himself, when hardly more than boys, he told them that he felt certain regrets with regard to his teaching. "I was at that very time already writing every night in my chamber my first thoughts on morals and the beautiful laws of Compensation and of individual genius, which to observe and illustrate have given sweetness to my life. I am afraid no hint of this ever came into the school, where we clung to the safe and cold details of languages, geography, arithmetic and chemistry. Now I believe that each should serve the other by his or her strength, not by their weakness, and that if I could have had one hour of deep thought at that time, I could have engaged you in thoughts that would have given reality, depth and joy to the school, and raised all these details to the highest pleasure and nobleness."

During the days of his ministry, he wrote thus in his Journal:—

CHARDON ST., JUNE 29, 1831.

Is not the law of Compensation perfect? It holds, as far as we can see, different gifts to different individuals, but with a mortgage of responsibility on every one. "The gods sell all things."—Well, old man, hast got no farther? Why, this was taught thee months and years ago. It was writ on the autumn leaves at Roxbury in keep-school days—it sounded in the blind man's ear at Cambridge.²⁵ And all the joy and all the sorrow since have added nothing to thy wooden book. I can't help it. Heraclitus, grown old, complains that all resolved itself into identity.... And I have nothing charactered in my brain that outlives this word Compensation.

Three years later, in 1834, he wrote the verses entitled "Compensation" which are printed in the *Poems*.

It does not appear that the essay "Compensation," as it stands, was ever delivered as a lecture. No doubt portions of it appeared in many sermons, and several pages of it came from the lecture "Duty" in the course on "Human Life," given in 1838–39.

In the first motto the image of "The lonely Earth amid the balls" is one among many instances of the charm which astronomical phenomena had for Mr. Emerson. Evidences of his reading treatises on the heavenly bodies, and of walks for the purpose of gazing on them, occur frequently in journals and writings.

N0263: Mr. Emerson, having left the pulpit, was striving the harder to awaken real religion among those to whom he spoke, to make them feel, not only on Sundays, but through the week, day and night, a beautiful, present Deity working surely through law.

²⁵ Referring to a time when trouble with the eyes deprived him for a time of their use.

N0264: Dr. Holmes ekes out the forlorn view of the preacher whose representations of the Christian's aims and spirit had stirred Mr. Emerson to write this discourse, by the statement of the unhappy John Bunyan:—

A Christian man is never long at ease;
When one fright's gone, another doth him seize.

N0265: This is a keynote of many of the essays.

"The soul is superior to its knowledge, wiser than its works."—*The Over-Soul*. "Heroism is an obedience to a secret impulse of an individual's character."—*Heroism*.

Himself from God he could not free;
He builded better than he knew.

"The Problem," *Poems*.

N0266: "In this and the following chapter." Compensation is not so obviously treated of in "Spiritual Laws" as might be expected from this expression. Yet the doctrine is there in "A man passes for what he is worth," and other statements of the great laws of balance and return.

N0267: Every scientific fact and law had its charm for Mr. Emerson, and he sought its spiritual correspondent. Again and again he uses polarity as a parable. It may be found in the third stanza of "The Sphinx" and in "Merlin."

The reconciliation in the very definition of Polarity²⁶ of the apparently contradictory notions held by the early philosophers

²⁶ "Polarity (Physics). A term used to designate opposite or dissimilar properties or powers simultaneously developed by a common cause in opposite or contrasted parts, as in the extremities of a magnet, or in the sides of a polarized ray of light, situated respectively in the plane of polarization and the plane perpendicular to it."—*Worcester's Dictionary*.

and priests, viz., of the One, and of the Duality that is more obvious in the world, delighted him.

N0268: One day Mr. Emerson saw the little child of a neighbor, whom he had always thought to be a sulky churl, playing with a pretty painted cart. He asked the child who made it. "My Papa," answered he, and this fortified Mr. Emerson in the optimism from which he had temporarily lapsed.

N0269:

No ray is dimmed, no atom worn,
My oldest force is good as new,
And the fresh rose on yonder thorn
Gives back the bending heavens in dew.

"Song of Nature," *Poems*.

N0270: A fragment from a lost play of Sophocles.

N0271: In the poem "Voluntaries," after the national crime of the long tolerance by our people of African slavery has been told, these lines follow:—

Destiny sat by, and said,
"Pang for pang your seed shall pay,
Hide in false peace your coward head,
I bring round the harvest day."

And this Nemesis, denied the name of Fate, because justice is a beneficent force, appears as "Worship" in the poem which serves as motto to the essay so named.

N0272:

Naturam expellas furca, tamen usque recurret,
Et mala perrumpet furtim fastidia victrix.

Horace, *Epistles*, i, 10.

N0273: *Confessions* of St. Augustine, Book I.

N0274: From the *Prometheus* of Æschylus.

N0275: The same thought that is more fully expressed in the extract from the letter to Sterling given in the Introduction to the notes on the essays of this volume. It also appears in "The Problem."

N0276: Mr. Emerson, after his return from Europe in 1833, preached often at New Bedford, and later gave a course of lectures at Nantucket, remaining for some time on the island. Those were the great days of the whaling industry of both those towns, and Mr. Emerson used to repeat the anecdotes of peril and accident in hunting the monster which had been told him by his hosts.

N0277: Herodotus tells that Fortune had so favored Polycrates, the tyrant of Samos, that his friend Amasis, king of Egypt, sent him word that to ward off the fate sure to follow unbroken prosperity, he ought to sacrifice whatever he valued most. Struck by this counsel, Polycrates cast into the sea his emerald ring. Next day it returned to him in the stomach of a fish sent as a present. Amasis at once broke off the alliance, foreseeing in this event the impending doom of Polycrates. Revolt of his subjects, and civil and foreign wars followed, and not long after the tyrant was lured out of his domain by the satrap of Sardis and crucified.

N0278: This maxim was a household word with Mr. Emerson. He was loath to place himself under obligation. He wrote:—

Wilt thou seal up the avenues of ill?
Pay every debt as if God wrote the bill.

See also in the *Poems*, the "Translation from Ibn Jemin."

N0279: These thoughts find expression in the arguments used by educators in the last few years to show the mental and moral advantage of manual training schools.

N0280: Wordsworth's *Sonnets to Liberty*, "September, 1802."

N0281: This passage, expanded from an entry made in Mr. Emerson's Journal of Oct. 18, 1832, was distinctly personal in its origin, and shows his habitual humility and courage. It continues: "The stammering tongue and awkward and formal manners which hinder your success in social circles keep you true to the mark which is your own—to that particular power which God has given you for your own and others' benefit."

N0282: This and the next two sentences are the entry made by Mr. Emerson in his Journal, Sept. 29, 1838, two months after he had delivered his earnest message to the young divines on the eve of their entry into the ministry, and the ensuing disclaimers and attacks on his address had been made by professors and clergymen, vigorously answered by Mr. George Ripley, Mr. Brownson, Professor Parsons, and Rev. James Freeman Clarke.

N0283:

If the Law should thee forget,
More enamoured serve it yet;
Though it hate thee, suffer long;
Put the Spirit in the wrong.

"The Poet," *Poems*, Appendix.

N0284: This was well said in Boston, where, within a few years, Mr. Garrison, for attempting to address an anti-slavery meeting, had been hustled up State Street with a rope around his body, by the solid men of business and of the professions; and the mayor, to save his life, had him committed to the jail as a "disturber of the peace." His statue stands now at the head of the handsomest avenue in Boston.

N0285: The translation of "Being" in the next word into its pleasing Latin form, and immediately making it the same as God, is a striking and condensed statement of the creed Each in All, the Universal Mind.

N0286: This passage, as written in the Journal, March 19, 1839, is perhaps more fresh and vigorous:—

"Such is my confidence in the compensations of nature, that I no longer wish to find silver dollars in the road, nor to have the best of the bargain in my dealings with people, nor that my property should be increased, knowing that all such gains are apparent and not real; for they pay their sure tax. But the perception that it is not desirable to find the dollar I enjoy without any alloy. This is an abiding good: this is so much accession of Godhead."

The description of the growth and liberation of the ideal man, which follows, written forty years before Mr. Emerson's death, is strangely autobiographical.

N0287: Compare the last stanza of "Give All to Love," *Poems*.

SPIRITUAL LAWS

THIS ESSAY does not appear to have been given in its present form as a lecture; it may have been so used in Concord or some neighboring town just before the *Essays* were published, but was not in the Boston courses. Certain passages of the essay, however, are found in the lectures "Religion" and "Manners" in the course on "The Philosophy of History" (1836–37), in "Being and Seeming" in the course on "Human Culture" (1837–38), and in "School" and "Duty" in the course on "Human Life" (1838–39).

N0288: There was no motto to "Spiritual Laws" in the first edition.

The verses that he placed before the new edition in 1847 show the fear which he felt, especially at that period, of weakening the poetic thought by what, in the letter to Sterling which has been already quoted, he calls "meddling ambitiously." Here, in twelve strong lines presenting the great Laws of the Universal Mind, Self-Reliance, Compensation, and Good out of Evil, he followed the counsel to the bard that he puts in the lips of Merlin in his poem:—

Great is the art,
Great be the manners of the bard.
He shall not his brain encumber
With the coil of rhythm and number;
But, leaving rule and pale forethought,
He shall aye climb
For his rhyme.
"Pass in, pass in," the angels say,
"In to the upper doors,
Nor count compartments of the floors,
But mount to paradise
By the stairway of surprise."

N0289: In the year of the publication of this essay, his honored friend, the Rev. Doctor Ripley, the minister of Concord for more than half a century, died. He had married the widow of William Emerson, his predecessor, a chaplain in the army at Ticonderoga. Dr. Ripley had been a true friend to his wife's grandchildren. Mr. Emerson tells in his Journal of his visit to the Old Manse at the time of his death:—

"His body is a handsome and noble spectacle. My mother was moved just now to call it 'the beauty of the dead.' He looks like a sachem fallen in the forest, or rather 'like a warrior taking his rest with his martial cloak around him.' I carried Waldo to see him and he testified neither repulsion nor surprise, but only the quietest curiosity. He was ninety years old...Yet this face has the tension and resolution of vigorous manhood....A man is but a little thing in the midst of these great objects of nature,...yet a man by moral quality may abolish all thoughts of magnitude, and in his manners equal the majesty of the world."

N0290: This passage calls to mind the "morning thought," the "Matutina Cognitio" of St. Augustine. See Notes^{N0049} to *Nature*. ("Prospects")

N0291: He would have liked the answer which William Morris gave to one who asked if he were subject to the extreme despondency which so often accompanies the highly poetic temperament. "I dare say I am," said he, "but I've never had the time to think of it, so I really can't say."

N0292: From Wordsworth's Sonnet XII. in *Poems dedicated to National Independence*, part ii.

N0293: The relative value of his imposed and his chosen studies came up often in Mr. Emerson's mind to the advantage of the later. Always an eager and delighted reader of the books (or a few passages in books) that he knew as "written for him," he found little in the text-books at school or college, besides the classics, that interested him. In "Heroism" he tells of the power for good of a romance "over a boy who grasps the forbidden book under the bench at school; our delight in the hero is the main fact to our purpose.... If we dilate in beholding the Greek energy, the Roman pride, it is that we are already domesticating the same sentiment."

N0294: Purified mankind as transmitters of divine thought are described in the poetical note-books as—

Pipes through which the breath of God doth blow
A universal music.

N0295: The image of Mother Nature calming her flustered little son is repeated, still with a little humor, in the poem "Experience," which serves as motto to the essay of that name in *Essays, Second Series*.

N0296: Pyrrho of Elis (360–270 B.C.), a Greek painter, poet and philosopher, who joined the expedition of Alexander to conquer the East, but returned to Elis and became a priest. "He held that the only condition worthy of a philosopher was that of suspended judgment. Virtuous imperturbability was the highest aim of life, but truth was unattainable."—Appleton's *Encyclopædia*.

N0297: During his stay in New Bedford, in 1834, while officiating for his friend the Rev. Dr. Dewey, Mr. Emerson heard the doctrine of Obedience as adopted by the Friends,—renunciation of all will, and awaiting the divine motion in the breast.

Journal. "The sublime religion of Miss Rotch yesterday. She was very much disciplined, she said, in the years of Quaker dissensions, and driven inward, drawn home to find an anchor, until she learned to have no choice, to acquiesce without understanding the reason when she found an obstruction to any particular course of acting. She objected to having this spiritual direction called an impression, or an intimation, or an oracle. It was none of them. It was so simple it could hardly be spoken of."

This statement of faith interested him, but he had already learned to yield himself to the divine stream sweeping away the distinctions of forms.

N0298: The boast of Glendower to Hotspur, *Henry IV.*, Part I., Act III., Scene i.

N0299: Mr. Emerson thus celebrates the dignity of the farmer's work:—

He planted where the deluge ploughed,
His hired hands were wind and cloud;
His eyes detects the Gods concealed
In the hummocks of the field.

"Fragments," *Poems*, Appendix.

N0300: This image was suggested by a passage in Scott's *Old Mortality* which Mr. Emerson often repeated with something of the pleasure it had given him in his boyhood. The fierce fanatic, Balfour of Burley, speaks of the possibility of influencing some opponents of the Covenanters by prospects of worldly gain, but thus tells in his wrath of the incorruptibility of the young nobleman who opposes them: "But Lord Evandale is a malignant of heart like flint and brow like adamant; the goods of this world fall on him like the leaves on the frost-bound earth, and unmoved he will see them whirled off by the first wind. The heathen virtues of such as he are more dangerous to us than the sordid cupidity of those who...may be compelled to work in the vineyard, were it but to earn the wages of sin."

N0301:

Earth fills her lap with pleasures of her own.

Wordsworth, *Intimations of Immortality*.

N0302: In the essay "Demonology," in *Lectures and Biographical Sketches*, dreams are treated of. See also the quatrain "Memory" in the *Poems*.

N0303: When somewhat importunately urged to be presented to a person for whom he felt no affinity, Mr. Emerson said, "Whom God hath put asunder, let no man put together."

N0304: It was the sentence more than the paragraph in the essay that he valued, hence he strove to make every syllable tell.

N0305: This was the remark of his honored friend, Samuel Hoar, Esq. See the notice of him in *Lectures and Biographical Sketches*, and the sonnet by the Mr. F. B. Sanborn prefixed to it. Also Mr. Emerson's quatrain "S. H." in *Poems*.

N0306:

Jack was embarrassed,—never hero more,
And, as he knew not what to say, he swore.

Byron's *Island*, Canto III., 5.

It was, however, Jack Skyscape and not Ben Bunting.

N0307: Another name for the British queen Boadicea. Mr. Emerson valued certain passages in Beaumont and Fletcher's "Tragedy of Bonduca," especially the speeches of Caratach in the first scene.

N0308: Dr. Holmes in his *Life of Emerson* quotes the passage, and thus comments: "This is not any the worse for being the flowering out of a poetical bud of George Herbert's." He alludes to "The Elixer," beginning—

Teach me, my God and King,

In all things thee to see;
and especially to the verse—
A servant with this clause
Makes drudgerie divine;
Who sweeps a room as for thy laws,
Makes that and th' action fine.

LOVE

THIS ESSAY is almost identical with the fourth lecture in the course on "Human Life," given in Boston by Mr. Emerson in the winter of 1838–39. He made a few verbal changes and unimportant omissions in the later editions from the earlier form. Because the love that Emerson treats of here is not considered from the point of view of young lovers alone, but as life-long, and unfolding to "a love which knows not sex, nor person, nor partiality, but which seeks virtue and wisdom everywhere," his poem "Eros" might have served for its motto:—

The sense of the world is short,—
Long and various the report,—
 To love and be beloved;
Men and gods have not outlearned it;
And, how oft soe'er they've turned it,
 Not to be improved.

In a letter written to a friend in the year of the publication of this essay, this passage occurs:—

"The same Goodness in which we believe, or rather which alway believes on itself, as soon as we cease to consider persons, becomes Love, imperious Love, that great Prophet and Poet, that Comforter, that Omnipotency in the heart. Its eye falls on some mortal form, but it rests not a moment there; but, as every leaf represents to us all vegetable nature, so Love looks through that spotted, blighted form to the vast spiritual element of which it was created and which it represents. We demand of those we love that they shall be excellent in countenance, in speech, in behavior, in power, in will. They are not so; we are grieved, but we were in the right to ask it. If they do not share the Deity that dictated to out thought this immense wish, they will quickly pass away, but the demand will not die, but will go on accumulating as the supply accumulates, and the virtues of the soul in the remotest ages will only begin to fulfil the first craving of our poor heart."

N0309: In a note-book Mr. Emerson gives the quotation from the Koran thus:—

"I was as a treasure concealed: then I loved that I might be known."

And below it his own rendering—

I was as a gem concealed;
I burned with love and was revealed.

And then the second line altered thus:—

Me my burning love revealed.

N0310: Although Mr. Emerson did not allow his mind to revert, looking ever to the brightness before, yet when, of a sudden, a memory came over him of his young wife, his brothers, his mother,

gone from this life, he would, for the moment, start and moan, wrung by "infinite compunctions," due to his own tenderness and humble rating of himself, not thinking how they had prized him.

N0311: Once a young school-teacher was invited to tea at his house. He was, as ever, courteous and kind, but after she had gone, he mentioned that, perhaps a dozen years before, he had found on the way to Walden a childish love-letter, open and weather-stained, addressed to her, and, though he did not know the schoolgirl, he had remembered her name and the little romance.

N0312: From the *Epithalamium* of John Donne.

N0313: This was a favorite line of Mr. Emerson's, perhaps written by one of his friends, but I have never been able to find whence it came.

N0314: From *A Nice Valour*, by John Fletcher. III., 3.

N0315:

He looketh seldom in their face,
His eyes explore the ground,—
The green grass is a looking-glass
Whereon their traits are found.

"Manners," *Poems*.

N0316: "The end of all liberal training should be the love of beauty"—Socrates having previously described proper education as a training in virtue. (Plato's *Republic*, Book III.)

N0317: This passage recalls the one from Plutarch, already quoted, to the effect that the Sun is the cause why all men are ignorant of Apollo, by sense withdrawing the mind from that which is to that which seems.

Professor Wright, of Harvard University, says of this Paragraph of Mr. Emerson's, "It is distinctly Platonic, and seems to be an echo of the *Phædrus*, where the entombment of the soul is referred to, and the necessity that it must see true being before it can take human form is stated. The thought that it is 'stupefied by the light of the natural sun and unable to see any other object but those of this world, which are but shadows of real things,' is perhaps supported by the opening of the seventh book of the *Republic*, where appears the famous 'image of the cave.'"

N0318: I think that the word "base" is used in its primary sense, to signify the humble foundation on the earth.

Thou shalt not scale Love's height divine
By burrowing at its earthly base;
Nor call the priceless treasure thine
Who car'st but to affront the case.

"The Angel in the House," Coventry Patmore.

N0319: From Donne's "Elegy on Mistress Drury."

N0320: Compare Emerson's early poem, "Thine Eyes Still Shined."

N0321: From Abraham Cowley's "Resolved to be Beloved," in *The Mistress; or, Several Copies of Love Letters*.

FRIENDSHIP

THIS ESSAY was not given as a lecture under this title and as a whole in any of the Boston courses, although very probably it served in that capacity in some of the Lyceums. As is shown in Mr. Cabot's Memoir (Appendix F), portions of it were taken from the lecture on "Society," in the course on "The Philosophy of History" (1836–37), and others from "The Heart" in the course on "Human Culture," given in the Boston the following year. Several paragraphs come from "Private Life," in the course on "The Present Age" (1839–40).

Friendship, as Mr. Emerson said in the essay, seemed "too good to be believed," and he earnestly desired it, yet so high was his standard that he felt that he had not his share of this blessing and cast the blame on himself.

Friends to me are frozen wine;
I wait the sun on them should shine.

He had many, in the usual sense of the word, and their number increased with the years; many also unknown to him; but he

had few close friends in all his life. This lack he recognized as temperamental and deplored. But here too was "good out of evil" for him. At a little distance he could take the greatest pleasure in his friends, could see them in their proper atmosphere. The treatment that he asked for himself he gave in some tempered degree to them:—

You shall not love me for what daily spends;
You shall not know me in the crowded street,
Where I, as others, follow petty ends;
Nor when in fair saloons we chance to meet.
Nor when I'm jaded, sick, anxious or mean.
But love me then and only, when you know
Me for the channel of the rivers of God
From deep, ideal, fontal heavens that flow.

In practice he was loyal and serviceable to his friends, yet preferred to see them sparingly, to find in them what they were meant to be, and "take each by his best handle."

In writing to one of his nearest friends through life, a gentleman of great charm and culture, Mr. Emerson said, probably about the new essay on "Love" or on "Friendship," a year before its publication:—

"I send you [a paper] of last winter's composition, a piece which I wrote with good heart, and trust you may find some sparks still alive in the cinders. The argument were fitter for rhyme, but that comes only by the special favor of the skies.... Certainly we discover our friends by the very highest tokens, and these not describable, often not even intelligible, but not the less sure to that augury which is within the intellect, and therefore higher. This is to me the most attractive of all topics, and, I doubt not, whenever I

get your full confession of faith, we shall be at one on the matter. Because the subject is so high and sacred, we cannot walk straight up to it; we must saunter if we would find the secret. Nature's roads are not turnpikes, but circles, and the instincts are the only sure guides."²⁷

While lecturing in Philadelphia, in January, 1843, he wrote to the same friend as follows:—

"I must thank the Quaker City, however, for a new conviction, that this whim called friendship was the brightest thought in what Eden or Olympus it first occurred. I think the two first friends must have been travellers.—I doubt you think my practice of the *finest art* to be bad enough, but friendship does not ever seem to me quite real in the world, but always prophetic; and if I wrote on the Immortality of the Soul, this would be my first topic. Yet is nothing more right than that men should think to address each other with truth and the highest poetry at certain moments, far as their ordinary intercourse is therefrom and buried in trifles. I will try if a man is a man. I will know if he feels that star as I feel it: among trees, does he know them and they him? Is he at the same time both flowing and fixed? Does he feel that Nature proceeds from him, yet can he carry himself as if he were the meanest particle? All and nothing? These things I would know of him, yet without catechism: he shall tell me them in all manner of unexpected ways, in his behavior and in his repose."

N0322: Journal, 1838. "At church I saw that beautiful child—and my fine, natural, manly neighbor, who bore the bread and wine to the communicants with so clear an eye and excellent face and manners.

.

²⁷ *Letters from Ralph Waldo Emerson to a Friend*. Houghton, Mifflin & Co., 1899.

"The softness and peace, the benignant humanity that hovers over our assembly when it sits down at the morning service in church."

N0323:

The tongue is prone to lose the way;
Not so the pen, for in a letter
We have not better things to say,
But surely say them better.

"Fragments on Life," *Poems*.

N0324: The high sidewalk under the warm sandy southern slope of hills opposite Mr. Emerson's house, on the "Great Road" to Boston, has a different climate from the rest of Concord, and so used to be a favorite walk in the cold half of the year. Mr. Alcott and Mr. Hawthorne lived on this road, and it was the venerable Squire Hoar's favorite walk. Not only these friends, but the farmers and laborers, the schoolgirls and the schoolboys would have been surprised if they had known with what respectful or admiring eyes Mr. Emerson looked on them from his study windows, and had heard his comments on them.

N0325: Milton, *Comus*.

N0326: Compare with this paragraph "The Park" in the *Poems*.

N0327: Journal, 1833. "My entire success, such as it is, is composed wholly of particular failures."

N0328:

When half-gods go
The gods arrive.

"Give All to Love," *Poems*.

N0329:

If love his moment overstay,
Hatred's swift repulsions play.

"The Visit," *Poems*.

N0330: Shakspeare, *Sonnet xxv*.

N0331: In his first letter to John Sterling, May 29, 1840, a few months before the publication of this essay, Mr. Emerson wrote: "I am a worshipper of Friendship, and cannot find any other good equal to it. As soon as any man pronounces the words which approve him fit for that great office, I make no haste: he is holy; let me be holy also; our relations are eternal; why should we count days and weeks? I had this feeling in reading your paper on Carlyle, in which I admired the rare behavior, with far less heed the things said; these were opinions, but the tone was the man."²⁸

N0332: The allusion is to Jones Very, of Salem, a mystic and ascetic, of whom an interesting account is given in Mr. Cabot's *Memoir of Emerson*, vol. i., chapter x., and a fuller one by Mr. W. P. Andrews, in his introduction to *Essays and Poems by Jones Very*. In a letter to Miss Margaret Fuller, written in November, 1838, Mr.

²⁸ Correspondence of Sterling and Emerson.

Emerson wrote: "Very has been here lately and stayed a few days, confounding us all with the question whether he was insane. At first sight and speech you would certainly pronounce him so. Talk with him a few hours, and you will think all insane but he. Monomania or monosania, he is a very remarkable person; and though his mind is not in a natural, and probably not in a permanent state, he is a treasure of a companion, and I had with him most memorable conversations."

He records that Very said to him: "I always felt, when I heard you read or speak your writings, that you saw the truth better than others, yet I felt that your spirit was not quite right. It was as if a vein of colder air blew across me."

N0333: This quotation is from Montaigne, Book I., chapter xxxix., "A Consideration upon Cicero."

N0334: In converse with Nature he felt that the same rule held. "Nature says to man, 'One to one, my dear.'"—*Journal*.

N0335: Compare with this paragraph his poem "Étienne de la Boëce."

N0336: From the recent notice of the death of a business man of integrity in Chicago, who was also a lover of good books and a loyal friend of Mr. Emerson, I copy this anecdote showing Mr. Emerson's conscience, and that of his friend also, in the matter of rashly endeavoring to come near to those whom we admire by letters of introduction. "Mr.—wanted to know Mr. Longfellow and desired Mr. Emerson to introduce him. The cautious philosopher replied that he would do so if his young friend could truthfully say that he stood in such relation to the genius of the poet as made it

fitting. This the youth decided that he could not do. There seems to me something charming in Mr. Emerson's reliance on the integral delicacy of the boy to guard him against a possible false position."

N0337: Here followed in the first edition these two sentences: "The only money of God is God. He pays never with anything less or anything else."

N0338: See the poem "Rubies."

N0339: This paragraph closes in the first edition with the sentence, "It is the property of the divine to be reproductive."

N0340: Carrying out the comparison of friends and books in the chapter "Nominalist and Realist" in the second series of *Essays*, Mr. Emerson writes: "I find most pleasure in reading a book in a manner least flattering to the author....I read for the lustres, as if one should use a fine picture in a chromatic experiment for its rich colors."

N0341: "The astronomers are very eager to know whether the moon has an atmosphere; I am only concerned that every man have one. I observe however that it takes two to make an atmosphere. I am acquainted with persons who go attended with this ambient cloud."—"Aristocracy," *Lectures and Biographical Sketches*.

N0342: This trait may be found in all Mr. Emerson's letters to his friends, especially those to Carlyle, wherein all his friend's petulances and faults are ignored.

PRUDENCE

THE GREATER part of this essay was probably given as a lecture in Boston, the seventh in the course on "Human Culture" in the winter of 1837–38. Mr. Emerson was by education and temperament prudent, but in no petty way. Knowing his want of practical faculty, and the idea of debt or of dependence on others being abhorrent to him, he strove to practise honorable economies. But every humblest fact was valuable to him as a symbol, and he loved to detect the workings of the great laws in small things. Recalling in one of his note-books two or three of his experiences as a young Boston minister, he wrote, "One day when I read a sermon of which the text might have been 'Don't mind trifles,' old William Little said to me at the door that, 'if he were to make the sermon, he should have taken the other side.'"

In the chapter on "Swedenborg" in *Representative Men*, he said, "Malpighi, following the high doctrines of Hippocrates, Leucippus and Lucretius, had given emphasis to the dogma that nature works in leasts,—'tota in minimis existat natura.'" So accepting Plato's word that the macrocosm may be known by the microcosm, in

spite of poetic traditions, yet, as a poet, and still young, he found pleasure in a

Theme no poet gladly sung,
Fair to old and foul to young,—

as he calls it in the motto which he wrote for the second edition. An example of the fitness and seeming originality of his English, by steadily holding its classic foundations in mind, occurs in the diminutive in the fourth line, where the little arts of which great arts are built find due recognition.

N0343: The other Garden is described in his poem of that name. Although in the early years of his housekeeping, for economy's sake and health's, he hoed and weeded, he soon found that a higher prudence required his spending the time hitherto given to the home garden in that by Walden's shores, whence he brought home better and more lasting fruit.

N0344: This is a good illustration of the pleasure Mr. Emerson took in "Aspects"; in coming to firm, homely ground after a high flight.

N0345: The influence of his reading of the old philosophers, and also of Swedenborg, shows in this paragraph.

Mr. Emerson loved to look for what his friend Whittier called—

The unsung beauty hid life's common things below.

N0346: "Nature is too thin a screen; the glory of the one breaks in everywhere."—"The Preacher," *Lectures and Biographical Sketches*.

N0347: A less complimentary estimate of proverbs than that given in the essay on "Compensation." It recalls Stevenson's essay "Crabbed Age and Youth" in *Virginibus Puerisque*, in which, among other strictures on cowardly and prudential proverbs, he says that, according to them, "never to forget your umbrella through a long life would seem to be a higher and wiser flight of achievement than to go smiling to the stake; and so long as you are a bit of a coward, and inflexible in money matters, you fulfil the whole duty of man."

N0348: The necessary interruptions of his study and writing that befell Mr. Emerson as a householder he bore with philosophy. He never allowed himself to complain of mischances in the house or abroad, unless later to serve up his misfortune in an amusing manner. Of one thing he was sure,—that there was some modest share of benefit in it, and that was his business to find.

N0349: The austere benefits which the North gives to her children are celebrated in the *Poems* in the lesson which the hardy Titmouse gives to the wanderer in the woods, in "Voluntaries," a war poem, and in the lines in "May-Day:"—

Titan-born, to hardy natures
Cold is genial and dear.
As Southern wrath to Northern right
Is but straw to anthracite;
As in the day of sacrifice,

When heroes piled the pyre,
The dismal Massachusetts ice
Burned more than others' fire,
So Spring guards with surface cold
The garnered heat of ages old.

Of course the constant consideration of the effect of Slavery and Free Labor on our people before the Civil War emphasized these distinctions.

N0350: Amidst the stream of visionaries flowing by him, often without visible means of support, it was important that some one should stand firm, with feet planted on the ground.

N0351: Compare his poem "Limits," *Poems*, Appendix.

N0352: Mr. Emerson could never hear with patience of the divorce of Morals from Intellect. There was always abatement of his enjoyment of Goethe because of his shortcomings in morals, and hence in insight.

N0353: In scattered verses on "The Poet" or "The Discontented Poet," written in the same years with these *Essays*, and only gathered after Mr. Emerson's death in the Appendix to the *Poems*, he describes these floods and ebbs in the passage beginning—

Ah! happy if a sun or star
Could chain the wheel of Fortune's car.

N0354: Again the ancient doctrine of "The Flowing," shown in the hurrying life of the Yankee of the nineteenth century.

N0355: "In proeliis oculi primi vincuntur" (Tacitus); a quotation often used by Mr. Emerson, but without giving the source.

N0356: "He who taketh the sword shall perish by the sword" was a rule that Mr. Emerson held to with regard to argument, whether as a weapon offensive or defensive. His feeling on this subject is shown in his second letter to his friend, Rev. Henry Ware, after the Divinity School Address, printed by Mr. Cabot in his *Memoir of Emerson*, vol. ii., p. 689.

N0357: By adhering to this simple rule and faith in "The Universal Mind," Mr. Emerson, as Dr. Holmes said, "could go anywhere and find willing listeners among those farthest in their belief from the views he held. Such was his simplicity of speech and manner, such his transparent sincerity, that it was next to impossible to quarrel with the gentle image-breaker." Suggesting George Herbert's teaching in his "Church Porch:"—

Scorn no man's love, though of a mean degree;
(Love is a present for a mightie king.)
Much lesse make any one thine enemy.
As gunnes destroy, so may a little sling.

HEROISM

THIS ESSAY is probably the lecture of that name essentially as delivered in the course on "Human Culture" in Boston, in the winter of 1837–38.

The homage which Mr. Emerson felt bound to render to the lowly virtues of Prudence, after dealing with "the fine lyric words of Love and Friendship," made an interesting contrast for his hearers, the more effective by his leading them up to the heights of Heroism in the succeeding lecture.

In a lecture called "The Present Age," delivered in the following year, this expression occurs,—his recognition of the awakening of those days to the need of individual, social, and political reform:—"Religion does not seem now to tend to a *cultus*, but to a heroic life. He who would undertake it is to front a corrupt society and speak rude truth, and he must be ready to meet collision and suffering."

The saying of Mahomet alone served for motto in the first edition.

N0358: In this list of plays, all from Beaumont and Fletcher, Mr. Emerson evidently trusted to his memory, and gave to one the

name from a leading character. There is no play by the name of "Sophocles," but the extract given is from a piece called "Four Plays in One," the special play being "The Triumph of Honor." This is founded on a story of Boccaccio's in the *Decameron*, the tenth day and the fifth novel.

N0359: Burley's description of the incorruptibility of the young nobleman in *Old Mortality*, chapter xlii.,—a passage often repeated by Mr. Emerson to his children.

N0360: From youth to age he took delight in Plutarch, the *Lives* and the *Morals*. This passage from Mr. Emerson's Introduction to Professor William Watson Goodwin's translations of the *Morals* (printed also in *Lectures and Biographical Sketches*) shows what attracted him to Plutarch. "His extreme interest in every trait of character and his broad humanity lead him constantly to *Morals*, to the study of the Beautiful and Good. Hence his love of heroes, his rule of life, and his clear convictions of the high destiny of the Soul."

N0361: This paragraph is suggestive of much that is written in "Aristocracy," in *Lectures and Biographical Sketches*.

N0362:

So nigh is grandeur to our dust,
 So near is God to man,
 When Duty whispers low, *Thou must*,
 The youth replies, *I can*.

.

Best befriended of the God

He who, in evil times,
Warned by an inward voice,
Heeds not the darkness and the dread,
Biding by his rule and choice,
Feeling only the fiery thread
Leading over heroic ground,
Walled with mortal terror round,
To the aim which him allures,
And the sweet heaven his deed secures.

"Voluntaries," *Poems*.

N0363: From Shakspeare's *Henry IV.*, Part II., Act II., Scene ii.

N0364: In the translation of the *Oriental Geography* of Ibn (or Ebn) Haukal, by Sir George Ouseley, published in London in 1800, this anecdote may be found with somewhat different wording.

N0365: One of the most remarkable instances of Mr. Emerson's applied philosophy is the absence in his journals of complaint of untimely, exacting, and wearisome visitors, towards whose bodies and souls he had to exercise hospitality. Once or twice nature asserts herself by a half-humorous explosion of protest.

The subjects that inspired the poem "The Visit" were probably unaware that they outstayed their welcome.

N0366: Another version of this story is told by Plutarch in his "Apothegms of Kings and Great Commanders," in the *Morals*, "When Pætilius and Quintus accused him of many crimes before the people; 'On this very day,' he said, 'I conquered Hannibal and Carthage; I for my part am going with my crown on to the capitol to sacrifice; and let him that pleaseth stay and pass his vote upon

me.' Having thus said, he went his way; and the people followed him, leaving his accusers declaiming to themselves."

N0367: An allusion to the charm of "the novel, hardly smuggled into the tolerance of father and mother" by the schoolboy, occurs again in "Domestic Life" in the passage which describes the home life of the Emerson brothers in childhood.

N0368:

Because I was content with these poor fields,
Low, open meads, slender and sluggish streams,
And found a home in haunts which others scorned,
The partial wood-gods overpaid my love
And granted me the freedom of their state.

"Musketaquid," *Poems*.

N0369: "Scorn trifles, lift your aims; do what you are afraid to do: sublimity of character must come from sublimity of motive." These were the teachings which the Emerson boys received in their youth from their brilliant, loving, and eccentric aunt, Miss Mary Moody Emerson. Her nephew has left an account of her in *Lectures and Biographical Sketches*. His words concerning her are carved upon her gravestone in Concord Cemetery: "She gave high counsels. It was the privilege of certain boys to have this immeasurably high standard indicated to their childhood, a blessing which nothing else in education could supply."

N0370: The Rev. Elijah P. Lovejoy, a Presbyterian minister of intelligence, courage and blameless character, devoted himself to the cause of awakening public sentiment in the Southern and

Border States to the wrong of Slavery and its evil results, and become editor of the *St. Louis Observer*. His press was destroyed by a mob, and he and his family were driven from the city. He then settled in Alton, Illinois, and established his paper, maintaining anti-slavery views. Riots resulted, and three presses, furnished in succession by friends of the cause, were destroyed. Mr. Lovejoy sent for another press. A public meeting of citizens was called because of the excited state of public opinion in the city. Resolutions were passed requiring Lovejoy to retire from the charge of his paper. He stood upon his rights under the Constitution to publish his beliefs freely. To the demand that in deference to mob law he should yield up his post, he said: "This I *never* will do. God in his providence—so say all my brethren, and so I think—has devolved upon me the responsibility of maintaining my ground here; and, Mr. Chairman, I am determined to do it. A voice comes to me from Maine, from Massachusetts, from Connecticut, from New York, from Pennsylvania,—yea, from Kentucky, from Mississippi, from Missouri, calling upon me in the name of all that is dear in heaven or earth to stand fast, and by the help of God *I will stand*. I know I am but one and you are many. My strength will avail but little against you all. You can crush me if you will, but I shall die at my post, for I cannot and will not forsake it." The press arrived and was lodged by his friends in a stone warehouse belonging to one of a gallant little company who undertook to defend the right of free speech. On the night of November 7, 1837, the mob demanded the press. The city authorities gave no protection. Mr. Lovejoy's friends refused to surrender and were attacked. They resisted, and when the building was set on fire, Lovejoy coming out to prevent it was shot dead.

Mr. George P. Bradford, one of Mr. Emerson's nearest friends, described to me the occasion when he delivered this discourse

in Boston. Towards the end of the lecture, while carrying his audience—the cultivated people of Boston—with him, in full sympathy with devoted courage in other times and lands, suddenly, looking his hearers in the eyes, he brought before them the instance in their own day and country, and told of the martyrdom of Lovejoy for the right of free speech. Mr. Bradford said that a cold shudder seemed to run through the audience at this calm braving of public opinion twenty years before its ripening in the great war for freedom. Of course Lovejoy had other defenders in Boston, notably Wendell Phillips, who first entered the lists as an anti-slavery champion at the time of his slaying.

N0371:

Freedom's secret wilt thou know?
Counsel not with flesh and blood;
Loiter not for cloak or food;
Right thou feelest such to do.

N0372: These lines were evidently quoted from memory from "A Dirge," one of Tennyson's early poems. The burden, "Let them rave," runs through all the verses. The following one comes as near the lines as quoted as any of them:—

Thou wilt not turn upon thy bed;
Chaunteth not the brooding bee
Sweeter tones than calumny?
Let them rave.
Thou wilt never raise thine head
From the green that folds thy grave—
Let them rave.

THE OVER-SOUL

THIS ESSAY was not given as a lecture in the Boston courses. Portions of it came from "Religion" in that on the "Philosophy of History" (1836–37), from "Holiness" in that on "Human Culture" (1837–38); much was taken from the "Doctrine of the Soul," the first lecture in the course on "Human Life," and a little from "School" in the same course.

Mr. George Willis Cooke in his *Life of Emerson* speaks of the influence first exerted by German thought in this country about the year 1830, received mainly through Coleridge as a medium, in opposition to the utilitarian views held by English moralists. I quote from his interesting chapter on "The Era of Transcendentalism:" "The new thought was everywhere a reaction against it [the philosophy of Locke and Bentham, and of many English Unitarians]....It declared that man has innate ideas, and a faculty transcending the senses and the understanding. It identified morality and religion, and made intuition their source. Coleridge calls this transcendent faculty Reason, and regarded it as the immediate beholding of supersensual things. He says it cannot be called a faculty, and much less a personal property

of the human mind. We do not possess it, but partake of it. It is identical with the Universal Reason, a spark from which enters the human mind. He says there is but one reason, which all intelligent beings share in, and it is identical in them all. This idea became most fruitful in Emerson's mind, the source of his doctrine of the Over-Soul."

It is certain that Mr. Emerson set a high value on Coleridge's teachings, through which he first came in contact with German ideas, but his eager readings of Plato, beginning in college, led him later to Plotinus, Porphyry, Synesius, Proclus, and the other Neoplatonists influenced by Oriental thought. These "great spiritual lords who have walked in the world," "the high priesthood of the pure reason,"²⁹ had given him a broader conception than contemporary preachers entertained of "Him in whom we live and move and have our being."

Dr. Holmes, in commenting on "The Over-Soul," says: "It is a curious amusement to trace many of these thoughts and expressions to Plato, or Plotinus, or Proclus, or Porphyry, to Spinoza or Schelling, but the same tune is a different thing according to the instrument on which it is played. There are songs without words, and there are states in which, in place of the trains of thought moving in endless procession with ever-varying figures along the highway of Consciousness, the soul is possessed by a single all-absorbing idea, which, in the highest state of spiritual exaltation, becomes a vision."

The only motto which was prefixed to the essay in the first edition was that from the *Psychozoia, or Life of the Soul*, Canto II., 19, by Henry More, printed in 1620. This verse was included by Mr.

²⁹ In the last pages of the essay on "Intellect."

Emerson in his collection of poems, *Parnassus*, where he gave it the title "Euthanasia."

N0373: Hardly anywhere in his writings has Mr. Emerson stated his belief in the sure triumph of beneficent law more compactly than in this sentence, suggesting that the leaven of conscience would work to the salvation of the race.

N0374: This expression recalls the line in which Mr. Emerson took great pleasure in a poem sent to him by Mr. George E. Tufts, of New York:—

Life is a flame whose splendor hides its base.

N0375: Again the doctrine of "The Flowing":

Far seen the river glides below,
Tossing one sparkle to the eyes.
I catch thy meaning, wizard wave;
The River of my Life replies.

"Peter's Field," *Poems*, Appendix.

N0376: Dr. Holmes said that "In the 'Over-Soul' Emerson attempted the impossible. He is as fully conscious of this fact as the reader of his rhapsody,—nay, he is more profoundly penetrated with it than any of his readers....The 'Over-Soul' might almost be called the *Over-flow* of a spiritual imagination."

N0377: Compare the essay on "Demonology" in *Lectures and Biographical Sketches*.

N0378: This suggests the expressions of Coleridge as rendered by Mr. Cooke in the note at the beginning of this chapter.

N0379: This, as Mr. Emerson says elsewhere, is the weakness of talent as compared with genius.

N0380: Found in a list of Spanish proverbs given in one of his early journals.

N0381:

Olympian bards who sung
Divine ideas below,
Which always find us young,
And always keep us so.

Lines from the "Ode to Beauty," *Poems*; used also as motto to "The Poet," in *Essays, Second Series*.

N0382: In the first edition this last clause is thus given: "All else is idle weeds for her wearing."

N0383: The doctrine of Each in All, the "Ἐν καὶ πᾶν of Xenophanes, and "the venerable and awful Parmenides," is also a familiar thought of Plato.

N0384: Through his preaching, and increasingly through his lecturing experiences, Emerson honored his hearers, however humble, by not "coming down to them," but reached them by his assuming their virtue, and speaking to the "common soul" in them.

N0385: A favorite image with him, drawn from the Copernican astronomy, which, by considering the system from the central sun, did away with the perturbations apparent in the Ptolemaic system. This is spiritualized in the poem "Uriel."

N0386: John Murray Forbes, a great and silent power for good in the State and Country during and after the Civil War, and one of Mr. Emerson's valued friends, used to tell his children: "*So the thing is done*, it is of no consequence who does it."

N0387: "We know better than we do," and "We are wiser than we know," recur in Emerson's teachings. The line in "The Problem,"—

He builded better than he knew,—

has passed into a proverb.

N0388: In the end of the poem "Worship" this image is rendered in verse.

N0389: With this may be compared a paragraph in the essay "Education" in *Lectures and Biographical Sketches*.

N0390: Here, as also some three pages earlier in this essay, recurs the favorite image—

Being's tide
Swells hitherward, and myriads of forms
Live, robed with beauty, painted by the sun;
Their dust, pervaded by the nerves of God,
Throbs with an overmastering energy

Knowing and doing.

"Pan," *Poems*, Appendix.

N0391: He quotes Bacon elsewhere as saying, "Nature is commanded by obeying her."

N0392:

Blasted with excess of light.

Gray, *Progress of Poesy*.

N0393: It was Emerson's custom to answer the crude inquiries on great subjects of his young visitors courteously, not directly, but in a way to show the great proportions of the subject, and set them really thinking. "The gods like indirect names and dislike to be named directly."

N0394: This is like a passage in "Demonology," in *Lectures and Biographical Sketches*.

N0395: Believing in the indestructibility of spirit and of matter, and regarding the latter as a method of instruction, he never disquieted himself, but, assured that he and all men shared in the universal existence, did not care to peep beyond the curtain. He said, "I am. The whole fact is here or nowhere."

N0396: The Spirit lodged in man has spurred him to seeking light, and works out the answer in his life.

They reckon ill who leave me out;

When me they fly, I am the wings; I am the doubter and the doubt,

And I the hymn the Brahmin sings.

"Brahma," *Poems*.

N0397:

Thou art the unanswered question.

"The Sphinx," *Poems*.

God enters by a private door into every individual.—"Intellect," *Essays, Second Series*.

N0398: In his first letter to John Sterling Emerson said, speaking of Sterling's paper on Carlyle, "In it I admired the rare behavior, with far less heed the things said; these were opinions, but the tone was the man."

N0399: Journal, 1851. "There is something—our brothers over the sea do not know it or own it; Scott, Southey, Hallam, and Dickens would deny and blaspheme it—which is setting them all aside, and the whole world also, and planting itself forever and ever."

N0400:

Himself from God he could not free.

"The Problem," *Poems*.

N0401: This image is used in some lines on the transient character of grief, printed among the "Fragments on Life" in the Appendix to the *Poems*.

N0402: Emerson believed that in saying "I and the Father are one" Jesus meant to teach that all men could become channels of deity, instancing himself.

N0403: Dr. Holmes spoke of him as "an iconoclast without a hammer, who took down our idols from their pedestals so tenderly that it seemed like an act of worship." In quoting this passage, Mr. Cabot adds: "That is well said. But I am not sure that he took them down, or ever thought it worth while that they should come down so long as they were really objects of worship. What he wished to disturb was formalism,...the gazing after past revelations until we are blind to the present."

N0404: This thought is found in the second motto of "Compensation," "And all that Nature made thine own," etc.

N0405: This sentence was first an entry made by Mr. Emerson in his Journal on the eve of going to deliver his Divinity School Address in 1838. The sentence and the entire paragraph were a portion of a sermon preached, probably in the following winter, in East Lexington. Mrs. Emerson cared so much for this passage that she gave it to her children to read while they were very young.

N0406:

No ray is dimmed, no atom worn,
My oldest force is good as new,
And the fresh rose on yonder thorn
Gives back the bending heavens in dew.

"Song of Nature," *Poems*.

CIRCLES

NO PART of this essay appears to have been taken from earlier papers, and no lecture of that name is recorded. On the 12th of September, 1840, in a letter to Miss Elizabeth Hoar, Mr. Emerson wrote: "My chapter on 'Circles' begins to prosper, and when it is October I shall write like a Latin Father."

His friend, William Ellery Channing, thus spoke of the range of Emerson's mind:—

The circles of thy thought shine vast as stars,
 No glass shall round them,
 No plummet sound them,
They hem the observer like bright steel wrought bars,
 And limpid as the sun,
 Or as bright waters run
From the cold fountain of the Alpine springs,
Or diamonds richly set in the king's rings.

Dr. Richard Garnett³⁰ writes: "The object of this fine essay quaintly entitled 'Circles' is to reconcile this rigidity of unalterable law with the fact of human progress. Compensation illustrates one property of a circle, which always returns to the point where it began, but it is no less true that around every circle another can be drawn....Hence there is no security but in infinite progress.... Emerson followed his own counsel; he always keeps a reserve of power. His theory of 'Circles' reappears without the least verbal indebtedness to himself in the splendid essay on 'Love.'"

The poem "Uriel" should be read in connection with this essay.

N0407:

Line in Nature is not found,
Unit and Universe are round.

"Uriel," *Poems*.

N0408:

Another morn has risen on mid-noon.

Milton, *Paradise Lost*, V, 310.

The last clause in the sentence suggests one by Mr. Emerson's neighbor poet, William Ellery Channing, in "The Poet's Hope,"—

If my bark sinks, 't is to another sea.

N0409: The old doctrine of Heracleitus again, brought to the modern use of progress by evolution. The prophecies of 1841

³⁰ *Life of Ralph Waldo Emerson*, by Richard Garnett, LL. D., London, Walter Scott, 1888.

made in the later portion of this paragraph have been strangely fulfilled in sixty years.

N0410:

Giddy with motion, Nature reels,
Sun, moon, man, undulate and stream,
The mountains flow, the solids seem,
Change acts, reacts; back, forward hurled,
And pause were palsy to the world.

"The Poet," *Poems*, Appendix.

N0411: "Throw a stone into the stream, and the circles that propagate themselves are the beautiful type of all influence."—*Nature*, chapter iv.

The ripples in rhymes the oar forsake.

"Woodnotes," II., *Poems*.

N0412: It was a curious superstition in the Middle Ages that evil spirits could not get out of a circle drawn around them. Some American Indians leave a slight break in the colored circles that decorate their baskets for the Devil to get out.

N0413:

Unless above himself he can
Erect himself, how poor a thing is man.

Samuel Daniels "To the Countess of Cumberland." (Quoted in "Civilization," *Society and Solitude*.)

N0414: The ideas expressed in this paragraph may also be found in the *Poems*.

Have I a lover
Who is noble and free?—
I would he were nobler
Than to love me.

"The Sphinx," *Poems*.

Heartily know,
When half-gods go
The gods arrive."

"Give All to Love," *Poems*.

See also "The Park."

N0415: It was Mr. Emerson's own habit in his lectures, after presenting strongly one side of his theme, suddenly to show the other aspect of it, almost ignored before. This might be done in another lecture of the course, but often in the same one.

In vain produced, all rays return.
Evil will bless, and ice will burn.

"Uriel," *Poems*.

N0416: In "The Poet," I. (Appendix), and in "Woodnotes," II., in the passage beginning, "Hearken once more," he tells of the instability of apparent permanencies.

N0417: The necessary alternation from books to nature, from society to solitude, was always urged by Mr. Emerson, the latter in

each case ranking the former. See the passage in "The American Scholar" beginning "Undoubtedly there is a right way of reading, so it be sternly subordinated."

See thou bring not to field or stone
The fancies found in books;
Leave authors' eyes, and fetch your own,
To brave the landscape's looks.

"Waldeinsamkeit," *Poems*.

N0418: The need of direct relation of the soul with God is dwelt upon at length in the latter part of the "Address to the Senior Class of the Divinity School" in *Nature, Addresses, and Lectures*: "Let me admonish you, first of all, to go alone...and dare to love God without mediator or veil," etc.

N0419: The welcome idea of the symbolism of Nature he received first from Plato, and it was this which gave him pleasure in Swedenborg's teachings. "The noblest ministry of Nature is to stand as an apparition of God."—*Nature*, chapter vii.

N0420: Compare the second motto of "Compensation" in this volume.

N0421: From Young's *Night Thoughts*.

N0422: Pyrrho of Elis (360–270 B.C.) taught that truth was unattainable, and that men should be indifferent to all external circumstances.

N0423: This consoling idea of Good out of Evil is taught in the motto for "Spiritual Laws" in this volume and in "Uriel" in the *Poems*.

The balance-beam of Fate was bent,
The bounds of good and ill were rent,
Strong Hades could not keep his own,
But all slid to confusion.

N0424: Dr. Holmes, referring to this paragraph, says: "But Emerson states his own position so frankly in his essay entitled 'Circles,' that the reader cannot take issue with him as against utterances which he will not defend."

N0425: His poem "Terminus" shows how Emerson met advancing old age.

INTELLECT

THIS LECTURE was not given in any of the Boston courses. Passages of no great length were taken from the lectures on "Literature" in the course on "The Philosophy of History" (1836–37), and from "The Doctrine of the Soul" and "Genius" in that on "Human Life" (1838–39).

Mr. Emerson never took any pleasure in systems of metaphysics. He even once said in a lecture, "Who has not looked into a metaphysical book? And what sensible man ever looked twice?" "Yet," as Mr. Cabot says in his Memoir, "the repulsiveness lay not in the subject, but in the way in which it is treated." He wished to "state the laws and powers of the mind as simply and as attractively as the physical laws are stated by Owen and Faraday." He welcomed all the scientific discoveries of his day for their symbolic value, assured that the same laws ruled mind and matter. Hence for years he planned a work on the Natural History of Intellect. He gave three lectures on that subject in England in 1848, and later others in America, especially two courses at Harvard College. But he was prevented by failing strength from completing the work he designed. After his death Mr. Cabot collected what matter

was available from the manuscripts, and this gives the title to the volume *Natural History of Intellect*.

The motto of this chapter appears in one of Mr. Emerson's notebooks as the third verse of a short poem which is included in the Appendix to the *Poems*, among the "Fragments on the Poet." The introductory verses run thus:—

Pale genius roves alone,
No scout can track his way,
None credits him till he have shown
His diamonds to the day.

Not his the feaster's wine,
Nor land, nor gold, nor power,
By want and pain God screeneth him
Till his elected hour.

N0426: Mr. Emerson at the age of nineteen was associated with his brother William, who taught a private school for young ladies in Boston. In this capacity he taught chemistry from some elementary text-book, possibly showing a few of the simpler experiments. Later he heard with great interest of the discoveries in that science from his wife's brother, Dr. Charles T. Jackson, an accomplished chemist and geologist. Each new fact he viewed as a symbol awaiting interpretation.

N0427: Journal, "Of the most romantic fact the memory is more romantic."

N0428: "Thoughts come into our minds by avenues which we never left open."

N0429: In the early part of "Natural History of Intellect" in the volume thus named, Intellect is considered "as an ethereal sea, which ebbs and flows, which surges and washes hither and thither, carrying its whole virtue into every creek and inlet which it bathes. To this sea every human house has a water front. But this force, creating nature, visiting whom it will and withdrawing from whom it will, making day where it comes and leaving night when it departs, is no fee or property of man or angel. It is as the light, public and entire to each, and on the same terms."

N0430: Mr. Emerson himself strove to render the thought that came to him truly, not to "meddle ambitiously" and spoil it by "what we miscal Art," as he said in his letter to Sterling.³¹ He brought kindred thoughts together, but purposely did not elaborate the argument, and left to the reader the pleasure of letting the electric spark pass and show the connection.

N0431: "It is a little seed," found in the first edition, is here omitted.

N0432: "Day creeps after day, each full of facts, dull, strange despised things....And presently the aroused intellect finds gold and gems in one of these scorned facts,—then finds that a day of facts is a rock of diamonds; that a fact is an Epiphany of God."—"Education," *Lectures and Biographical Sketches*.

N0433: The seeming contradiction by this sentence of what has gone before, as to the reception rather than the originating of ideas, is done away with by the author's strictly classic use of

³¹ Letters of Emerson and Sterling, No. IV.

the word *produce*,—to *bring forward* the ideas received, joined perhaps with others that shed light on them.

N0434:

Unless to thought be added will,
Apollo is an imbecile.

Lines from one of the Note-books.

N0435: "Excess of individualism, when it is not corrected or subordinated to the Supreme Reason, makes that vice which we stigmatize as monotonous,...or, as the French say, *enfant perdu d'une conviction isolée*, which give such a comic tinge to all society."—*Natural History of Intellect*.

N0436:

For thought, and not praise,
Thought is the wages
For which I sell days,
Will gladly sell ages,
And willing grow old,
Deaf and dumb and blind and cold,
Melting matter into dreams,
Panoramas which I saw,
And whatever glows or seems
Into substance, into law.

"Fragments on the Poet," *Poems*, Appendix.

N0437: The duties and sacrifice required of the scholar are dwelt on in "The American Scholar" in *Nature, Addresses, and*

Lectures, and in "The Man of Letters" and "The Scholar" in *Lectures and Biographical Sketches*.

N0438: The Egyptian god Horus is represented with his finger on his lips.

N0439: His counsel was always to "read a little proudly," and in life he urged that one should not mistake others' chivalries for one's own.

N0440: A name given to a group of philosophers, mostly Neoplatonists, from the mythical Hermes Trismegistus (thrice great), a Greek name for the Egyptian god Thoth, to whom many of these writings were ascribed.

N0441: This saying is quoted from Plotinus. It is evident from his mention of these masters of ancient thought and his markings on the fly-leaves of their books, that, following his custom, he rapidly found such things as were for him, and turning their abstruse pages "read for lustres." It was evidently the lofty tone that pleased him, and certain quotations and "Chaldean Oracles."

Mr. George Willis Cooke in his book on Emerson, chapter xix., gives an interesting brief abstract of the doctrines of the Neoplatonists.

ART

IN THE course on the "Philosophy of History" given in Boston in 1836–37, the third lecture was on "Art," following "The Humanity of Science," and preceding "Literature." Much from this lecture appears in this essay, but some pages come from "Eye and Ear," in the next year's course.

In Mr. Emerson's youth there were almost no works of art, except portraits, to be seen in New England. At a sad epoch of his life he landed in Italy and spent a few weeks there. He saw the statues in the museums of Naples and Rome. Looking for greatness of character through works of art, endowed with a good sense of form and fitness, but little for color, and none for technique, he evidently took great and lasting pleasure in the works of Michelangelo and Raphael in the Vatican. The temperance, simplicity and perfect taste of Greek art always charmed him. He saw the Elgin Marbles in London.

After his return he saw the paintings of Allston, enjoyed the drawings of Flaxman, and a friend, a connoisseur in art, lent him his collection of engravings and drawings, in which Mr. Emerson

took great pleasure.³² Among the artists he had few friends, but he read works on art, especially valuing them for the glimpses they gave of the artist at work, and his sayings.

Dr. Holmes, while praising the clothing by Emerson of the common aspects of life with the colors of his imagination, feels that the danger line was crossed when, in the motto to "Art," he would have us give even to

Barrows, trays and pans
Grace and glimmer of romance.

Yet he could do so, and see even planetary motion in a school-boy's play. Journal. "I saw a boy on the Concord Common pick up an old bruised tin milk pan that was rusting by the roadside, and, poising it on the top of a stick,...made it describe the most elegant imaginable curves."

N0442: Thomas Couture, in his admirable little book, *Méthode et Entretiens d' Atelier*, speaks thus of the portrait painter's duty of giving the best that can be seen in his sitter: "Faites faire à toutes vos formes, à toutes vos lignes, un travail ascensionnel vers ce que constitue la beauté, tout en restant cependant dans les limites du vrai, et vous obtiendrez un portrait ressemblant qui, à l' étonnement de tous, excepté pourtant celui que vous aurez représenté, semblera beaucoup moins laid que le modèle."

N0443: "The universal soul is the alone creator of the useful and the beautiful; therefore to make anything useful or beautiful

³² See *Letters of Emerson to a Friend*. Houghton, Mifflin & Co., 1899.

the individual must be submitted to the universal mind."—"Art," *Society and Solitude*.

N0444: These thoughts are expressed in his poem "The Problem" and in the essay on "History" in this volume.

"Every genuine work of art has as much reason for being as earth and sun."—"Art," *Society and Solitude*.

N0445: Selection, "the first office of art," and then what Ruskin calls "Principality,"—the concentration of interest, or focussing in a picture,—are dwelt upon in this paragraph, and the old doctrine of the Macrocosm shown in the Microcosm.

N0446: As stated by the squirrel to the mountain, in an early poem of Emerson's,—

Talents differ,
All is well and wisely put;
If I cannot carry forests on my back,
Neither can you crack a nut.

N0447: Mr. Emerson found, and said of himself, that, though he did not have a musical ear, he had "musical eyes." In the physical and metaphysical sense his eyes were opened. Like his Seyd,—

Beauty chased he everywhere,—

and he found what he looked for.

N0448: Mr. Emerson knew well the truth which the French artist insisted on to his pupils: "It is not true that one knows what one sees. One sees what one knows."

This paragraph was taken from the lecture "Eye and Ear" in the course on "Human Culture."

N0449: An instance of his happy use of his classical studies in the choice of this best yet unusual word.

N0450:

Coelum non animum mutant

Qui trans mare currunt.

Horace.

N0451: See *Hamlet*, Act I., Scene v.

N0452: In the "Fragments on the Poet," in the *Poems*, he tells of a random word, overheard from the Muse,—

I travelled and found it at Rome;

Eastward it filled all Heathendom,

And it lay on my hearth when I came home.

N0453: "Newton did not exercise more ingenuity, but less than another to see the world."

"Art," *Society and Solitude*.

N0454: His application of the evolution doctrines of Hunter and Lamarck appears in the words *tendency* and *effort*.

N0455: With "the negative," the dismal, or sceptical in painting or in writing he had no sympathy.

N0456: This paragraph seems a strong instance of that quality of Mr. Emerson of stating aspects without qualification, against which he warns his readers in "Circles": "When I obey my whims, let me remind the reader that I am only an experimenter. Do not set the least value on what I do, or the least discredit on what I do not, as if I pretended to settle any thing as true or false....I simply experiment, an endless seeker, with no Past at my back." He valued painting, and sculpture more, and the motto, written long after the essay itself, shows his feeling of the necessity and blessing of art.

N0457: The low state of art in his day and country should be remembered.

N0458: Emerson's far sight and faith went beyond the materialism of his age and country, regarding these as a necessary stage in evolution.

ESSAYS: SECOND SERIES

THIS SECOND book of Essays followed the first by a three years' interval, allowing time for the rehearsal of the lectures, or rather the trial of them on assemblages of men and women in country villages, and before more cultivated, if not more critical, audiences in the city. During that time the matter was often rearranged and extended, and always severely pruned. The book was published by James Munroe & Co., of Boston, in 1844. The papers of the time show that it was better received than either of its predecessors. The Rev. Dr. Hedge, writing in the *Christian Examiner*, praising the *Essays*, though troubled at some expressions with regard to Jesus, went so far as to say that they "were destined to carry far into coming time their lofty cheer and spirit-stirring notes of courage and hope." Chapman, the English publisher, had written to Mr. Emerson asking him to send some work not yet published, for which he would try to get and maintain copyright, and allow half profits to the author. So the book appeared in America and England about the same time.

Carlyle wrote in November: "Your English volume of *Essays*, as Chapman probably informs you by this Post, was advertised

yesterday, 'with a Preface from me.' That is hardly accurate—that latter clause. My 'Preface' consists only of a certificate that the Book is correctly printed, and sent forth by a Publisher of your appointment, whom therefore all readers of yours ought to regard accordingly. Nothing more. There proves, I believe, no visible real vestige of a copyright obtainable here.... I will say already of it, It is a *sermon* to me, as all your other deliberate utterances are; a real *word*, which I feel to be such,—alas, almost or altogether the one such, in a world all full of jargons, hearsays, echoes, and vain noises, which cannot pass with me for *words*. This is a praise far beyond any 'literary' one; literary praises are not worth repeating in comparison. For the rest, I have to object still (what you will call objecting against the Law of Nature) that we find you a Speaker indeed, but as it were a *Soliloquizer* on the eternal mountain-tops only, in vast solitudes where men and their affairs lie all hushed in a very dim remoteness; and only *the man* and the stars and the earth are visible,—whom, so fine a fellow seems he, we could perpetually punch into, and say, 'Why won't you come and help us then? We have terrible need of one man like you down among us! It is cold and vacant up there; nothing paintable but rainbows and emotions; come down, and you shall do life-pictures, passions, facts,—which *transcend* all thought, and leave it stuttering and stammering!' To which he answers that he won't, can't, and does n't want to (as the Cockneys have it); and so I leave him, and say, 'You Western Gymnosophist! Well, we can afford one man for that too. But—!'—By the bye, I ought to say, the sentences are very *brief*; and did not, in my *sheet* reading, always entirely cohere for me. Pure genuine Saxon; strong and simple; of a clearness, of a beauty—But they did not, sometimes, rightly stick to their foregoers and their followers; the paragraph not as a beaten *ingot*, but as a beautiful square *bag of duck-shot* held together by canvas!

I will try them again, with the Book deliberately before me. There are also one or two utterances about 'Jesus,' 'immortality,' and so forth, which will produce wide-eyes here and there. I do not say it was wrong to utter them; a man obeys his own Dæmon in these cases as his supreme law."

In Mr. Emerson's answer, freely acknowledging himself to be a poor transmitter of celestial law, his faith in the ideals and intelligence of his countrymen at large shines conspicuous. An audience of "middle class" hearers being attracted and held by such discourses was a thing incomprehensible to his English friends.

DECEMBER, 1844.

My knowledge of the defects of these things I write is all but sufficient to hinder me from writing at all. I am only a sort of lieutenant here in a deplorable absence of captains, and write the laws ill as thinking it a better homage than universal silence. You Londoners know little of the dignities and duties of country lyceums. But of what you say now and heretofore respecting the remoteness of my writing and thinking from real life, though I hear substantially the same criticism made by my countrymen, I do not know what it means. If I can at any time express the law and the ideal right, that should satisfy me without measuring the divergence from it of the last act of Congress. And though I sometimes accept a popular call, and preach on Temperance or the Abolition of Slavery, as lately on the 1st of August, I am sure to feel, before I have done with it, what an intrusion it is into another sphere, and so much loss of virtue in my own.

As to his call to speak on his favorite themes, he earlier wrote to a friend:—

"I am just announcing my new course of lectures [the matter later included in this volume], so far does the thirst of publishing my solitudes,

and the need sometimes felt by me of a stated task—add even some small degree of superstition of a necessity to speak what one fancies people ought to hear—with other reasons, drive me.”

Readers of the Essays should bear in mind that most of them were spoken man to man. The thoughts were received—so the speaker held—and reported as truly as he could, but what labor was spent on the form was in presenting them clearly and strongly in the plain English which is the language of the best poetry, and in illustrating them by anecdotes from the past and analogies of daily life and from advancing science. In the chapter “Emerson as Essayist,” in Mr. John Albee’s admirable *Remembrances of Emerson*, is a good account of the lecturer, his method and his audience.

THE POET

THE POET in Emerson was in these years struggling through impediment to expression. *Nature* has been called more of a rhapsody than an essay. In his solitary walks by day and night, he listened for the song of the pine-tree and the music of the stars, and he placed an Æolian harp in his study window while he wrote. It was the poetic side of philosophy, history, science and divinity that interested him. Seeing the harmonies of the Universe, he naturally longed to show them in poetry, the fitting form. His note-books at this period are full of trials to do so, and several of his poems had already appeared in the *Dial*. He had given another lecture, "The Poet," between "The Conservative" and "The Transcendentalist" in the course in Boston in the winter of 1841-42. Only a few paragraphs of this appear in the present lecture, and a few more in "Poetry and Imagination" in *Letters and Social Aims*. But in a poem often referred to in these notes, which Mr. Emerson never finished, so it was only printed in the Appendix to the collection of his verse, the same thoughts and high estimate of the office of the Poet appear that occur in the published and unpublished essays on this theme.

The first motto is taken from this poem, where in improved form it is found in the latter lines of the first part:—

But oh, to see his solar eyes
Like meteors which chose their way
And rived the dark like a new day, etc.

The second motto is taken from the "Ode to Beauty."

N0459: In "Literary Ethics" in *Nature, Addresses and Lectures*, early in its second division, is an interesting passage showing how Emerson, when he came from his studies in classic poetry to the wild woods, found "all new and undescribed:" "Further inquiry will discover...that not these chanting poets themselves knew anything sincere of these handsome natures they so commended," etc.

N0460: In the unpublished lecture "The Poet," alluded to in the introductory note, is this passage: "The sense of nature is inexhaustible. You think you know the meaning of these tropes of nature, and to-day you come into a new thought, and lo! all nature converts itself into a symbol of that, and you see it has been chanting that song like a cricket ever since the creation... 'T was the moral of the river, the rock and the ocean. The river, the rock and the ocean say 'Guess again.'"

N0461: The doctrine of the immanence of spirit—the universal mind—imaged in the doctrine of Heracleitus that Fire is the ultimate ground of the world.

N0462: This whole paragraph is from the earlier lecture "The Poet." Adopting the not altogether pleasing phraseology of the old physicians in their division of temperaments, he speaks of excess of phlegm as a safeguard (an image which he used again in the first of the "Fragments on Nature" in the *Poems*, Appendix), as Dr. Holmes used to speak of the nine parts of nitrogen being a diluent essential, of the one of the fiery stimulant, oxygen that we breathe.

He, foolish child, . . .
Thanked Nature for each stroke she dealt;
On his tense chords all strokes were felt,
The good, the bad, with equal zeal,
He asked, he only asked, to feel.

"The Poet," *Poems*, Appendix.

N0463: In *Representative Men* Mr. Emerson says of Plato, "The balanced soul was born;" and in this essay and in the poems "The Test" and "The Solution" he is counted in the highest class of Poets.

N0464: In the last pages of "The Transcendentalist" in *Nature, Address and Lectures*, and in many other essays this Trinity is spoken of.

N0465: The poet's pursuit of the universal Protean beauty is told of in the *Poems* in "Beauty," the motto to the essay of that name, and in the first of the "Fragments on the Poetic Gift."

N0466:

Song breathed from all the forest,

The total air was fame;
It seemed the world was all torches
That suddenly caught the flame.

"May Morning," *Poems*, Appendix.

N0467:

Ever the words of the gods resound;
But the porches of man's ear
Seldom in this low life's round
Are unsealed, that he may hear.

"My Garden," *Poems*.

N0468: The allusion here is probably to Tennyson, who had not come to his full strength; possibly to Mr. Emerson's unseen friend and correspondent in England, John Sterling, who died the year these essays were published.

N0469: In a letter Mr. Emerson spoke of the priority of music to thought in young scholars, and referring to the college declamations and exhibitions, and certain poems, said, "What fools a few sounding sentences and verses made of me and my mates!" To his children he often quoted these with amused affection.

N0470: Dr. Holmes quotes this sentence as one "meant for the initiated, rather than for him who runs, to read," and thus comments: "Does this sound wild and extravagant? What were the political ups and downs of the Hebrews? what were the squabbles of the tribes with each other or with their neighbors compared to the birth of that poet to whom we owe the Psalms,—the sweet singer whose voice is still the dearest of all that ever sang to the heart of

mankind?" Mr. Emerson looked along the heights of history and saw mainly the men of faith and insight who moved the masses. In the unpublished lecture on the Poet referred to he says, "A man apparently foolish and helpless, with nothing magnetic in him, who is a churl in the drawing-room, an idiot in the legislature,—hides himself in his garret from the pride and pity of men, and writes a poem which...is at first neglected, then kissed,—and it pushes all potentates from their thrones, changes the course of affairs in a few years, and actually wipes out the memory of that transient state of things under which he suffered when he existed." On the reverse of the sheet he noted a list of names of some "Poets," in the wider sense, as they came to mind, who have in their degree had such influence: Plato, Aristophanes, Tyrtæus, Rouget de Lisle, Rousseau, Machiavel, Voltaire, Tom Paine, Swift, Luther, Rabelais, Mahomet, Mirabeau.

N0471: His steady belief was that thought was common property, and not to be *defended*, and that all good teaching and poetry was affirmative, and by its merit made denials unnecessary.

N0472: Jamblichus, who lived in the fourth century B.C., was the pupil of Porphyry and the teacher of Proclus. He wrote on the Egyptian mysteries; also the Life of Pythagoras. Mr. Emerson, alluding to him in the essay "Books" in *Society and Solitude*, quotes the Emperor Julian's saying of him, "He was posterior to Plato in time, not in genius." In a letter in 1842 he mentions that he is reading Jamblichus's Life of Pythagoras.

N0473: From *An Hymne in Honour of Beautie*, Stanza xix.

N0474: Writing to Miss Elizabeth Hoar from Nantasket Beach in July, 1841, and telling of his reading, after speaking of his delight in Plato's *Phædrus*, *Meno* and the *Banquet*, he adds, "I have also three volumes new to me of Thomas Taylor's Translations, Proclus, Ocellus Lucanus, and Pythagorean Fragments."

N0475: Mr. Emerson liked to talk with stage-drivers and stablemen that drove him on New England roads, or across Illinois prairie, to his lectures, and enjoyed their racy vernacular and picturesque brag. On his walks he fell in with pot-hunters and fishermen, wood-choppers and drovers, and liked to exchange a few words with them. "I always felt as if every man I met was my master," he said.

N0476: This part of the essay is from the lecture "The Poet," which was written soon after the election of Harrison to the Presidency.

Journal, 1840. "The simplest things are always better than curiosities. The most imposing part of this Harrison celebration of the Fourth of July in Concord, as in Baltimore, was this ball, twelve or thirteen feet in diameter, which, as it mounts the little heights and slopes of the road, draws all eyes with a certain sublime movement, especially as the imagination is incessantly addressed with its political significance.³³ So the Log Cabin is a lucky watchword."

N0477: This recalls the last lines of the little poem "Limits," printed in the Appendix to the *Poems*, in which man's ignorance of animal life and feeling is spoken of (as also in the end of "History" in *Essays, First Series*). There, speaking of the rat, Mr. Emerson says,—

³³ "Keep the ball a-rolling" was the campaign watchword, with "Tippecanoe and Tyler too."

His wicked eye
Is cruel to thy cruelty.

N0478: In "A Letter" written at the time of the publication of these essays,—when the Fitchburg Railroad was just finished to Concord,—in the *Dial* (vol. iv.), also printed in *Natural History of Intellect*, Mr. Emerson, after his way, makes the best of its coming, thus: "To the railway we must say,—like the courageous lord-mayor at his first hunting, when told the hare was coming,—'Let it come in Heaven's name, I am not afraid on 't,'" and speaks of the unlooked-for social and political effects fast appearing.

N0479: Much of this paragraph came from the earlier lecture of the same title, and it should be read with "Woodnotes," II., in the *Poems*, written about the same time. It also suggests Mr. Emerson's reading. Thomas Taylor said, giving "the substance of Porphyry's Life of Plotinus," that Plotinus applied himself to the canons concerning the stars, but not according to a very mathematical mode, like the calculation of eclipses or measuring the distance from the sun to the earth, etc. "For he considered employment of this kind as more the province of the mathematician than the profound and intellectual philosopher. The mathematical sciences are indeed the proper *means* of acquiring wisdom, but they ought never to be considered as its end. They are the bridge, as it were, between sense and intellect by which we may safely pass through the night of oblivion over the dark and stormy ocean of matter to the lucid regions of the intelligible world. And he who is desirous of returning to his true country will speedily pass over this bridge without making any needless delays in his passage."

N0480: In the opening of the poem parallel with this essay, it is said of the Poet:—

The things whereon he cast his eyes
Could not the nations re-baptize,
Nor Time's snows hide the names he set,
Nor last posterity forget.

In the chapter "Language" in *Nature*, these thoughts of the origins of words are developed.

N0481: The Evolution concisely stated.

N0482: In his collection of "Fragments of Pindar" in the *Dial*, published this same year, Mr. Thoreau quoted this passage from Ælius Aristides: "Pindar used such exaggeration [in praise of poetry] as to say that even the gods themselves, when, at his marriage, Zeus asked them if they wanted anything, 'asked him to make certain gods for them who should celebrate these great works and all his creation with speech and song.'"

N0483: For a poem written in Emerson's youth on a sunrise seen by him from the hill opposite the Old Manse, his grandfather's house, see "Fragments on Nature" in the *Poems*.

N0484:

The gods talk in the breath of the woods,
They talk in the shaken pine, etc.

"The Poet," *Poems*, Appendix.

N0485:

Thee, gliding through the sea of form.

"Ode to Beauty," *Poems*.

N0486: It was his consolation that "Evil was only Good in the making."

N0487: "He who sings the holy decrees of the gods and pious heroes and the heaven of Jove, let him live sparsely, let herbs be his harmless food, and clear water from a beechen cup give him a sober draught. Let his youth be chaste and free from sin, his morals rigid and his name stainless. So lived Orpheus and Homer. For the poet is dedicated to the gods and is their priest."—Milton, *Elegia Sexta*, lines 55–78, translated.

N0488: Since the poet sees the permanent truth symbolized by each transient appearance, this is another version of the word of the Evangelist, "The truth shall make you free."

N0489: These lines come from the Dedication of Chapman's Homer.

N0490: This passage from "The Wif of Bathe's Tale" was a favorite of Mr. Emerson's:—

Take fire, and bere it to the derkest hous
Betwix this and the Mount of Caucasus,
And let men shette the dores and go thenne,
Yet wol the fire as faire lie and brenne
As twenty thousand men might it behold;

His office naturel ay wol it hold,
Up peril of my lif, til that it die.

N0491: Always eclectic in his reading, he wrote:—

That book is good
Which puts me in a working mood.
Unless to thought be added will,
Apollo is an imbecile.

"Fragments on the Poet," *Poems*, Appendix.

N0492:

The heavens that now draw him
With sweetness untold,
Once found,—for new heavens
He spurneth the old.

"The Sphinx," *Poems*.

Much to this purpose is in the earlier lecture on "The Poet," as, "Swedenborg had this vice, that he nailed one sense to each image,—one and no more." And he speaks there of the face of Nature as "a sympathetic cipher or alphabet, and to exist that it may serve man with a language....We say of man that he is grass, that he is a stream, a star, a lion, fire, a day;...these names are comparatively unaffecting in our ears, hearing them, as we do, merely caught by ear from others, and spoken without thought, but the man who first called another man Puppy or Ass was a poet, and saw at the moment the identity of nature through the great difference of aspect,...he could hear him bark or bray with a bestial necessity under the false clothing of man."

N0493: Perhaps the answer to "The Problem" in his *Poems*.

N0494:

All the forms are fugitive,
But the substances survive.

"Woodnotes," II., *Poems*.

N0495:

One who having nectar drank
Into blissful orgies sank;
He takes no mark of night or day,
He cannot go, he cannot stay,
He would, yet would not, counsel keep,
But, like a walker in his sleep
With staring eye that seeth none,
Ridiculously up and down
Seeks how he may fitly tell
The heart-o'erlading miracle.

"The Poet," *Poems*, Appendix.

N0496: Compare in "The Poet" the passage:—

Beside him sat enduring love,
Upon him noble eyes did rest,
Which, for the Genius that there strove,
The follies bore that it invest.

EXPERIENCE

THIS ESSAY was written at one of the critical epochs of Mr. Emerson's life. "The Angel troubled the pool." The old and the new were contending in him. His growth was not without pain. He bore "the yoke of conscience masterful," and this inheritance he fortunately could not shake off. But his sudden intellectual growth possibly made the yoke gall at times. He had cut loose from tradition and experienced the difficulties attendant on trying to live only according to each day's oracle. Life became experimental, and manifold experiments were suggested in that period of spiritual and social upheaval. He was severely tried in these years. In many places in his journals he gratefully recognizes his debt to the Puritan tradition of a virtuous ancestry and their inherited impulse. This carried him through the whirlpools or sloughs in which he saw many of the sons of the morning of that day sink. Grief came to him in heavy form—the death of his first-born child, of wonderful promise and charm. In this essay, which presents moods and aspects in an unusual degree of contrast, and of which he says, "I have set my heart on honesty in this chapter," he speaks of the speedy healing of this wound and his grieving at

the slightness of the scar left. In his desire for utter freedom from hypocrisy, he makes an overstrong statement. But his health and faith and great power of detachment shortened and soothed his suffering.

He passed through this epoch of unrest bravely, and came soon into that serene strength and happiness which remained for life.

I find no record of this essay delivered as a lecture. A very small part of it was taken from "Being and Seeming" in the course on "Human Culture" in 1837-38.

The motto would seem to have been written after the essay. The "lords of life" are named a little more fully in a paragraph near its closing portion. This image of a passing of demigods in procession pleased Emerson's fancy, and he often used it. The last lines show him aware of the unrestful character of the piece, and in sure faith of a harmonious solution of the difficulties on a better day.

The dear, dangerous lords that rule our life

are spoken of in his poem "Musketaquid."

N0497: In the procession of the "lords of life," Dream has been seen. In the paragraph near the end of the chapter, he is called Illusion. At the time when it was written, Mr. Emerson was becoming more acquainted with the ancient religion of India, in which Maya or Illusion bears such a part. The *Dial*, which he had lately edited, had quotations from the "Ethnical Scriptures," as they are there called, in several of its numbers.

N0498: His own want of animal spirits, unfitting him in his opinion for action or society, but serenely received as driving him

thence to solitary places to listen and report, is again and again dwelt upon by Mr. Emerson in his journals.

N0499: In a letter written to John Sterling in the previous year, he had said: "Truly, I think it a false standard to estimate health, as the world does, by some fat man, instead of by our power to do our work. If I should lie by whenever people tell me I grow thin and puny, I should lose all my best days. Task these bad bodies and they will serve us and be just as well a year hence, if they grumble to-day."

N0500: "Rhea having accompanied with Saturn by stealth, the Sun found them out, and pronounced a solemn curse against her, containing that she should not be delivered in any month or year; but Hermes afterwards making his court to the goddess, obtained her favor, in requital of which he went and played at dice with the Moon and won of her the seventieth part from each day, and out of all these made five new days, which he added to the three hundred and sixty other days of the year, and these the Egyptians... observe as the birthdays of their gods. Upon the first of these, as they say, Osiris was born, and a voice came into the world with him, saying, 'The Lord of all things is now born.'" —*Plutarch's Morals*, "Of Isis and Osiris."

N0501: Three critical writers of the eighteenth century.

N0502: The source of these lines cannot be found.

N0503: Ruggiero Boscovich, an Italian, author of a system of natural philosophy, which regarded the senses as immediately

cognizant, not of matter itself, but only of the attractive and repelling forces of particles.

N0504: In the journal whence this passage is taken Nature speaks more loudly,—“the death of my sweet Boy.” This was written at the same time with the second part of the Threnody beginning “The deep Heart answered, ‘Weepest thou?’” two years after the first part, when time and thought had “reduced the calamity within the sphere.”

N0505: In the poem *The Curse of Kehama*, by Southey.

N0506: “The young mortal enters the hall of the firmament.... On the instant, and incessantly, fall snow-storms of illusions.”—*Conduct of Life*, “Illusions.”

N0507: His creed was always onward; let your next act, and not your word, correct your past mistake.

N0508: Mr. Emerson was always troubled that most of Mr. Alcott’s hearers did not find the spot where the rays of his illumining thought focussed. Indeed, he admitted that, while Mr. Alcott’s angle of vision was wider than that of other men, the rays did not always appear to come together: “There are defects in the lens and errors of refraction and position, etc., to be allowed for,... but ‘t is the best instrument I have ever met with.”

N0509: Dr. Gamaliel Bradford.

N0510: The almost fatality of temperament was interesting to him, but it was an evening thought, and his steady faith disowned

it, as in the next pages. "Hear what the morning says and believe that" was his counsel.

N0511: The pseudo-science of Phrenology at this time attracted great attention in America. In a lecture in the course on New England in this same year, speaking of the restlessness of our people and their too ready acceptance of novelties, he said, "A hint like phrenology is exalted into a science to outwit the laws of nature and pierce to the courts of power and light by this dull trick."

N0512: "The soul is its own witness."—*Laws of Menu*, printed among the "Ethnical Scriptures" in the *Dial*.

N0513: The power of Effort, then accepted by few biologists, spiritualized.

N0514: "Still, it moves."—Galileo's remark on rising from his knees when, by command of the Court of the Inquisition, he made retraction of his heretical teaching that the Earth was not stationary and central, but moved around the Sun.

N0515: The answer to the child is the answer with which he often had to console himself when he could not meet the demands for special sympathy from his friends, or for enlistment in particular reform movements. "My reforms include, so will outlast, theirs," he said.

N0516: To come down from the timeless cloudland of the philosophers who visited him, to talk with a solid farmer or honest laborer, gave Mr. Emerson great comfort. It is told of him by Mr.

Albee that he left the discussion in the study, seeing through the window a man drive a load of wood into his yard, saying to his guests, "Excuse me. We have to attend to these things just as if they were real."

N0517: He was glad that the Brook Farm enterprise should be tried, and honored the motives of the Community, but from the first saw that a man's own problem could not be solved by a company.

N0518: A similar passage about "the American disease, a paralysis of the active faculties" of young men after leaving college, occurs among the *Papers from the Dial*, "A Letter," in *Natural History of Intellect*.

The quotation which occurs in both is probably from some of the sayings ascribed to Zoroaster.

N0519: See the quatrain "Nature," *Poems*.

N0520: Mr. Emerson's trust was rewarded by his experience. Looking for the best, even in humble people, he found it. His early resolve was to give only his best thoughts in his lectures: "Do not cease to utter them, and make them as pure of all dross as if thou wert to speak to sages and demi-gods, and be no whit ashamed if not one in the assembly should give sign of intelligence. Is it not pleasant to you—unexpected wisdom? depth of sentiment in middle life? persons that in the thick of the crowd are true kings and gentlemen without the harness and the envy of the throne?"

N0521: Mr. Emerson's "content in these low fields" of Concord, and life there, is told in "Musketaquid" in the *Poems*.

N0522: Dr. Garnett,³⁴ Mr. Emerson's English biographer, seems a little troubled by this evidence of the period of unrest that he was going through, and thus comments: "The essay on 'Experience' seems at first a singular discourse for a preacher of righteousness. It must be regarded as an endeavour to atone for previous overstatements by a frank recognition of the unmoral aspects of the universe....The essay is full of the apparent contradictions established by experience, but concludes that experience indefinitely protracted will reconcile all."

In "The Park" (*Poems*) the thought of this passage will be found.

N0523: In this passage is a strange mixture of the "saving common-sense" of Mr. Emerson, and the Poet's attitude, sitting in the sun and minding his rhyme while

Sad-eyed Fakirs swiftly say
Endless dirges of decay,

and letting

Theist, atheist, pantheist,
Define and wrangle how they list.

"Saadi," *Poems*.

N0524: Thoreau in his *Walden* humorously tells of his "half-witted and one-and-a-half-witted visitors" there.

N0525: "Everything in the Universe goes by indirection. There are no straight lines."—*Journal*.

³⁴ *The Life of Emerson*, by Richard Garnett, LL.D. London, Walter Scott, 888.

A very similar passage is found near the end of "Gifts" in this volume.

N0526: See Luke xvii. 20.

N0527:

I am the doubter and the doubt.

"Brahma," *Poems*.

"Not unto us, O Lord, not unto us, but to thy name be the praise!"

N0528: Sir Everard Home, a Scottish surgeon and writer on Comparative Anatomy, supposed to have been mainly indebted for his knowledge to the manuscripts of his brother-in-law, John Hunter, which he burned.

N0529: Antigone, in Sophocles's tragedy, reproached by Creon for burying her outlawed brother's body, says, "Nor did I think thy proclamation, since thou art a mortal, of force to outweigh the unwritten and secure laws of the gods, for these are not matters of now and yesterday, but always were, and no man knows whence they came."

N0530: With regard to Mr. Emerson's utterances concerning the Immortality of the Soul and kindred subjects, Mr. John Albee says, in his *Remembrances*, "Emerson refused to dogmatize about what is necessarily obscure at present. So some thought the obscurity lay in him."

N0531: The doctrine announced in the opening pages of "Circles" in the first book of *Essays*, suggesting also the poems "Uriel" and "Brahma."

N0532: "The discovery we have made that we exist" would perhaps make the sentence clearer: the discovery of our lower self, warping the divine universal self.

N0533: These pages were bravely written, in endeavor for utter honesty and freedom from cant. To "give the Devil his due," find the good leaven in apparent evil, which may surround and beset us, that is, our lower selves.

The intellect alone working at the problem arrives at that "sad self-knowledge" which

Withering fell
On the beauty of Uriel,

and which, as in the next pages, carries the soul up to bleak rocks where it needs faith to see that God inhabits.

N0534: He could not deal with other people's facts in the sense of problems, but he always valued the facts, whether of the man of science, business, or farm, for what they meant to him. He warned people of the "disloyalty of mistaking other people's chivalries for their own." Yet he was patient in considering them.

Journal, 1841. "Bores are good too. They may help you to a good indignation, if not to a sympathy; to 'a mania better than temperance,' as Proclus would say. Long-Beard and Short-Beard, who came hither the other day with intent to make Artesian wells of us, taught me something."

N0535: Adrasteia was a name of Nemesis or Destiny. "And there is a law of Destiny that the soul which attains any vision of truth in company with the god is preserved from harm until the next period, and if attaining always, is always unharmed."—The *Phædrus* of Plato, Jowett's Translation.

N0536: In this essay is less of the ascension to heights of assured content, which characterizes the ending of almost all of Emerson's writings. And yet here in the end Faith gives the lie to Experience, and the author remembers that God's circles are great and his time is long.

CHARACTER

A PART of this essay was in the lecture of the same name in the course on "The Times," given in the Masonic Temple in Boston, in the season of 1841–42.

Another essay on Character was printed in the *North American Review* for April, 1866, and was included by Mr. Cabot in the volume *Lectures and Biographical Sketches*, published after Mr. Emerson's death. A reference to the General Index in the volume *Natural History of Intellect* will show how much was said of character in other essays; especially in "Aristocracy," *Lectures and Biographical Sketches*, may be found much that is kindred to this essay and the following one. For evidence of it he watched with more interest than for learning or talent, in the street or parlor, in travel, in town meeting, courts, and legislatures, and among scholars. In a stray leaf that remains of a lecture on "Influences" is written, "Say not you are sufficient to yourself but have nothing to impart. We know that whoever is sufficient to himself will, if only by existing, succor me also."

The first motto will be found in "The Poet," part of that long poem, never published by him.

The second motto is part of the poem written early, but first printed in the collection *May-Day*, in 1867, in memory of his younger brother, Edward Bliss Emerson, who died in Porto Rico in 1834, his brother of the brief but blazing star.

N0537: This conversation seems to have been of Mr. Emerson's invention.

Iole, daughter of King Eurytus, was carried home captive by Hercules, after he had conquered and slain her father. Dejanira, his wife, jealous of Iole, tried to retain her husband's love by putting on him the tunic poisoned by the blood of the centaur Nessus, which she believed to be a love charm, whereby Hercules died. The story of Iole is told in the *Trachiniæ* of Sophocles.

N0538: The foregoing passage refers to Webster, then the idol of New England.

N0539: Compare his poem "Fate."

Deep in the man sits fast his fate, etc.

N0540: At the time of his first marriage and during the few years of his ministry in Boston, Mr. Emerson and his young wife found a home in Chardon Street with his parishioner, Mr. Abel Adams, a merchant of integrity and success. All through his life Mr. Adams was a valued and helpful friend and adviser. This passage in the journal has his initials attached. In later years this place was filled by Mr. John Murray Forbes. Friendship and sympathy united the scholar and the man of large affairs. In "Social Aims" Mr. Emerson has given a portrait of this silent power for good in public and

private affairs (but without naming Mr. Forbes) as an "American to be proud of."—*Letters and Social Aims*.

N0541: Leonora, widow of Concini, Marquis d'Ancre (murdered in 1617 for exercising an almost usurping power over the young Louis XIII.), was accused and burned for having used the influence of a sorceress over the queen of Henry IV.

N0542:

Unit and Universe are round;
In vain produced, all rays return.

"Uriel," *Poems*.

N0543: In the lecture on "Politics," as first delivered, these sentences occur: "Character is the true theocracy. It will one day suffice for the government of the world."

N0544: A verse from a rude Danish ballad, "Svend Vonved," was a favorite with Mr. Emerson:—

Success shall be in thy courser tall,
Success in thyself, which is best of all,
Success in thy hand, success in thy foot,
In struggle with man, in battle with brute.

N0545: His friend Thoreau's speech, quoted in the "Biographical Sketch," pleased him: "Nothing is so much to be feared as fear. Atheism may comparatively be popular with God himself."

N0546: This sentence, reading a little obscurely, shows the sign of a paper written for delivery. It was certainly helped by the emphatic delivery of the first word, which in the manuscript and first edition was repeated. Original men, conductors of the water of Life from its source, are those whom he values.

N0547: The journal shows that the person alluded to is Mr. George Ripley, the head of the Brook Farm Community. The passage, written in April, 1842, there begins, "You might know beforehand that your friends will not succeed, since you have never been able to find the Institution in the Institutor."

N0548: A new life put into the sentence by the change from the first edition, where it read, "which sheds a splendor on the passing hour."

N0549:

When success exalts thy lot
God for thy virtue lays a plot.

"Prayer," *Poems*, Appendix.

N0550: A few years later in England, Mr. Emerson gave a lecture on "Natural Aristocracy," "an attractive topic,...an interest of the human race, and, as I look on it, inevitable, sacred and to be found in every country and in every company of men,...true and not spurious pictures of excellence." This, with additional matter

from later writings, was published by Mr. Cabot in *Lectures and Biographical Sketches* under the title "Aristocracy."

N0551: Rev. Edward Taylor, of the Sailors' Bethel in Boston, between whom and Mr. Emerson were mutual regard and honor. He is also alluded to in the essays on "Greatness," "Eloquence," "The Preacher," and "Historic Notes of Life and Letters in Boston."

N0552: When Mr. Alcott returned from England in 1842 with Messrs. Lane and Wright, two Englishmen interested in the same ideas, who came in high hope to realize them in a new and aspiring country,—a hope that met with failure in the Fruitlands attempted community,—Mr. Emerson wrote in his journal: "Alcott and Edward Taylor ["Father Taylor"] resemble each other in the incredibility of their statement of facts. One is the fool of his idea and the other of his fancy. When Alcott wrote from England that he was bringing home Wright and Lane, I wrote him a letter which I required him to show them, saying that they might safely trust his theories, but that they should put no trust whatever in his statement of facts. When they all arrived here, he and his victims, I asked them if he showed them that letter; they answered that he did: so I was clear."

N0553: This passage is quoted from "The Book of Shet the Prophet Zirtûsht" in the second volume of *The Desatir, or Sacred Writings of the Ancient Persian Prophets, together with the Ancient Persian Version and Commentary of the Fifth Sasan, carefully published by Mulla Firuz Bin Kaus*. Bombay, 1818.

As the book is exceedingly rare, I give the whole passage. "It is said that when the fame of the excellence of the nature of Zertûsht had spread all over the world, and when Isfendiar went around the world, erected fire-temples and raised domes over the fires,

the wise men of Yunân selected a Sage named Tûtîânûsh, who at that time had the superiority in acquirements over them all, to go to Irân and to enquire of Zertûsht *concerning the real nature of things*. If he was puzzled and unable to answer, he could be no prophet, but if he returned an answer, he was a speaker of truth." (Here follows the passage quoted in the text.) "He then asked the day of the prophet's nativity. The prophet of God told it. He said, 'On such a day, and under such a fortunate star a deceiver cannot be born.' He next enquired into his diet and mode of life. The prophet of God explained the whole. The Sage said, 'His mode of life cannot suit an impostor.' The prophet of Yezdân then said to him, 'I have answered you the questions which you have put to me; now in return retain in your mind what the famed Yunâni Sage directed you to enquire of Zertûsht and disclose it not, but listen and hear what they ask; for God hath informed me of it and hath sent his word unto me to unfold it.' The Sage said, 'Speak.' Thereupon the prophet of Zertûsht repeated the...texts."

N0554: This is said in the *Timæus*.

N0555: Mr. Emerson applies this saying of Milton to his venerated friend, Samuel Hoar, Esq., in the notice of him printed in *Lectures and Biographical Sketches*.

N0556: Homer's *Odyssey*, Book V., 99.

N0557: These lines are in the third division of "Initial, Dæmonic and Celestial Love" in the *Poems*.

N0558: This might be supposed to refer to Mr. Emerson's disappointment that Carlyle could see nothing elevating and

helpful in Mr. Alcott, and treated him rather rudely, but this passage occurs in the journal a year before that time. Nevertheless, it very likely refers to similar experiences in Boston. When some one later said, "Mr. Alcott is impracticable," Mr. Emerson answered, "Yes, impracticable as our thoughts are. You will reply that it will not do to say our thoughts are quite impracticable,—nor do I think that any man is quite impracticable. I do not feel at liberty to decline the thoughts or the men that go by, because they are not quite easy to deal with and conformable to the opinions of the *Boston Post*."

MANNERS

A LECTURE with this name had been given by Mr. Emerson in the Boston course on "The Philosophy of History" in the winter of 1836–37.

This essay is the lecture in the course on "The Times" given at Tremont Temple in the winter of 1841–42. A year later, and before this essay was published, Mr. Emerson gave in New York five lectures on "New England," the third of which treated of "Manners and Customs of New England."

This subject, always attractive to Mr. Emerson and constantly recurring in his writings, he treats at length in "Behavior" in the volume *Conduct of Life*.

The present essay shows that, like most of the others, it was largely made up from notes taken at various times on manners, whether commanding or charming or merely conventional; in some cases with a Montaigne-like frankness and tolerance. Readings both in scientific books and in romance contribute to the subject, and Mr. Emerson's humor crops out occasionally, as in "Circe's horned company."

The motto is taken from Ben Jonson's "Masques," the first four lines from a song by the Priest in "Love Freed from Ignorance and Folly;" the others from the song of Dædalus in "Pleasure reconciled to Virtue," beginning—

O more and more! this was so well
As praise wants half his voice to tell.

N0559: Architecture, like sculpture, though he never had opportunity to study it, always interested Mr. Emerson. He was especially quick to notice any pretentiousness or sham. In "The Problem" it is in the architecture, not in the painting or sculpture, of Italy that he saw the Great Soul working through the hand of the passive master.

N0560: This idea is presented in the first pages of "Heroism" in *Essays, First Series*.

N0561: He took great pleasure in the passage in Chaucer's "Wif of Bathe's Tale" that treats of *Gentilesse*, and it is printed under that title in *Parnassus*, the collection of poetry edited by him.

N0562: Said, or Saadi, as Mr. Emerson named his ideal poet, loved humble cottages and honors labor,—

Nor loved he less
Stately lords in palaces,
Princely women hard to please,
Fenced by form and ceremony,
Decked by courtly rites and dress

And etiquette of gentillesse.

"Fragments on The Poet," *Poems*, Appendix.

N0563: These ideas are set out more fully in the lecture "Aristocracy,"³⁵ better called (as it was at first, to avoid any misunderstanding in England as to what was meant) "Natural Aristocracy." He there asks, Why this invincible respect for war, that in the triumphs of our commercial civilization we can never quite smother the trumpet and the drum? and answers, Why, but because courage never loses its high price? Why, but because we wish to see those to whom existence is most adorned and attractive foremost to peril it for their object, and ready to answer for their actions with their life?

N0564: Mr. Emerson might well make this exclamation in those days of "The Newness."

N0565: In allusions to himself in his journals, Mr. Emerson often speaks of his hopeless lack of animal spirits as unfitting him for general society and for action, and in "Terminus," the poem of his old age, he speaks of it, but with serene acceptance.

N0566: Two Persian monarchs of the name of Sapor, of the dynasty of the Sassanidæ, conquered the Roman emperors in battle in the third and fourth centuries A.D.

In the previous sentence the real gentleman is spoken of as good company for pirates and academicians. Mr. Emerson always took pleasure in the story told by Plutarch, that when the young Cæsar was the captive of the pirates he made them listen to his

³⁵ *Lectures and Biographical Sketches.*

rhetoical compositions, at the same time freely telling them that when he was ransomed he should crucify them, which promise he fulfilled.

N0567: Among Mr. Emerson's friends in whom the philosophic mind and habit prevailed, Thoreau especially is brought to mind by this sentence. He was something of a Diogenes, but with no sourness, and more human; though almost all his days were spent in peaceful Concord, there was much of the heroic Epaminondas in his temper. Though unlike Socrates in having a poetic rather than a dialectic taste, it is surprising how much of the description in the Symposium of Plato as given by Alcibiades of Socrates, when they were tent-mates in the campaign in Potidæa, suggests Thoreau.

N0568: Most of the above paragraph is taken from a lecture on "Prudence" in the course on "Human Culture" in 1838. It there goes on as follows: "Thus we understand exceeding well in America the charm of what is best in English manners, and, as we by age, cultivation and leisure refine and ripen, come to set a high value on that species of breeding, which foreigners, from a more sanguine temperament, and we too, from our democratic wantonness, usually blame in the English—the mild, exact decorum, the cool recognition of all and any facts by a steadiness of temper which hates all starts, screams, faintings, sneezings, laughter and all violence of any kind. The English, and we also, are a commercial people, great readers of newspapers and journals and books, and are therefore familiar with all the variety of tragic, comic, political tidings from all parts of the world, and are not to be thrown off their balance by any accident near by, like villagers whom the overturn of a coach, or a robbery, or a dog with a kettle sets agape, and furnishes with gossip for a week."

N0569:

The lord is the peasant that was,
 The peasant the lord that shall be;
 The lord is hay, the peasant grass,
 One dry, and one the living tree.

.

What prizes the town and the tower?
 Only what the pine-tree yields;
 Sinew that subdued the fields, etc.

"Woodnotes," II., *Poems*.

N0570: Journal, 1841. "It is not a *word* that 'I am a gentleman and the king is no more,' but is a fact expressed in every passage between the king and a gentleman."

N0571: The strength and dignity of calmness he held as essential to man as modesty to woman. In one of his earlier poetic fragments he said:—

Composure
 Is the pudency of man.

N0572: This allowance by the world of some latitude in virtue to men who are real masters is even more strongly expressed in "Aristocracy" in *Lectures and Biographical Sketches*.

N0573: The henchman of Melvor in Scott's *Waverley* thus expresses his wish that the young English officer could see the chief at the head of his clan.

N0574: Mr. Emerson's feeling on calling on his manly neighbor, Edmund Hosmer, who did the necessary ploughing and planting for him, is expressed in Oriental form in the verses in the Appendix to the *Poems*:—

Said Saadi, "When I stood before
Hassan the camel-driver's door," etc.

This neighbor is the Farmer described in Mr. Emerson's "Agriculture in Massachusetts," a paper written for the *Dial*, but now included in the volume *Natural History of Intellect*.

N0575: He perhaps had in mind here the expression, in which he took pleasure, of Jean Paul Richter with regard to the Greek statues: "The repose, not of weariness but of perfection, looks from their eyes and rests upon their lips."

N0576: Compare "Give All to Love" and the last passage in "The Celestial Love" in the *Poems*.

N0577: "Recall," as expressing something that we all should ever have in mind, was an improvement made by Mr. Emerson on "signify" of the first edition.

N0578: The essay on "The Superlative," in *Lectures and Biographical Sketches*, warns Americans in an amusing way of a besetting national foible.

N0579: This reminder of the exact sense from the derivation of a common word is an instance of Mr. Emerson's habitual consideration of his words.

N0580: This is an expression of Heracleitus quoted by Plutarch in his *Morals* in the essay "Of Eating of Flesh." The passage as translated there is, "The wisest soul is like a dry light."³⁶ Its meaning might be,—unobscured by the fogs of passion and circumstance; but Professor John H. Wright, of Harvard University, says that the original expression of Heracleitus was corrupted in transmission; that the word which he used signified rather *nearest to Fire*, his first principle. Αὔη ψυχῇ σοφωτάτη καὶ ἀρίστη, 'The dry soul is wisest and best.'—Heracleitus, *On Nature*.

N0581: "The ignoring eye" here is autobiographical, the expression describing Mr. Emerson's own habit at awkward or disagreeable chances in daily life.

N0582: In the journal of 1842 is noted "Profound meaning of *Good-will makes insight*."

N0583: Circe and her company of lions, or horned beasts, recalls a remark which I heard Mr. Emerson make about a zealous lady of wide sympathies whom he valued more for her virtues than for her judgment. Some one said at his table, when Mr. Emerson did not seem to think highly of some traveller who was spoken of, "But Miss X says that he is a very remarkable man!" "O, Miss X,"—said Mr. Emerson, "she has always a whole stud of Phœnixes in charge."

N0584: I have been unable to find any source of this epitaph, though much search has been made for it, yet hardly believe that it was composed by Mr. Emerson.

³⁶ Professor W. W. Goodwin, in his edition of the *Morals*, thus refers: "See Mullach, *Fragm. Philos.* p. 325 (No. 73)."

N0585: Ruy Diaz de Bivar in the eleventh century, the *preux chevalier* of Spain, in the struggle against the Moors, was celebrated in ancient chronicles, romances and ballads. Southey from these materials composed his noble *Chronicle of the Cid*. Mr. Emerson liked to read passages from this to his children. Many of the ballads about the Cid are translated by Lockhart in *Spanish Ballads*.

N0586: Keats, *Hyperion*.

N0587: Mr. Emerson early took exactly this ground and always held to it. It was not for man to say what woman should or should not do. What the sense and virtue of the sex demanded should of course come to them. He spoke to this purpose many times. One of his addresses on this theme is printed in *Miscellanies*.

N0588: Dr. Holmes said of the foregoing passage that Emerson "speaks of woman in language that seems to pant for rhythm and rhyme."

N0589: This consoling prescription of country life for the hurts of disappointed social ambition recalls his verses in "Musketaquid," though his troubles were not these:—

All my hurts
My garden spade can heal. A woodland walk,
A quest of river-grapes, a mocking thrush,
A wild-rose, or rock-loving columbine,
Salve my worst wounds.

N0590: The ascension to a high plane, which characterizes the end of the essays, here appears in showing love which is open to all as the basis of true gentility,—at which gentility so-called is a rude attempt. Mr. Emerson often repeated Wordsworth's lines:—

O what is honour? 'T is the finest sense
Of justice which the human mind can frame,
Intent each lurking frailty to disclaim,
And guard the way of life from all offence,
Suffered or done.

N0591: In previous notes it has been mentioned that Osman was the name given by Emerson to the ideal man, subject to the same conditions as himself.

N0592: This fable is original.

GIFTS

THIS SHORT essay was one of Mr. Emerson's contributions to the *Dial*.

In the widest sense he held that there was no such thing as giving. The Over-soul common to all, the community of nature, rendered it impossible. Moreover, what belongs to the individual will come to him; what does not cannot be given. "Direct giving is agreeable to the early belief of men; direct giving of material or metaphysical aid.... The boy believes there is a teacher who can sell him wisdom. Churches believe in imputed merit. But in strictness we are not much cognizant of direct serving. Man is endogenous.... Gift is contrary to the law of the Universe. Serving others is serving us.... Indirect service is left."—"Uses of Great Men," *Representative Men*. And elsewhere, "When each comes forth from his mother's womb, the gate of gifts closes behind him."

But in the domestic and usual sense he was a giver and receiver. And yet so fine was his sense both of honor and of fitness that it was hard for him to receive, and not always easy for him to choose a gift for another that should have a bloom of symbolism upon it.

In the family the old-time New England custom of New Year's presents was never supplanted by the modern Christmas-tree. To his last days, when his grandchildren were around him, Mr. Emerson gave New Year's morning to this ceremony, and obeyed the rule of writing a poem to be read before each present was opened. Over these verses he often sat out the old year, and took great pleasure next morning in hearing the young people's efforts, though most humble about his own. "The Maiden Song of the Æolian Harp" accompanied that characteristic gift to his daughter and her husband. As far as time and taste allowed him, he selected his presents for his family, but, even from them, it was a little hard for him to receive.

Great gifts went out from him to those to whom he thought them due, but on this subject his lips were closed.

N0593: Fruits always pleased him,—his other senses more than that of taste, however,—his pears and plums seemed such a triumph achieved in evolution out of hard seed-cases, hips and haws. Van Mons (a Dutch pomologist mentioned in his copy of Downing's book on fruit-culture) was a saint he honored because of his doctrine and practice of "Amelioration." Care of his orchard and especially the harvesting of its small crop of pears, which perfumed his study, was the only farm-work of his later years.

N0594: A saying of Landor's was often quoted by Mr. Emerson: "The highest price you can pay for a thing is to ask for it." The Nemesis of regret, or a least misgiving, would in a sensitive mind show the price to have been too high.

N0595: John Thoreau, who died in his youth, Henry's older brother, was a lover of Nature and of children. He gave Mr.

Emerson an instance of giving according to one's character. The latter recorded in his journal: "Long ago I wrote of Gifts and neglected a capital example. John Thoreau, Jr., one day put a blue-bird's box on my barn,—fifteen years ago, it must be,—and there it still is with every summer a melodious family in it adorning the place and singing its praises. There's a gift for you which cost the giver no money, but nothing which he bought could have been as good.

"I think of another quite inestimable: John Thoreau knew how much I should value a head of little Waldo, then five years old. He came to me and offered to take him to a daguerreotypist who was then in town, and he, Thoreau, would see it well done. He did it and brought me the daguerre, which I thankfully paid for. A few months after, my boy died, and I have since to thank John Thoreau for that wise and gentle piece of friendship."

The happy thought of other friends, of an investment for him in beauty and comfort at compound interest, he recorded within two years after he made his home in Concord: "May 2, 1837. Day before yesterday Dr. Hobbs, Dr. Adams and Mr. Ripley³⁷ sent me from Waltham thirty-one trees which I have planted by my home. What shall I render to my benefactors?" These pines and chestnuts still shelter and adorn his house.

N0596: Epimetheus thus counsels his brother Prometheus:—

οὐδ' Ἐπιμηθεὺς
ἐφράσαθ' ὥς οἱ ἔειπε Προμηθεὺς μήποτε, δῶρον
δέξασθαι παρ Ζηνὸς Ὀλυμπίου ἀλλ' ἀποπέμψει

37 Rev. Samuel Ripley, his uncle, and two other friends in Waltham.

ἐξοπίσω μὴ ποῦ τι κακὸν γένηται.

Hesiod, *Works and Days*, 85–88.

N0597: In Mr. Emerson's copy of Cotton's translation of Montaigne, which book, as a boy, he read with delight and "felt as if I myself had written this book in some former life, so sincerely it spoke my thoughts," the following passage is marked:—

"Oh, how am I obliged to almighty God, who has been pleased that I should immediately receive all I have from his bounty, and particularly reserved all my obligation to himself! How instantly do I beg of his holy compassion that I may never owe a real thanks to any one. O happy liberty in which I have thus far lived! May it continue with me to the last. I endeavour to have no need of any one. *In me omnis est spes mihi.*"

N0598: A new and strange experience and trial came to Mr. Emerson when in his age his house was nearly destroyed by fire. A common impulse moved his friends, near and far, to seize the opportunity to show their love or reverence for him by restoring it, and sending him abroad for refreshment meantime. Something of the struggle in Mr. Emerson's mind, and more of the emotion which he felt, is shown in the correspondence with Dr. Le Baron Russell and Judge Hoar, the friends to whom the contributors committed the pleading of their case. This is printed in the Appendix to Mr. Cabot's Memoir, from which I extract a few sentences. The ingenious Judge, the ambassador, relates how "I told him by way of prelude that some of his friends had made him a treasurer of an association who wished him to go to England and examine Warwick Castle and other noted houses that had been recently injured by fire, in order to get the best ideas possible for

restoration, and then apply them to a house which the association was formed to restore in this neighborhood.

"When he understood the thing...he seemed very deeply moved. He said that he had been allowed so far in life to stand on his own feet, and that he hardly knew what to say,—that the kindness of his friends was very great....But he must see the list of contributors....

"I am glad that Mr. Emerson, who is feeble and ill, can learn what a debt of obligation his friends feel to him."

When he made up his mind to accept his friends' kindness he wrote: "Thank them for me whenever you meet them, and say to them that I am not wood or stone if I have not yet trusted myself to go to each one of them directly." And when he was allowed to see the list of his benefactors he wrote: "It cannot be read with dry eyes or pronounced with articulate voice. Names of dear and noble friends; names also of high respect with me, but on which I had no known claims; names, too, that carried me back many years, as they were of friends of friends of mine more than of me, and thus I seemed to be drawing on the virtues of the departed."

N0599: There were certain persons whose Oriental temperament seemed to him to bestow on them a right to exercise their genius for gifts, perhaps as valid as that of the Puritan to maintain his independence of favors.

NATURE

IN JUNE, 1840, Mr. Emerson wrote in his journal: "I think I must do these eyes of mine the justice to write a new chapter on Nature. This delight we all take in every show of night or day or field or forest or sea or city, down to the lowest particulars, is not without sequel, though we be as yet only wishers and gazers, not at all knowing what we want. We are predominated, here as elsewhere, by an upper wisdom, and resemble those great discoverers who are haunted for years, sometimes from infancy, with a passion for the fact, or class of facts, in which the secret lies which they are destined to unlock, and they let it not go until the blessing is won. So these sunsets and starlights, these swamps and rocks, these bird-notes and animal forms off which we cannot get our eyes and ears, but hover still, as moths round a lamp, are no doubt a Sanscrit cipher covering the whole religious history of the universe, and presently we shall read it off into action and character. The pastures are full of ghosts for me, the morning woods full of angels.

.

"No inventory is complete....The Select-men assess me no tax for my use of the woods, where I find first-sight, second-sight and insight.

"The asters and eupatoriums are maturing their leaves and buds, the gerardia is getting ready its profuse flowers, warning me that my book should be ended before their capsules are filled with seed."

In the course given in Boston in the winter immediately before the publication of the second series of Essays, one of the lectures was called *Relation to Nature*. The manuscript of this was not preserved, but certain stray leaves seem to indicate that they were what remained when that lecture was prepared for publication as an essay. The oration delivered at Waterville College, *The Method of Nature*, in 1841, drew much of its matter from the same journals which furnished that for the present essay.

When Mr. Emerson was writing his first book *Nature*, between 1833 and 1836, his mind was in a state of ferment; he was beginning a new life. He walked with faith into this beautiful but strange temple to receive the oracle. Now, softened by home life, after reverent and happy communion with Nature for nearly ten years, he is in serener mood. The essay reflects this. For the assault on this problem the forces are not arrayed in due order, as in the earlier work. With an opening pæan on the cheering or consoling beauty of passive nature, he passes to the consideration of living Nature, the struggle and the *becoming*, which man, by the Universal Mind, understands in part. He cannot quite solve Nature's riddle, nor was it meant that he should. She will hint at a new meaning daily, and to new men continue to give new meanings.

This sentence and verse from the journal might serve as a second motto: "Go to the forest if God has made thee a poet, and make thy life clean and fragrant as thy office."

True Brahmin, in the morning meadows wet,

Expound the Vedas and the violet.

N0600: The passage in the journal has a freshness that makes it worth copying.

"Oct. 30th, 1841. On this wonderful day when Heaven and earth seem to glow with magnificence, and all the wealth of all the elements is put under contribution to make the world fine, as if Nature would indulge her offspring, it seemed ungrateful to hide in the house. Are there not dull days enough in the year for you to write and read in, that you should waste this glittering season when Florida and Cuba seem to have left their seats and come to visit us with all their shining hours, and almost we expect to see the jasmine and cactus burst from the ground instead of these last gentians and asters which have loitered to attend this latter glory of the year? All insects are out, all birds come forth, the very cattle that lie on the ground seem to have great thoughts, and Egypt and India look from their eyes."

N0601:

And the countless leaves of the pine are strings
Tuned to the lay the wood-god sings.

"Woodnotes," II., *Poems*.

N0602: Journal, June, 1841. "The good river-God has taken the form of my valiant Henry Thoreau here, and introduced me to the riches of his shadowy, starlit, moon-lit stream, a lovely new world lying as close, and yet as unknown, to this vulgar, trite one of streets and shops as death to life, or poetry to prose. Through one field we went to the boat, and then left all time, all science, all history behind us and entered into nature with one stroke of the

paddle. Take care, good friend! I said, as I looked West into the sunset overhead and underneath, and he, with his face towards me, rowed towards it,—take care: you know not what you do, dipping your wooden oar into this enchanted liquid, painted with all reds and purples and yellows, which glows under and behind you."

N0603:

Stars taunt us with their mystery.

"The World-Soul," *Poems*.

N0604: The memory of this horn, heard when in his youth he visited the White Mountains, always remained a joy when recalled to mind. It is alluded to in "The Scholar" in *Lectures and Biographical Sketches*, where the note of a bugle scatters in an instant the negative views which the poet, in a low hour, is accepting.

N0605:

Enchanters! enchantresses!

Your gold makes you seem wise;

The morning mist within your grounds

More proudly rolls, more softly lies.

"The Park," *Poems*.

N0606: I am indebted to Dr. Ralph Barton Perry, of Harvard University, for the following information. These terms were probably first used by Averroës, the Arabian commentator on Aristotle; later, Nicolas Cusanus, Giordano Bruno and Spinoza employed the same distinction. It is used by pantheistic philosophers to distinguish the universe in its ultimate, unitary significance from

the universe as aggregate of objects. In Aristotelian terms *natura naturans* would be *form* and *activity*, and *natura naturata* would be *matter*.

N0607: A favorite image which occurs in "The Two Rivers" and in the last verse of "Peter's Field" in the *Poems*.

N0608: The attraction of the pseudo-sciences for low minds is dwelt upon in "Demonology," *Lectures and Biographical Sketches*.

N0609: Emerson's reading, whether of the doctrines of the Flowing and the Identity in the ancient philosophers, of immanence and emanence in the Neo-Platonists, of *natura naturans* in the Schoolmen, of the nebular hypothesis of the astronomers, of Evolution by the paleontologists and biologists,—was all confirmed and laid before his eyes by his study of nature and man.

N0610: Compare his poem "Xenophanes."

N0611:

And the poor grass will plot and plan
What it will do when it is man.

"Bacchus," *Poems*.

These doctrines of the struggle for existence, with the survival of the fittest, had not then attracted the attention which Darwin and Spencer gave them a few years later.

N0612: Dr. Paul Richer, of Paris, in his recent admirable *Introduction to the Study of Artistic Anatomy*, calls attention to the fact that all the greatest *savants* have had something of the artist or poet in their minds; that is, that they had *Intuition*, and *then*, with all care and conscience, made the necessary experiments to establish their discovery on a scientific foundation.

N0613: By leaving out the hyphen Mr. Emerson skilfully makes "common sense" here signify his "Universal Mind."

This passage and the succeeding ten pages first appeared under the title "Tantalus" in the last number but one of the *Dial* (January, 1844). Its name signified the unsatisfied thirst which man must feel in studying the Universe. He writes: "Tantalus is but another name for you and me." In his "Ode to Beauty" he wrote:—

I drank at thy fountain
False waters of thirst.

N0614:

But Nature whistled with all her winds,
Did as she pleased and went her way.

"Fragments on Nature," *Poems*, Appendix.

N0615: Similar affectionate paintings of the child appear in "Domestic Life" in *Society and Solitude*, and in "Courage" in *Natural History of Intellect*.

N0616: In Mr. Emerson's journals, about the time of his parting with his church, are many references to George Fox, the founder of the Society of Friends, in whose life he was greatly interested.

Later he found much that appealed to him in the works of Jacob Boehme, the mystic, born a peasant shoemaker of Silesia in the sixteenth century. James Naylor was a humble English religious enthusiast, persecuted for his supposed blasphemous views in the time of the Commonwealth.

N0617: This image is carried out in the early poem "The Forerunners."

N0618: In "Tantalus" this passage follows: "So is it with these wondrous skies and hills and forests. What splendid distances, what recesses of ineffable pomp and loveliness in this sunset. But who can go where they are or lay his hand or plant his foot thereon? Off they fall from the round world forever and ever; glory is not for hands to handle."

N0619:

Daily the bending skies solicit man, etc.

"The Adirondacs," *Poems*.

N0620: Here we have the image of "the passive Master" in the poem "The Problem."

This is the end of "Tantalus" in the *Dial*, but the following words are omitted here that there occur after "soul of the workman streams through us:"—"that a paradise of love and power lies close beside us, where the Eternal Architect broods on his thought and projects the world from his bosom."

N0621: In the last years of Mr. Emerson's life the little blue self-heal crept into the grass before his study window.

N0622: This bit of scientific information Dr. Holmes found a little too popular, and classed it under the heading *On-ditologie*.

N0623:

Wonderful verse of the gods,
Of one import, of varied tone;
They chant the bliss of their abodes
To man imprisoned in his own.

"My Garden," *Poems*.

POLITICS

THIS ESSAY was based on a lecture in the Boston course of 1839–40 on “The Present Age.” The lecture on “Politics” followed “Literature” and preceded “Reforms” and “Religion.” Much new matter was added in the essay. Some passages that were omitted it seemed well to give in these notes. In this essay one sees Emerson fearlessly apply his doctrine of the Universal Mind, or the *common* sense of man, to politics, and find therein good hope for democracy. And his faith in evolution encourages a fearless optimism when at last in the nineteenth Christian century he has found one man—it does not appear whether himself or another—“to whom no weight of adverse experience will make it for a moment impossible that thousands of human beings might exercise towards each other the grandest and simplest sentiments, as well as a knot of friends, or a pair of lovers.”

The motto is an example of the earlier poems of Emerson’s second period, when, perhaps influenced by the Bardic fragments, he felt that the strength of the thought would be lost in too much attention to melodious expression. His “Merlin” says of the bard:—

He shall not his brain encumber
With the coil of rhythm and number,
But, leaving rule and pale forethought,
He shall aye climb
For his rhyme.

With severe condensation, in the twenty-six short lines, none too melodious, of the motto, we have Merlin from old Cymrian forests bearing witness, and the Man of Destiny of the early nineteenth century proving by his overthrow, that like begets only like. The precedent of the mystic building of Thebes to the god-inspired harping of Amphion is cited to show that the divine must enter into all that shall have strength. Then the Muses from Helicon and the personified virtues from Europe of the Renaissance cross the Atlantic to find, in a country where a Lincoln may follow the example of Cincinnatus, a promise of a better republic than that of Plato.

N0624: In those days of eager plans for social reforms, and gallant forlorn-hope attacks on slavery, Mr. Emerson had steadily to keep before his eyes, and present to others, that the larger included the less, and that one must not spend all one's energy on the transient.

N0625: This simile of ropes to be twisted out of sand came from the old treatises on the black arts. Such an attempt is described in Scott's ballad "Lord Soulis."

N0626: The late Professor James B. Thayer, of the Harvard Law School, wrote in 1876 to Mr. Emerson's daughter: "I was almost startled yesterday in our Law Library on opening an English

treatise on 'The Law of Carriers,' by J. H. Balfour Browne (1873), to see this on the title-page, and Mr. Emerson's name under it: 'Our statute is a currency,'" etc., giving the whole passage.

In the original lecture this passage occurs: "Out of a thousand errors, oppositions, compromises, springs ever the actual statute-book which regulates to-day the economy of the Commonwealth."

N0627: He lived to see the apparent fulfilment of these words in the issue of the War of the Rebellion.

N0628: He quotes often the Latin proverb of which I cannot learn the source,—*Res nolunt diu male administrari*.

N0629: This paragraph from the lecture was omitted here:—

"The philosopher, who is never to stop at the outside or appearance of things, will find more to justify his faith in the harmony of politics with the constitution of man, than the mere statute-book can furnish him. There is more history to a nation than can be gathered from its code. Its code is only the high-water mark showing how high the last tide rose, but at this moment perhaps the waters rise higher still, only they have not yet notched their place by a line of pebbles, shells and seaweed. Observe that the law is always the last and never the first step. One person, a few persons, an increasing minority do the thing; defend it; irresistibly urge it; until finally, against all reluctance, roaring opposition, it becomes the law of the land. The thing goes before,—the form comes after. The elements of power, namely, persons and property, must and will have their just away."

N0630: "Away with this hurrah of masses....In old Egypt it was established law that the vote of a prophet be reckoned equal to a hundred hands....Pairing off! As if one man who votes wrong,

going away, could excuse you, who mean to vote right, for going away; or as if your presence did not tell in more ways than in your vote. Suppose the three hundred heroes at Thermopylæ had paired off with three hundred Persians. Would it have been all the same to Greece and to history?"—"Considerations by the Way," *Conduct of Life*.

N0631: From this point the lecture ended differently, as given below.

"It seems to follow from these doctrines that nothing is less important than the laws or forms of government. Power belongs to persons and to property. Property is merely the obedience of nature to human labor and follows of course the moral quality of the persons who create and hold it. With the progress of any society, with the cultivation of individuals, the existing forms become every day of less consequence. Every addition of good sense that a citizen acquires destroys so much of his opposition to the laws of nature and the well-being of society, and of course brings the power of his property on the side of justice. Knowledge transfers the censorship from the State House to the reason of every citizen, and compels every man to mount guard over himself, and puts shame and remorse for sergeants and maces. And we find in all times and countries every great man does, in all his nature, point at and imply the existence and well-being of all the orders and institutions of a state. He is full of reverence. He is by inclination (how far soever in position) the defender of the grammar-school, the almshouse, the holy day, the church, the priest, the judge, the legislator, the executive arm. Throughout his being is he loyal, even when by circumstance arrayed in opposition to the actual order of things. Such was Socrates, St. Paul, Luther, Milton, Burke.

"The education of every man is bringing him ever to postpone his private to the universal good, to comport himself, that is, in his proper person, as a

state, and of course whilst the whole community around him are doing the like, the persons who hold public offices become mere clerks of business, in no sense the sovereigns of the people.

"It were very much to be wished that these laws drawn from the nature of things could become a part of the popular philosophy, that at least all endeavors for the reform of education or the reform of political opinion might be made where only they can have any avail, in the speculative views of the individual, for it was justly said by Bacon that the speculative opinions of men in general between the age of thirty and forty were the only sure source of political prophecy. The philosophy of property, if explored in its foundations, would open new mines of practical wisdom, which would in the event change the face of the world; would destroy the whole magazine of dissimulation, for so many ages reckoned the Capital art of Government. It would purge that rottenness which has defamed the whole Science until *politic* has come to mean cunning; would show the pretenders in that science that they were their own dupes; would show that the cunningest man cannot cheat nature or do any wrong without suffering the same. It would go deep into ethics and touch all the relations of man. It would teach the subtle and inextricable compensation that attaches to property. Everything God hath made hath two faces. Every cent in a dollar covers its worth, and also covers its evil. The man who covets the wealth of London should know that whilst each pound and penny represents so much commodity, so much corn and wine and cloth, of necessity it also represents so much mould or sourness and moth as belongs to these commodities: if so much property, then so much risk; if so much power, then so much danger; if so much revenue, then so much tax. When his honest labor and enterprise attract to him a great estate, then his exertions stand over against his gains to make him whole. But could his wish without his honest labor transfer out of another's vaults a million pounds sterling into his own chest, so would also, against his wish, just so massive an ill will and fear concentrate its black rays on him in darkness

that might be felt. All property must and will pay its tax. If it come not by fair means, then it comes by foul. The wise man who sees the unerring compensations which worked themselves out in the world, will pay the state its full dividend on his estate, if not for love of right, then for fear of harm.

"And as in respect to property so also in respect to persons it takes an ounce to balance an ounce; the fair house of Seem is never an equivalent for the house of Be. Nor can the loudest Pretension supply the place of the smallest piece of Performance. A just view of human nature would convince men of that truth (how hard to learn) that it is the man makes the place. Alfred, Washington, Lafayette, appear half divine to the people followed in their office by a nation's eye. Ambitious but pitiful persons see them and think it is the place alone that makes them great, and that if they sat in the same chairs they would be as much admired. All means are used to this end; all sorts of shame accumulated; and by and by perhaps they sit in the high seat only to make subtleness and pitifulness quite bare to the view of all men.

"In our own times, without satire, this mistake is so common that all society and government seems to be making believe, when we see such ignorant persons with a grave countenance taking their places as legislators and statesmen. This could not be, but that at intervals throughout society there are real men intermixed, whose natural basis is broad enough to sustain the paper men in common times, as the carpenter puts one iron rod in his banister to five or six wooden ones. But inexorable time, which brings opportunity once to every man, brings also to every man the hour of trial to prove him whether he is genuine, or whether he is counterfeit.

"The last ages have been characterized in history by the immense creation of property. The population of the globe, by the nations of western Europe in whom the superiority of intellect and organization seems to reside, has set at work so many skilful hands that great wealth is added. Now no dollar of property is created without some direct communication

with nature, and of course some acquisition of knowledge and practical power. The creation of all this property, and that by millions, not by a few, involves necessarily so much education of the minds of the proprietors. With power always comes the consciousness of power, and therefore indomitable millions have demanded forms of government more suited to the facts. Throughout Europe, throughout America, the struggle exists between those who claim new forms at all hazards, and those who prefer the old forms to the hazard of change. Of course on the whole is a steady progress of innovation. In London, they write on the fences, 'Of what use are the Lords?' In Spain and in Portugal, the liberal monarchists can scarce hold out against the mob. The South American States are too unsettled than that an ordinary memory can keep the run of the powers that be.

"The era seems marked in many countries by the separation of real power from its forms, and the continual interference of the popular opinion between the executive and its will. A levity before unknown follows. The word 'Revolution' is stripped of its terrors, and they may have many in a year. They say in Paris, There will be no revolution to-day, for it rains.

"The struggle is envenomed by the great admixture of ignorance and selfishness on both sides which always depraves human affairs, and also prevents the war from being one purely of ideas. The innovators are led not by the best, but by the boldest, and often by the worst, who drive their private trade on, take advantage of the march of the principle. The conservatives make up for weakness by wiles and oppose indiscriminately the good and evil measures of their antagonists. Meantime Party, that bellowing hound that barks or fawns, that defamer and bargainer and unreasoning self-lover, distorts all facts and blinds all eyes. Party counts popularity success. Its whole aim ever is *to get the hurrah on our side*. It infects from the bar-room and ward-caucus up, all the veins of the state, stealing even into literature and religion; and in our age every Party has written history for itself as Gibbon, Lingard, Brodie, Hume, Hallam, Mitford.

"Meantime if we rise above the hubbub of parties, and the uncovered selfishness of many of the actors, we shall see that humanity is always the gainer, that the production of property has been the education of the producers, that the creation of so many new households and so many forcible and propertied citizens, has been the creation of lovers of order, knowledge and peace, and hating war. Trade and war are always antagonists. The progress of trade has been the death of war, universally. In these days nations have stretched out the hand to each other. In our times, it is said for the first time, has the word 'International' been compounded. Some progress has been made by national compact in hindering offences against all the world as piracy and kidnapping. Mediation is made to supersede armies and navies. The projects with which the minds of philanthropists teem, are themselves a sure mark of progress. The black colony at Liberia, the proposition of the congress of nations to arbitrate controversies arising between two states, and so to prevent war or at least aid the right cause by the moral force of a decision, these are projects the bare starting of which in any practicable shape, proves civilization and Christianity. The mutual helpfulness of nations and the sympathy of all in the projects of each and the continual approximation by means of mechanical improvements seem to point at stricter union and simpler legislation, at a legislation more purely official, such as shall not hold out such bribes to vanity and avarice.

"The philosopher must console himself amidst the harsh discord of what is called politics by the reflection that its errors, like the errors of the planets, are periodic; that a firm bound is set by counterchecks in man to every excess, that the discipline which the events of every day administer to every man, tend always to make him a better citizen, and to make him independent of the mutations of parties and states."

N0632: As the inventor by a mechanical device shows man's previous stupid waste of energy, and the man of science shows by

his heresies the errors of the church's teaching, so Mr. Emerson held good men to their duty of protest against unjust law. Six years later the passage of the Fugitive Slave Law brought this question home to every brave man of the North, and this is what Mr. Emerson said to his Concord neighbors of the duty of the hour:—

"The last year has forced us all into politics. There is infamy in the air. I wake in the morning with a painful sensation which I carry about all day, and which, when traced home, is the odious remembrance of that ignominy which has fallen on Massachusetts. I have lived all my life in this State and never had any experience of personal inconvenience from the laws until now. They never came near me to my discomfort before. *But the Act of Congress of September 18th, 1850, is a law which every one of you will break on the earliest occasion,—a law which no man can obey, or abet the obeying, without loss of self-respect and forfeiture of the name of a gentleman.*"

N0633: Mr. Cabot, in the Appendix F to his Memoir, giving an account of the lecture "Politics," printed the following passage as omitted in the essay. I cannot find it in the manuscript, and suppose it may have dropped out:—

"The State and Church guard their purlieus with jealous decorum. I sometimes wonder where their books find readers among mere mortals, who must sometimes laugh, and are liable to the infirmity of sleep. Yet politics rest on real foundations and cannot be treated with levity. But the foundation is not numbers or force, but character. Men do not see that all force comes from this, and that the disuse of force is the education of men to do without it. Character is the true theocracy. It will one day suffice for the government of the world. Absolutely speaking, I can only work for myself. The fight of Leonidas, the hemlock of Socrates, the cross of Christ,

is not personal sacrifice for others, but fulfils a high necessity of his proper character: the benefit to others is merely contingent."

N0634: In dealing with his children after they began to grow up, Mr. Emerson held to his theory. He did not command or forbid, but laid principles and facts before us and left the case in our hands,—a helpful confidence.

N0635: His townsman, Squire Hoar, was an exception. "When I talked with him one day of some inequality of taxes in the town, he said it was his practice to pay whatever was demanded; for, though he might think the taxation large and very unequally proportioned, yet he thought the money might as well go in this way as any other."—"Samuel Hoar," *Lectures and Biographical Sketches*.

N0636: When the question arose what epitaph to put upon the stone over Emerson's grave, a young man who had often been his guest wrote suggesting that much of the foregoing paragraph would be fitting, beginning "The wise man...needs no library," etc.

N0637:

His instant thought a poet spoke,
And filled the age his fame;
An inch of ground the lightning strook,
But lit the sky with flame.

"Fragments on the Poet," *Poems*, Appendix.

N0638: In an address prefixed to the first number of the *Massachusetts Quarterly*, in 1848, Mr. Emerson said: "We believe

politics to be nowise accidental or exceptional, but subject to the same laws with trees, earths and acids."

N0639: In the first edition the wording was "full of fate," instead of "full of faith."

NOMINALIST AND REALIST

WHAT EMERSON said in writing of Plato³⁸ might, with little change, be said of himself and of his fairness in considering the “famous dispute of the Nominalists and Realists:”—

“The unity of Asia and the detail of Europe...he came to join, and by contact to enhance the energy of each....In short, a balanced soul was born, perceptive of the two elements...If he loved abstract truth, he saved himself by propounding the most popular of all principles, the absolute good, which rules rulers and judges the judge. If he made transcendental distinctions, he fortified himself by drawing all his illustrations from sources disdained by orators and polite conversers;...from pitchers and soup-ladles,...the shops of potters, horse-doctors, butchers, and fish-mongers. He cannot forgive in himself a partiality, but is resolved that the two poles of thought shall appear in his statement.”

The wise men of the East and the Greek philosophers, and poets everywhere, spoke to Emerson, and in them he joyfully

³⁸ *Representative Men*.

recognized his instinctive belief in the soul-Universal, and in living Law. On the other hand, he was born into the hard and brilliant daylight of America in the youth of the nineteenth century. While by sympathy a Realist, he admired the courage and performance of the Nominalist, *if only he would take the next step*.

This essay does not appear to have been given as a lecture. Even in the short motto Mr. Emerson recognizes both the ideal archetype and the happiness and privilege of the individual.

N0640: In his Ode the hold which Beauty has upon him is less for what she has shown him than as a

Lavish, lavish Promiser.

N0641: This is true in the body also, and notably in the face. Mr. Emerson's head furnishes a marked example. The sculptors who made good portraits of him—Daniel Chester French, whose fine bust represents him in his serene age, and Sidney H. Morse, who made an excellent statuette bust of him in his prime—recognized this. In the work of both the face has a very different expression according to the side looked at, one representing Emerson the thinker and speaker, the other Emerson among his friends.

N0642: He foresaw truly. Four years later in England he found good men and customs and results, but falling far short of the ideal English men and institutions. Yet he chose rather to look at and give them credit for their best tendencies. And in America, six years later, Webster, an idol of his youth, turned his back on the ideals that he had stood for in the minds of the best New England, yet for a time was supported by Northern people.

N0643: This contest occupied the Church and the universities from the end of the ninth century down; the Realists, with the motto *Universalia ante rem* (or *in re*), supporting revelation of law to the mind, but, as churchmen rather than philosophers, less broadly than the ancients. The Nominalists studied man and nature in the individual, "proved all things," and generalized later,—*Universalia post rem*,—and were the party of criticism and advance. The Reformation and modern science drew their strength from this class.

N0644: Comparing this sentence with what he has said elsewhere, it is clear that he would have dwelt a little on the words "have been." Mr. Emerson's almost invariable rule in writing was, Never italicize.

N0645: Compare "*Aristocracy*," *Lectures and Biographical Sketches*.

N0646: Journal, 1839. "Plutarch fits me better than Southey or Scott, therefore I say, there is no age to good writing. Could I write as I would, I suppose the piece would be no nearer to Boston in 1839 than to Athens in the fiftieth Olympiad. Good thought, however expressed, saith to us, 'Come out of time; come to me in the Eternal!'"

N0647: Mr. Emerson had no ear for music, unless for a ballad sung with expression, and by a woman. The wild music of nature and the wind singing in the Æolian harp in his window spoke to him, as scientific music did not. Yet he was interested in it, and occasionally liked to go to a concert.

N0648: When all the competing reforms and theories were urged on him, instead of accepting or rejecting, he considered them calmly, and his practice was, like his Humble-bee, to—

Leave the chaff and take the wheat.

N0649:

Saw the endless rack of the firmament,
And the sailing moon where the cloud was rent,
And through man and woman and sea and star
Saw the dance of Nature forward and far.

"The Poet," *Poems*, Appendix.

N0650: His reconciliation of two views here considered.

N0651: Alphonso X., King of Castile³⁹ in the thirteenth century, a monarch of wonderful literary, legal and scientific achievement, whose criticism of Nature's ways was versified by Emerson among his early poems. He is reported to have said that, had God consulted him in the making of the world, he would have made it differently. Nature's wholesome influence in bringing us down to earth after our flights is symbolized by hellebore at the bottom of her draught, because the ancients found hellebore quieted the insane. It is said that the philosophers drank hellebore to clear their brains before intellectual labor. Whether this was true *helleborus* or *veratrum*, still used as a heart-sedative, is uncertain.

³⁹ See *A History of Spain*, by Ulick Ralph Burke, M. A.

N0652: Evolution is thus condensed into an answer to the Sphinx's question,—

The fate of the man-child,
The meaning of man?

N0653: Three communities then recently established.

N0654: From "The Paint-King," by Washington Allston. "Plato had no external biography. If he had lover, wife, or children, we hear nothing of them. He ground them all into paint." This simile in *Representative Men* Mr. Emerson no doubt owed to the line he quotes above.

N0655: Compare the lines in the "Fragment on Life" in the Appendix to the *Poems* beginning—

You shall not love me for what daily spends.

N0656: As Nature presents different facets and man sees the beauty of one at a time, so as a writer Emerson reported on one aspect at a time. Hence his remarks in "Self-Reliance" on a foolish consistency.

N0657: This is a harsh statement of the looseness with which a growing man should hold his beliefs of the day. In this very connection an instance can be given of how bravely sincere Mr. Emerson was. While temporarily preaching in East Lexington, he introduced into his discourse leaves from a sermon written a few years before while he was a Boston minister. In delivering it, he suddenly stopped and quietly said to his hearers, "The sentence

which I have just read I do not now believe," turned the page, and went on.

N0658: These were the good Englishmen that Mr. Alcott brought home with him, and who joined in the Fruitlands experiment. Though they came in spite of Mr. Emerson's warning, they weighed rather heavily upon his mind, but they were not of his kind.

NEW ENGLAND REFORMERS

THE SOCIETY which met at Amory Hall from 1841 to 1848 was the Church of the Disciples, of which Rev. James Freeman Clarke was the minister.

In the period of the Awakening in New England those who felt its influence wished to join others with them in helpful movements, and zealously urged organization; but the schemes which they felt to be of first importance varied with the individual temperament or need, and the individual was to take counsel of no man. Persons reputed high-minded and generous were eagerly assailed by competing advocates of measures for the regeneration of man, varying much in their wisdom, and usually woefully partial. Mr. Emerson stood rather for the Individual than for organization, believing that the universal or common mind of men would take care of the latter. His hospitality to thought, however, and the belief that he had means and influence, drew all the reformers to his door, sure that he would see that they brought the one thing needful, and join in proclaiming this newest and best gospel. Already in 1840 he had spoken on "Reforms" in the course on *The Present Age*, and in the following year had said a good word

for "Man the Reformer" before the Boston Mercantile Library Association.

This essay shows well his character. Although for years his time and sympathy, his patience and his power, had been over-freely drawn upon by the wise and the foolish, he honored and defended such wisdom and courage, or even trace of it, as each brought. Many of these pilgrims were unpresentable, rude and tedious; few had any eyes and heart for Nature, and almost all were without any sense of humor. But Mr. Emerson's high hope for man, if only some leaven of the Spirit were in him, made him gracious and forbearing to the "monotones," and welcome the wise and brave. So he treats his subject hopefully, and even the absurdities with good humor and a characteristically light hand.

Mr. George W. Cooke,⁴⁰ speaking of the charge made against Mr. Emerson of neglect and undervaluing of special reforms, says: "He would aim at the very centre of all vice and defect, dry up that fountain, and then all the lesser evils would cease. His method may be wrong, but it is the method of every great moral and religious teacher that the world has known."

Yet Mr. Emerson was a little troubled at his want of sympathy, and asks, after these strange and noisy conventions were over, "And where were the men of genius whilst these coarse missionaries were making odious the high doctrines of temperance, love and the life of nature which they had first broached in solemn hymns? Alas,...I saw them each taking himself in charge to keep himself silent nor plague the world longer with the harsh counsel of reform, drugging and quieting, how he best could, the nerves that were once harp-strings on which every sun-beam played music."

⁴⁰ *Ralph Waldo Emerson, his Life, Writings, and Philosophy*. Boston, J. R. Osgood & Co., 1881.

The motto did not appear in the first edition. Its last lines recall a fragment of verse printed in the Appendix to the *Poems*:—

The archangel Hope
Looks to the azure cope,
Waits through dark ages for the morn,
Defeated day by day, but unto victory born.

N0659: The “Chardon Street Convention” was called by the “Friends of Universal Progress” early in 1840 and lasted three days. It was followed by two more the same year. In the *Dial* an amusing account of this occasion, seen through Mr. Emerson’s eyes, was published by him. It is printed in *Lectures and Biographical Sketches*.

N0660: Mrs. Emerson, with her ready interest in domestic chemistry, which she learned from her brother Dr. Charles T. Jackson, no doubt supplied this good argument.

N0661: The Fruitlands Community was handicapped in getting its support from its lean acres by its theories. Cattle must not be enslaved; animal manure was abhorrent; all cultivation must be done by man-power when time could be spared from contemplation and high discussion; insects must not be murdered. Meat, fish, poultry, milk, cheese, butter, honey, eggs, as food, and wool and feathers as clothing or bedding, were unlawful, because obtained by wrongs done to the animal creation; leavened bread and fermented drinks were poisonous; cane-sugar, molasses, rice, and spice, and cotton for clothing, were products of slave-labor. Such grain and fruits as could be raised without manure, and wild nuts and berries and maple sugar, must furnish the food, and linen

the raiment, for these good but over-refining people. Necessity, which knows no law, prevented their carrying these rules quite to extremes.

N0662: The Antinomians, who troubled the early days of the New England colony, held that, as the elect cannot fall from grace nor forfeit the divine favor, any wicked actions which they may commit are not really sinful, and consequently they have no need to confess their sins or to break them off by repentance.

N0663: This parable, written in Mr. Emerson's journal, was suggested by the views advanced by his visitors: "You ask, O Theanor, said Amphitryon, that I should go forth from this palace with my wife and children, and that you and your family may enter and possess it. The same request in substance has been often made to me before by numbers of persons. Now I also think that I and my wife ought to go forth from the house and work all day in the fields, and lie at night under some thicket, but I am waiting where I am only until some god shall point out to me which among all these applicants, yourself or some other, is the rightful claimant."

N0664: In the previous year Thoreau, Alcott, and Lane (his English friend) had been arrested for refusal on conscientious grounds to pay their taxes. Mr. Sanborn in his *Memoir of Alcott* quotes from a letter of Thoreau to Emerson the following testimony of the officer of the law as to the grounds of refusal: "When Staples (the deputy-sheriff) came...my sister Helen asked him what he thought Mr. Alcott meant,—what his idea was,—and he answered, 'I vum, I believe it was nothing but principle, for I never heard a man talk honestier.'"

N0665: The *Non-Resistant* newspaper was started in Boston five years before this time. Its editors were William Lloyd Garrison, Edmund Quincy, and Mrs. Maria Chapman.

N0666: Among the active and interesting *doctrinaires* that thronged the ways in those days was Edward Palmer, who wrote a book to show that money was the root of evil and urged the abolishment of property, each person to serve others by exercising his own gift. On the title-page he added to his name the words "who has nothing to do with money," and for a time held stoutly to this abstinence.

Mr. Cabot in his Memoir (pp. 415, 416) quotes, among other writings of Mr. Emerson's upon money, the following: "We may very well and honestly have theoretical and practical objections to it; if they are fatal to the use of money and barter, let us disuse them; if they are less grave than the inconvenience of abolishing traffic, let us not pretend to have done with it whilst we eat and drink and wear and breathe it."

N0667: The spirit of the times was working in the schools. Five years earlier, as a result of a memorial of the American Institute of Instruction, headed by George Barrell Emerson, the Massachusetts legislature laid aside other business to consider how the then wretched schools of the Commonwealth could be improved, and chose Horace Mann, then president of the Senate, the secretary of the new Board of Education. His zeal and extreme devotion in these very days was regenerating the schools. It is remarkable to find in this essay suggestions for object-teaching and field-work, and some election in studies, and criticism of the mediæval rating of the classics,—ideas which hardly took root in the schools and colleges until twenty-five years later. Yet Mr. Emerson prized the

classics: it was neglect of their beauty in too much gerund-grinding that disgusted him.

N0668: With entire faith in the power of the better to quietly displace the worse, if opposition were not aroused, he prized an earnest priest more than a coarse or narrow denier. Once after a conversation at which a radical had explained that the death of Jesus might have been simulated and planned beforehand for effect on the people, and he thereafter kept in hiding, Mrs. Emerson said to her husband, "Should you have liked to have the children hear that?" "No," he answered, "it is odious to have lilies pulled up and skunk-cabbages planted in their places."

N0669: The communities at Brook Farm in West Roxbury (see "Historic Notes of Life and Letters in New England," *Lectures and Biographical Sketches*), at Hopedale in Worcester County, founded by the Rev. Adin Ballou, and probably that at Northampton, as the Fruitlands experiment, had already failed.

These communities are often alluded to in the *Dial*, especially Brook Farm. Interesting accounts of them by members may be found in Hawthorne's writings, and in the volumes of the *Atlantic*, *Century*, and *Overland Monthly* magazines.

N0670: Mr. Emerson's doubts were justified. Speaking of the material of these communities, he said: "These reformers were of a new class. Instead of the fiery souls of the Puritans, bent on hanging the Quaker, burning the witch, and banishing the Romanist, these were gentle souls with peaceful and even genial dispositions, casting sheep's eyes even on Fourier and his houris."

N0671: A part of this page was taken from the lecture on "Politics," to the teaching of which it is akin.

N0672: This distinction between talent and genius is made by him in many places.

N0673:

The heavens that now draw him
With sweetness untold,
Once found,—for new heavens
He spurneth the old.

"The Sphinx," *Poems*.

N0674:

I serve you not, if you I follow
Shadow-like o'er hill and hollow, etc.

"Étienne de la Boéce," *Poems*.

N0675: Mr. Emerson dealt with this mood in the poems "Alphonso of Castile" and "Blight."

N0676: This phrase comes from a fragment of Pindar, in the older English version of Plutarch's *Morals*, rendered, "Tread the floors of Hell with necessities as hard as iron." Professor Goodwin's translation gives it, "We are bound to the floors," etc.—*Consolation to Apollonius*.

N0677:

Postquam epulis Bacchoque modum lassata voluptas
 Imposuit, longis Cæsar producere noctem
 Inchoat adloquiis summaque in sede iacentem
 Linigerum placidis compellat Achorea dictis:
 'O sacris devote senex, quodque arguit ætas,
 Non neclcte deis, Phariæ primordia gentis
 Terrarumque situs volgique edissere mores
 Et ritus formasque deum; quodcunque vetustis
 Insculptum est adytis, profer noscique volentes
 Prode deos. Si Cecropium sua sacra Platona
 Maiores docuere tui, quis dignior umquam
 Hoc fuit auditu, mundique capacior hospes?
 Fama quidem generi Pharias me duxit ad urbes,
 Sed tamen et vestri; media inter proelia semper
 Stellarum coelique plagis superisque vacavi,
 Nec meus Eudoxi vincetur fastibus annus.
 Sed cum tanta meo vivat sub pectore virtus
 Tantus amor veri, nihil est, quod noscere malim
 Quam fluvii causas per sæcula tanta latentis
 Ignotumque caput; spes sit mihi certa videndi
 Niliacos fontes: bellum civile relinquam.'

Lucan, *De Bello Civili*, Lib. X.

N0678: Here is the reaction from the intoxication of persons which is told of in the poems "The Park" and "Manners."

N0679: The material aid which Mr. Emerson gave unasked to supply the manifest need of some of his spiritually-minded guests,

he held slight in comparison with the stimulus to thought which he often found in their society. The labourer was worthy of his hire.

N0680: This was his philosophic farmer-neighbor, Mr. Edmund Hosmer.

N0681: In one of his addresses to students Mr. Emerson said, "The relation of men of thought to society is always the same; they refuse that necessity of mediocre men, to take sides. They keep their own equilibrium. The sun's path is never parallel to the equator."

N0682: See Montaigne's Essays, Book III., chapter i., *On Utility and Honesty*.

Plutarch relates that Alexander the Great sent Onesecritus, a disciple of Diogenes, to the Indian sages who lived a retired life, to desire them to come to him. Some of them were haughty, but Dandamis behaved with civility. "When Onesecritus had given him an account of Pythagoras, Socrates and Diogenes, he said, 'They appear to have been men of genius, but to have lived with too passive a regard for the laws.' Others say Dandamis entered into no discourse with the messenger, but only asked 'Why Alexander had taken so long a journey.'"

N0683: Rev. Dr. Hale in his *Ralph Waldo Emerson* relates that, when a youth in whom they both were interested took high honors at a Cambridge exhibition, he addressed Mr. Emerson, expecting delighted sympathy in the young man's triumph. "Yes," was the answer, "I did not know he was so fine a fellow. And now if something will fall out amiss—if he should be unpopular with his class, or his father should fail in business, or if some other

misfortune can befall him—all will be well.” Dr. Hale adds: “I was green enough to be inwardly indignant at what seemed to me the cynicism of the philosopher. But I did not know that when he was eight years old his father had died, and that to the penury... of those early days—to his mother’s determination that the boy should be bred at Harvard College, to the careful struggles by which each penny was made to work the miracles of the broken bread by the Sea of Galilee—he owed...much of the vigor, the rigor and the manhood of his life.”

N0684: Mr. Emerson took especial delight in the noble passage to this purpose, in Scott’s *Lord of the Isles*, where the Abbot in vain tries to lay his ban upon Robert Bruce:—

De Bruce! I rose with purpose dread
To speak my curse upon thy head,
And give thee, as an outcast, o’er
To him who burns to shed thy gore:
But, like the Midianite of old,
Who stood on Zophim, heaven controlled,
I feel within mine aged breast
A power that will not be repressed.

.

De Bruce, thy sacrilegious blow
Hath at God’s altar slain thy foe;—
O’ermastered yet by high behest,
I bless thee, and thou shalt be blest!

N0685: Compare the lines in the *Poems*,—

And conscious Law is king of kings.

"Woodnotes," II.

The patient Dæmon sits

With roses and a shroud;

He hath his way and deals his gifts,—

But ours is not allowed.

"The World-Soul."

N0686: "Let a man's social aims be proportioned to his means and power. I do not pity the misery of a man underplaced; that will right itself presently; but I pity the man overplaced. A certain quantity of power belongs to a certain quantity of faculty. Whoever wants more power than is the legitimate attraction of his faculty, is a politician, and must pay for that excess; must truckle for it."—"Aristocracy," *Lectures and Biographical Sketches*.

REPRESENTATIVE MEN

MR. EMERSON eagerly sought anecdote or evidence which made good the oracles of the inspired minds. Not only in boyhood, when such enthusiasm is natural, he took keen pleasure in brave achievement, whether in the closet or the field: all through life he held to his faith in the Individual rather than the Organization. It was largely from him that the young Charles Russell Lowell learned his faith, later acted up to on the battlefield, that "the world advances by impossibilities achieved."

The astounding passage of the Alps by the First Consul with his army would have been among the first stories of the great world that reached Emerson's ears as a boy, and later the fame of the Emperor's rapid marches across Europe and repeated overthrow of the armies of the banded monarchs of Feudalism, compelling them to treat for peace at the very gates of their capitals. Mr. Emerson used to say, "I like people who can do things." No wonder that Napoleon was chosen as one type of the great man in this book. But the moral element was lacking, and the sudden reverse of the scale—

"When one that sought but Duty's iron crown
On that loud Sabbath shook the Spoiler down"—

made the lesson complete; showed the sure working of the great Law.

There is no need of seeking when the young Emerson made a friend of Shakspeare. In those serious New England days when there were no exciting athletics, and out-of-door play was a diversion after duties were done, and when in every well-ordered home the rule prevailed, "Little folks should be seen and not heard," children naturally sought for what comfort books allowed, and sometimes, opening a cover, found it a gate to fairy-land. For happily *A Midsummer Night's Dream* and *Macbeth* were on the shelf with Mason *On Self-knowledge*.

But before the elders had ceased to talk of the flood and the ebb in the fortune of Napoleon, then a captive at St. Helena, the boy, now in college and eagerly reading in the library, to the detriment of algebra, perhaps while studying for his Bowdoin prize dissertations⁴¹ came upon *The True Intellectual System of the Universe* by Ralph Cudworth (1678). In the review there given of the systems of ancient speculation, in order to show that belief in one sovereign God underlay the polytheism of the Pagan nations, it is probable that Mr. Emerson acquired his first knowledge of Plato's writings. In his journal for 1845 he wrote thus of an experience just after leaving college: "Men read so differently with purpose so unlike. I had read in Cudworth from time to time for years, and one day talked of him with Charles W. Upham, my classmate, and found him acquainted with Cudworth's argument and theology,

⁴¹ "On the Character of Socrates" (1820) and "On the Present State of Ethical Philosophy" (1821). These are printed in Rev. Dr. E. E. Hale's *Ralph Waldo Emerson*. Boston: Brown & Co., 1899.

and quite heedless of all I read him for,—namely, his citations from Plato and the philosophers, so that, if I had not from my youth loved the man, I suppose we might have ‘inter-despised,’ as De Quincey said of Wordsworth, and (perhaps) Mackintosh.”

It appears from the journals that while living in Canterbury (Roxbury) in 1825, the young Emerson, flying from the daily terrors of his school for young ladies in Boston, was seeking for some bit of spiritual refreshment in the remains of his father’s library. Among the books of desiccated sermons and the commentaries on the Scriptures he came upon an odd volume of Cotton’s translation of Montaigne which proved a friend indeed. In the lecture on Montaigne in this volume he relates this experience, but in the journal for 1873 he adds, “No book before or since was ever so much to me as that.”

In the fourth year after leaving college, when he had left the desk of the schoolmaster for his study at Divinity Hall, Emerson read a little book newly published in Boston, *The Growth of the Mind*, by Sampson Reed, which first attracted his attention to Swedenborg. Its author, a quiet druggist in Boston, and a member of the Swedenborgian Church, had graduated at Harvard at the end of Emerson’s Freshman year. Some early verses, never finished, entitled only S. R., seemed to show that even then something in Sampson Reed had attracted him. They begin,—

Demure apothecary,
Whose early reverend genius my young eye
With wonder followed and undoubting joy,
Believing in that cold and modest form
Brooded alway the everlasting mind,
And that thou, faithful, didst obey the soul.

This book made Mr. Emerson a reader of Swedenborg, even in his days of study for the ministry.

To the writings of Goethe there can be little doubt that he was first introduced by Coleridge. In his "Blotting Book," in which he noted and copied passages which pleased him in his reading, in the autumn of 1830 are several from *Wilhelm Meister* and other writings of Goethe, as well as from the *Life of Goethe*. It was certainly Carlyle's love of German and of Goethe that set Emerson to the task of learning the language and reading the Master in the original tongue. In the early letters that passed between the friends Goethe is discussed, Mr. Emerson never being able to share to the full in his friend's value for Goethe. But it is certain that for the love of his friend he struggled through nearly all of the fifty-five volumes of a pocket edition of the works in German, though he never really mastered the difficulties of the language.

In a letter to Carlyle on June 29, 1845, after confessing to this "gigantic anti-poet,"⁴² as John Sterling called him, his own recent resolve to publish a volume of poems, and excusing his friend in advance from reading a word of them, he adds: "Meantime I think to set a few heads before me as good texts for winter evening entertainments. I wrote a deal about Napoleon a few months ago after reading a library of memoirs. Now I have Plato, Montaigne and Swedenborg, and more in the clouds behind."⁴³

Again, September 15, in the same year he writes, "I am to read to a society in Boston presently some lectures,—on Plato, or the Philosopher; Swedenborg, or the Mystic; Montaigne, or the

42 *A Correspondence between John Sterling and Ralph Waldo Emerson*. Boston: Houghton, Mifflin & Co., 1897.

43 *The Correspondence of Thomas Carlyle and Ralph Waldo Emerson, Supplementary Letters*. Boston: Ticknor & Co., 1886.

Skeptic; Shakespeare, or the Poet; Napoleon, or the Man of the World;—if I dare, and much lecturing makes us incorrigibly rash. Perhaps, before I end it, my list will be longer, and the measure of presumption overflowed. I may take names less reverend than some of these,—but six lectures I have promised. I find this obligation usually a good spur to the sides of that dull horse I have charge of. But many of its advantages must be regarded at a long distance." The course of seven lectures was first given before the Boston Lyceum in the Odeon in the winter of 1845–46.

When in response to the urgent invitation of several friends, Mr. Emerson, in the late autumn of 1847, crossed the ocean to lecture in England, his first course after landing, given before the Manchester Athenæum, was that on "Representative Men." The lectures on Napoleon and on Shakspeare were later given in Exeter Hall in London.

The record of the impression made on one of his hearers by this American lecturer at his first appearance before English audiences may be interesting. It is from the Memoir by the late Mr. Alexander Ireland of Manchester.⁴⁴

"The first impression one had in listening to him in public was that his manner was so singularly quiet and unimpassioned that you began to fear the beauty and force of his thoughts were about to be marred by what might almost be described as monotony of expression. But very soon was this apprehension dispelled. The mingled dignity, sweetness and strength of his features, the earnestness of his manner and voice, and the evident depth and sincerity of his convictions gradually extorted your deepest attention and made you feel that you were within the grip of no ordinary man, but of one 'sprung of Earth's first blood' with 'titles manifold;' and

44 *Ralph Waldo Emerson, his Life, Genius and Writings*. London: Simpkin, Marshall & Co. 1882.

as he went on with serene self-possession and an air of conscious power reading sentence after sentence, charged with well-weighed meaning and set in words of faultless aptitude, you could no longer withstand his 'so potent spell,' but were forthwith compelled to surrender yourself to the fascination of his eloquence. He used little or no action....Perhaps no orator ever succeeded with so little exertion in entrancing his audience, stealing away each faculty, and leading the listeners captive to his will. He abjured all force and excitement—dispensing his regal sentences in all mildness, goodness and truth, but stealthily and surely he grew upon you from the smallest proportions, as it were; steadily increasing, until he became a Titan....The moment he finished he took up his MS. and quietly glided away,—disappearing before his audience could give vent to their applause."

Representative Men was published January 1, 1850. A copy was sent to Carlyle, who, "a remorseful man," acknowledged it in an affectionate letter written July 19, 1850, telling, however, that his own life had been meanwhile "black with care and toil." In it he said: "Chapman, with due punctuality at the time of publication, sent me the *Representative Men*; which I read in the becoming manner: you now get the book offered you for a shilling, at all railway stations; and indeed I perceive the word 'representative man' (as applied to the tragic loss we have had in Sir Robert Peel) has been accepted by the Able-Editors and circulates through newspapers as an appropriate household word, which is some compensation for the piracy you suffer from the typographic Letter-of-Marque men here. I found the book a most finished, clear and perfect set of *Engravings in the line manner*; portraitures full of *likeness*, and abounding in instruction and materials for reflection to me: thanks always for such a Book; and Heaven send us many more of them. *Plato*, I think, though it is the most admired by many, did

the least for me: little save Socrates with his clogs and big ears remains alive with me from it. *Swedenborg* is excellent in *likeness*; excellent in many respects; yet I said to myself, on reaching your general conclusion about the man and his struggles: 'Missed the consummate flower and divine ultimate elixir of Philosophy, say you? By Heaven, in clutching at *it*, and almost getting it, he has tumbled into Bedlam,—which is a terrible *miss*, if it were never so *near*! A miss fully as good as a mile, I should say.'—In fact, I generally dissented a little about the *end* of all these *Essays*; which was notable, and not without instructive interest to me, as I had so lustily shouted 'Hear, hear!' all the way from the beginning up to that stage.—On the whole let us have another book with your earliest convenience: that is the modest request one makes of you on shutting this."

Earlier in the letter Carlyle had said, "Though I see well enough what a great deep cleft divides us, in our ways of practically looking at this world,—I see also (as probably you do yourself) where the rock-strata, miles deep, unite again: and the two souls are at one."

The new book was well received on both sides of the ocean. It was naturally at that time a more popular book than the *Essays* had been. It received a most appreciative yet critical notice in the *Revue des Deux Mondes* from Emile Montégut, who was struck with Emerson's detachment from the political and religious excitements of the moment, for it appeared just after the Revolution in France of 1848. He said, "Revolutions and reactions intimidate him not at all and do not draw him in the least from his convictions. In nothing does he offer sacrifice to the spirit of the moment. He speaks of Swedenborg and Plato at the moment when the whole universe has ears only for Proudhon and Louis Blanc. He praises the skepticism of Montaigne as if he did not live in a century which boasts of having the most absolute philosophies."

Mr. Emerson's friend Horatio Greenough, the sculptor, in a letter written in December, 1851, said:—

"I found your *Representative Men* in the hands of a *dame du Palais* at Vienna in '48 and have learned that she has been exiled, having made herself politically obnoxious."

This "Representative Men" may have been a newspaper report of the lectures as delivered in London, or, more probably, Mr. Greenough made a mistake either in the volume or the date.

But the book was not everywhere valued. Mr. George W. Cooke tells in his book on Mr. Emerson that a writer in the *New Englander* found it "purely ridiculous for any one to laboriously write out and gravely read to large assemblies such gratuitous absurdities," and made other severe strictures; among other things, saying that a large part of what Mr. Emerson had then written "must be little else than a caricature of himself." The same idea in a more courteous and complimentary form was, after Emerson's death, expressed by Dr. Holmes in his *Memoir*, thus: "He shows his own affinities and repulsions, and, as everywhere, writes his own biography, no matter about whom or what he is talking. There is hardly any book of his better worth study by those who wish to understand not Plato, not Plutarch, not Napoleon, but Emerson himself. All his great men interest us for their own sake, but we know a good deal about most of them, and Emerson holds the mirror up to them at just such an angle that we see his own face as well as that of his hero unintentionally, unconsciously, no doubt, but by a necessity which he would be the first to recognize."

There is a story of the effect of this book on a schoolboy looking for light which should here be told:—

"I remember a day when I stood idly over a counter looking at the backs of what seemed to be newly published books. I drew out one, bound in plain black muslin. Its title, *Representative Men*, attracted me, because I had just been reading Plutarch's *Lives*, and for the first time had been aroused by the reading of any book. Those Greek and Roman men moved my horizon some distance from its customary place. The titles of the books were at least cousins, and I wondered if there had been any representative men since Epaminondas and Scipio. I opened the volume at the beginning, 'Uses of Great Men,' and read a few pages, becoming more and more agitated until I could read no more there. It was as if I had looked into a mirror for the first time. I turned around, fearful lest some one had observed what had happened to me; for a complete revelation was opened in those few pages, and I was no longer the same being that had entered the shop. These were the words for which I had been hungering and waiting. This was the education I wanted—the message that made education possible and study profitable, a foundation, and not a perpetual scaffolding. These pages opened for me a path, and opened it through solid walls of ignorance and the limiting environment of a small country academy. All that is now far, far away, and seems indeed an alien history; yet however much one may have wandered among famous books, it would be ungrateful not to remember the one book which was the talisman to all its fellows."⁴⁵

⁴⁵ *Remembrances of Emerson*, by John Albee. New York: International Book and Publishing Co. 1900.

USES OF GREAT MEN

N0687: Mr. Emerson tells in his *Poems* how, when the west wind was making music in the Æolian harp in his study windows,—

Not long ago at eventide,
It seemed, so listening, at my side
A window rose, and, to say sooth,
I looked forth on the fields of youth:
I saw fair boys bestriding steeds,
I knew their forms in fancy weeds,
Long, long concealed by sundering fates,
Mates of my youth,—yet not my mates,
Stronger and bolder far than I,
With grace, with genius, well attired
And then as now from far admired,
Followed with love
They knew not of,
With passion cold and shy.

"The Harp."

Again, perhaps recalling the good and wise women who had fostered his childhood and early youth, he tells that it is revealed to the poet,—

That blessed gods in servile masks
Plied for thee thy household tasks.

"Saadi."

N0688: With Mr. Emerson the benefits and pleasures of travel were incidental. He used the opportunities by the way, but when invited to travel for pleasure, inclined to say like the young Jesus, "Wist ye not that I must be about my Father's business?" Men interested him more than places: his New England village was enough for him. His journal of travel in 1833, the substance of which appears in the first chapter of *English Traits*, shows this. The verses, "Written at Rome, 1833," in the *Poems*, end with a longing to find the true man, whom a few weeks later he sought out among the Scottish moors.

N0689: To the same purpose is a passage about "the masses" early in "Considerations by the Way," in *Conduct of Life*, and in a more human and sympathetic tone in the last pages of the present essay.

N0690:

"We find in our dull road their shining track."

Lowell's *Commemoration Ode*.

N0691: As elsewhere this idealist concedes—"Treat men and women well. Treat them as if they were real. Perhaps they are."

N0692: It is not easy for the generation who remember only the end of the nineteenth century to believe that the persons thus described abounded in New England at the time when this book was written. When the period of unrest is again followed by one of eager aspiration, the like may occur.

N0693: When young people brought their problems to Mr. Emerson, they may at first have experienced disappointment at not receiving the easy answers for which they hoped. His answer was a large one, more serviceable later, if they considered it. Their individualities were different from his, and scope must be left for these. He wrote in his journal, "If we could speak the direct solving words, it would solve us too." Compare the last part of the "Celestial Love" in the *Poems*.

N0694: Jacob Behmen, or Boehme, a Silesian of humble birth in the sixteenth century, a mystic whose writings later attracted much attention. Mr. Emerson was early interested in his works and often mentions them.

N0695: He welcomed each discovery for its use and beauty, and more for its significance, which it was his delight to find. He said of Nature,—

Day by day for her darlings to her much she added more;
In her hundred-gated Thebes every chamber was a door,
A door to something grander,—loftier walls and vaster floor.

And Nature says,—

He lives not who can refuse me;

All my force saith, Come and use me.

N0696: Among other sentences in the original lecture which were pruned out of the essay because their substance occurs later, was this strong one: "Man is a piece of the Universe made alive."

N0697: William Gilbert, the greatest man of science of Queen Elizabeth's reign, especially noted for his discovery that the earth is a great magnet.

Hans Christian Oersted of Denmark, who in 1820 announced his discovery of the identity of electricity and magnetism.

N0698: Journal, 1885 (compare passage, varied, in *Nature*, p. 27). "Natural History by itself has no value: it is like a single sex, but marry it to human history and it is poetry. Whole floras, all Linnæus's or Buffon's volumes, contain not one line of poetry; but the meanest natural fact, the habit of a plant, the organs, or work, or noise of an insect, applied to a fact in human nature, is beauty, is poetry, is truth at once."

N0699:

I am the doubter and the doubt.

"Brahma," *Poems*.

N0700: Compare the motto of "Wealth" in *Conduct of Life*.

N0701: But not forgetting, in the material gain, its main use—the spiritual.

N0702: This idea is found in the poems "Destiny" and "Fate."

N0703:

Me too thy nobleness has taught
To master my despair;
The fountains of my hidden life
Are through thy friendship fair.

"Friendship," *Poems*.

N0704: In his afternoon walks through the Walden woods while he was writing this book, Mr. Emerson saw with respect the unprecedented day's work of the newly imported Irishmen on the Fitchburg Railroad, then in process of construction.

N0705: This introductory chapter to the *Representative Men* may be compared with Carlyle's *Heroes and Hero-worship*, published ten years earlier. In Mr. Emerson's essay on *Aristocracy*, called *Natural Aristocracy* when read as a lecture in England, are several passages similar to the one on this page, sympathizing with the admiration for "men who are incomparably superior to the populace in ways agreeable to the populace, showing them the way they shall go, doing for them what they wish done and cannot do;"—"the steel hid under gauze and lace under flowers and spangles."

N0706: This was his own rule—never to "talk down" to others. When in 1834 he made his home in Concord, and began his new life as lecturer and writer, he entered in his journal this resolve:—

"Henceforth I design not to utter any speech, poem or book that is not entirely and peculiarly my work. I will say at public lectures and the like those things which I have meditated for their own sake, and not for

the first time with a view to that occasion." And again, "Do not cease to utter them and make them as pure of all dross as if thou wert to speak to sages and demigods, and be no whit ashamed if not one, yea, not one in the assembly should give sign of intelligence. Is it not pleasant to you—unexpected wisdom? depth of sentiment in middle life, persons that in the thick of the crowd are true kings and gentlemen without the harness and envy of the throne?"

N0707: Mr. Emerson, in the lecture on Shakspeare in this volume, tells of such an experience while seeing *Hamlet* performed.

N0708: He did not believe that men could be forced or pledged to reform. When the way was made beautiful to them, they could not choose but take it. He wished no disciples. "The poet," he said, "is the liberator."

N0709: The Over-Soul doctrine.

N0710: That is, the ideal, instead of the outward shows of things.

N0711: From a noble poem by John Sterling, entitled "Dædalus," in honor of Greek sculpture and lamenting the lost art. This poem by his friend is included in Emerson's collection *Parnassus*.

N0712: Out-of these losses he redeemed "Days," which he once said he thought perhaps his best poem.

N0713: Probably suggested by Balzac's *Peau de Chagrin*.

N0714: Journal, April, 1839. "Yesterday I read Beaumont and Fletcher's tragedy 'The False One,' which, instead of taking its

name from Septimius, ought to have been 'Cleopatra.' A singular fortune is that of the man Cæsar, to have given name as he has to all that is heroic ambition in the imaginations of painters and poets. Cæsar must still be the speaking-trumpet through which this large wild commanding spirit must always be poured. The Poet would be a great man. His power is intellectual. Instantly he seizes these hollow puppets of Cæsar, of Tamerlane, of Boadicea, of Belisarius, and inflates them with his own vital air. If he can verily ascend to grandeur,—if his soul is grand, behold his puppets attest his weight, they are no more puppets but instant vehicles of the wine of God: they shine and overflow with the streams of that universal energy that beamed from Cæsar's eye, poised itself in Hector's spear, purer sat with Epaminondas, with Socrates, purest with thee, thou holy child Jesus."

N0715:

Who bides at home, nor looks abroad,
Carries the eagles and masters the sword.

"Destiny," *Poems*.

N0716: Mr. Emerson gives in a journal an instance of the humble compensations—a case of a poor feeble-minded girl who went about the house bragging that *she was not dead*.

N0717: He told Mr. John Albee, who, still a boy in Andover Academy, visited him, that it was a great day in a man's life when he first read the *Symposium*.

N0718: Mr. Emerson had great skill in lifting the conversation from a low and gossiping level, without apparent reproof or incivility.

N0719: "*Au nom de Dieu, ne me parlez plus de cet homme là!*"

N0720:

If love his moment over-stay,
Hatred's swift repulsions play.

"The Visit," *Poems*.

N0721: The Oriental doctrine, alluded to in his poem "Uriel":—

Doomed to long gyration
In the sea of generation.

N0722:

In vain: the stars are glowing wheels,
Giddy with motion Nature reels,
Sun, moon, man, undulate and stream,
The mountains flow, the solids seem,
Change acts, reacts; back, forward hurled,
And pause were palsy to the world.

"The Poet," *Poems*, Appendix.

N0723: Mr. Emerson's frequent use of his classical education, not pedantically, but to secure the attention of the reader and make the expression exact and picturesque, is well shown in the choice of the word *flagrant* as if the human world were traced out

in the general dimness by its blazing beacon lights. "*Federal errors*," a few pages earlier, for mistakes sanctioned by custom is another example.

N0724: Immortality in some form seems taken for granted by this expression.

N0725:

The word unto the prophet spoken
Was writ on tables still unbroken.

"The Problem," *Poems*.

N0726: The constant security of Mr. Emerson's belief in Evolution in its highest sense appears here as everywhere in his prose and verse, and also his belief in the genius of mankind, which is another word for the Universal Mind. He wrote thus of the Poet in his journal of 1838:—

"Morning and evening he blessed the world. Where he went the trees knew him, and the earth felt him to the roots of the grass. Yet a few things sufficed. One tree was to him as a grove; the eyes of one maiden taught him all charms; and by a single wise man he knew Jesus and Plato and Shakspeare and the angels."

PLATO; OR, THE PHILOSOPHER

DR. RICHARD Garnett, in his *Life of Emerson*, ends his comment on the previous chapter, the "Uses of Great Men," by saying that "we find ourselves landed at last in Emerson's favourite conclusion [the Universal Mind], with but slight idea how we have arrived at it. 'Genius appears as the exponent of a vaster mind and will. The opaque self becomes transparent with the light of a First Cause.' It is the purpose of the remaining lectures to resolve this pure ray of primal intellect into the sixfold spectrum of philosopher, mystic, skeptic, poet, man of the world, and writer respectively personified by Plato, Swedenborg, Montaigne, Shakspeare, Napoleon, and Goethe."

In Mr. Emerson's journal in the spring of 1845 is this note: "A Pantheon course of lectures should consist of heads like these. [Here follow the six names of the subjects of these chapters.] Jesus should properly be one head, but it requires great power of intellect and of sentiment to subdue the biases of the mind of the age and render historic justice to the world's chief saint."

As has been said in the introductory note, Mr. Emerson began in his college days to make the acquaintance of Plato, and the

readings thereafter were a frequent refreshment. When he went to lonely Nantasket Beach to write his oration, *The Method of Nature*, he read in Plato for inspiration, and wrote thence to a friend:—

18 JULY, 1841.

I brought here *Phædrus*, *Meno* and the *Banquet*, which I have diligently read. What a great uniform gentleman is Plato! Nothing is more characteristic of him than his good-breeding. Never pedantic, never wire-drawn or too fine, and never, O never obtuse or saturnine; but so accomplished, so good humoured, so perceptive, so uniting wisdom and poetry, acuteness and humanity, into such a golden average, that one understands how he shall enjoy his long Augustan empire in literature. I have also three volumes new to me of Thomas Taylor's translations, Proclus, Ocellus Lucanus, and Pythagorean Fragments.

The next year he writes to the same friend:—

CONCORD, 7 MAY 1842.

...I read last week the *Protagoras* and *Theages* of Plato. The first is excellent and gave me much to think. With what security and common sense this Plato treads the cliffs and pinnacles of Parnassus, as if he walked in a street, and came down again into a street as if he lived there.

My dazzling friends of Alexandria, the New Platonists, have none of this air of facts and society about them. This Socrates is as good as Don Quixote all the time. What impenetrable armor of witty courtesy covers him every moment.

In his journal, under the head of "The Poppy-wreath," he says, "Plato, well guarded from those to whom he does not belong by a river of sleep."

Journal, 1845. "It requires for the reading and final disposition of Plato, all sorts of readers, Frenchmen, Germans, Italians, English, and Americans. If it were left to apprehensive, gentle, imaginative, Plato-like persons, no justice would be done to his essence and totality, through the excess or violence of affection that would be spent on his excellence of reason and imagination. But Frenchmen have no reverence, they seize the book like merchants, it is a piece of goods, and is treated without ceremony after the manner of commerce; and though its diviner merits are lost by their profanation, the coarser, namely, the texture and coherence of the whole and its larger plan, its French availableness, its fitness to French taste, by comprehending that. Too much seeing is as fatal to just seeing as blindness is. People speak easily of *Cudworth*, but I know no book so difficult to read as *Cudworth* proper. For, as it is a magazine of quotations, of extraordinary ethical sentences, the shining summits of ancient philosophy, and as *Cudworth* himself is a dull writer, the eye of the reader rests habitually on these wonderful revelations, and refuses to be withdrawn; so that after handling the book for years, the method and the propositions of *Cudworth* still remain a profound secret. *Cudworth* is sometimes read without the Platonism; which would be like reading *Theobald's Shakspeare*, leaving out only what *Shakspeare* wrote.

"I think the best reader of Plato the least able to receive the totality at first, just as a botanist will get the totality of a field of flowers better than a poet."

N0727: The less usual use of "secular," as applied to books, in its strict classic sense, to mean *that live through the ages*, is characteristic.

Omar the Caliph was Mahomet's cousin and second successor.

N0728: Here came in, in the original lecture, the sentences: "Nothing but God can give invention. Everything else, one would say, the study of Plato would give."

N0729: And yet Plato quotes from the earlier men, as mentioned later in this essay and in "Quotation and Originality," *Letters and Social Aims*.

N0730: This rare book is thus entitled:—*Practical Philosophy of the Muhammadan People, exhibited in its professed connection with the European, so as to render either an introduction to the other; being a translation of the AKHLAK-I-JALALY, the most esteemed work of Middle Asia, from the Persian of Fakir Jāny Muhammad Asāad, (with references and notes), by W. F. Thomson, Esq., of the Bengal Civil Service. London, 1839.*

The translator says in his introduction, "The latter half of the fifteenth century may indeed be considered as the Augustan age of Persian letters," that about that time the Akhlak-i-Jalaly was produced, and that it is "the best digest of the important topics of which it treats." He says that through the translations of the Greek philosophers, or, in some cases, the transference "in extract from writer to writer," the Moslem people came to have a knowledge of the great Greek systems of thought. "The most successful efforts of the entire people" to reconcile the Greek philosophy with the social and religious systems of the Mohammedans "may be said to be concentrated in the work before us; but the treatise from which it more particularly originates is the Kitat-at-Jaharat, an Arabic work composed in the tenth century." This work "is an amalgam of Platonic and Aristotelian philosophy, carried out, however, to the most minute practical application," etc. This Arabic work, having passed with improvements, due to the increase of knowledge

in five hundred years, through the hands of two Persian writers, appears as the *Akhlak-i-Jalaly*. It treats, after an *Exordium*, in Book I. of *The Individual State*; in Book II. of *The Domestic State*; in Book III. of *The Political State*, and in the Conclusion gives, I. *Platonic Maxims on Ethics*; II. *Aristotelian Maxims on Politics*.

N0731: Dr. Holmes thus comments on this passage: "The reader will, I hope, remember this last general statement when he learns from what wide fields of authorship Emerson filled his store-houses."

N0732: Mr. Emerson quotes Stanley as saying that Plato first used the word Poem.

N0733: When Mr. Emerson gave this lecture in Concord, a lady walking home with her neighbor, a substantial farmer's wife, found that she did not approve of it. On pressing her to learn what she objected to, the disapproving matron said, "Well! If those old heathen did what Mr. Emerson said they did, the less said about them the better!" "Why, what do you mean?" "He said *they ground their wives and children into paint!*"

N0734: The majesty of planets and suns and systems, in their ordered courses, especially appealed to Emerson from his youth. He draws constantly his imagery from astronomy, and especially honored Galileo, Copernicus, Kepler, and Newton. In the years between 1835 and 1845 his journals and the scattered fragments of "The Poet" (see *Poems*, Appendix) show how constantly he sought "the sweet influence of the Pleiades" and "Arcturus and his sons."

Divine inviters, I accept

The courtesy ye have shown and kept
 From ancient ages for the bard.

.

O birds of ether without wings!
 O heavenly ships without a sail!
 O fire of fire! O best of things!
 O mariners who never fail!
 Sail swiftly through your amber vault,
 An animated law, a presence to exalt.

N0735: These doctrines are discussed in the *Parmenides* and the *Theætetus* of Plato. That of the Identity, "Ἐν καὶ πᾶν, came from Xenophanes. See also Emerson's "Xenophanes" in the *Poems*.

N0736: The journal of 1845 shows that Mr. Emerson was reading, not only in the Koran and Akhlak-i-Jalaly, but in the East Indian Scriptures, and he gives many quotations. He writes, "The East is grand and makes Europe appear the land of trifles." It was natural that Plato should lead him to the most ancient fountains of the religion of the Aryan race.

In the midsummer of 1840 Mr. Emerson told in a letter to a near friend of his high prizing of the Vedas.⁴⁶

"In the sleep of the great heats there was nothing for me but to read the Vedas, the bible of the tropics, which I find I come back upon every three or four years. It is sublime as heat and night and a breathless ocean. It contains every religious sentiment, all the grand ethics which visit in turn each noble and poetic mind, and nothing is easier than to separate what must have been the primeval inspiration from the endless ceremonial

⁴⁶ *Letters of Emerson to a Friend*, edited by Charles Eliot Norton. Boston: Houghton, Mifflin & Co. 1899.

nonsense which caricatures and contradicts it through every chapter. It is of no use to put away the book: if I trust myself in the woods or in a boat upon the pond, nature makes a Bramin of me presently: eternal necessity, eternal compensation, unfathomable power, unbroken silence,—this is her creed. Peace, she saith to me, and purity and absolute abandonment—these penances expiate all sin and bring you to the beatitude of the Eight Gods."

N0737: The thought that appears in "Brahma," which is but a poetical rendering of a passage from the Bhagavat-Gita.

N0738: This suggests Mr. Emerson's poem "Pan," which has often been alluded to in these notes because it presents the doctrine of the Over-Soul.

N0739:

Find me, and turn thy back on Heaven.

"Brahma," *Poems*.

N0740: Dr. William T. Harris said of this passage: "What Emerson says of Plato we may easily and properly apply to himself. But he goes farther than Plato toward the Orient, and his pendulum swings farther West into the Occident. He delights in the all-absorbing unity of the Brahman, in the all-renouncing ethics of the Chinese and Persian, in the measureless images of the Arabian and Hindoo poets. But he is as practical as the extremest of his countrymen. His practical is married to his abstract tendency. It is the problem of evil that continually haunts him, and leads him to search its solution in the Oriental unity which is above all dualism of good and evil. It is his love of freedom that leads him to seek

in the same source an elevation of thought above the trammels of finitude and complications. Finally, it is his love of beauty, which is the vision of freedom manifested in matter, that leads him to Oriental poetry, which sports with the finite elements of the world as though they were unsubstantial dreams."⁴⁷

N0741: From the *Timæus*.

N0742:

The gods talk in the breath of the woods,
 They talk in the shaken pine,
 And fill the long reach of the old seashore
 With dialogue divine;
 And the poet who overhears
 Some random word they say
 Is the fated man of men
 Whom the ages must obey.

"The Poet," *Poems*, Appendix.

See also the poem "My Garden."

N0743: Spenser's *Faerie Queene*, Book III., Canto XI.

N0744: From the *Theætetus*.

N0745: From the *Gorgias*.

⁴⁷ "Emerson's Orientalism" in *The Genius and Character of Emerson*, Lectures at the Concord School of Philosophy, Boston: J. R. Osgood & Co. 1885.

N0746: This suggests a passage in a letter which Mr. Emerson wrote to a spiritually minded Quaker friend in 1847.

"For the science of God our language is unexpressive and merely prattle: we need simpler and universal signs, as algebra compared with arithmetic. Thus I should affirm easily *both* those propositions, which our Mr. Griswold balances against one another; that, I mean, of Pantheism and the other *ism*.

"Personality, too, and impersonality, might each be affirmed of Absolute Being; and what may not be affirmed of it in our own mind? And when we have heaped a mountain of speeches, we have still to begin again, having nowise expressed the simple unalterable fact."

N0747: See an early poem of Emerson's, "The Bohemian Hymn," in the Appendix to the *Poems*.

N0748: Compare *The Republic*, Book VII.

N0749: From the *Phædrus*.

N0750: When, as a schoolboy, I was complaining of the difficulties of geometry, I was surprised at my father's words, for he had found mathematics so hopeless a study for himself that he always shared his children's feelings on the subject, much to their comfort. But on this occasion he said, "Geometry, yes, one must study geometry for its elegance." Plato had probably made it sacred to him—in theory. Yet there is some truth in Dr. Holmes's remark, "Lover and admirer of Plato as Emerson was, the doors of the Academy, over which was the inscription,—μηδεις ἀγέωμετρος εἰδὶτω—Let no one unacquainted with Geometry enter here,—would have been closed to him."

N0751:

From the stores of eldest matter,
The deep-eyed flame, obedient water,
Transparent air, all-feeding earth,
He took the flower of all their worth,
And, best with best in sweet consent,
Combined a new temperament.

"Fragments on Life," *Poems*, Appendix.

N0752: It was this doctrine of Symbolism which made Emerson prize Swedenborg so highly.

N0753: See *Republic*, Book VI.

N0754: Mr. Emerson's use of the authors was to give him a spur—he "read for lustres," and in the great masters especially. Thus, writing to Carlyle in July, 1842, he said, "I had it fully at heart to write at large leisure in noble mornings, opened by prayer, or by readings of Plato or whomsoever else is dearest to the Morning Muse, a chapter on Poetry, for which all readings, all studies, are but preparation."

N0755: This idea appears in "Love" in the First Series of *Essays* and in the poem "Initial, Dæmonic, and Celestial Love."

N0756: This literary or philosophic coldness Mr. Emerson satirizes in some lines which, after his death, were printed in the Appendix to the *Poems*, under the title "Philosopher." He complained of finding this professional mood in himself at times. To pure Intellect he always assigned a lower plane than to Love.

In the journal for 1845 is this passage, headed *Buddha, or he who knows*, and also *Icy Light*:—

"Intellect puts an interval: if we converse with low things, we are not compromised, the interval saves us. But if we converse with high things, with heroic persons, with virtues, the interval becomes a gulf, and we cannot enter into the highest good."

N0757: What Mr. Emerson says here of Plato, and also a few pages earlier, "He cannot forgive in himself a partiality, but is resolved that the two poles of thought shall appear in his statement," cannot but recall his own method of presenting in turn different facets of the gem of truth. Churchman and Agnostic can easily find good weapons for argument in his works. Dr. Holmes says of this passage, "Some will smile at hearing him say this of another." It illustrates the felicity of the Doctor's remark that Emerson holds up the mirror to his characters at just such an angle that we see his own face as well as that of his hero.

N0758: Dr. Richard Garnett tells a story of an occurrence which might well have happened in England: "Can you tell me," asked an auditor of his neighbor at the lecture, "what connection all this has with Plato?" "None, my friend, save in God."

N0759: This paragraph suggests the "Song of Nature" in the *Poems*.

N0760: But these lines are but segments of great returning curves like the orbits of the heavenly bodies.

In vain produced, all rays return,

Evil will bless and ice will burn.

N0761: The cave of Trophonius, where he delivered oracles, is more particularly told about by Plutarch in his *Lives*. The ring, strangely found by Gyges the shepherd, made him invisible and by means of it he won great temporal power (*Republic*, Book II.). The soul is figuratively represented as a pair of winged horses and a charioteer. "Now the winged horses and the charioteer of the gods are all of them noble and of noble breed, while ours are mixed, and we have a charioteer who drives them in a pair, and one of them is noble, and of noble origin, and the other is ignoble,...and, as might be expected, there is a great deal of trouble in managing them." (*Phædrus*.)

"God has formed you differently. Some of you have the power of command and these he has composed of gold, wherefore also they have the greatest honor; others of silver to be auxiliaries; others again who are to be husbandmen and craftsmen he has made of brass and iron; and the species will generally be preserved in their children. But, as you are of the same original family, a golden parent will sometimes have a silver son or a silver parent a golden son." (*Republic*, Book III.)

Socrates relates that the Egyptian god Theuth, having invented the use of letters, showed them to Thamus the king. "'This,' saith Theuth, 'will make Egyptians wiser and give them better memories.' But Thamus replied,...'This invention of yours will create forgetfulness in the learners' souls, because they will not use their memories.'" (*Phædrus*.)

In the strange vision of Er, the Pamphylian, is the scheme of the planetary system whirled by the sister Fates, Lachesis singing of the Past, Clotho of the Present, and Atropos of the Future. He saw

also the spirits of departed heroes choosing their destinies in a new life. (*Republic*, Book X.)

N0762: Dr. Holmes says, "These two quaint adjectives are from the mint of Cudworth."

N0763: These correspondences of matter and spirit Mr. Emerson celebrates everywhere.

Subtle rhymes, with ruin rife,
Murmur in the house of life,
Sung by the Sisters as they spin;
In perfect time and measure they
Build and unbuild our echoing clay.
As the two twilights of the day
Fold us music-drunken in.

"Merlin," II., *Poems*.

N0764:

Vast the realm of Being is,
In the waste one nook is his;
Whatsoever hap befalls
In his vision's narrow walls
He is here to testify.

"Fragments on Life," *Poems*, Appendix.

N0765: And yet, in the winnowing of Time, Plato is not one of those who, as poet, survived "The Test" as answered in "The Solution," in the *Poems*, although, strangely, Swedenborg is.

Perhaps this was because Emerson chose but one representative of a nation and Homer stood for Greece.

SWEDENBORG

AS HAS been said in the Introduction to this volume, it is almost certain that the little book by Sampson Reed, *The Growth of the Mind*, first interested Mr. Emerson in the writings of Swedenborg. That book was published in Boston when Mr. Emerson was twenty-three years old. A few years later he wrote in his journal:—

CHARDON ST., 9TH OCTOBER, 1829.

I am glad to see that Interpretations of Scripture like those of the New Jerusalem Church can be accepted in our community. The most spiritual and sublime sense is put upon various historical passages of the New Testament. The interpretation of the passages is doubtless wholly false. The Apostle John in Patmos and our Saviour in his talking meant no such things as the commentator says he meant. But the sentiment which the commentator puts into their mouths is nevertheless true and eternal. The wider that sentiment can be spread and the more effect it can have on men's lives, the better. And if the fool-part of man must have the lie, if truth is a pill that can't go down till 't is sugared with superstition, why then I will forgive the last in (the) belief that the truth will enter into the Soul natively,

and so assimilated that it will become part of the soul and so remain, when the falsehood grows dry and lifeless, and peels off.

In his first letter to Carlyle, Emerson tells him that he is sending him *The Growth of the Mind*, and the former, in his answer, says, "a faithful thinker, that Swedenborgian druggist of yours, with really deep ideas, who makes me too pause and think, were it only to consider what manner of man he must be, and what manner of thing, after all, Swedenborgianism must be. 'Through the smallest window look well, and you can look out into the Infinite.'"

To this Emerson answered:—

NOVEMBER, 1834.

Swedenborgianism, if you should be fortunate in your first meetings, has many points of attraction for you: for instance, this article, 'The poetry of the Old Church is the reality of the New,' which is to be literally understood, for they esteem, in common with all the Trismegisti, the Natural World as strictly the symbol or exponent of the Spiritual, and part for part....It is only when they come to their descriptive theism, if I may say so, and then to their drollest heaven, and to some autocratic, not moral, decrees of God, that the *mythus* loses me. In general, too, they receive the fable instead of the moral of their Æsop. They are to me, however, deeply interesting, as a sect which I think must contribute more than all other sects to the new faith which must arise out of all.

The value which Mr. Emerson set upon Swedenborg was a notable case of his taking people and things "by their best handle." His recoil from all the parson and sexton and controversial elements of Swedenborg's writing, the Hebraism and prosiness of expression and the wearisome length, is sanely expressed with a kindly humour. But the perception by Swedenborg, though no

poet, of the meaning of things, the rhyme of matter and spirit, delighted the poet.

Dr. Garnett says, "Nothing can be more generous than his trampling down of prejudice in recognizing the true inspiration of Swedenborg, or more crushing than his criticism of the purely mechanical element in that seer."

As a contrast and showing the difference in the temperament and the method of the men, part of Carlyle's comment on Emerson's estimate of Swedenborg already quoted may be recalled: "*Missed* the consummate flower and divine ultimate elixir of Philosophy, say you? By Heaven, in clutching at *it*, and almost getting it, he has tumbled into Bedlam,—which is a terrible *miss*, if it were never so *near*! A miss fully as good as a mile, I should say!"—Mr. Leslie Stephen, quoting this passage, says: "Emerson would apparently reply not by denying the truth of the remark, but by declaring it to be irrelevant. Swedenborg, like other prophets, fell into absurdities when he became a system-monger, and Emerson could condemn some of the results sharply enough. He was not the less grateful for the inspiration because associated with absurdities which might qualify the prophet for Bedlam." (*Studies in Biography.*)

N0766: In a fragment of verse on the Poet's gifts he said:—

But over all his crowning grace,
Wherefor thanks God his daily praise,
Is the purging of his eye
To see the people of the sky:
From blue mount and headland dim
Friendly hands stretch forth to him,
Him they beckon, him advise
Of heavenlier prosperities

.

Than the wine-fed feasters know.

Poems, Appendix.

N0767: This story, and the poetical quotation before it, would seem, from the context in the journal, to be from the *Akhlak-i-Jalaly*, referred to in the notes^{N0730} on "Plato; or, the Philosopher."

N0768: The quotation came from Plato's *Meno*, where, as also in the *Phædrus*, the doctrine of Reminiscence is brought forward, and here is reconciled with that of the Universal Mind.

N0769: From Dryden's *Absalom and Achitophel*.

N0770: Shakspeare, *Hamlet*, Act I., Scene iv.

N0771: John Selden (1584–1654), jurist, antiquarian, orientalist, author. His *Table-Talk* was published in 1681.

N0772: William Gilbert (1540–1603), physician to Queen Elizabeth, was a man of great scientific attainments. He wrote on the magnet and explained that the Earth was a vast magnet. On his recumbent statue in Trinity Church, Colchester, is engraved *Magneticarum virtutum primus indagator Gilbertus*.

René des Cartes (1596–1650), born in France but passing much of his life in Germany, Holland, and Sweden. Dr. Alfred Weber in his *History of Philosophy* says of him that he should be regarded as "a geometrician with a taste for metaphysics rather than a philosopher with leanings toward mathematics," and that those who regard him as the author of the psychological method are right in so far as observation is one of the phases and the preparatory

stage...in the Cartesian method, but err in regarding it as more than a kind of provisional scaffolding for deductive reasoning which is the soul of his philosophy. The schoolman had said *Credo ut intelligam*. Descartes said *Dubito ut intelligam*. Self-evidence alone was needed to make man certain of anything. *Cogito ergo sum* was his formula, and he held that the idea of God in the human mind implied the existence of the perfect Being. The *Vortex* in his philosophy was a collection of material particles forming a fluid or ether endowed with a rapid, rotatory motion about an axis and filling all space, by which Descartes accounted for the motions of the Universe.

N0773: Marcello Malpighi of Bologna (1628–1694) is considered a founder of microscopic anatomy. At the age of seventeen he studied Aristotle and the use of the microscope. Having studied medicine, he held chairs in the universities of Pisa, Messina, and for twenty-five years at Bologna. He was physician to Innocent XII. His investigations of anatomical structure and physiological processes were crowned with great success. He discovered the capillary circulation and the minute secreting structure of the various glands.

Leucippus in the fifth century B.C. held an atomic theory, later expounded by Lucretius in his poem *De Rerum Natura*.

N0774: This statement, which, seen with after-lights, seems so rash, did not seem very startling half a century ago before the improvement of the microscope, and the general use resulting therefrom.

Swammerdam, a brilliant Dutch naturalist of the seventeenth century, especially noted for his minute studies of the viscera, and system of injection of vessels. Leuwenhoek, his countryman and contemporary, made notable discoveries with regard to capillary

circulation and the blood corpuscles of man and animals; also in botany and entomology.

Winslow, a Dane, but worked in Paris, and wrote on purely descriptive anatomy. Eustachius of Salerno, a brilliant investigator of human structure, especially of the ear and the viscera, though less reputed than the great Flemish anatomist Andreas Vesalius, who was persecuted for daring to teach the real facts of human anatomy in face of the mistaken authority of Galen. Heister was also an anatomist.

Herman Boerhaave (1668–1738), born in Holland and educated at the University of Leyden, to which his name and teachings later gave great fame. He studied philosophy and medicine and became a distinguished practitioner and writer mainly on medical subjects. His character and great abilities won him great and lasting honors throughout Europe.

N0775: *Natura semper sibi similis* is an expression of Malpighi's, though here given as the faith of the great Swedish botanist and scholar who gave his name to and took for his device the delicate little twin-flowered Linnæa of northern forests of the Old and New Worlds. Mr. Emerson delighted to find this rare flower among the older woods near Walden.

The maxim of the broad and high-minded Leibnitz (1646–1715), *Everything is for the best in the best of possible worlds*, would have recommended him: and his theory of monads, each a mirror of the universe; their effort; the continuity of unorganized and organized creation, and "preestablished harmony," seemed to lead the way to the Evolution doctrines of the nineteenth century.

N0776: Oken and Goethe saw in the skull a few modified vertebrae. To Oken the whole trunk with all its systems was repeated in the head with due modifications.

N0777: Mr. Emerson wrote in his journal while crossing the Atlantic on his return from Europe in 1833:—

"I believe in this life. I believe it continues. As long as I am here I plainly read my duties as with a pencil of fire. They speak not of death. They are woven of immortal thread."

The notion of the plane of dæmonic life, between those of mortal and celestial, is told of in the *Symposium* of Plato, and the image is used in the poem "Initial, Dæmonic, and Celestial Love."

N0778: Dr. James J. Garth Wilkinson, "the editor of Swedenborg, the annotator of Fourier, and the champion of Hahnemann, has brought to physics and to physiology a native vigor with a catholic perception of relations equal to the highest attempts, and a rhetoric like the armory of the invincible knights of old. There is in the action of his mind a long Atlantic roll not known except in deepest waters, and only lacking what ought to accompany such powers, a manifest centrality." (*English Traits*.)

N0779: Among some notes for a lecture on Swedenborg is the following: "His brilliant treatment of natural philosophy, Miltonic, sensuous."

N0780: The "flowing of nature" is the old doctrine of Heracleitus. The answer of Amasis, King of Egypt, is related in "The Banquet" in Plutarch's *Morals*.

N0781: Lucretius, *De Rerum Natura*, Lib. I., 835.

N0782: This paragraph suggests some lines by Samuel Daniel which are copied in Mr. Emerson's journal of 1830:—

"The recluse hermit oft-times more doth know
Of the world's inmost wheels than worldlings can.
As man is of the world, the heart of man
Is an epitome of God's great book
Of creatures, and men need no farther look."

Also the last verse in Emerson's "Sphinx":—

Thorough a thousand voices
Spoke the universal dame:
"Who telleth one of my meanings
Is master of all I am."

N0783: In the *Timæus* it is told that Solon heard from Egyptian priests this account of the great Athenians of the first State, which was destroyed by an earthquake thousands of years earlier.

N0784: In the journal of 1845 Mr. Emerson made these notes, headed *Symbolism*, the first paragraph referring to a lady visiting occasionally in Concord, whose singing always pleased him. He had little ear for musical notes, but much for expressive rendering.

'B. R.'s music taught us what song should be; how slight and thin its particular meaning; you would not be hard and emphatic on the burden of a song, as *tira-lira*, etc., *Lillibulero*, etc.

"The world is enigmatical, everything said and everything known and done, and must not be taken literally, but genially. We must be at the top of our condition to understand anything rightly."

N0785: Before the passage which follows in the text, I find in some stray leaves about Swedenborg these sentences:—

"The fascination which his mind has for those bred in the old churches, in woeful Calvinism, in sentimental Christianity, is this, that they come to a mind which believes the world has a meaning, a meaning that can be known, and which the good only can know. Swedenborg is to furnish a key to the eternal and universal engine, an explanation of the sky, of the sea, of their tenants, of our doing and suffering, of our weapons and means. What! and no longer to receive certain cold results from catechism and priest, but I am to be a party to every result by seeing its reason and these results are no longer remote at arm's length, at life's length."

N0786: Among fragmentary notes for a lecture are these with reference to the Swedenborgian sect:—

"What I mean by popular religion the Swedenborgians have not conceived, but it is true that who would see truly must forsake a great as well as a little conventionalism; that of Christendom as well as that of his parish."

"Fascination of Swedenborg.

"I cannot flatter the Swedenborgian by finding in him any resemblance to the genius and tendency of the great man whose name he bears."

"Very dangerous study to any but a mind of great elasticity and power. Like Napoleon as military leader, a master of such extraordinary extent of Nature and not to be acted on by any other, that he must needs be a god to the young and enthusiastic."

"Exceeding good behavior of the Sect a few years ago: he was pilloried in a pamphlet of garbled extracts:—the Swedenborgians circulated his book."

"Their excellent spirit of superior tactics—nothing vulgar in their propagandism; they treated men respectfully and had the manners of people holding valuable truth."

N0787: Casella, Dante's friend, the beautiful singer, whom meeting, in Purgatory, he besought to sing. Casella began *Amor che nella mente mi ragiona*, and all the souls flocked to hear.

N0788: The poems "Give All to Love" and "To Rhea" are in this strain, and also the verses "You shall not love me for what daily spends," etc., among the "Fragments on Life" in the Appendix to the *Poems*.

N0789:

MANUSCRIPT NOTES FOR LECTURE ON SWEDENBORG.

"Beware of interference. Direct service the God reserves to himself. The condition of greatness, that is of health, is poise; and reception only from the Soul; illustration from men, but reception only from God through Self. Every strong individual is tyrannical—Swedenborg, Luther, Mahomet, Moses; and the Mahomets of our own acquaintance. Appease them whilst they are with you, bow and assent, if you cannot answer; but when they have taken their hats, as thou livest, recover thy erectness. No matter what they say about their credentials from God—tell them it is all gammon, self-delusion and a lie; that God never speaks by a third person, for he is nearer than the nearest. You exist from him. It is as if some one came from the other side of the planet to tell me what I thought. We inhabit a thousand and a thousand planes. Go home now to thy closet, to thy heart, to Being, and Swedenborgize. Go, that is, and sit and ascertain what truth of you

this man fantastically said, but yet said, and subtract what vast amounts of individualism have mixed with that pure universalism that is yours as well as his, neither yours nor his, but Being's."

N0790: Journal, 1838. "Swedenborgianism is one of the many forms of Manichæism. It denies the omnipresence of God or pure Spirit."

Journal, 1839. "The Swedenborgian violates the old law of rhetoric and philosophy *Nec deus intersit dignus nisi vindici nodus* in its forcible interposing of a squadron of angels for the transmission of thought from God to man. I say I think or I receive, in proportion to my obedience, truth from God; I put myself aside, and let him be. The New Churchman says,—No, that would kill you, if God should directly shine into you: there is an immense continuity of mediation. As if that bridged the gulf from the infinite to the finite by so much as one flank. Would He not kill the highest angel into whom he shone just as quick?"

N0791: The manuscript notes above quoted furnish the following: "It was impossible also for this gifted man to say one word of God."

And of the dulness and repetition Mr. Emerson goes on to say, "I hold him responsible for every yawn of mine," and "The civilest reader at the tenth page says, 'I conceive that I read something like this once before.'"

N0792: There is an entry in the journal for 1841: "It seems as if the Jewsharp had sounded long enough."

N0793: One of the examples of Laconic speech given by Plutarch in the *Life of Lycurgus*.

N0794:

ἐὶ θεοί τι δρῶσι φαῦλον, οὐκ εἰσὶν θεοί.

More literally rendered:—

If gods do wrong, surely no gods they are.

Quoted in Plutarch's *Morals*.

N0795: The verses in the "Fragments on The Poet" in the Appendix to the *Poems* are suggested:—

Let me go where'er I will
I hear a sky-born music still, etc.;

and also the lines in the poem "Beauty":—

In dens of passion and pits of woe,
He saw strong Eros struggling through,
To sun the dark and solve the curse,
And beam to the bounds of the universe.

The quoted line below is from Burns's poem, "Address to the Deil."

N0796: Here follows in his manuscript notes the sentence: "Or, without going to eminent examples, the most eminent, the soul itself, is near enough to testify it we will hold the ear close and listen."

And again a fragmentary sheet: "Into the urn I put, *The Spirit* never *Gossips*. What we receive from any man is ever indirect truth:

we learn him: we learn Swedenborg; and have huge deductions and corrections to make in order to get pure truth. I admire it as poetry; you wish I should feel it as fact. But who is Swedenborg? A man who saw God and nature as he could for a fluid moment. You cannot make an universal self of him. My concern is with the universal truth of Plato's or Swedenborg's or Behmen's sentences, not at all with their circumstance or vocabulary. To seek too much of that were low and gossiping. He may and must speak to his circumstance and the way of events and belief around him, to Christendom or Islamism as his birth befel: he may speak of angels or Jews or gods or Lutherans or gypsies, or whatever figures come next to hand; I can readily enough translate his rhetoric into mine."

N0797: This healthy feeling of Emerson's about the petty or besmirching quality of alleged results of prying behind the great curtain is fully expressed in his early paper on "Demonology" which was posthumously published in *Lectures and Biographical Sketches*.

It may not be uninteresting to present here the letter received by Mr. Emerson from Mr. Wilkinson, the translator of Swedenborg, acknowledging his gift of *Representative Men*.

25 CHURCH ROW, HAMPSTEAD [ENGLAND],
FEB. 5, 1850.

MY DEAR SIR,—

I have to thank you...for your *Representative Men*, read with delight a month ago. It is for me full of vistas and views, a regular exhibition of the optics of the soul. You show your men and things by new properties of light, hinting at all kinds of polarizations of these through which we see....I am especially grateful to your *Swedenborg, the Mystic*, which to reverse will require some tough work at long arts and sciences. It seems to me,

however, that there is yet to be a consideration of some things that you have dismissed. The spiritual world in the old ghostly and mythological sense, is deep in man's heart, and not easily to be shelved. There are facts about it which, whether pleasant or unpleasant, must come gravely on the carpet during the experimental ages. In the presence of these, all backs feel cold streams, and all hair stands on end as of yore....Swedenborg's allegations of his intercourse will, I believe, be found to be a genuine addition to knowledge, in no way created by those curious eyes which saw into another life. But as to any finality in Swedenborg, I give up the point at once, and concede that the spiritual world is not absolute, but fluxional or historical, and will be found changed and changing by each fresh traveller. Still I can by no means disallow it altogether....

I need not say what I feel at your mention of me in your book. I feel now thoroughly hopeless and divided; there is the little man which is myself, and the Brocken shadow to which people are walking up. They will soon find out the truth, and say that in one instance at least you have too kindly believed in a shadow.

Yours most truly,
J. J. G. WILKINSON.

N0798: As an instance of the sweet and wholesome way in which Behmen looks at man and nature Mr. Emerson says in the journal, speaking of "this era of triviality and verbiage:" "Once 'the rose of Sharon perfumed our graves,' as Behmen said: but now, if a man dies, it is like a grave dug in the snow; it is a ghastly fact abhorrent to nature, and we never mention it. Death is as natural as life and should be as sweet and graceful."

N0799: From a poem by Nathaniel P. Willis called "Lines on Leaving Europe," in which he thus expresses his assurance of his

safe return across the ocean because of his waiting mother's love and faith.

N0800: It is worth while to note Mr. Emerson's steady allegiance to the supremacy of right in contrasting this final weighing of Swedenborg in the balance and not finding him wanting in what was greatest, while of Goethe he says: "He has not worshipped the highest Unity. He is incapable of a self-surrender to the moral sentiment....Goethe can never be dear to men. His is...devotion to truth for the sake of culture." And of Napoleon he said: "He did all that in him lay to live and thrive without the moral principle....It was the nature of things, the eternal law of man and the world which balked and ruined him, and the result in a million experiments will be the same."

MONTAIGNE; OR, THE SKEPTIC

AS HE tells in the *Essays*, Mr. Emerson made a friend of Montaigne in his youth,—felt that Montaigne, three centuries earlier, had, with wit and frank courage, written of things as he himself would have liked to, in boyish protest at timid observance and decorum. There was obvious contrast between their conditions. The French lord, baptized into the communion of the Church of Rome, bred to the usual military accomplishments, with something of a courtier's experience, and a student of law, heir of a castle and full feudal rights, and living in troublous times, stirred the imagination of a delicate and studious youth, growing up well-bred but poor in the very heart of Puritan simplicity and democracy in New England. Yet there were bonds stronger than their differences,—a greater Catholicism, a brave love of truth, and disgust at cant, and desire to make their protest freely; a human way of looking at men and things and the teaching of each day, a love of wild nature and the independence and retirement of a country householder,—these, and their common love of Plato and of Plutarch. As to writing, Emerson's word in his journal about Montaigne was true

of himself: "Montaigne or Socrates would quote Paul of Tarsus and Goody Two-shoes with equal willingness."

During the time of his Boston ministry, on Christmas day, 1831, he wrote to his Aunt Mary, who eagerly followed her nephews' reading and discussed it with them:—

"No effeminate parlor workman is he on an idea got at an evening lecture or a young men's debate, but roundly tells what he saw or what he thought of when he was riding on horseback or entertaining a troop at his château. A gross, semi-savage indecency debases his book, and ought doubtless to turn it out of doors, but the robustness of his sentiments, the generosity of his judgment, the downright truth without fear or favor, I do embrace with both arms. It is wild and savory as sweet-fern. Henry the Eighth loved to see a man; and it is exhilarating once in a while to come across a genuine Saxon stump, a wild, virtuous man, who knows books, but gives them their right place, lower than his reason. Books are apt to turn reason out of doors. You find men talking everywhere from their memories instead of from their understanding. If I stole this thought from Montaigne, as is very likely, I don't care. I should have said the same myself."

Later, in his journal, appreciating the brave, out-of-door, half-military aspect of the man, he notes, "We can't afford to take the horse out of Montaigne's Essays." Again, valuing Montaigne's solid basis, he writes: "Montaigne has the *de quoi* which the French cherubs had not when the courteous archbishop implored them to sit down." In the story the kind prelate said, *Asseyez vous, mes enfans*, and the fluttering cherubs answered, *Monseigneur, nous n'avons pas de quoi*.

In his first summer in Concord after he made it his home, at the age of thirty-two, Mr. Emerson made this entry in his journal:—

8th AUGUST [1835].

Yesterday I delighted myself with Michel de Montaigne. With all my heart I embrace the grand old sloven. He pricks and stings the sense of virtue in me, the wild gentile stock, I mean, for he has no Grace. But his panegyric of Cato and of Socrates in his essay On Cruelty (vol. ii.) do wind up again for us the spent springs, and make virtue possible without the discipline of Christianity; or rather do shame her of her eye-service and put her upon her honor. I read the Essays in Defence of Seneca and Plutarch; On Books; On Drunkenness; and On Cruelty. And at some fortunate line, which I cannot now recall, the spirit of some Plutarch hero or sage touched mine with such thrill as the war-trump makes in Talbot's ear and blood.

Eight years later he writes:—

"I once took so much delight in Montaigne, that I thought I should not need any other book; then in Plotinus, in Synesius, in Goethe,—even in Bettini; but to-day I turn the pages of either of them languidly enough, whilst I still cherish their genius....It is too strong for us, this onward trick of Nature. *Pero si muove.*"

Two months after the above entry, Mr. Emerson said in a letter written to his young friend Henry Thoreau, then teaching in his brother William Emerson's family in Staten Island:—

"We have had the new Hazlitt's Montaigne which contained the 'Journey to Italy,' new to me, and the narrative of the death of the renowned friend Étienne de la Boëce."

N0801: This image of the two-facedness of things is used to a different purpose in Emerson's poem "The Chartist's Complaint," originally entitled "Janus." But in almost every essay, though

sometimes in separate essays, his own habit is to contemplate one facet of a truth at a time, and then, often abruptly, go to another point of view.

N0802: "Aristotle, founding on the qualities of matter, is the European skeptic, Plato the believer." (*Journal*, 1845.)

N0803: Strangely in contrast with this attitude of the timid or intolerant man of the gown was Mr. Emerson's own interested, respectful, and often admiring attitude towards the man of deeds, whether laborer, mechanic, merchant, or statesman.

N0804: This recalls the first lines of Michael Angelo's sonnet to Vittoria Colonna translated by Emerson:—

Never did sculptor's dream unfold
A form which marble doth not hold
In its white block; yet it therein shall find
Only the hand secure and bold
Which still obeys the mind.

Poems, Translations.

N0805: Mr. Emerson, on his way to town meeting, saw his honest neighbor George Minot, a farmer and pot-hunter, at work, and asked him if he were not going to cast his vote for Freedom, in the sad days of the Fugitive Slave Law. "No," said Minot, "I ain't a-goin'. It's no use a-ballotin', for it won't stay so. What you do with a gun 'll stay."

N0806: This was the remark of his next neighbor on the other side, a laborer.

N0807: Here come in favorite images: that the planet is bearing its solidest materialists, helpless, whither they know not, at frightful speed through stellar space, drugged and cheated by the illusions of the senses which they cannot interpret, the Maia of the Oriental philosophers.

N0808: These lines are borrowed from George Herbert's poem entitled "Affliction." When a youth he longed to leave Cambridge University, but his mother would not permit him to do so.

"Whereas my birth and spirit rather took
The way that takes to town:
Thou didst betray me to a lingering book,
And wrapt me in a gown:
I was entangled in a world of strife;
Before I had the power to change my life."

N0809: Here is a momentary indulgence at the expense of Mr. Emerson's long-sitting reformer visitors, from the journal of 1842, yet showing a magnanimity to the borers which he was fighting on his peach-trees in those days.

"The borer on our peach-trees bores that she may deposit an egg; but the borer into theories and institutions and books, bores that he may bore."

N0810: Mr. Emerson recognized Nature's secret of Identity through all fugitive forms in the fable of the sea-god Proteus, who, when caught sleeping by a mortal, took shapes of beasts, of serpents, of fire, to disconcert his captor, yet, if held fast in spite of all, must answer his questions.

N0811: It will be remembered that this book was written at the end of a decade which had witnessed an extraordinary awakening in the minds and consciences of New England people and their neighbors. Mr. Emerson's papers on "The Times," "The Transcendentalist," "New England Reformers" in *Nature, Addresses and Lectures*, and his "Historical Notes of Life and Letters in New England" in *Lectures and Biographical Sketches* bear witness to the ferments that were at work on the questions of Emancipation, Temperance, Non-Resistance, Communities, Labor, as well as in Religion, Education, and Literature.

N0812: The following passage is copied from some stray leaves of the lecture on Montaigne:—

"Talent without character is friskiness. The charm of Montaigne's egotism, and of his anecdotes, is, that there is a stout cavalier, a seigneur of France, at home in his château, responsible for all this chatting.

"Now suppose it should be shown and proved that the famous 'Essays' were a *jeu d'esprit* of Scaliger, or other scribacious person, written for the booksellers, and not resting on a real status picturesque in the eyes of all men. Would not the book instantly lose almost all its value?"

N0813: The brilliant John Sterling, with whom Emerson formed a strong friendship through correspondence due at first to their common affection for Carlyle. They never met, for Sterling died in 1844. In his journal for 1843 Mr. Emerson records, almost in the same words as here, his pleasure, when a boy, in Cotton's *Montaigne* and his visit to Père Lachaise and of reading Sterling's "loving criticism on Montaigne in the *Westminster Review*," adding, "and soon after, Carlyle writes me word that this same lover of Montaigne is a lover of me. Now I have been introducing to his genius two of my friends,

James and Tappan, who warm to him as to a brother. So true is S. G. W.'s saying that all whom he knew met." Sterling's biography was written both by Archdeacon Hare, who edited his works, and by Carlyle. His Correspondence with Emerson was published in 1897.

N0814: Mr. Emerson drew this contrast between Montaigne and Plutarch in his essay on the latter, printed in *Lectures and Biographical Sketches*:—

"Plutarch had a religion, which Montaigne wanted, and which defends him from wantonness; and, though Plutarch is as plain-spoken, his moral sentiment is always pure."

N0815: Had Montaigne been a living, instead of a dead friend, Mr. Emerson's tolerance would have been sorely strained by this habit, and he would have wished to counsel him that "there is one topic peremptorily forbidden to all well-bred, to all rational mortals, namely, their distempers," as he tells at large as a final word of advice in the essay on "Behavior" in *Conduct of Life*.

N0816: Miss Edgeworth's stories for children are so little read in this generation that it may be well to say that Old Poz was a character who bore this nickname because he was positive of his knowledge on all topics.

N0817: In the journal for 1840 are the following sentences continuous with the foregoing passage:—

"I know nobody among my contemporaries except Carlyle who writes with any sinew and vivacity comparable to Plutarch and Montaigne. Yet always the profane swearing and bar-room wit has salt and fire in it. I

cannot now read Webster's speeches. Fuller and Browne and Milton are quick, but the list is soon ended. Goethe seems to be well alive, no pedant: Luther too."

N0818: In the journal he tells of "a walk to the river with [a friend] and saw the moon interrogating, interrogating." The skeptic considered as a man in "the vestibule of the temple," suggests what has been said by Professor Weber of Strasburg on the doubts of Descartes as "a provisional skepticism, a means which he hastens to abandon as soon as he has discovered a certain primary truth." *Dubito ut intelligam*.

N0819: The valued friend here alluded to, Mr. Charles K. Newcomb, was of a sensitive and beautiful character, a mystic, but with the Hamlet temperament to such an extent that he was paralyzed for all action by the tenderness of his conscience and the power with which all sides of a question presented themselves to him in turn. He was a member of the Brook Farm Community, a welcome but rare visitor at Mr. Emerson's house, and when he came he brought his writings, which interested his host greatly. I think they never came to publication, except a few papers in the *Dial*. His sense of duty sent him to the war for the Union in the ranks. He remained a bachelor all his life and in his last years lived much abroad.

N0820: The last passage appears in the journal for 1845 thus:—

"Skepticism and gulfs of skepticism; strongest of all, that of the Saints. They come to the mount, and in the largest and most blissful communication to them, somewhat is left unsaid, which begets in them doubt and horrible doubt. So then, say they, before they have yet risen from their knees, Even

this does not justify: we must still feel that this our homage and beatitude is partial and deformed. We must fly for relief and sanity to that other suspected and reviled part of nature, the kingdom of the understanding, the gymnastics of talent, the play of fancy."

N0821: Here appears the cause which all his life he stood for,—The Church against the churches.

N0822: Compare in the poem "Voluntaries"

Fate's grass grows rank in valley clods,
And rankly on the castled steep.

N0823: His method of dealing with these formidable doubts in the following pages is characteristic of the man; no attempt at dogmatically solving the question for all, but throwing of side-lights here and there, suggestive perhaps to other minds both of the magnitude of the problem, and how to approach it in their own way. Among many of his sayings on the subject of Indirection these may serve as specimens: "In good society—say among the angels in Heaven—is not everything spoken by indirection." "If we could speak the direct solving speech it would solve us too."

N0824: Journal, 1845. "There are many skepticisms. The universe is like an infinite series of planes, each of which is a false bottom, and when we think our feet are planted now at last on the adamant, the slide is drawn out from under us.

"Value of the skeptic is the resistance to premature conclusions. If he prematurely conclude, his conclusion will be shattered, and he will become malignant. But he must limit himself with the anticipation of law in the mutations,—flowing law."

N0825: This paragraph is exactly a case of Mr. Emerson's holding the mirror to his characters at just such an angle that you see something of his own face too, as Dr. Holmes said. His ecclesiastical sin had been, in Dr. Bartol's words, his excess of spirituality, and all sorts of well-meaning men were wishing him to spend himself on details and partial reforms while he was trying to hear and transmit the universal laws. He has honestly endeavored in this essay to state the difficult problems fully and clearly, not "Sunday objections made up on purpose to be put down." But, after all, he belongs to the minds that are made "incapable of skepticism," "a man of thought who must feel the thought which is parent to the Universe."

N0826: About the time when Mr. Emerson was parting from his church he was reading with great pleasure the life of George Fox, the founder of the Society of Friends, and making many extracts from it in his journal. The simple worship of the Quakers and their obedience to the moving Spirit always recommended them to him.

N0827: In an early journal is this entry:—

"Fools and clowns and sots make the fringe of every one's tapestry of life and give a certain reality to the picture. What could we do in Concord without Bigelow's and Wesson's bar-rooms and their dependencies? What without such fixtures as Uncle Sol and old Moore, who sleeps in Dr. Hurd's barn, and the red Charity-house over the brook? Tragedy and Comedy go ever hand in hand."

And again in "The Poet":—

He, foolish child,
A facile, reckless, wandering will,
Eager for good, not hating ill,
Thanked Nature for each stroke she dealt;
On his tense chords all strokes were felt,
The good, the bad with equal zeal,
He asked, he only asked, to feel.
Timid, self-pleasing, sensitive,
With Gods, with fools, content to live.

Poems, Appendix.

N0828: This thought appears in his poem "The Day's Ration."

N0829: In the "Woodnotes," II., the pine-tree sings—

Of tendency through endless ages.

N0830: A line that he valued most of those of the poet Channing, his friend, from "A Poet's Hope."

There is a summary, not appearing in the essay in the journal of 1845, perhaps obscure in its ending, but interesting. The "cowage" of the first sentence was an herb which used to be prescribed for intestinal worms, and acted, not as a poison, but by piercing them with its sharp fibres.

"Montaigne good against bigots as cowage against worms, acts mechanically.

"But there is a higher Muse there, sitting where he durst not soar, a muse that follows the flowing power, a Dialectic that respects results: and it requires a muse, as Hafiz expresses himself only in musical phrases, the hyphens are small unities, not parts."

SHAKSPEARE; OR, THE POET

This essay was read as a lecture in Exeter Hall, in London, in June, 1848.

Perhaps it is well to bear in mind that Mr. Emerson was reared for the ministry and ordained a clergyman, and that his ancestors for several generations had exercised that office, and moreover that, in New England, up to his day, theatrical representations had been looked at with disfavor by serious and God-fearing people, and the witnessing of such by a minister would, like dancing, have been considered unbecoming indulgence. Although Mr. Emerson emancipated himself from bonds that were merely professional or artificial, he had an inbred distaste for the common amusements of society, feeling that they were unbecoming to a scholar, and that he was not adapted for them, though he was tolerant of them in other people. There was a natural earnestness, and a simple and cheerful asceticism in his early and later life. Yet once in his later life, when he had been induced to go to see Mr. and Mrs. Barney Williams in some bright comedy, he praised their acting and admitted to his daughter that he really much enjoyed theatrical performances, in spite of the feeling that they were not for him.

Dancing, for instance, which he considered a proper part of youths' education, would have seemed unbecoming for himself. He says, "It shall be writ in my memoirs...as it was writ of St. Pachonius, *Pes ejus ad saltandum non est commotus omni vita sua.*" His staying away from theatrical entertainments was instinctive, but he was liberal in the matter and would go to see a real artist. He even went to see the performance of the beautiful dancer Fanny Elssler, although a story which has been too often repeated of his remarks to Margaret Fuller on the subject is as false as it is silly.

In Paris he saw Rachel during the Revolution of 1848, and often told his children of her fierce and splendid declamation of the *Marseillaise* in the theatre, holding the tricolor aloft. On London in that same year he wrote of seeing Macready in *Lear*, with Mrs. Butler as Cordelia. It was usually to see one of Shakspeare's heroes rendered by some master that he went, and probably he never was inside a theatre twenty times in his life, and, so sensitive was he to bad taste or ranting, that he was usually sorry that he had gone.

The rendering of *Richard II.* (I cannot remember by whom) more than satisfied him, and he liked to recall the actor's tones in reading this play, an especial favorite of his, to his children. *Coriolanus* and *Julius Cæsar* too he enjoyed reading to them, and he selected passages from Shakspeare for them and trained them very carefully for their recitation in school.

He saw Edwin Booth in Boston, and met him later at the house of a friend and had some talk with him. Booth later mentioned with pleasure to their host the fact that Mr. Emerson had not once alluded to his profession or performance in their conversation.

Mr. Emerson once defined the cultivated man as "one who can tell you something new and true about Shakspeare." And he read a good omen for our age in Shakspeare's acceptance: "The book

only characterizes the reader. Is Shakspeare the delight of the nineteenth century? That fact only shows whereabouts we are in the ecliptic of the soul."

In writing of Great Men in 1838 in his journal, he says:—

"Swedenborg is scarce yet appreciable. Shakspeare has, for the first time, in our time found adequate criticism, if indeed he have yet found it:—Coleridge, Lamb, Schlegel, Goethe, Very, Herder.

"The great facts of history are four or five names, Homer—Phidias—Jesus—Shakspeare. One or two names more I will not add, but see what these names stand for. All civil history and all philosophy consists of endeavours more or less vain to explain these persons."

In the journal for 1843 he writes: "Plato is weak inasmuch as he is literary. Shakspeare is not literary, but the strong earth itself." Yet from another point of view he writes, "Shakspeare and Plato each sufficed for the culture of a nation."

That Shakspeare and Milton should have been born meant much to him and to mankind. "Who saw Milton, who saw Shakspeare, saw them do their best, and utter their whole heart manlike among their contemporaries."

And again, "No man can be named whose mind still acts on the cultivated intellect of England and America with an energy comparable to that of Milton. As a poet, Shakspeare undoubtedly transcends and far surpasses him in his popularity with foreign nations: but Shakspeare is a voice merely: who and what he was that sang, that sings, we know not."

N0831: Mr. Emerson said of Nature:—

No ray is dimmed, no atom worn,

My oldest force is good as new,
And the fresh rose on yonder thorn
Gives back the bending heavens in dew;—

and her cheerful lesson for the artist or poet was that he too could forever re-combine the old material into fresh and splendid pictures. He rejoiced that "the poet is permitted to dip his brush into the old paint-pot with which birds, flowers, the human cheek, the living rock, the broad landscape, the ocean and the eternal sky were painted," and turning from the reading of the plays he says: "'T is Shakspeare's fault that the world appears so empty. He has educated you with his painted world, and this real one seems a huckster's-shop." Again as to his true rendering of men's characters, "I value Shakspeare as a metaphysician and admire the unspoken logic which upholds the structure of *Iago*, *Macbeth*, *Antony* and the rest."

N0832: Again the ancient doctrine of the Flowing, and the modern onward and upward stream of Evolution.

N0833:

The passive Master lent his hand
To the vast soul that o'er him planned.

"The Problem," *Poems*.

N0834: The stage was to Shakspeare his opportunity, as the Lyceum was to Emerson.

N0835: *Henry VIII.*, Act V., Scene iv.

N0836: This estimate of the value of memory to the poet, typified by the Greeks in their making the Muses the daughters of Mnemosyne, is enlarged upon in the Essay on "Memory" in *Natural History of Intellect*. Mr. Emerson said once, "Of the most romantic fact the memory is more romantic," and he quotes Quintilian as saying, *Quantum ingenii, tantum memoriæ*.

N0837: In a fragment of verse written in Mr. Emerson's journal of 1831 on the yearning of the poet to enrich himself from the Treasury of the Universe, he says:—

And if to me it is not given
To fetch one ingot thence
Of that unfading gold of Heaven
His merchants may dispense,
Yet well I know the royal mine,
 And know the sparkle of its ore,
Know Heaven's truth from lies that shine,—
 Explored, they teach us to explore.

"Fragments on the Poet," *Poems*, Appendix.

N0838: Milton, "Il Penseroso."

N0839: Taine, in his *History of English Literature*, thus justifies Chaucer's borrowing or rendering:—

"Chaucer was capable of seeking out, in the old common forest of the middle ages, stories and legends, to replant them in his own soil and make them send out new shoots....He has the right and power of copying and translating because by dint of retouching he impresses...his original mark.

He re-creates what he imitates.... At the distance of a century and a half he has affinity with the poets of Elizabeth by his gallery of pictures."

The dates of Lydgate and Caxton show a mistake as to his use of them. Caxton, following Chaucer, when he introduced the printing-press to England, printed his poems and those of Lydgate, who was younger than Chaucer. In his *House of Fame*, Chaucer places, in his vision, "on a pillar higher than the rest, Homer and Livy, Dares the Phrygian, Guido Colonna, Geoffrey of Monmouth and the other historians of the war of Troy,"⁴⁸ a due recognition of his debt for *Troilus and Cryseyde*. As for Gower, he was Chaucer's exact contemporary and friend, and Chaucer dedicated this poem to him.

N0840: Kipling irreverently tells of Homer's borrowings thus:—

"When 'Omer smote 'is bloomin' lyre,
He 'd 'eard men sing by land an' sea;
An' what he thought 'e might require,
'E went an' took—the same as me!"

And says of his humble audience:—

"They knew 'e stole; 'e knew they knowed.
They did n't tell, nor make a fuss,
But winked at 'Omer down the road,
An' 'e winked back—the same as us!"

⁴⁸ Taine's *History of English Literature*.

N0841: Dr. Holmes's remark with regard to the preceding page is: "The reason why Emerson has so much to say on this subject of borrowing, especially when treating of Plato and Shakspeare, is obvious enough. He was arguing his own cause—not defending himself," etc. In *Letters and Social Aims*, Mr. Emerson discusses Quotation and Originality.

N0842: Mr. Emerson had tender associations with the Book of Common Prayer. His mother had been brought up in the Episcopal communion, and the prayer-book of her youth was always by her,⁴⁹ though after her marriage she attended her husband's church.

N0843: Landor says of these borrowings of Shakspeare, "He breathed upon dead bodies and brought them to life."

N0844: The princes Ferrex and Porrex, brothers and rivals for the ancient British throne, are characters in the tragedy *Gorboduc* by Norton and Sackville, to which the date 1561 is assigned. *Gammer Gurton's Needle* is a comedy of the same period.

N0845: Journal, 1864. "Shakspeare puts us all out. No theory will account for him. He neglected his works, perchance he did not know their value? Ay, but he did; witness the sonnets. He went into company as a listener, hiding himself, ὁ δ' ἦτε νυκτὶ εἰκώς; was only remembered by all as a delightful companion."

N0846:

England's genius filled all measure

⁴⁹ In Mr. Cabot's *Memoir*, vol. ii. p. 572, see Mr. Emerson's letter on his mother's death.

Of heart and soul, of strength and pleasure,
Gave to the mind its emperor,
And life was larger than before:
Nor sequent centuries could hit
Orbit and sum of Shakspeare's wit.
The men who lived with him became
Poets, for the air was fame.

"The Solution," *Poems*.

N0847: While writing this, Mr. Emerson was surrounded by persons paralyzed for active life in the common world by the doubts of conscience or entangled in over-fine-spun webs of their intellect.

N0848: Journal, 1837. "I either read or inferred to-day in the *Westminster Review* that Shakspeare was not a popular man in his day. How true and wise. He sat alone and walked alone, a visionary poet, and came with his piece, modest but discerning, to the players, and was too glad to get it received, whilst he was too superior not to see its transcendent claims."

N0849: The following is the "Exordium of a lecture on Poetry and Eloquence," given in London in 1848:

"Shakspeare is nothing but a large utterance. We cannot find that anything in his age was more worth telling than anything in ours; nor give any account of his existence, but only the fact that there was a wonderful symbolizer and expresser, who has no rival in the ages, and who has thrown an accidental lustre over his time and subject."

In the lecture on "Works and Days" he wrote, "Shakspeare made his *Hamlet* as a bird weaves its nest." And in that on "Inspiration" in *Letters and Social Aims*: "Shakspeare seems to you miraculous, but the wonderful juxtapositions, parallelisms, transfers, which his genius effected, were all to him locked together as links of a chain, and the mode precisely as conceivable and familiar to higher intelligence as the index-making of the literary hack."

Journal, 1838. "Read *Lear* yesterday and *Hamlet* to-day with new wonder and mused much on the great Soul in the broad continuous daylight of these poems. Especially I wonder at the perfect reception this wit and immense knowledge of life and intellectual superiority find in us all in connection with our utter incapacity to produce anything like it. The superior tone of *Hamlet* in all the conversations how perfectly preserved, without any mediocrity, much less any dulness in the other speakers.

"How real the loftiness! an inborn gentleman; and above that, an exalted intellect. What incessant growth and plenitude of thought,—pausing on itself never an instant, and each sally of wit sufficient to save the play. How true then and unerring the earnest of the dialogue, as when *Hamlet* talks with the Queen. How terrible his discourse! What less can be said of the perfect mastery, as by a superior being, of the conduct of the drama, as the free introduction of this capital advice to the players; the commanding good sense which never retreats except before the Godhead which inspires certain passages—the more I think of it, the more I wonder. I will think nothing impossible to man. No Parthenon, no sculpture, no picture, no architecture can be named beside this. All this is perfectly visible to me and to many,—the wonderful truth and mastery of this work, of these works,—yet for our lives could not I, or any man, or all men, produce anything comparable to one scene in *Hamlet* or *Lear*. With all my admiration

of this life-like picture, set me to producing a match for it, and I should instantly depart into mouthing rhetoric.... One other fact Shakspeare presents us; that not by books are great poets made. Somewhat—and much, he unquestionably owes to his books; but you could not find in his circumstances the history of his poems. It was made without hands in his invisible world. A mightier magic than any learning, the deep logic of cause and effect he studied: its roots were cast so deep, therefore it flung out its branches so high."

N0850: Mr. Edwin P. Whipple, writing in *Harper's Monthly* in 1882, relates how in a long drive with Mr. Emerson, after a lecture, "The conversation at last drifted to contemporary actors who assumed to personate leading characters in Shakspeare's greatest plays. Had I ever seen an actor who satisfied me when he pretended to be Hamlet or Othello, Lear or Macbeth? Yes, I had seen the elder Booth in these characters. Though not perfect, he approached nearer to perfection than any other actor I knew....

"'Ah,' said Emerson, [after] the three minutes I consumed in eulogizing Booth,... 'I see you are one of the happy mortals who are capable of being carried away by an actor of Shakspeare. Now, whenever I visit the theatre to witness the performance of one of his dramas, I am carried away by the poet. I went last Tuesday to see Macready in *Hamlet*. I got along very well until he came to the passage:—

"thou, dead corse, again, in complete steel,
Revisit'st thus the glimpses of the moon:"—

and then actor, theatre, all vanished in view of that solving and dissolving imagination, which could reduce this big globe and all

it inherits into mere "glimpses of the moon." The play went on, but, absorbed in this one thought of the mighty master, I paid no heed to it.'

"What specially impressed me, as Emerson was speaking, was his glance at our surroundings as he slowly uttered, 'glimpses of the moon,' for here above us was the same moon which must have given birth to Shakspeare's thought....Afterward, in his lecture on Shakspeare, Emerson made use of the thought suggested in our ride by moonlight. He said, 'That imagination which dilates the closet he writes in to the world's dimensions, crowds it with agents in rank and order, as quickly reduces the big reality to be the "glimpses of the moon."...'In the printed lecture, there is one sentence declaring the absolute insufficiency of any actor, in any theatre, to fix attention on himself while uttering Shakspeare's words, which seems to me the most exquisite statement ever made of the magical suggestiveness of Shakspeare's expression. I have often quoted it, but it will bear quotation again and again, as the best prose sentence ever written on this side of the Atlantic: 'The recitation begins; one golden word leaps out immortal from all this painted pedantry, *and sweetly torments us with invitations to its own inaccessible homes.*'"

N0851:

The little Shakspeare in the maiden's heart
Makes Romeo of a ploughboy on his cart;
Opens the eye to Virtue's starlike meed
And gives persuasion to a gentle deed.

"The Enchanter," *Poems*, Appendix.

N0852: And yet perhaps there is some truth in Dr. Richard Garnett's word in his *Life of Emerson*: "Emerson is incapable of contemplating Shakspeare with the eye of a dramatic critic."

Just after Mr. Emerson settled in Concord he read with great pleasure Henry Taylor's play *Philip van Artevelde*, then recently published. He wrote in his journal for 1835:—

"I think Taylor's poem is the best light we have ever had upon the genius of Shakspeare. We have made a miracle of Shakspeare, a haze of light instead of a guiding torch, by accepting unquestioned all the tavern stories about his want of education, and total unconsciousness. The internal evidence all the time is irresistible that he was no such person. He was a man, like this Taylor, of strong sense and of great cultivation; an excellent Latin scholar, and of extensive and select reading, so as to have formed his theories of many historical characters with as much clearness as Gibbon or Niebuhr or Goethe. He wrote for intelligent persons, and wrote with intention. He had Taylor's strong good sense, and added to it his own wonderful facility of execution which aerates and sublimates all language the moment he uses it, or more truly, animates every word."

N0853: Lowell, in one of his essays, calls attention to the survival in New England of the type of face of the English in Queen Elizabeth's day even more than in the mother country, and also to the old English expressions, obsolete in England, but still current on New England farms.

N0854: Journal, 1838. "Shakspeare fills us with wonder the first time we approach him. We go away, and work and think, for years, and come again,—he astonishes us anew. Then, having drank deeply and saturated us with his genius, we lose sight of him for another period of years. By and by we return, and there he stands

immeasurable as at first. We have grown wiser, but only that we should see him wiser than ever. He resembles a high mountain which the traveller sees in the morning, and thinks he shall quickly near it and pass it, and leave it behind. But he journeys all day till noon, till night. There still is the dim mountain close by him, having scarce altered its bearings since the morning light."

N0855:

And yet it seemeth not to me
That the high gods love tragedy;
For Saadi sat in the sun,
And thanks was his contrition;

.

And yet his runes he rightly read,
And to his folk his message sped.

"Saadi," *Poems*.

N0856: This image appears in "The Apology" in the *Poems*.

N0857: The Puritan shrinking from the form in which the great poet embodied his thought or oracles or dreams still appears in the journal of 1852, yet, contrasted to the dismal seers, Shakspeare is well-nigh pardoned his levity.

"There was never anything more excellent came from a human brain than the plays of Shakspeare, bating only that they were plays. The Greek has a real advantage of them in the degree in which his dramas had a religious office. Could the priest look him in the face without blenching?"

In 1839 Mr. Emerson had written:—

"It is in the nature of things that the highest originality must be moral. The only person who can be entirely independent of this fountain of literature and equal to it, must be a prophet in his own proper person. Shakspeare, the first literary genius of the world, leans on the Bible: his poetry supposes it. If we examine this brilliant influence, Shakspeare, as it lies in our minds, we shall find it reverent, deeply indebted to the traditional morality, in short, compared with the tone of the prophets, *Secondary*. On the other hand, the Prophets do not imply the existence of Shakspeare or Homer,—to no books or arts,—only to dread Ideas and emotions."

N0858: All through his life Mr. Emerson felt increasing thankfulness for "the Spirit of joy which Shakspeare had shed over the Universe." In 1864 he wrote:—

"When I read Shakspeare, as lately, I think the criticism and study of him to be in their infancy. The wonder grows of his long obscurity:—how could you hide the only man that ever wrote from all men who delight in reading?"

And again he wrote: "Your criticism is profane. Shakspeare by Shakspeare. The poet in his interlunation is a critic,"—that is, his worst is criticised by his best performance.

Journal, 1864. "How to say it I know not, but I know that the point of praise of Shakspeare is the pure poetic power: he is the chosen closet companion, who can, at any moment, by incessant surprises, work the miracle of mythologizing every fact of the common life; as snow, or moonlight, or the level rays of sunrise lend a momentary glow to every pump and wood-pile."

And again: 1836. "It is easy to solve the problem of individual existence. Why Milton, Shakspeare, or Canova should be there is

reason enough. But why the million should exist drunk with the opium of Time and Custom does not appear."

But even Shakspeare must not be idolized. The soul must rely on itself, that is, on the universal fountain of beauty, wisdom and goodness to which it is open. So thus he draws the moral:—

1838. "The indisposition of men to go back to the source and mix with Deity is the reason of degradation and decay. Education is expended in the measurement and imitation of effects in the study of Shakspeare, for example, as itself a perfect being—instead of using Shakspeare merely as an effect of which the cause is with every scholar. Thus the college becomes idolatrous—a temple full of idols. Shakspeare will never be made by the study of Shakspeare. I know not how directions for greatness can be given, yet greatness may be inspired."

Feb. 1838. "Consider too how Shakspeare and Milton are formed. They are just such men as we all are to their contemporaries, and none suspected their superiority,—but after all were dead, and a generation or two besides, it is discovered that they surpass all. Each of us then take the same moral to himself."

NAPOLÉON; OR, THE MAN OF THE WORLD

THE MAN of action, made on the largest pattern, with intellect to match his will, and yet a believer in his star, to which, though it turned out to be but a lurid planet, not a sun, he "hitched his wagon," could not fail to interest Emerson.

"That world's earthquake, Waterloo," occurred when he was twelve years old.

He supplemented his Plutarch's *Lives* by all the memoirs of Napoleon then written, and especially enjoyed his letters to his brother, the King of Spain.

Courage, address and disbelief in the impossible were virtues as much needed by the scholar as the soldier, but executive ability, knowledge how to deal directly with men and things, was admired by the man of the gown. He said, "I like people who can do things." In his journal of 1838 he thus contrasted temperaments:—

"The advantage of the Napoleon temperament, impassive, unimpressible by others, is a signal convenience over this other tender one, which every aunt and every gossiping girl can daunt and tether. This weakness, be sure, is merely cutaneous, and the sufferer gets his revenge by the sharpened

observation that belongs to such sympathetic fibre. As even in college I was already content to be 'screwed' in the recitation room, if on my return, I could accurately paint the fact in my youthful journal."

And in 1856 his interest in "other people's facts," to find in them the law applicable to his own or every man's life, thus appears:—

"'Whatever they may tell you, believe that one fights with cannon as with fists,' said Napoleon; 'when once the fire is begun, the least want of ammunition renders what you have already done useless.' I find it easy to translate all his technics into all of mine, and his official advices are to me more literary and philosophical than the *mémoires* of the Academy."

And again in 1844:—

"I myself can easily translate, not without some terror, the maxim, 'that an army should never have more than one line of operation' and the principle of 'never joining your columns before your enemy or near him.'"

This lecture on Napoleon, like that on Shakspeare, was read in Exeter Hall, London, in 1848.

N0859: Malpighi's dictum of *tota in minimis existit Natura*.

N0860: Anecdotes of this kind, which Mr. Emerson used as parables, always interested him, and in his lectures he found their sure value, though when he pruned these with a classic severity for his essays, many were omitted. Mrs. Emerson objected to this, but he said that when the lectures were published "they must have on their Greek jackets." On coming home from church in 1835 he wrote in his journal:—

"I cannot hear a sermon without being struck by the fact that amid drowsy series of sentences what a sensation a historical fact, a biographical name, a sharply objective illustration makes! Why will not the preacher heed the admonition of the silence momentary of his congregation and (what is often shown him) that this particular sentence is all they carry away? Is he not taught hereby that the synthesis is to all grateful, and to most indispensable, of abstract thought and a concrete body? Principles should be verified by the adducing of facts and sentiments incorporated by their appropriate imagery. Only in a purely scientific composition, which by its text and structure addresses itself to philosophers, is a writer at liberty to use mere abstractions."

N0861: Dr. Richard Garnett in his *Life of Emerson* says in connection with this paragraph: "The discussion on Napoleon shows Emerson at his best as a connoisseur of men, and would alone prove that he did not addict himself to speculation out of incapacity or contempt for the affairs of the world. The ideologist judges the man of action more shrewdly and justly than the man of action would have judged the ideologist; and after having most brilliantly painted Napoleon's perfect sufficiency in all things for which virtue is not needful, puts him on his right footing with 'Bonaparte is the idol of common men,'" etc.

In the following extract from the journal the scholar owns his debt to the great soldier:—

May 1, 1838. "I sat in sunshine this afternoon beside my little pond in the woods, and thought how wide are my works and my plays from those of the great men I read of or think of. And yet the solution of Napoleon, whose life I have been reading, lies in my feelings and fancies as I loiter by this rippling water. I am curious concerning his day,—what filled it,—the crowded orders,

the stern determinations, the manifold etiquette. The soul answers, Behold his day! In the sighing of these woods, in the quiet of these gray fields, in the cool breeze that sings out of those Northwestern mountains, in the workmen, the boys, the girls you meet, in the hopes of the morning, the ennui of noon, and sauntering of afternoon, in the disquieting comparisons, in the regrets at want of vigor, in the great idea and the puny execution, behold Napoleon's day; another, yet the same; behold Byron's, Webster's, Canning's, Milton's, Scipio's, Pericles's day—Day of all that are born of woman."

N0862: Mr. Emerson was alive to the failings of his class. The one fault that he finds with Plato is that in dealing with the questions of life and passion and sin and hope "he is always literary and never otherwise."

N0863: There is in one of Mr. Emerson's note-books a newspaper cutting containing a translation of a remarkable characterization of Napoleon by Fichte in a lecture given at Berlin in 1813. The following is quoted from it:—

"Let us now look at the man who has placed himself at the head of that people. First of all, he is no Frenchman. If he were, those social fundamental views and that regard for the opinions of others, or, in short, for something outside of himself, as well as that benevolent weakness and inconsequence which manifested themselves, for instance, in Louis XIV,—in my opinion the worst outgrowth of French national character,—would also have been exhibited in him. But he came from a people which, even among the ancients, were notorious as savages; which at the time of his birth had relapsed into still greater barbarism, through bitter slavery; which had fought a hard struggle to break its chains, and...been cheated out of its freedom....He received his education among the French people,

whom he thus became acquainted with; the character of that nation exhibiting itself at that time in a revolution whereof he had opportunity to observe the most secret motives. He could not fail soon to comprehend with convincing clearness this people to be a very excitable body, capable of taking any direction given to it from without, but utterly incapable of giving to itself a self-determined and permanent direction....This complete clearness concerning the true character of the nation over which he assumed supreme rule was reinforced by a powerful and inflexible will, grounded in his descent from a strong people, and hardened through his continual but secret conflict with the surroundings of his youth. Armed with these two components of human greatness, calm clearness and firm will, he would have become the benefactor and savior of mankind, if but the slightest presentiment of the moral nature of man had fallen upon his soul. But it did not. And thus he became an example for all time as to what these two components, purely by themselves and without any contemplation of the spiritual, can achieve."

N0864: In the journal the quotation from Las Casas, which follows in the text, is preceded by this sentence: "It was observed that the Emperor was not fond of setting forward his own merits: 'That is,' said he, 'because with me morality and generosity are not in my mouth, but in my nerves.'"

N0865: There is a remarkable passage in the oration called "Literary Ethics" (*Nature, Addresses and Lectures*, p. 179) on Napoleon's utter "faithfulness to facts" in his campaigns, but also his reserve belief "in the freedom and quite incalculable force of the soul."

N0866: "As I quote at second hand, and cannot procure Seruzier, I dare not adopt the high figure I find." Note to First Edition.

N0867: This, and the story of Cæsar's civilly eating the asparagus which his poor host had dressed with a salve, and his reproving his officers for their grimaces of disgust, always strongly appealed to Mr. Emerson's natural feelings of consideration and courtesy to the humblest person. He was drawn more to Napoleon by this speech, "Respect the burden, Madam," than by any other story told of him, and he frequently used it as a lesson to his children and others, of honor and consideration for laborers and servants.

N0868: Journal, 1836. "I like the man in O'Meara's picture. He is good-natured, as greatness always is, and not pompous."

N0869: Mr. Emerson delights in a liberator of man. He defines the poet as such in one way, and the hero of this chapter in another way.

Napoleon's sharing the hardships of his soldiers, and personal knowledge of them, his power of labor, his faith in means, his breaking down the bars of feudalism and throwing open the door, closed for centuries to native power and merit in the humblest, went far with Emerson.

Laurel crowns cleave to deserts,
And power to him who power exerts.

In the essay on "Aristocracy," in *Lectures and Biographical Sketches*, is much to this purpose.

But the touch of softness and of imagination in this Man of Destiny found in the following anecdote gave especial pleasure:

Journal, 1844. "Bonaparte was sensible to the music of bells. Hearing the bell of a parish church, he would pause and his voice

faltered as he said, 'Ah! that reminds me of the first years I spent at Brienne. I was then happy.'"

The sexton, tolling his bell at noon,
Deems not that great Napoleon
Stops his horse and lists with delight
Whilst his files sweep round yon Alpine height.

"Each and All," *Poems*.

N0870: Journal. "History is zoölogy and not a chapter of accidents."

N0871: A curious prophecy of the natural antitoxins.

N0872: Journal, 1838. "Napoleon like all men of genius, is greatly impersonal in his habit of thought. He sees the sublime laws and not the individual men. Men are to him but illustrations, and hence a magnanimous tolerance....The Admiral Cockburn admits that 'Napoleon is the most good-natured and reasonable of the whole set.' Able men generally have this vast fund of justice and good dispositions, because an able man is nothing else than a good free vascular organization whereinto the Universal Spirit freely flows, so that his fund of justice is not only vast, but infinite."

N0873: Journal, 1845. "Napoleon stands at the confluence of the two streams of thought and of matter, and derives thence his power."

N0874: "Jupiter Scapin" is a title which appears to have been applied to Napoleon by Abbé de Pradt.

N0875: Journal. "Napoleon was called by his men *Cent Mille*. Add honesty to him, and they might have called him Hundred Millions."

N0876: Journal, 1838. "The only fault in Napoleon's Biography is that he was beaten at Waterloo. What can Genius avail against Facts, which are the Genius of God?"

"Bonaparte by force of intellect is raised out of all comparison with the strong men around him. His marshals, though able men, are as horses and oxen. He alone is a fine tragic figure related to the dæmons, and to all time. Add as much force of intellect again, to repair the immense defect of this *morale*, and he would have been in harmony with the ideal world."

Boded Merlin wise,
Proved Napoleon great,—
Nor kind nor coinage buys
Aught above its rate.
Fear, Craft and Avarice
Cannot rear a State.
Out of dust to build
What is more than dust,—
Walls Amphion piled
Phœbus stablish must.

Motto to "Politics," *Essays, Second Series*.

GOETHE, OR, THE WRITER

IN THE third decade of the nineteenth century New England was introduced to German thought and literature by Everett, Frothingham, Norton, Ticknor and others of her brilliant or ambitious scholars, returning from foreign travel, and from courses at continental universities to which they had been incited by the study of Coleridge. In his "Historic Notes of Life and Letters in New England," in the volume *Lectures and Biographical Sketches*, Mr. Emerson tells of the awakening influence of this breeze from Germany when he was an undergraduate and a divinity student. His older brother William, destined, like his ancestry for several generations, for the ministry, graduating from Harvard at the age of seventeen, had after four years of school-teaching gone to Göttingen to study, as soon as the earnings of Ralph and Edward left him free to leave the family, of which since his father's death he had shared with his mother the heavy responsibility. William's mind was exact and judicial and his conscience active. The German philosophy and the Biblical criticism shook his belief in the forms and teachings of the religion in which he had been brought up. There is a letter, still preserved in the family, to his

honored step-grandfather, the Rev. Ezra Ripley of Concord, in which he respectfully but with great clearness states his reasons for thinking that the rite of the Lord's Supper was not authoritatively established by Jesus for perpetual observance as a sacrament by Christians. His brother Waldo several years later parted with his church on this issue, and, in his sermon explaining his reasons, does not urge primarily his own feeling that, as a form, it is a hindrance rather than a help to true devotion and unsuited to our race and our day, but enters, in a way unusual and remarkable for him, into a critical and systematic consideration of the scriptural authorities for the rite. There is hardly room for doubt that this argument was supplied by the elder brother. To William, beset by distressing doubt at Göttingen, it occurred that, but eighty miles away at Weimar, lived the wisest man of the age. He forthwith sought him out, was kindly received, and laid his doubts before him. He hoped, no doubt, that Goethe could clear these up, and show some way in which he could honorably and sincerely exercise the priestly office. The counsel which he received was in effect—for unhappily there is no written record and the story rests on family tradition—to persevere in his profession, comply with the usual forms, preach as best he could, and not trouble his family and his hearers with his doubts. Happily the youth, at this parting of the ways where the great mind of the age acted the part of the Tempter, turned his back, and again listened to the inward voice. He left the ancestral path, gave up at the age of twenty-four his plan of life for which he had been with diligence and sacrifice preparing himself, and studied law. He was an honorable and successful practitioner, but his standard of work, and the sacrifices and heroic asceticism of his early life made him a sufferer all his days.

This counsel of Goethe's to William to do the expedient, not the heroic, must have made a lasting impression on the younger

brother's mind, and, soon after, *Wilhelm Meister*, translated by Carlyle in 1824, must, in spite of its breadth and its fascination, have shocked the young New England minister with its lax continental morals. After his visit to Carlyle at Ecclefechan in 1834, his love for and faith in his friend led Emerson to comply with his urgency that he study Goethe. For Carlyle's sake immediately on his return he procured Goethe's Collected Works in the original and, hitherto unacquainted with German, set himself to read them in the original.

"November 20, 1834.

"Far, far better seems to me the unpopularity of this Philosophical Poem (shall I call it?), *Sartor Resartus*, than the adulation that followed your eminent friend Goethe. With him I am becoming better acquainted, but mine must be a qualified admiration. It is a singular piece of good-nature in you to apotheosize him. I cannot but regard it as his misfortune, with conspicuous bad influence on his genius,—that velvet life he led....Then the Puritan in me accepts no apology for bad morals in such as *he*. We can tolerate vice in a splendid nature whilst that nature is battling with the brute majority in defence of some human principle. The sympathy his manhood and his misfortunes call out adopts even his faults; but genius pampered, acknowledged, crowned, can only retain our sympathy by turning the same force once expended against outward enemies now against inward, and carrying forward and planting the standard of Oromasdes so many leagues farther on into the envious Dark."

In his answer Carlyle said:—

"I will tell you in a word why I like Goethe: his is the only *healthy* mind, of any extent, that I have discovered in Europe for long generations; it was he that first convincingly proclaimed to me (convincingly, for I saw it *done*): Behold, even in this scandalous Sceptico-Epicurean generation, when all is gone but hunger and cant, it is still possible that Man be a Man! For which

last Evangel, the confirmation and rehabilitation of all other Evangs whatsoever, how can I be too grateful? On the whole, I suspect you yet know only Goethe the Heathen (Ethnic); but you will know Goethe the Christian by and by, and like that one far better."

In the journal of 1836 Mr. Emerson records that he has been reading "our wise, but sensual, loved and hated Goethe," on the open secret of life: "There sits he at the centre of all visibles and knowables, blowing bubble after bubble, so transparent, so round, so coloured, that he thinks and you think they are pretty good miniatures of the all. Such attempts are all his minor poems, proverbs, *Xenien*, parables. Have you read the *Welt Seele*? The danger of such attempts as this striving to write universal poetry is,—that nothing is so shabby as to fail.

"Yes, you may write an ill romance or play, and 't is no great matter. Better men have done so; but when what should be greatest truths flat out into shallow truisms, then are we all sick. But much I fear that Time, the serene Judge, will not be able to make out so good a verdict for Goethe as did and doth Carlyle. I am afraid that under his faith is no-faith,—that under his love is love-of-ease. However his mind is Catholic as ever any was."

Affection for Carlyle gave at first a great impulse towards the work of tunnelling through this mountain of universal learning in hard German, which never became easy for Mr. Emerson to read, but as he read, real interest grew in this mighty mind and the eye which

bounded to the horizon's edge
And searched with the sun's privilege.

In writing to his friend in April, 1840, Mr. Emerson said: "You asked me if I read German, and I forget if I have answered. I have contrived to read almost every volume of Goethe, and I have fifty-five, but I have read nothing else [*i. e.* in German]: but I have not now looked even into Goethe for a long time. There is no great need that I should discourse to you on books, least of all on his books; but in a lecture on Literature, in my course last winter, I blurted all my nonsense on that subject, and who knows but Margaret Fuller may be glad to print it and send it to you?" This paper appeared in the *Dial* in "Thoughts on Modern Literature," now included in the volume *Natural History of Intellect*.

Though Goethe opened vistas of knowledge and thought, the gods were speaking in the breath of the wood a purer word, and the new day shed fresher light on things and men. So he wrote in one of the pocket volumes:—

Six thankful weeks,—and let it be
A meter of prosperity,—
In my coat I bore this book,
And seldom therein could I look,
For I had too much to think,
Heaven and earth to eat and drink.
Is he hapless who can spare
In his plenty things so rare?

Always in his praise of Goethe there was a reserve, a protest spoken or unspoken, but, with all abatements, he acknowledged the debt of mankind to him. In the essay in this volume it is noticeable how he refrains from the obvious criticisms of Goethe's morals, of which he thought enough had been said in Old and

New England. He wrote, in 1844, of strictures by a clergyman on Goethe's religious speculations:—

“—pleased the people of Boston by railing at Goethe in his Phi Beta Kappa oration because Goethe was not a New England Calvinist. If our lovers of greatness and goodness after a local type and standard could expand their scope a little, they would see that a worshipper of truth, and a most subtle perceiver of truth like Goethe, with his impatience of all falsehood and scorn of hypocrisy, was a far more useful man and incomparably more helpful ally to religion than ten thousand lukewarm church members who keep all the traditions and leave a tithe of their estates to establish them. But this clergyman should have known that the movement which in America created these Unitarian dissenters of which he is one, began in the mind of this great man he traduces; that he is precisely the individual in whom the new ideas appeared and opened to their greatest extent and with universal application, which more recently the active scholars in the different departments of Science, of State, and of the Church have carried in parcels and thimblefuls to their petty occasions.”

In the *Poems* he bids the severe critic of the dead Goethe's shortcomings consider, instead, his great debt to him for his vast achievement.

Set not thy foot on graves;
Nor seek to unwind the shroud
Which charitable Time
And Nature have allowed
To wrap the errors of a sage sublime.

“To J. W.”

N0877: The old doctrine of "the Flowing" again in the *living* record of the living, changing fact,—flowing Nature as the apparition of the living God. Going down to the river, whether of Memory or Experience, we find the river the same, but the waters not those of yesterday. The motto of "Spiritual Laws" is suggested here.

N0878: As a further instance of his doctrine of Compensation, Mr. Emerson might have mentioned that when the great anatomist Vesalius had the luck to have this vivisection experiment performed for him by the amiable Sultan, he was on an enforced pilgrimage to the Holy Land at the edict of the Inquisition in *expiation* of his heresy in saying that Galen's descriptions, being founded on dissections of animals, were incorrect concerning men.

N0879: "Let the scholar not quit his belief that a pop-gun is a pop-gun, though the ancient and honourable of the earth affirm it to be the crack of doom."—"The American Scholar," *Nature, Addresses and Lectures*.

N0880: The thoughts of this paragraph are strongly presented in "Aristocracy," and those in the next, on the importance and duty of the Writer, in "The Scholar" and "The Man of Letters," all in *Lectures and Biographical Sketches*.

N0881: Having all respect, and more,—wonder,—at Goethe's vast mental range and insight, and at his enormous work and achievement, Mr. Emerson chooses "instructive," and no stronger word; for, as to duties, he felt that the lesson was in what was done, and what left undone.

N0882: Journal, 1851. "Goethe is the pivotal man of the old and new times with us. He shuts up the old, he opens the new. No matter that you were born since Goethe died,—if you have not read Goethe, or the Goethans, you are an old foggy, and belong with the antediluvians."

N0883: Journal, 1836. "Goethe the observer. What sagacity! what industry of observation! what impatience of words! To read Goethe is an economy of time; for you shall find no word that does not stand for a thing, and he is of that comprehension as to see the value of truth. But I am provoked with his Olympian self-complacency."

Journal, 1837. "A characteristic of Goethe is his choice of topics. What an eye for the measure of things! Perhaps he is out in regard to Byron, but not of Shakspeare; and in Byron he has grasped all the peculiarities. Paper money; periods of belief; cheerfulness of the poet; French Revolution; how just are his views of these trite things! What a multitude of opinions and how few blunders! The estimate of Sterne I suppose to be one."

N0884: Journal, 1851. "One listens to the magnifying of Goethe's poem by his critic, and replies, 'Yes, it is good, if you all agree to come in, and be pleased;' and you fall into another company and mood, and like it not. It is so with Wordsworth. But to Shakspeare alone God granted the power to dispense with the humours of his company. They must needs all take *his*. He is always good; and Goethe knew it, and said, 'It is as idle to compare Tieck to me as me to Shakspeare.'

"I looked through the first part of *Faust* to-day and found it a little too modern and intelligible. We can make such a fabric at several mills, though a little inferior [referring to Bailey's *Festus*

and Browning's *Paracelsus*]. The miraculous, the beauty which we can manufacture at no mill, can give no account of, it wants. The cheerful, radiant, profuse beauty of which Shakspeare, of which Chaucer, had the secret." Some of the above extracts and more concerning *Faust* are printed in "Papers from the Dial; Thoughts on Modern Literature," in the volume *Natural History of Intellect*.

Again of the second part of *Faust* he wrote in the journal of 1843:—

"In Helena, Faust is sincere and represents actual cultivated, strong-natured man. The book would be farrago without the sincerity of Faust. I think the second part of *Faust* the grandest enterprise of literature that has been attempted since the *Paradise Lost*."

Journal, Aug. 18, 1832. "To be genuine. Goethe, they say, was wholly so. The difficulty increases with the gifts of the individual. A ploughboy can be, but a minister, an orator, an ingenious thinker, how hardly! George Fox was. 'What I am in words,' he said, 'I am the same in life.' Swedenborg was. 'My writings will be found,' he said, 'another self.' George Washington was,—'the irreproachable Washington.'"

N0885: This line is probably a translation from some Arabic or Persian source, from the connection in which it appears in the note-book.

N0886: Journal, 1831. "As History's best use is to enhance our estimate of the present hour, so the value of such an observer as Goethe, who draws out of our consciousness some familiar fact, and makes it glorious by showing it in the light of this [hour], is this, that he makes us prize all our being by suggesting its inexhaustible

wealth; for we feel that all our experience is thus convertible into jewels. He moves our wonder at the mystery of our life."

N0887: Journal, 1839. "Goethe unlocks the faculties of the artist more than any writer. He teaches us to treat all subjects with greater freedom, and to skip over all obstruction, time, place, name, usage, and come full and strong on the emphasis of the fact."

Journal, 1856. "When Goethe says, Nature, love, truth, insight, it is quite another thing than if some one else used those words."

N0888: In the essay called "Historic Notes of Life and Letters in New England," Mr. Emerson thus spoke of the first part of *Faust*, always distasteful to him:—

"The age of arithmetic and of criticism has set in...the age of analysis and detachment....In literature the effect appeared in the decided tendency of criticism. The most remarkable literary work of the age has for its hero and subject precisely this introversion: I mean the poem of *Faust*."

And again in "The Man of Letters" in the same volume he says:—

"Our profoundest philosophy (if it were not contradiction in terms) is skepticism. The great poem of the age is the disagreeable poem of *Faust*, of which the *Festus* of Bailey and the *Paracelsus* of Browning are English variations."

"Goethe, the surpassing intellect of modern times, apprehends the spiritual but is not spiritual."

N0889: Among the few novels that Mr. Emerson read he always praised *Consuelo*.

N0890: One merit noted in *Wilhelm Meister* is this, from the journal:—

“Goethe certainly had good thoughts on the subject of female culture. How respectful to woman and hopeful are the portraits in *Wilhelm Meister*.”

The book is considered at some length in the “Thoughts on Modern Literature.” In its realism Mr. Emerson finds thus much to his liking,—an eventual good coming out of mistakes and failures, a Power

Forging, through swart arms of offence,
The silver seat of Innocence.

But he regrets that a mind like Goethe's chooses to paint the Actual. He sets him down as the poet of this, and not of the Ideal, “the poet of limitation, not of possibility; of this world, and not of religion and hope; in short, if we may say so, the poet of prose, and not of poetry. He accepts the base doctrine of Fate, and gleans what straggling joys may yet remain out of its ban.” Lacking “a moral sense proportionate to his powers,...the cardinal fact of health or disease...he failed in the high sense to be a creator, and, with divine endowments, drops by irreversible decree into the common history of genius.”

N0891: Journal, 1844. “Goethe with his extraordinary breadth of experience and culture, the security with which, like a great continental gentleman, he looks impartially over all literatures of the mountains, the provinces and the sea, and avails himself of the best in all, contrasts with the vigour of the English, and

superciliousness and flippancy of the French. His perfect taste, the austere felicity of his style.

"It is delightful to find our own thought in so great a man."

N0892: But a few years after this passage was written Mr. Emerson had occasion to write the like with more vigor and feeling concerning American statesmen; as thus:—

"Very little reliance must be put on the common stories that circulate of this great senator's or that great barrister's learning, their Greek, their varied literature. That ice won't bear. Reading! do you mean that this senator or that lawyer who stood by and allowed the passage of infamous laws was a reader of Greek books? That is not the question, but to what purpose did they read....They read that they might know, did they not? Well, these men did not know....They were utterly ignorant of that which every boy or girl of fifteen knows perfectly,—the rights of men and women." "The Man of Letters," *Lectures and Biographical Sketches*.

N0893: Yet Mr. Emerson felt that Goethe fell short of the highest culture thus elsewhere defined by him:—

"The foundation of culture, as of character, is at last the moral sentiment. This is the fountain of power, preserves its eternal newness, draws its own rent out of every novelty of science. Science corrects the old creeds.... Yet it does not surprise the moral sentiment. That was older, and awaited expectant these larger insights."—"Progress of Culture," *Letters and Social Aims*.

N0894: *Xenien*, from the Greek, was used by Goethe and Schiller to denote epigrams.

N0895: Some unfinished verses of Emerson's, which scarce need an ending, may serve perhaps for the moral.

But if thou do thy best,
Without remission, without rest,
And invite the sunbeam,
And abhor to feign or seem;

.

If thou go in thine own likeness,
Be it health, or be it sickness,
If thou go as thy father's son,
If thou wear no mask or lie
Dealing purely and nakedly,—

ENGLISH TRAITS

WHEN MR. Emerson first sailed for Europe he was, no doubt, urged by physicians to the measure to restore his shattered health, and by his friends, that his mind might be diverted by the scenes rich in beauty and association, and by the treasures of art. Then and through life he cared little for travel for amusement; he had all the beauty and the facts that he wanted in the home horizon; but previous experience had shown him that even a rough sea-voyage was helpful, and this trip involved two, in sailing vessels. More than that, he had left his old life behind and now had opportunity to think out alone the plan of the life about to begin. Two or three men lived in Europe the courage and freshness of whose thoughts had cheered and helped him. In his sadder hours he almost wished to find a helpful Master, but his heart told him that this could not be, and thus answered the wish of his weakness:—

Journal, Rome, April 22, 1833. "Our stern experience replies with the tongue of all its days. Son of Man! it saith, all giving and receiving is reciprocal; you entertain angels unawares, but they cannot impart more or higher things than you are in a state to

receive, but every step of your progress affects the intercourse you hold with all others; elevates its tone, deepens its meaning, sanctifies its spirit."

But, in the loneliness of an ancient city, and beset with sad memories of home, he felt assurance of helpful and strengthening friendship soon to come. He was to find that friend in Carlyle.

The verses "In Naples" are sad; the last lines of those "Written at Rome" (see Appendix to the *Poems*) show hope reviving with health:—

Generously trust

Thy fortune's web to the beneficent hand
That until now has put his world in fee
To thee. He watches for thee still. His love
Broods over thee, and as God lives in heaven,
However long thou walkest solitary,
The hour of heaven shall come, the man appear.

Six months before, he had written in his journal: "I am cheered and instructed by this paper on Corn Law Rhymes in the *Edinburgh* by my Germanick new-light writer, whoever he be. He gives us confidence in our principles. He assures the truth-lover everywhere of sympathy. Blessed art that makes books, and so joins me to that stranger by this perfect railroad."

A few weeks later, having found the name of the unknown champion, he writes,—his sickness showing in the shade of doubt:—

"If Carlyle knew what an interest I have in his persistent Goodness, would it not be worth one effort more, one prayer, one mediation. But will he resist the deluge of bad example in England? One manifestation of

goodness in a noble soul brings him in debt to all the beholders that he shall not betray their love and trust which he has awakened."

During his short stay in France on his way northward, of which there is no mention in *English Traits*, he made this entry:—

"Thus shall I write memoirs? A man who was no courtier, but loved men, went to Rome and there lived with boys. He came to France and in Paris lives alone, and in Paris seldom speaks. If he do not see Carlyle in Edinburgh, he may go to America without saying anything in earnest except to Cranch and to Landor."

In lonely Nithsdale he found the friend he was seeking, not the teacher, and found also, as the Spirit had said, that, even with angels found unawares, all giving and receiving is reciprocal.

"That man came to see me," said Carlyle to Richard Monckton Milnes. "I don't know what brought him, and we kept him one night and then he left us. I saw him go up the hill; I did n't go with him to see him descend. I preferred to watch him mount and vanish like an angel."

But it was the Carlyle that God meant, that Emerson loved, and through all the years of their lives—fortunately with the ocean between—it was this Carlyle that he regarded and addressed, not the sad prophet denouncing the world of his day.

More contemporary side-lights will be given in the notes to the pages describing their intercourse.

The young man's wish to see Wordsworth and Coleridge was gratified, but little was gained by the sight at near range of these masters of poetry and philosophy.

Journal, September, 1833. "It occurs forcibly, yea, somewhat pathetically, that he who visits a man of genius out of admiration for his parts should treat him tenderly. 'T is odds but he will be disappointed. That is not the man of genius's fault,—he was honest and human, but the fault of his [the visitor's] own ignorance of the limits of human excellence. Let him feel then that his visit was unwelcome, and that he is indebted to the tolerance and good nature of his idol, and so spare him the abuse of his own reacting feelings,—the backstroke."

At the time of his first visit to England Mr. Emerson had published nothing and of course was entirely unknown. It is said that he preached once or twice in London; if so, of course at Unitarian chapels, but of this I find no authentic record. His friend, Mr. Alexander Ireland, then of Edinburgh, to whose charge Dr. Samuel Brown, "the chemical philosopher," had committed him, says in his memoirs,⁵⁰ that he heard him deliver a discourse in the Unitarian Chapel in that city, and tells of the effect produced on his hearers. "It is almost needless to say that nothing like it had ever been heard by them before, and many of them did not know what to make of it. The originality of his thoughts, the consummate beauty of the language in which they were clothed, the calm dignity of his bearing...and the singular directness and simplicity of his manner, free from the least shadow of dogmatic assumption, made a deep impression upon me."

The second visit to England was made under quite other conditions. *Nature* and the two volumes of *Essays*, sent at first to a few friends, had found readers in England enough to warrant publication of editions there. Mr. Emerson's friends, those who knew him personally and those whom his writings had won

⁵⁰ Ralph Waldo Emerson, *his Life, Genius and Writings; A Biographical Sketch*. London: Simpkin, Marshall & Co., 1882.

him, wished to see him and hear his thoughts from his own lips. Mr. Ireland made Mr. William Lloyd Garrison, then returning to Boston, the bearer of a generous and urgent invitation to consider the project of a lengthened visit to England and the delivery of lectures in the chief towns, Mr. Ireland himself assuming the burden of the necessary correspondence and business arrangements. The proposal was seconded by friendly and hospitable letters from Carlyle.

He urged Mr. Emerson's coming on another score. "Unquestionably you would get an immense quantity of food for ideas, though perhaps not at all in the way you anticipate, in looking about among us: nay, if you even thought us *stupid*, there is something in the godlike indifference with which London will accept and sanction even that verdict—something highly instructive at least."

Learning from a delayed letter that Emerson was actually on the seas, Carlyle sent with all urgency a letter to meet him on landing, saying, "Know then, my Friend, that in verity your home is *here*... and here surely, if anywhere in the wide earth, there ought to be a brother's welcome and kind home waiting you! Yes, by Allah!"

He landed in the end of October, 1847. After a short visit to Carlyle, he returned to Manchester, where lived Mr. Ireland, of whom he said, "he approves himself the king of all friends and helpful agents...active, unwearable, imperturbable." Thanks to his zeal and influence through his paper, the *Manchester Examiner*, Mr. Emerson found arrangements made for courses in Liverpool and Manchester, and lectures in the important towns in the midland and northern counties, which occupied him until February. Mechanics' institutes afforded him many of his audiences, in some respects like those of country Lyceums at home, and quite as agreeable to him as the gathering of more aristocratic hearers in London.

In February he went to Edinburgh. Mr. Ireland says, "His four lectures created a great sensation in the Scottish metropolis and stirred the hearts of many independent thinkers. The orthodox of that firm stronghold of religious formalism were grieved and shocked, although Emerson, knowing the tone of feeling there, had, with the utmost delicacy, avoided such subjects as might bring him into direct contact with it." He quotes a hearer as saying, "What a quiet, calm conversation it is! It is not the seraph or burning one you see; it is the cherubic reason thinking aloud before you. It is a soul totally unsheathed you have to do with, and you ask, Is this a spirit's tongue sounding on its way? so solitary and severe seems its harmony."

During this visit to Edinburgh, David Scott, the painter, whom Mr. Emerson describes as "a noble Stoic sitting apart here among his rainbow allegories," insisted on his sitting for his portrait. This picture was bought, after Mr. Emerson's death, by near friends, who considered the expression and attitude to be characteristic of him when lecturing, and was given to the Concord Public Library. Its somewhat hard drawing and coloring is offset in a measure by the insight of the painter, in placing the rainbow behind the figure of the apostle of hope.

In the Spring Mr. Emerson went to London and there stayed through March and April, seeing many interesting and notable people and receiving much friendly hospitality, of which much is told by Mr. Ireland in his book, and in Mr. Emerson's own letters home included in Mr. Cabot's Memoir. This was the stormy period of Chartist demonstrations in England, and of actual revolution in France. Though warned of possible danger, Mr. Emerson crossed the Channel and spent most of May in Paris, then in full ferment, with his friend Arthur Hugh Clough, a fellow of Oxford and author of *The Bothie of Tober-na-Vuolich* and other poems. He returned

to London and gave, at the Portman Square Literary and Scientific Institute, a course of six lectures. Mr. Ireland speaks of the audience as "the élite of the social and literary world of the Metropolis. Mr. and Mrs. Carlyle, the Duchess of Sutherland, Lady Byron and her daughter Ada (Lady Lovelace), the Duke of Argyll, Dr. John Carlyle, William and Mary Howitt, Douglas Jerrold, Mr. John Forster, Thackeray and many other distinguished persons were among his hearers.... During the delivery of this course a letter appeared in the *London Examiner* urging a repetition of it at a price sufficiently low to admit of poor literary men hearing Emerson." The writer of this letter, on behalf of "poets, critics, philosophers, historians, scholars, and the other divine paupers of that class," urged that this be done "because Emerson is a phenomenon whose like is not in the world, and to miss him is to lose an important part out of the nineteenth century." Mr. Emerson met this demand. He wrote home, "I must make amends for my aristocratic lecturing in Edwards St. at prices which exclude all *my* public by reading three of my old chapters in Exeter Hall to a city association." This done, he gladly sailed for home in July.

"I leave England," he wrote to Miss Margaret Fuller, "with an increased respect for the Englishman. His stuff or substance seems to be the best of the world. I forgive him his pride. My respect is the more generous that I have no sympathy with him, only an admiration."

This was no doubt a true and concise statement of his feeling about the race of modern Englishmen as he met them. He admired their comeliness and strength, as fine animals, their executive ability and prowess at home and abroad; he had experienced their open hospitality. Above all, he respected their honesty and their courage, physical and moral—but he found few idealists. The remarkable honor and esteem in which he held the English has

another reason. He had been from childhood their debtor. When he thought of the English it was the English from Alfred's time onward. In books he had found his friends and his delight, and there were almost no American books. In the nursery he began with Miss Edgeworth and Bunyan, went on to Shakspeare, Milton, and Spenser, knew Homer through Chapman and Pope, owed Montaigne to Cotton's racy English; Scott and Byron had carried him into realms of romance; as a boy he had rejoiced in Berkeley's idealism, and the poems of the holy Herbert. Gibbon's majestic chapters and the eloquence of Burke had stirred him. Bacon and Newton aroused his admiration, Coleridge had enlightened him, and, last, in Wordsworth, Landor, and especially Carlyle he had found thought and stimulus and advancing courage.

The English authors represented England for him, and through them he knew of their men of action, whether Warwick or Drake, Strafford or Cromwell or Hastings.

After Mr. Emerson's return, while preparing *Representative Men* for the press, he was reading lectures on "England," "Anglo-Saxon," "Norseman and English Influence on Modern Civilization," "English Poetry," "France or Urbanity," "The Anglo-American," and thus gradually brought his new material into shape for publication in *English Traits*.

The book appeared in 1856. Carlyle thus welcomed it: "I got your Book by post in the Highlands; and had such a day over it as falls rarely to my lot! Not for seven years and more have I got hold of such a Book;—Book by a real *man*, with eyes in his head; nobleness, wisdom, humor, and many other things in the heart of him. Such Books do not turn up often in the decade, in the century. In fact I believe it to be worth all the Books ever written by New England upon Old. Franklin might have written such a thing (in his

own way); no other since! We do very well with it here, and the wise part of us *best*."

I. FIRST VISIT TO ENGLAND

N0896: Mr. Wall, a young artist of New Bedford, with whom he had crossed the Simplon from Italy. The copy of Michael Angelo's *Fates*, which always hung in Mr. Emerson's study, was painted by Mr. Wall.

N0897: Scott and Mackintosh had died in the previous year, and apparently not until his visit in 1847 did he meet Jeffrey, De Quincey, or Hallam. In the letters quoted in Mr. Cabot's *Memoir of Emerson*, the interesting account of his meeting with the first two is given. De Quincey, then over sixty years of age, "with a very handsome face,...a very gentle old man speaking with the greatest deliberation and softness, and so refined in speech and manners as to make one quite indifferent to his extremely plain and poor dress," came, wet through and muddy, having walked ten miles in the storm, to dine with Mr. Emerson at the invitation of Mrs. Crowe. He later invited Mr. Emerson to dine with him and his daughters, and attended his lecture.

N0898: William Wilberforce, the friend and helper of Pitt, a member of Parliament from Hull. He introduced the bill for the abolition of the slave trade, and for years championed the measure against the planters and merchants until its final success.

N0899: Horatio Greenough was born in Boston in 1805. His fine personality and his high thought interested Mr. Emerson when they met in Italy and through the sculptor's short life. He made the statue of Washington in front of the National Capitol and many other good works of sculpture, and also designed Bunker Hill Monument.

N0900: Pierre Charron (1514–1603), a French philosopher of note and a Roman Catholic theologian. He wrote the *Traité des Trois Vérités* and the *Traité de la Sagesse*. Mr. Emerson's journals in 1830 show that he had been looking up the beliefs of Heracleitus, Xenophanes, Empedocles, and other ancient philosophers in De Gérando's *Histoire Comparée des Systèmes de Philosophie*. Richard Lucas, D. D. (1648–1715), wrote "Enquiry after Happiness" and "Practical Christianity, or an Account of the Holiness which the Gospel enjoins."

N0901: A friend informs me that the following hexameters of Julius Cæsar, the only specimen of his verse that we have, are found in an extract from the life of Terentius by Suetonius, preserved by Donatus in the introduction to his commentary on this poet. (*Deperditorum Librorum Reliquiæ.*)

Tu quoque, tu in summis, o dimidiate Menander,
Poneris, et merito, puri sermonis amator.
Lenibus atque utinam scriptis adjuncta foret vis

Comica, ut æquato virtus polleret honore
 Cum Græcis, neve hac despectus parte jaceres!
 Unum hoc mæror ac doleo tibi deesse, Terenti.

Thou also art placed, and rightly, among the highest, O halved Menander,⁵¹ lover of clear language, and oh that the comic gift had been added to thy graceful writing, so that thy power might be held in honor equal to the Greek, nor thou lie neglected on this account. This one thing I regret, and mourn thy lack in it, O Terence.

N0902: It is fair to remember that fifty years ago there seemed small chance that an American book would find many readers in England, and also that the American public for whom it was written was a small number of persons, reverent towards English writers. The book, however, reached Landor twenty-three years after the conversation reported, and he published a commentary entitled "An Open Letter from W. S. Landor to R. W. Emerson" (printed at Bath),⁵² some of the corrections in which of Mr. Emerson's statements it is proper to give below. The whole pamphlet is very entertaining in its radical and revolutionary vehemence, yet, considering the temper of the man, singularly respectful and friendly.

In a letter to Carlyle in 1841 Mr. Emerson spoke thus of his value of Landor:—

⁵¹ *Dimidiata* is difficult to render in English. It may mean *diminished*, or *in miniature*, or refer to the fact that Terence borrowed freely from Menander.

⁵² This pamphlet of twenty pages of comment on some five pages of *English Traits* may be found reprinted in *Literary Anecdotes of the Nineteenth Century*, vol. ii., edited by W. Robertson Nicoll, M. A., LL. D., and Thomas J. Wise. London, 1896.

"Many years ago I have read a hundred fine memorable things in the *Imaginary Conversations*, though I knew well the faults of that book, and the *Pericles and Aspasia* within two years has given me delight. I was introduced to the Man in Florence...and his speech I remember was below his writing. I love the rich variety of his mind, his proud tastes, his penetrating glances, and the poetic loftiness of his sentiment, which rises now and then to the meridian, though with the flight, I own, rather of the rocket than an orb, and terminates sometimes by a sudden tumble."

In the following extracts are the more important corrections and comments which Landor made on Mr. Emerson's report, in the "Open Letter":—

My Dear Sir:—

Your *English Traits* have given me great pleasure; and they would have done so, even if I had been treated by you with less favour. The short conversations we held at my Tuscan Villa were insufficient for an estimate of my character and opinions. A few of these and only a few, of the least important, I may have modified since. Let me run briefly over them as I find them stated in your pages. Twenty-three years have not obliterated from my memory the traces of your visit, in company with that intelligent man and glorious sculptor, who was delegated to erect a statue in your capitol to the tutelary genius of America.

Speaking of Michael Angelo, he says,—

"I confess I have no relish for his prodigious *giblet pie* in the Capella Sistina, known throughout the world as his Last Judgment. Grand in architecture, he was no ordinary poet, no lukewarm patriot."

He says of Raffaele, "The cartoons are his noblest works: they place him as high as is Correggio in the dome of Parma: nothing has been, or is likely to be, higher....Let me say, before we go father, that I do not think 'the Greek historians the only good ones.'"

He then praises Davila, Machiavelli, Voltaire, Michelet, Gibbon, Napier.

"Is it certain that I am indiscriminating in my judgment on Charron? Never have I compared him with Montaigne; but there is much of wisdom, and, what is remarkable in the earlier French authors, much of sincerity in him.

"I am sorry to have '*pestered you with Southey*,' and to have excited the enquiry, '*Who is Southey?*' I will answer the question. Southey is the poet who has written the most imaginative poem of any in our own times, English or Continental; such is the *Curse of Kehama*. Southey is the proseman who has written the purest prose; Southey is the critic, is the most cordial and the least invidious. Show me another of any note, without captiousness, without arrogance and without malignity.

'Slow rises worth by poverty depressed!'

But Southey raised it."

Speaking of his early poem "Gebir," he says that in an English journal "on the strength of this poem I am compared and preferred to Göthe. I am not too much elated. Neither in my youthful days, nor in any other have I thrown upon the world such trash as 'Werther' and 'Wilhelm Meister,' nor flavored my poetry with the corrugated spicery of metaphysics. Nor could he have written in a lifetime any twenty, in a hundred or thereabout, of my Imaginary Conversations. My poetry I throw to the Scotch terriers growling

at my feet. Fifty pages of Shelley contain more of pure poetry than a hundred of Göthe.

.

"I do not 'undervalue Socrates.' Being the cleverest of the Sophists, he turned the fraternity into ridicule: he eluded the grasp of his antagonist by anointing with the oil of quibble all that was tangible and prominent. To compare his philosophy (if indeed you can catch it) with the philosophy of Epicurus and Epictetus, whose systems meet, is insanity.

"I do not 'despise entomology.' I am ignorant of it; as indeed of almost all science.

"I love also flowers and plants; but I know less about them than is known by a beetle or a butterfly.

"I must have been misunderstood, or have been culpably inattentive, if I said, 'I knew not Herschell [sic] by name.' The father's I knew well, from his giving to a star the baptismal one of that pernicious madman who tore America from England."

Mr. Emerson published in the *Dial* in 1841 a paper on Landor which is now included in the volume *Natural History of Intellect*.

N0903: In his chapter on "Boston" in *Natural History of Intellect* Mr. Emerson says that amid the laborious and economical population of New England you may often find "that refinement which no education and no habit of society can bestow;...which unites itself by natural affinity to the highest minds of the world;...and...gave a hospitality in this country to the spirit of Coleridge and Wordsworth, and to the music of Beethoven, before yet their genius had found a hearty welcome in Great Britain." There is evidence that at the age of twenty-three Mr. Emerson had been interested in Coleridge, and by him in German thought. In 1829, in a letter to his Aunt Mary Emerson, he speaks of his pleasure in

Coleridge's "Friend" and says, "He has a tone a little lower than greatness, but what a living soul, what a universal knowledge!" and speaks of him as one "whose philosophy compares with others much as astronomy with the other sciences; taking post at the centre, and, as from a specular mount, sending sovereign glances to the circumference of things."⁵³

John Sterling in a letter to Emerson in 1841,⁵⁴ says: "In my boyhood, twenty years ago, I well remember that, with quite insignificant exceptions, all the active and daring minds which would not take for granted the Thirty-nine Articles and the Quarterly Review took refuge with teachers like Mackintosh and Jeffrey, or at highest Madame de Staël. Wordsworth and Coleridge were mystagogues lurking in caverns, and German literature was thought of with a good deal less favour than we are now disposed to show towards that of China."

In the last lecture of the course on English Literature given in the winter of 1835–36 before the Society for the Diffusion of Useful Knowledge, Mr. Emerson said that Coleridge's true merit was not that of a philosopher or of a poet, but of a critic. He praised his "subtlety of discrimination, surpassing all men in the fineness of his distinctions," and added, "He has taken the widest survey of the moral, intellectual, and social world. His *Biographia Literaria* is the best book of criticism in the English language; nay, I do not know any to which a modern scholar can be so much indebted. His works are of very unequal interest."

⁵³ For the whole passage on Coleridge, see Mr. Cabot's *Memoir of Emerson*, p. 161.

⁵⁴ *A Correspondence between John Sterling and Ralph Waldo Emerson*.

N0904: Daniel Waterland, arch-deacon of Middlesex early in the eighteenth century, published polemical treatises against Arians and Deists.

N0905: Mr. Emerson said to Mr. Ireland of Wordsworth and Carlyle: "Am I, who have hung over their works in my chamber at home, not to see these men in the flesh, and thank them and interchange some thoughts with them, when I am passing their very doors?"

N0906: From Mr. Emerson's notebook:—

CARLISLE IN CUMBERLAND, AUG. 26 (1853).

I am just arrived in merry Carlisle from Dumfries. A white day in my years. I found the youth I sought in Scotland, and good and wise and pleasant he seems to me. Thomas Carlyle lives in the parish of Dunscore, sixteen miles from Dumfries, amid wild and desolate heathery hills and without a single companion in this region out of his own house. There he has his wife, a most accomplished and agreeable woman. Truth and peace and faith dwell with them and beautify them. I never saw more amiableness than is in his countenance. He speaks broad Scotch with evident relish—"in London yonder;" I liked well 'about it,' 'Ay, Ay,' etc. Nothing can be better than his stories,—the philosophic phrase, etc.

N0907: Mr. John Albee in his *Remembrances* speaks of Mr. Emerson's remarks on the daguerreotype of Carlyle (profile) which he showed him. "He spoke of his physiognomy, his heavy eyebrows and projecting base of the forehead, underset by the heavy lower jaw and lip, between which as millstones, he said, every humbug was sure to be pulverized."

N0908: "Tunc uno quoque hinc inde instante, ut quam primum se impendentibus contumeliis eriperet, scrobem coram fieri imperavit, dimensus ad corporis sui modulum, componique simul, is qua invenirentur, frusta marmoris, et aquam simul et ligna conferri curando mox cadaveri, fiens ad singula atqui identidem dictitans;—*Qualis artifex pereo!*"—Suetonius, *De Vita Cæsarum*, Liber VI., 49.

Which passage may be thus rendered: "Then with some one on each side urging him to save himself as soon as possible from the impending indignities, he commanded that a grave be made, in his presence, to his measure, and bits of marble, if any could be there found, be put together, and also water and wood to be brought for the disposing of the corpse soon to be, weeping at everything that was done and repeatedly exclaiming, 'What an artificer dies in me.'"

N0909: Of this visit, from a man then totally unknown, to him "the solitariest, stranded, most helpless creature that I have been for many years," his work rejected by publishers, and apparently by the world, Carlyle wrote two years afterwards: "Long shall we remember that Autumn Sunday that landed him (out of Infinite Space) on the Craigenputtock wilderness, *not* to leave us as he found us." And Mrs. Carlyle wrote: "Friend, who, years ago, in the Desert descended upon us out of the clouds, as it were, and made one day there look like enchantment or us, and left me weeping that it was only one day."

N0910: "John S[tuart] Mill, the best mind he knows,—more purity, more force; has worked himself clear of Benthamism."—Journal.

N0911: Mr. Landor in the "Open Letter" rudely comments on this preference, "More fool he!"

N0912: Literally, *a gain forever*.

N0913: In a letter to Mr. Ireland, Mr. Emerson thus spoke of this visit to Ambleside: "I spent a valuable hour, and perhaps a half more, with Mr. Wordsworth, who is in sound health at seventy-seven years and was full of talk. He would even have walked with me on my way to Miss Martineau's, but it began to rain, and I would not suffer it."

But he felt of Wordsworth and the lights of Edinburgh, as he said in another of his letters: "They have nothing half so good to give you near, as they had at a distance."

Miss Martineau had written of Mr. Emerson as she saw him in America in 1836: "There is a remarkable man in the United States, without knowing whom it is not too much to say that the United States cannot be fully known. I mean by this, not only that he has powers and worth which constitute him an element in the estimate which is to be formed of his country, but that his intellect and his character are the opposite of those which the influences of his country and his time are supposed almost necessarily to form. Great things are expected of him."

II. VOYAGE TO ENGLAND

N0914: In answering Mr. Ireland's kindly urged proposal, Mr. Emerson had said: "I feel no call to make a visit of literary propagandism in England. All my impulses of that kind would rather employ me at home." Yet he felt that the stimulus would be good for him, and writing later to Carlyle, whom he wished to see again, said: "I should find my account in the strong inducement of a new audience to finish pieces which have lain waiting with little hope for months and years. Ah then, if I dared, I should be glad to add some golden hours to my life in seeing you, now all full-grown and acknowledged amidst your own people,—to hear and speak is so little, yet so much."

N0915: The voyage in a small coaster to Charleston and St. Augustine, which threatenings in his lungs obliged him to take in the winter of 1827.

III. LAND

N0916: Count Vittorio Alfieri of Asti in Piedmont (1749–1803), an author of note, and especially a tragic dramatist.

N0917: In his lecture “Boston” (printed in *Natural History of Intellect*) he says that those Englishmen who planted New England “were precisely the idealists of England,” and Mr. Lowell in the Ode which he recited at the Old North Bridge on the One Hundredth Anniversary of Concord Fight, thus stated the issue:—

“Here English law and English thought
Against the might of England fought.”

N0918: This was William Chambers of Edinburgh.

N0919: At that time the eager American students of philosophy and theology were going to Göttingen, Jena, and Leipsic, while the young doctors and scientific students flocked to the Sorbonne and the hospitals of Paris.

N0920: Add South Carolina, and you have more than an equivalent for the area of Scotland.—Mr. Emerson's note in First Edition.

N0921: Mr. Emerson had full knowledge of the dismal conditions of life described, for he spent his first two months in lecturing and visiting in "The Black Country."

N0922: "Et penitus, toto divisos orbe Britannos. (And within it [the ocean], the Britons, cut off from all the world.*)"—Virgil, *Aeneid* I., 67.

N0923:

"Thank Him who isled us here, and roughly set
His Briton in blown seas and storming showers."

Tennyson's "Ode on the Death of the Duke of Wellington."

Mr. Emerson wrote that an Englishman said to the Persian Ambassador in London, "I am told that in your country you worship the sun." "So would you, if you ever saw him," replied the Persian.

IV. RACE

N0924: *The Races, A Fragment*, by Robert Knox, M. D., London, 1850; republished in fuller form in 1862: *The Races of Men, A Philosophical Inquiry into the Influence of Race over the Destinies of Nations*.

N0925: Charles Pickering, naturalist to the exploring expedition sent out by the United States in 1838, under Commodore Wilkes; author of *Races of Man* and works on the geographical distribution of animals and plants.

N0926: Mr. Emerson had read Lyell and heard of Lamarck's teachings through him and others, and on his second visit to England had taken great interest in the conversation of the men of science.

That the imperative needs brought about by emigration, or other radical change of conditions, wrought variations in species, was the argument brought up by Lamarck against those who pointed to Egyptian sculpture as showing the absolute persistence of race-

type in men and animals. The conditions in Egypt, being constant, did not provoke variation.

N0927: J. R. Green, in his *Short History of the English People*, says that even in the reign of Richard II. strikes and combinations became frequent among the lower craftsmen in the towns.

N0928:

Roomy Eternity
Casts her schemes rarely,
And an æon allows
For each quality and part
Of the multitudinous
And many-chambered heart.

"Fragments on Life," *Poems*, Appendix.

Mr. Emerson took great interest in his pear orchard, which he set out soon after settling in Concord, and every morning in good weather, before going to his study, visited, to prune, watch for caterpillars and borers, or gather the fruit. He had Downing's book on Fruits. A few pages in this gave him especial pleasure; namely, the account of the theory and successful experiments in the amelioration of fruits, by Dr. Van Mons, professor at Louvain in the Netherlands. All through Mr. Emerson's works crop out allusions to this hopeful theory of Amelioration, to him symbolic.

This theory, full of parables, might be thus stated in very condensed form:—

The aim of nature in the wild fruit-tree is only to produce a vigorous tree, and perfect seeds for continuing the species.

The object of culture is to subdue excess of vegetation, lessen coarseness of tree, reduce size of seeds, and increase the pulp of the fruit.

There is always a tendency of improved fruits to return by seeds to the wild state, especially in seeds borne by old fruit-trees, yet they never quite return.

But the seeds of a young tree of a good sort, being itself in a state of amelioration, have the least tendency to retrograde, and are most likely to produce improved sorts.

There is a limit to perfection in fruits. When this is reached, the next generation will more probably produce bad fruit than if raised from seeds of an indifferent sort in the course of amelioration. Seeds of the oldest good fruits usually produce inferior sorts; those from *recent varieties* of bad fruit, if reproduced uninterruptedly under good conditions for several generations, will certainly yield good fruit.

Van Mons was constantly on the watch for trees in a *state of variation* for his experiments. In the fifth generation his seedlings mostly gave excellent fruit and bore in the third year.

In 1823 Van Mons's nurseries contained two thousand seedlings of merit.

To his teachings and work should be credited a share in strengthening Mr. Emerson's faith in Compensation and in Ascension.

N0929: "*La Nature aime les croisements*" is a quotation appearing in the journals.

N0930: In spite of his praise for Plato, argument was not only disagreeable to Mr. Emerson, but he felt that the heat engendered

burned up the perception. "Truth ceases to be truth when polemically stated," he said.

N0931: In his boyhood Mr. Emerson delighted in Ossian and later in the genuine remains of the British bards, Taliessin, Llewarch Hen, and the others. We are apt to think and speak of the Scotch as one people, but the difference is striking between the religion of the Saxon Lowlander, fanatically wedded to his Kirk's dour dogma, and delighting in argumentative theology, and the Celtic Highlander's faith in Spirit, associated with wild, free Nature and almost ancestor-worship.

N0932: "It was in the consulship of Cæcilius Metellus and Papirius Carbo, six hundred and forty years after the founding of Rome, that we first heard the clash of the Cimbrian arms. From that date, reckoning down to the second consulship of the Emperor Trajan, gives an interval of some two hundred and ten years. Our conquest of Germany is taking us a long time.

"And during the process we have had many hard blows in return. Not the Samnites, nor the Carthaginians, nor the Spaniards, nor the Gauls, nor even the Parthians themselves, have oftener given us a lesson. The freemen of Germany are more spirited antagonists than all the subjects of King Arsaces."⁵⁵

Tacitus then enumerates the disastrous defeats of Roman armies in Germany, ending with the crushing blow when Varus lost three legions, and thus ends: "Nec impune Caius Marius in Italia, divus

⁵⁵ From the *Germania* of Tacitus (xxxvii), translated by R. B. Townshend, M. A. London, 1894.

Julius in Gallia, Drusus ac Nero et Germanicus in suis eos sedibus perculerunt."

N0933:

The gale that wrecked you on the sand,
It helped my rowers to row;
The storm is my best galley-hand
And drives me where I go.

"Northman," *Quatrains, Poems*.

N0934: *Heimskringla, or The Sea-Kings of Norway*, translated and edited by Samuel Laing. London, 1844.

N0935: This story, one of those which Mr. Emerson liked to read to his children, is in Laing's *Sea-Kings of Norway*, above mentioned.

N0936: Throughout *English Traits* it appears that Mr. Emerson had been carried along in the tide of historical reaction that set in in the first half of the century. The merits of the Anglo-Saxon then shone out after long eclipse by Norman glory,—much as "Cromwell damned to ever-lasting fame" was established as the hero of England by Carlyle. The tendency of many books of that day showed a democratic recoil from aristocratic feudalism, and withal the dislike of France by English writers told to the disadvantage of the vikings who had really been much civilized by French residence. So, as was natural, the pendulum of opinion for the time went to the Saxon extreme. Yet with regard to the Saxon conquest of Britain, Tennyson's picture—

"Last, a heathen horde,

Reddening the sky with fire and earth with blood,
And on the spear which pierced the mother's heart
Spitting the babe, brake over sea"—

is borne out by Freeman and Green in their histories, and the Norman Conquest was gentle and beneficent beside that of the exterminating Saxon. Freeman writes: "The English wiped out everything Celtic and everything Roman....A more fearful blow never fell on any nation than the landing of the Angles and Saxons was to the Celt of Britain. But we may now be thankful for the barbarism and ferocity of our forefathers."

Of the Norseman settled on the Seine he says: "The Scandinavians in Gaul embraced the creed, the language and the manners of their French neighbors, without losing a whit of their old Scandinavian vigor and love of adventure. The people thus formed became the foremost apostles alike of French Chivalry and Latin Christianity....To free England he (the Norman) gave a line of tyrants....But to England he gave also a conquering nobility which in a few years became as truly English in England, as it had become French in Normandy....In a word, the indomitable vigor of the Scandinavian, joined to the buoyant vivacity of the Gaul, produced the conquering and ruling race of Europe. And yet that race, as a race, has vanished. It has everywhere been absorbed by the races which it has conquered."

N0937: In one of the lectures on England Mr. Emerson said: "Then came the Gothic nations, Belgian, Saxon, Dane, Northman. The Emperor Charles V. said that 'all the nobility of Europe came out of Scandia and from the stock of the Goths.'"

N0938: Sir Samuel Romilly (1757–1818), of Huguenot descent, was solicitor-general under the Grenville administration in 1806. In Parliament he bravely advocated political reform, abolition of the slave trade, Catholic emancipation, and mitigation of the criminal code. The success of the last measure did not come until after his death by his own hand while suffering from melancholia.

N0939: Charles Reade's story, *It is Never too Late to Mend*, was an important tract in arousing public attention in England to these outrages. It may be interesting to mention that one of Mr. Emerson's friends and neighbors, John S. Keyes, sheriff of Middlesex, was greatly moved by this book, and gave copies of it to the officers of the county jail at East Cambridge.

N0940: I think this phrase was Lord Palmerston's, when asked how he could carry the load of care and labor that rested on him when he was Premier: "By putting a solid bar of eight hours' sleep between day and day."

N0941: In the *Achievements of Cavalry* by General Sir Evelyn Wood, V. C., G. C. B., etc., in which six brilliant actions of cavalry in Europe in the last hundred years are selected, two are credited to the English service: 1st, at *Villars en Couchées* in Brittany in 1793, the breaking of a square of French infantry protected by artillery and cavalry by the Fifteenth Light Dragoons; 2d, at *Garcia Hernandez* in the Peninsular War, where five "British" squadrons (*but Hanoverians, of the King's German Legion*) attacked the rear guard of a French division, broke two squares, and captured a general and one thousand prisoners. The French commander praised the gallantry of their action in the highest terms, and the Duke of Wellington said he had never seen so gallant a charge.

The English cavalry certainly distinguished themselves at the end of the day at Waterloo, and at Balaclava in the Crimea the superb courage and steadiness of Scarlett's Heavy Brigade in the morning, and the unquestioning gallantry of the hopeless charge of the Light Brigade under Lord Cardigan in the afternoon, demonstrated the individual prowess and admirable discipline of the British cavalryman, even when ill managed.

V. ABILITY

N0942: Of George Stephenson, the introducer of the locomotive engine for railway use, and Chief Engineer of the Liverpool and Manchester Railway, Mr. Emerson writes in his journal: "At Chesterfield I dined in company with Stephenson, the old engineer, who built the first locomotive, and who is, in every way, one of the most remarkable men I have seen in England. I do not know but that I shall accept some day his reiterated invitation to 'go to his house and stay a few days and see Chatsworth and other things.'" His son, Robert Stephenson, was exactly Mr. Emerson's age. The tubular bridge over the Menai Straits was among his great engineering works.

Isambard Brunel, son of the constructor of the Thames tunnel, took part in floating and raising the Conway and Britannia tubular bridges.

N0943: Henry de Bratton, or Bracton, in the thirteenth century, and ecclesiastic and jurist, and Chancellor of the Exchequer, wrote *De Legibus et Consuetudinibus Angliæ*, which is said to be "the first

attempt to treat the whole extent of the English Law in a manner at once systematic and practical."

William Camden (1551–1623), the historian and antiquary, author of *Britannia* and of the *Annals of the Reign of Queen Elizabeth*. The Camden Society, for publication of valuable literary and antiquarian matter, takes its name from him.

Sir William Dugdale (1605–86), antiquarian and historian of extraordinary industry, to whom credit is due for his preservation of a vast amount of valuable and interesting records of the past legal, ecclesiastic, genealogical, artistic and heraldic.

John Selden (1584–1654), jurist, antiquarian, orientalist and author.

James Brindley (1716–72), a remarkable engineer who united the rivers of England—Mersey, Trent, Humber, Thames and Severn—by canals, and tunnelled Harecastle Hill.

Josiah Wedgwood (1730–95), whose studies of the antique "raised British pottery to the level of a fine art."

N0944: Antony à Wood's *Athenæ Oxoniensis*. Carlyle presented these two fine folio volumes to Emerson in 1848.

N0945: *Man's Soule*, p. 29.

N0946: Philip de Comines (1445–1509), whose abilities, and residence near Burgundy, necessarily deeply involved him in the political struggles between its duke and the king of France, each of whom he served in turn. His *Memoirs* are an important authority on the period, and to them is due much of the knowledge of the character of Louis XI. (portrayed by Sir Walter Scott in *Quentin Durward*).

N0947: Mr. Emerson's friend, Professor Charles Eliot Norton, tells the story of an occurrence during their homeward voyage together from England in 1873. They were in the middle of the Atlantic, and in their talk the daring of Columbus was spoken of in his sailing on westward, week after week, without sight of land. Mr. Emerson said, "But Columbus had the compass. That was enough for a man of his quality." Then, producing from his pocket a small compass, he said, "I always carry this with me. I like to hold the god in my hand."

N0948: In a lecture on the Anglo-American, contrasting the hurry and daring shiftiness of the Western pioneer with the cautious thoroughness of the Briton, Mr. Emerson said, "The engine is built in the boat, which does not commend it to the Englishman. The knees, instead of grand old oak, are sawed out of refuse sapling."

N0949: John Clerk, a merchant of Eldin, near Edinburgh, wrote "An Essay on Naval Tactics" in 1790 (2d and 3d parts in 1797), which gave rise to a controversy due to the claim of Clerk, supported by others, that his plans, which had been circulated in manuscript before publication, had been adopted by Admiral Rodney at Dominica in April, 1782.

N0950: In his *History of the War in the Peninsula* Napier says that "in the beginning of each war England has to seek in blood the knowledge necessary to insure success; and, like the fiend's progress towards Eden, her conquering course is through chaos followed by death."

N0951: In his indignation at the cold and threatening attitude of aristocratic and official England towards our country in the first years of the Civil War, Mr. Emerson wrote thus: "England has no higher worship than Fate.... Never a lofty sentiment, never a Duty to Civilization, never a generosity, a moral self-restraint. In sight of a commodity, her religion, her morals are forgotten. Why need we be religious? Have I not bishops and clergy at home punctually praying, and sanctimonious from head to foot? Have they not been paid their last year's salary?"

Of course, in thus saying, he would have fully admitted what he said in his journal of 1849: "There are two or three Englands, and it is difficult to speak emphatically of England without finding that we are saying that which is true of only one of these—false of the others."

N0952: In the Norse mythology of the *Edda*.

N0953: Luke Hansard's *Journal of the House of Commons from 1774*.

N0954: Sir Charles Fellows on his travels discovered Xanthos, the capital of ancient Lycia, in 1838. His description of the remarkable architectural and sculptured remains there induced the British government to obtain permission for their excavation and removal to the British Museum. Mr. Emerson there saw with delight these treasures, under the guidance of Sir Charles Fellows; especially the triumphal temple with the statues in honor of the twelve cities which sent aid to Harpagus in his reduction of Ionian cities. Mr. Emerson calls the Greek sculpture in the Museum the "Illustration of Homer and Herodotus," and adds, "England holds

these things for mankind, and holds them well. Conservative, she is Conservator."

N0955: Of the race, sifted by conscience and endurance, building their New Commonwealth in New England, he said:—

The men of yore were stout and poor,
And sailed for bread to every shore.
And where they went on trade intent
 They did what freemen can,
Their dauntless ways did all men praise,
 The merchant was a man.
The world was made for honest trade,—
To plant and eat be none afraid.

"Boston," *Poems*.

N0956: The Banshee in Irish legend was a familiar spirit of a household, whose cries prophesied their weal or woe.

N0957: Pope's "Windsor Forest," quoted by Mr. Emerson from memory and differing slightly from the original lines.

N0958: Mr. Emerson in a note to the earlier editions refers on this subject to the *Memorial of Horatio Greenough* (p. 66), published in New York in 1853.

N0959: In the chapter on "Aristocracy" in this volume it is stated that the possessions of the Earl of Lonsdale gave him eight seats in Parliament and that "before the Reform of 1832 one hundred and fifty-four persons sent three hundred and seven members to Parliament. The borough-mongers governed England."

The Reform Bill, passed in June of that year (which by its defeat the year before had occasioned terrible agitation throughout England, accompanied by riots), took away the right of representation from fifty-six "rotten boroughs," and gave the one hundred and forty-three members it gained to counties or large towns which as yet sent no members to Parliament.

N0960: Mr. Emerson here noted that "Sir Samuel Romilly, purest of English patriots, decided that the only independent mode of entering Parliament was to buy a seat, and he bought Horsham." See a passage with regard to this action in the end of the chapter "Results" in this volume.

N0961: John Scott, Earl of Eldon (1751–1838), the distinguished jurist, and Lord Chancellor of England for twenty-eight years. He was a stanch Tory and earnestly opposed Catholic emancipation and Parliamentary reform and all liberal measures.

N0962: Mr. Emerson used to read to his children for its pathetic eloquence a passage in which Coleridge related the words of an old shepherd on the recent cruel depopulation of the Highlands of Scotland by absentee chiefs and lairds. The old man, after describing the brave and self-respecting population of the strath in his youth, cries out, "And what is here now but a shepherd and an underling or two, and, it may be, a pair of small lads,—and a many, many *sheep*!" He tells of the laird who "raised a company to go to the battles overseas for the love that was borne to his name, and gained high preferment in consequence. And what were the thanks that the folks had for those that came back, some blind and more in danger of blindness, and for those that perished in the hospitals or fell in battle fighting before or beside him? Why, that

their fathers were all turned out of their farms before the year was over, or sent to wander like so many gypsies, unless they would consent to shed their gray hairs at ten-pence a day over the new canals! Had there been a price set on his head, he needed but have whistled and a hundred brave lads would have made a wall of flame around him with the flash of their broad-swords. Now, if the French should come among us, let him whistle to his sheep and see if *they* will fight for him!"

N0963: Adam Gottlieb Oehlenschläger, for the reason given in the text, went to Germany and there became eminent as a writer of tragedies. He later went to Paris. *Hakon Jarl*, *Correggio*, and *Land Lost and Found* are among his pieces, the last based on the Norsemen's discovery of America.

N0964: James Hutton, a man of wide education and of versatile gifts, turned his attention to geology, and wrote a *Theory of the Earth*, assuming that heat was the main agent in its changes.

VI. MANNERS

N0965: The devoted wife of Colonel John Hutchinson, one of the Parliamentary leaders in the civil war, and member of the high court of judiciary which condemned Charles I. to death. After the Restoration he was accused of conspiracy and died in prison. His wife wrote his Memoir, which was first published in 1806.

Lady Rachel Russell, daughter of the Earl of Southampton. Her husband, William Lord Russell, sentenced on a false charge of conspiracy against Charles II., was beheaded. His wife helped him during his defence, in which he was not allowed counsel.

N0966: Contrast with this picture of the handsome but case-hardened beings whom he met, that which he drew, using the same image, of the advancing soul. "Every soul is by this intrinsic necessity quitting its whole system of things and home and laws and faith, as the shell-fish crawls out of its beautiful but stony case, because it no longer admits of its growth, and slowly forms a new house." ("Compensation," *Essays, First Series*.)

The description in the text of the hard enamel, varnishing the Englishman, is, in Mr. Emerson's journal, followed by his adducing

Pope, Swift, Johnson, Gibbon, Goldsmith and Gray, as instances. He goes on: "We get good men sometimes in this country; but Everett and Irving are the only persons I think of who have pretensions to finish, and their enamel will not rival the British. It seems an indemnity to the Briton for his precocious maturity. He has no generous daring in this age; the Platonism died in the Elizabethan; he is shut up in French limits; the practical, the comfortable oppress him with inexorable claims, so that the smallest fraction of power remains for poetry. But Birmingham comes in, and says, 'Never mind; I have some patent lustre that defies criticism!' and Moore made his whole fabric of the 'lustre,' and Tennyson supplied defects with it. Only Wordsworth bought none."

N0967: From *A Relation, or rather a True Account of the Island of England*, by a Venetian Traveller (about A.D. 1500). Printed by the Camden Society, no. xxxvii. 1847.

N0968: Mr. Emerson made this a household word, telling his children when unusually late to a meal, "Nothing but death or mutilation will hold as an excuse."

VII. TRUTH

N0969: Mr. Joshua Bates, the American member of the firm of Messrs. Baring Brothers of London, said to Mr. Emerson, "I have been here thirty years and nobody has ever attempted to cheat me."

N0970: The above passage recalls some "Pythagorean opinions," copied by Mr. Emerson in the "Blotting Book" of 1830, in which he took pleasure because they recognized the "Universal Mind" even in animals.

"Man has some affinity, not only with gods, but with animals; one mind runs through the universe. The soul breathes the representations of the images of things as a sort of air."

N0971: A good instance of the Englishman's caution in "checking himself in compliments" is in the introduction to his audience of a lecturer by the presiding clergyman or squire, who takes pleasure "in calling your attention to the—er—*doubtless* very interesting remarks we are about to hear," etc.

August 1, 1808, and soon after defeated Laborde and repulsed Junot. Sir Hugh Dalrymple, the English commissioner, made an agreement with the latter in a convention at Cintra by which the French were not only permitted to leave Portugal, but were conveyed to France with their arms and property.

N0977: Lord Eldon's stanch Tory opposition to all reforms was not pursued in ignorance of the increasing unpopularity of his course; for Mr. Emerson notes that he said in his old age that, "were he to begin life again, he would be damned but he would begin as an agitator."

N0978: Mr. Emerson made the following note in modification of the above passage, written several years before the book was published:—

"It is an unlucky moment to remember these sparkles of solitary virtue in the face of the honors lately paid in England to the Emperor Louis Napoleon. I am sure that no Englishman that I had the happiness to know, consented, when the aristocracy and the commons of London cringed like a Neapolitan rabble, before a successful thief. But,—how to resist one step, though odious, in a linked series of state necessities? Governments must always learn too late that the use of dishonest agents is as ruinous for nations as for single men."

N0979: The "spiritual" manifestations that began to attract attention in America about the year 1850 were first called "Rochester knockings" because they occurred in the family of John D. Fox of that city.

N0980: From Daniel Defoe's *True-Born Englishman*, Part II.

Tacitus writes of the ancient Germans: "It is generally at their drinking-bouts that they discuss" all important matters of a public or private nature. "Not being a crafty or a cunning race, they furthermore disclose their secret thoughts in the freedom of the feast, and so the minds of all lie open and discovered. On the morrow the matter is debated again and the double process justifies itself. They discuss when disguise is impossible, they decide when too sober to blunder." (*Germania*, XXII.)

VIII. CHARACTER

N0981: Jehan Froissart, Canon of Chimay in Flanders (1337–1410), in his *Chroniques de France, d' Angleterre, d' Ecosse, d' Espagne, de Bretagne, de Gascogne, Flandres et lieux d' alentour*. Mr. Emerson used often to quote the remark of Grahame of Claverhouse to his prisoner, Morton, in Scott's *Old Mortality*, about the glorious old chronicler of chivalry: "I have half a mind to contrive you should have six months' imprisonment in order to procure you that pleasure. His chapters inspire me with more enthusiasm than even poetry itself."

N0982: Shakspeare, *Henry IV.*, Part II., Act I., Scene 1.

N0983: Milton, *L' Allegro*.

N0984: It is of course Turner that is here referred to. In his journal Mr. Emerson tells of going with Mr. Stanfield, the painter, and another gentleman, to see Mr. Windus's large collection of Turner's pictures and drawings at Tottenham. Later Mr. Richard Owen, the anatomist, "carried us to Turner's studio, but Turner,

though he had written him a note to announce his visit, was gone. So he [Owen] showed us the pictures. In his earlier pictures, he said, Turner painted conventionally, painted what he knew was there, finished the coat and buttons; in the later he paints only what the eye really sees, and gives the genius of the city or landscape. He was engaged to paint a whale-ship, and he came one day to see Mr. Owen and asked to see a mullet (?) [Agassiz said a Clio]⁵⁶ and begged him to explain to him from the beginning the natural history of the creature; which he did; Turner followed him with great accuracy. In process of time the picture was painted and Owen went there to see his mullet. 'I could not find it,' he said, 'in the picture, but I doubt not it is all there.'"

The painter out of kindness to whom he smudged his own picture with water-color was Lawrence.

Mr. Emerson notes, "Turner told Stanfield he will not suffer any portrait to be taken of him, for nobody would ever believe that such an ugly fellow made such beautiful things."

N0985:

"But I will wear my heart upon my sleeve
For daws to peck at."

Shakspeare, *Othello*, Act I., Scene 1.

N0986: Fuller's *Worthies of England*.

N0987: *Heimskringla*, Laing's translation, vol. iii. p. 37.

⁵⁶ This anecdote I copy from a book in which Mr. Emerson wrote out the story more fully than in the little notebook. The comment of Agassiz was evidently added later, inserted with a caret. It seems very possible that it was not a "whale-ship," but the "Slave Ship" now in the Boston Museum of Fine Arts.

IX. COCKAYNE

N0988: "Humorist" in the Elizabethan sense of indulging his humor or whim. In his notes on England Mr. Emerson quotes from Dr. A. Carlyle's *Autobiography*: "The humorist prevails more in England than in any country because liberty has long been universal there and wealth very general, which I hold to be the father and mother of the humorist."

N0989: In 1844 Mr. R. H. Gurney, a banker of Norwich, said on his cross-examination before a railway committee, "I have never travelled by rails. I am an enemy to them. I have opposed the Norwich Railway. I have left a sum of money in my will to oppose railroads."

N0990: Mr. Emerson in a lecture called "France; or, Urbanity," delivered soon after his return from this visit abroad, and often in his allusion to the French, shows something of the same tendency to "use France as a blackboard." It should be remembered that his experience of France was only in Paris, and mostly for a few weeks during the Revolution of 1848, a time which brought out

the excitability of the French, a trait always disturbing to his serene mind.

N0991: One brilliant exception to this rough British propagandism has been recently shown by Sir Andrew Clarke, whose wise humanity and consideration for the traditions and feelings of the fierce Malay race, with whom he had to deal, has been so successful in producing peace and prosperity, with almost no military backing, in the Straits Settlement.

N0992: In some loose sheets of notes written in 1848 this plan is more fully stated.

"There is also this use to be made of brag, that men show their cards in that. Humor them by all means. Do not check the speaker by so much as a look; he is unconsciously telling you his idea of what he ought to do. Draw it all out, and then hold him to it. Hold the Frenchman to his. He that is the liberator of the universe: he that has the most civilized of civilizations: France it is to which all nations sitting in darkness look with hope and all despots with despair. My best of human beings! I am delighted to hear you. And this is the mission of France. And France will suffer nobody nor any mad neighbour to do the like by Poland, Hungary or Turkey. Least of all to impede the liberty of the press or of speech in France. Take down the words, and give me your signature to this in black and white. Surely you do not hesitate!

"Well, but here are English, and I remember that the English say that the French are a little given—the least in the world—to rhodomontade—but that English speak what they think, and their word is as good as their bond. Well, these, then, we can hold to their boast: England is the refuge of freedom, English press is the public opinion of Europe, asylum of the

oppressed, bulwark of freedom against the despotism. We will remember all this; and see how well her actions bear it out in the approaching crisis."

N0993: William Spence, principally known by his work on entomology, written in conjunction with the Rev. William Kirby. He was for a time a member of Parliament.

N0994: The general distress among the poorer classes in England continuing after the passage of the Reform Bill in 1832 led to agitation and even riots on behalf of "The People's Charter" in 1839. The "six points" of Chartism were: Universal suffrage, vote by ballot, annual Parliaments, equal electoral districts, no property qualification for members, and payment for their services. Most of these points have been substantially won. Some Chartist demonstrations were broken up by the military arm of the government, and leading agitators imprisoned or transported. The last serious demonstrations were during the time of Mr. Emerson's stay in England, and gave rise to the more alarm because of the revolution then going on in France.

9 March, 1848. "I attended a Chartist Meeting in National Hall, Holburn. It was called to hear the report of the Deputation who had returned after carrying congratulations to the French Republic. The *Marseillaise* was sung by a party of men and women on the platform and chorused by the whole assembly: then the *Girondins*. The leaders appeared to be grave men intent on keeping a character for order and moral tone, but the great body of the meeting liked best the sentiment, 'Every man a ballot and every man a musket.'"

Mr. Emerson's comment is, "England a little top-heavy still, though she keeps her feet much better since the Corn-laws were thrown overboard."

N0995: Mr. Emerson adopted the account of St. George given by Gibbon. The weight of evidence of the various chronicles now seems to show that the real St. George was not George the Arian, of Cappadocia, described in the text, but another who died two generations earlier.

It is said that Constantine the Great dedicated a church to the martyred St. George in Constantinople more than forty years before the killing of George the Arian, which occurred in A.D. 361. Eusebius relates that St. George, a man of no mean origin and highly esteemed for his temporal dignities, publicly tore down the edict against the Christians of the Emperor Diocletian, who was then in the city, and "after enduring what was likely to follow an act so daring, preserved his mind calm and serene until the moment his spirit fled." Other authors tell of the prolonging of the tortures for ten days, the saint recovering and performing miracles in the intervals.

In the opinion of to-day the case of Amerigo Vespucci appears in a better light than that here presented. Although his statement that he was concerned in the voyage to the New World in 1497 is held to be false, he appears to have taken part in one or two expeditions which later reached the South American coast. A writer in the *American Encyclopædia* says that it does not appear that Vespucci himself had any intention of taking the honor of the discovery from Columbus.

X. WEALTH

N0996: Benjamin Robert Haydon, the painter and writer on art, whose life was a struggle with poverty, and who was himself imprisoned for debt. In his bitterness he wrote:—

“The greatest curse that can befall a father in England is to have a son gifted with a passion and a genius for high art.” (*Life of Haydon.*)

N0997: The misery in the streets of the English cities, especially of women and children, distressed Mr. Emerson. In a letter to his wife soon after arriving in Manchester he said, referring to his youngest daughter: “My dear little Edie, to tell you the truth, costs me many a penny, day by day. I cannot go up the street but I shall see some woman in rags, with a little creature just of Edie’s size and age, but in coarsest ragged clothes, and barefooted, stepping beside her; and I look curiously into *her* Edie’s face with some terror lest it should resemble *mine*, and the far-off Edie wins from me the half-pence for this near one.” For more to this purpose, see Mr. Cabot’s *Memoir*, vol. ii., pp. 506, 507.

N0998: Lord Bacon in his essay *On Expense* gave the like counsel: "Certainly, if a man will keep but of even hand, his ordinary expenses ought to be but half of his receipts; and, if he thinks to wax rich, but to the third part."

N0999: In the Norse mythology, the Fenris wolf, son of Loki, was bound on Niflheim, but steadily frays his bond, which will at last break, and in the Day of Doom he will swallow the Sun.

N1000: Mr. Emerson's residence and visitings in the great industrial towns of Yorkshire and Lancashire, where he met manufacturers and operatives at the mechanics' institutes before which he lectured, gave him remarkable opportunities to see the huge material activities and their products; also their social and economic results. Soon after landing he wrote that he had an invitation from a "Mr. Crawshay, who refused the tests at Cambridge after reading my essays! as he writes me. And so with small wisdom the world is moved as of old." He accepted, and soon after wrote: "I find here at Newcastle a most accomplished gentleman in Mr. Crawshay, at whose counting-room in his iron works I am now sitting after much conference on many and useful arts." It was his six-ton trip-hammer that suggested Thor's Miöllnir. Mr. Crawshay showed how it would fall close down to his silk hat and spare it, and then reduce a workman's borrowed hat to atoms.

N1001: It will be remembered that John Evelyn, the well-known author of the *Diary*, wrote, at the instance of the Royal Society, when there was panic lest ship-timber should fail in England, his *Sylva, or Forest Trees*, which induced the planting of oaks that furnished the ship-yards of the next century.

Passing over the two poet-gardeners mentioned, Robert Brown, who accompanied the Australasian expedition in 1801 and described the flora of the Southern Hemisphere, was called by Humboldt the greatest botanist of the age. John Claudius Loudon, impelled by a love for agriculture and landscape-gardening, left Scotland and opened an agricultural school in England, and wrote the *Arboretum et Fruticetum Britannicum*, as well as encyclopædias of agriculture, gardening, plants, and cottage, farm and villa architecture. Joseph Paxton, the gardener of the Duke of Devonshire, by his skill made Chatsworth the most celebrated country seat of England, and in 1851 planned and superintended the erection of the Crystal Palace, for which service he was knighted.

N1002: The English brag to this effect, in contrast to poor Scotland, comes out in the ballad of *Chevy-Chase*: King James, when the news of the death of Earl Douglas reaches him, exclaims in despair,—

"I have not any captaine more
Of such account as hee."

But on the other side of the Border

"Like tydings to King Henry came,
Within as short a space
That Percy of Northumberland
Was slaine in Chevy-Chase.
'Now God be with him,' said our King,
'Sith it will noe better bee;
I trust I have within my realme
Five hundred as good as hee."

N1003:

The horseman serves the horse,
The neatherd serves the neat,
The merchant serves the purse,
The eater serves his meat;
'T is the day of the chattel,
Web to weave and corn to grind;
Things are in the saddle,
And ride mankind.

"Ode," *Poems*.

As a contrast to this dwarfing of the man by specialized labor Mr. Emerson took keen pleasure in every instance that he saw of Yankee "faculty" among his neighbors in the country. The war brought out much of this versatile talent. He especially enjoyed the bright and interesting narrative by Major Theodore Winthrop of the equality of the Massachusetts men to each new difficulty in the march to Washington in 1861. See Theodore Winthrop's *New York Seventh Regiment; Our March to Washington*, in *The Atlantic Monthly* for June, 1861.

N1004: Carlyle, in a letter written to his friend in April, 1839, had said of conditions in England:—

"Scarcity, discontent, fast ripening towards desperation, extends far and wide among our working people. God help them! In man is yet small help."

N1005: Among Mr. Emerson's notes on England are the following on her rule in India:—

"The English repair the old, and dig new canals for the irrigation of the country, cross the immense Empire with macadam roads, educate the native population in good schools; advance natives to public employment, and aim 'to elevate more and more the social condition of the peoples of Hindostan, and to put them in condition of administering their own affairs one day, by aid of the principles and the laws whose utility England will have made them comprehend, and carefully taught them the beneficent application.' Magnificent this,—the gradual detachment of the colonies which she has planted, which have grown to Empires, and then are with dignity, and with full consent of the mother country, released from allegiance. Go—I have given you English language, laws, manners; disanglicanize yourselves if you can. United States, Canada, Australia, Cape of Good Hope, West Indies—East Indies.... It has become necessary to govern India by carefully selected agents—young men of thorough education and high ability, tried in the service. India is practically a profession to be studied as methodically as law or medicine."

XI. ARISTOCRACY

N1006: One is reminded here of the glamour which Scott by his *Waverley Novels* had thrown around the nobility of England, even for readers of democratic predilections; and yet with a fairness and humanity, Tory though he was, towards the humble vassal and down-trodden peasant.

"There's Derby and Cavendish, dread of their foes;
There's Erin's high Ormond and Scotland's Montrose!
Would you match the base Skippon and Massey and Brown
With the Barons of England that fight for the Crown?"

"The Cavalier," *Rokeby*.

N1007: Mr. Emerson used to tell his children of an old miracle-play in which Jesus, before submitting to be crucified, stood on his rights of knighthood as a direct descendant of King David, and challenged Pontius Pilate to single combat.

N1008: Fuller's *Worthies*, vol. ii. In Mr. Emerson's notebook he gives these two fine pictures of the earl, from Fuller: "At a joust in

France, fighting with Sir Collard Fines, he so bore himself that the French thought he was tied to the saddle, and to confute their jealousies, he alighted and remounted." "Crossing into Normandy, the ship was tossed with such a tempest that Warwick caused himself and lady and infant son to be bound to the mainmast, with his armour and coat of arms upon him, that he might be known and buried aright. Yet he died in his bed."

N1009: The Bear and Ragged Staff was the full cognizance of the Earls of Warwick.

N1010: *Reliquiæ Wottonianæ*. This was George Villiers, the favorite of James I. and Charles I., the first duke after the revival of the title. There had been Dukes of Buckingham of the House of Stafford, but the title became extinct with the execution, by Richard III., of "the deep-revolving wily Buckingham."

N1011: In Shakspeare's *Richard III.*, on the morning of the battle of Bosworth Field, fatal to him, this duke, a stanch adherent of the usurper, finds this scroll in his tent:—

"Jockey of Norfolk, be not too bold,
For Dickon thy master is bought and sold."

N1012: Compare the *Earth-Song* in "Hamatreya" in the *Poems*.

N1013: Jamblichus of Chalcis, in the fourth century B.C., a Syrian Neo-Platonist. Of him Mr. Emerson said more than once in his journals, "I expect a revival in the churches to be caused by the reading of Jamblichus."

N1014: Opportunity to test this statement seemed to be at hand during Mr. Emerson's visit. In a letter to his wife, April 20, 1848, he wrote, "I read the newspaper daily, and the revolution, fixed for the 10th instant, occupied all men's thought until the Chartist petition was actually carried to the Commons."

N1015: The residence of the Duke of Sutherland. Of his visit there Mr. Emerson wrote to a friend:—

June 21st, 1848.

The Duchess of Sutherland sent for me to come to lunch with her at two o'clock, and she would show me Stafford House. Now you must know this eminent lady lives in the best house in the Kingdom, the Queen's not excepted. I went, and was received with great courtesy by the Duchess, who is a fair, large woman, of good figure, with much dignity and sweetness, and the kindest manners. She was surrounded by company, and she presented me to the Duke of Argyle, her son-in-law, and to her sisters, the Ladies Howard. After we left the table we went through this magnificent palace, this young and friendly Duke of Argyle being my guide. He told me he had never seen so fine a banquet hall as the one we were entering; and galleries, saloons, and ante-rooms were all in the same regal proportions and richness, full everywhere with sculpture and painting. We found the Duchess in the gallery, and she showed me her most valued pictures. I asked her if she did not come on fine mornings to walk alone amidst these beautiful forms; which she professed she liked well to do. She took care to have every best thing pointed out to me, and invited me to come and see the gallery alone whenever I liked. I assure you in this little visit the two parts of Duchess and of Palace were well and truly played....I had seen nothing so sumptuous as was all this. One would so gladly forget that there was anything else in England than these golden chambers and the high and gentle people who walk in them! May the grim Revolution with

his iron hand—if come he must—come slowly and late to Stafford House, and deal softly with its inmates!

Concerning the meeting between this noble lady and Mr. Emerson, his friend wrote to him:—

I hope you penetrated the Armida Palace and did your devoir to the sublime Duchess and her Luncheon yesterday! I cannot without a certain internal amusement (foreign enough to my present humor) represent to myself such a conjunction of opposite stars! But you carry a new image off with you, and are a gainer, you. *Allons...*

Yours ever truly,
T. CARLYLE.

N1016: Of Northumberland House, which stood until 1874 in Trafalgar Square, Augustus Hare said:—"One only of the great Strand palaces survived entire till our own time, and our own generation has seen and mourned the loss of Northumberland House, one of the noblest Jacobean buildings in England and the most picturesque feature in London."

N1017: Mr. Emerson, though sympathizing with the rising of the people to assert their proper rights, took a certain pleasure in the courage shown by both sides when the storm threatened. In a letter home he said:—"One thing is certain: that if the peace of England should be broken up, the aristocracy here—or, I should say, the rich—are stout-hearted and as ready to fight for their own as the poor; are not very likely to run away." He gives this instance of "standing by one's order" from the previous century:—

"Earl Spencer when asked why he left Fox and voted for the War (in 1793), wrote:—

"I will be very frank with you. My lot is cast among the nobility. It is not my fault that I was thus born, and that I thus inherit. I wish to remain what I am, and to hand my father's titles and estates down to my heirs. I do not know that I thus seek my own gratification at the expense of my country, which has been very great, free and happy, under this order of things. I am satisfied that if we do not go to war with the French, this order of things will be destroyed. *We may* fall by the War, but we *must* fall without it. The thing is worth fighting for, and to fight for it we are resolved."

N1018: The following notes on English politics were used in lectures on Mr. Emerson's return:—

"The English youth, highborn, has a narrow road to travel. Besides his horse and gun and his clubhouse, all he knows is the door of the House of Commons. So aristocratic is the frame of society, that the House of Commons is in the hands of the House of Lords. The Commons are the lords that shall be. Of the 658 members of the lower House, 455 have been lately shown to be representatives of the House of Lords. Before 1832 the House was violently patrician. In 1793, it was declared in a petition presented to the House by the (afterward) Earl Grey, that 307 members were put into the House by 154 persons, owners and patrons of boroughs. The Reform Bill in 1832 reduced the patronage, yet a majority of seats in the House may be filled by the nominees of the nobility. Of the Cabinet, one half is usually peers, and the other half relations of peers. Thus the aristocracy have the direction of public affairs. They naturally prize this as a career. 'Politics,' said the Duke of Norfolk to Shelley, 'is the proper career of a young man of ability in your station. That career is most advantageous, because it is a monopoly.' A little success in that line goes far, since the number of competitors is limited. In such a Parliament class-

legislation is inevitable; and offices and pensions are given to those who have votes and patronage to buy them with. Mr. Peyronnet Thompson's theory of aristocracy is, 'To make one of a family strong enough to compel the public to support all the rest.' And it only needs to look into the files of newspapers opposed to the Government in the last century to find many ugly anecdotes, which, after all allowance for party exaggeration, expose the manner of saddling the public with pensions for their children, relatives, tutors, and even bastards. The Duke of Beaufort's will left annual sums to his younger sons, which, with great naiveté, he devised should be paid *until they should obtain places or pensions to certain amounts, under Government*.

"An Earl of Uxbridge, with an estate of £60,000 a year, obtained an annual pension for his daughter of £300, in her own name; and after her marriage, another pension of the like sum to her, in the list of Scotch pensions, under her new name of Erskine. She continued to draw both, and the journals had their joke on the double Lady Louisa.

"These abuses were much mended by the Reform Bill. In 1780, Mr. Pitt said in the House that, 'Without a reform in Parliament, it was impossible for any honest man to remain a minister of England.'"

N1019: Commissions in the army could then be bought.

N1020: Again from the stray sheets on English politics:—

"One wonders how a Parliament thus constituted remains in any manner representative of the bulk of the population. But many of the younger nobles espouse the popular cause and the classes of trade and manufactures force their voices into the House. Men of brilliant popular talents like Burke, Pitt, Mackintosh, Macaulay, Canning, Sheridan, sit for the close boroughs, and, one thing with another, we have got in modern times

a wonderful assembly, its moral reputation much mended, though bribery is still permitted, but its intellectual and social reputation supreme.

"It is petulant—the common saying is that no question can be mooted, no statement made there but, out of 654 members, will find some fit and ready to sift it. That, especially, it is the most severe anthropometer or test of men. Canning said, when alarm was expressed at the probable return of O'Connell and his friends to Parliament, 'It is in Parliament I wish to see them. I have never known a demagogue who, when elected to a seat in this house, did not in the course of six months shrink to his proper dimensions.'"

N1021:

"That repose

Which stamps the caste of Vere de Vere."

Tennyson, "Lady Clara Vere de Vere."

Of his experiences in London society Mr. Emerson wrote: "I am to say what is strange, but it so happened, that the higher were the persons in the social scale whom I conversed with, the less marked was their national accent, and the more I found them like the most cultivated persons in America."

N1022: Jean de la Quintinie wrote a book on gardening which was translated into English by John Evelyn.

Arthur Young was an agricultural experimenter and writer in the last part of the eighteenth century, and wrote several important works on the subject of agricultural in England and the use of waste lands. His *Travels in France* is quoted by Carlyle often in his *French Revolution*. George III. contributed to his *Annals of Agriculture* under the name of Ralph Robinson.

In these *Annals*, Young highly praises the improvements in cultivation and cattle-breeding made by Robert Bakewell in the middle of the eighteenth century.

John Joseph Mechi, a great authority on scientific farming, attained remarkable results in Essex by irrigating his farm with liquefied manure by steam-power.

N1023: In Dibdin's *Literary Reminiscences*, vol. I., xii.

N1024: Mr. Emerson took great pleasure in the *naïf* account of his life and adventures, given by the valiant and philosophic Edward, Lord Herbert of Cherbury. He was the elder brother of George Herbert, the poet.

N1025: Penshurst in Kent was Sir Philip Sidney's birthplace, and Wilton House the residence of his sister the Countess of Pembroke.

Sir Fulke Greville, Lord Brooke, wrote *The Life of the Renowned Sir Philip Sidney*.

N1026: In the lecture "Natural Aristocracy" which Mr. Emerson gave in London, after granting the claims of the really great to honor and place, he said, "But mankind do not extend the same indulgence to those who claim and enjoy the same prerogative, but render no returns. The day is darkened when the golden river runs down into mud; when genius grows idle and wanton and reckless of its fine duties of being Saint, Prophet, Inspirer to its humble fellows, baulks their respect and confounds their understanding by silly extravagances....To live without duties is obscene." He made so much allowance for the outrages to which the misdeeds of idle aristocrats might incite the poor and ignorant that Lord Morpeth urged him to suppress the passage, should he

give the lecture again. It still stands in the essay on "Aristocracy" in *Lectures and Biographical Sketches*.

N1027: George Selwyn (1719–91), the friend of Horace Walpole.

N1028: *Causes Célèbres Étrangères, publiées en France pour la première fois, et traduites de l' Espagnol, l' Italien et l' Allemagne*. Paris: 1827–28. Par une Société de jurisconsultes et de gens de lettres.

Another work of the same kind is the *Causes Célèbres, Répertoire générale des causes célèbres anciennes et modernes, rédigé par une Société d'hommes de lettres sous la direction de B. Saint-Edme*. Paris: Rosier, 1834–35.

An English work appeared in 1849, entitled: *Celebrated Trials connected with the Aristocracy in the Relations of Private Life*. London: W. Benning & Co., 1849.

N1029: A clergyman who prepared students for the examinations of admission to Oxford and Cambridge told the editor that, even in the colleges in which the standard of scholarship was very high, rank was, to some extent, accepted as an equivalent.

N1030: *History of English Universities*, "Die englischen Universitäten," by Victor Aimé Huber (2 vols. Cassel, 1839–40), was translated into English by Francis William Newman.

N1031:

"Some great estates provide, but not
A mastering mind, so both are lost thereby"

Herbert, *The Church Porch*.

N1032:

The lord is the peasant that was,
The peasant the lord that shall be.

.

Who liveth in the palace hall
Waneth fast and spendeth all.

"Woodnotes," II., *Poems*.

XII. UNIVERSITIES

N1033: This friend was Arthur Hugh Clough, the poet, and translator of Plutarch. Mr. Emerson, on his return, reviewed with much praise his poem "The Bothie of Tober-na-Vuolich," in the Massachusetts *Quarterly Review* (March, 1849), then edited by Theodore Parker.

Mr. Clough visited Mr. Emerson later and spent a winter in Cambridge. From Oxford Mr. Emerson wrote of dining at Exeter College with Palgrave, Froude, and other Fellows, and at Oriel with Clough and Dr. Daubeney. "They showed me the kindest attentions,...but more, they showed me themselves; who are many of them very earnest, faithful, affectionate, some of them highly gifted men; some of them, too, prepared and decided to make great sacrifices for conscience' sake. Froude is a noble youth to whom my heart warms....Truly I became fond of these monks of Oxford."

Soon after leaving Oxford Mr. Emerson received a letter from Mr. Froude of which the following is an extract:—

EXETER COLLEGE [OXFORD], JUNE 6, [1848].

MY DEAR MR. EMERSON,—

...Your own visit here, short as it was, was not without its service to us; you left luminous traces of your presence in the words you scattered from you, which as yet the birds of the air have not devoured. Horace's *Segnius irritant animos*⁵⁷ is only half true. One sentence spoken is worth a hundred written. In a few years, I hope, even here in Oxford, you will see whole acres yellow with the corn of your sowing, and logic-mills grinding it and professors baking it in their lecture-rooms into bread for hungry students.

Believe me ever

Your very much obliged

J. A. FROUDE.

N1034: "Let the blessed bless; he is blessed, let him be blessed."

N1035: Erasmus thus expressed his surprise and delight in Oxford, regenerated by the influence of John Colet, whither he had gone to study Greek (newly introduced by Grocyn), because he was too poor to go to Italy: "I have found in Oxford so much polish and learning that now I hardly care to go to Italy at all, save for the sake of having been there. When I listen to my friend Colet it seems like listening to Plato himself. Who does not wonder at the wide range of Grocyn's knowledge? What can be more searching, deep and refined than the judgment of Linacre? When did Nature mould a temper more gentle, endearing and happy than the temper of Thomas More?"⁵⁸

⁵⁷ *Segnius irritant animos demissa per aurem.*—Horace, *Art Poetica*, 180.

In speaking of theatrical representations, and the comparative effect on the spectator of things seen, or merely narrated by an actor, Horace explains that things addressed to the ear rouse the feelings more slowly than those presented to the eye.

⁵⁸ Green's *Short History of the English People*.

N1036: Albericus Gentilis (1552–1608), a celebrated jurist and early authority on international law. Driven from Italy and Austria by the Inquisition, he was recommended to University of Oxford by the Earl of Leicester and received with much honor there.

N1037: Casaubon, the Swiss theologian and critic, protected and made royal librarian at Paris by Henry IV., was so annoyed by Catholic jealousy that he passed his latter days in England, where he was made prebendary of Canterbury.

N1038: *The Life of William Morris* by J. W. Mackail, and the story of *Tom Brown at Oxford* by the late Thomas Hughes, give extraordinary pictures of sleepy and perfunctory instruction at Oxford colleges and the idle life there until the very recent awakening.

N1039: *Leviathan, or the Matter, Form and Power of a Commonwealth, Ecclesiastical and Civil*, containing the complete system of Hobbes's materialistic philosophy.

N1040: Huber's *History of English Universities*, vol. ii. p.304.

N1041: *Five Years in an English University*, by Charles Astor Bristed (1852).

N1042: Mr. Emerson, always regretting that, as Dr. John Collins Warren said of him in his boyhood, "he had no *stamina*," wrote thus to his friend Sterling in 1844: "I do not know how it happens, but there are but seven hours, often but five, in an American scholar's day; the twelve, thirteen, fifteen, that we have heard of in German libraries, are fabulous to us. Probably in England you find

a mean between Massachusetts and Germany. The performances of Goethe, the performances of Scott, appear superhuman to us in their quantity, let alone their quality."

N1043: Huber's *History of English Universities*.

N1044: Bristed's *Five Years in an English University*.

N1045: Later Mr. Emerson wrote: "At home I am still struck with the superior animal vigor of the average Englishman; as if the English were pasture-oaks, and the Americans fine saplings."

It should be remembered, however, that this was written before the reaction towards due physical culture in America set in, which culminates now in extreme athleticism.

N1046: Both these Russian posts were captured by the Allies in the Crimean War, but I cannot find evidence of personal hostile action taken by their governors. Perhaps stories of such were in the newspapers of the day.

N1047: The "poetic influence from the heart of Oxford" evidently refers to Arthur Hugh Clough, Mr. Emerson's friend and host there, and four years later his guest in America, whose charming hexameter poem, *The Bothie of Tober-na-Vuolich*, was just published. Mr. Clough's increasingly liberal views made him feel bound in honor to resign his Fellowship, the holder of which is required to belong to the Church of England.

N1048: Wordsworth, and, probably, Byron.

XIII. RELIGION

N1049: As he says elsewhere, he felt that the Briton was temperamentally a worshipper of Fate. As for "this mountain of stone," he hoped that among the generation then rising in England would appear men who would, as he had done, remember Jesus' word: "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you."

N1050: To this thought before Dundee Church he adds in his notebook, "And at other times I say, If idealists will work as well as these men wrought, we shall see a new world apace."

N1051: The contemporary monkish chronicler of the deeds of Richard Cœur de Lion in Palestine. It is included in Bohn's *Chronicles of the Crusades*.

N1052: Wordsworth, note to "Ecclesiastical Sonnets," XVIII. He also speaks of the Established clergy of England as being, in many parts, "the principal bulwark against barbarism."

N1053: John Sterling, in a letter written to Mr. Emerson in 1841, speculates as to what kind of audiences he finds in America—audiences that must be very different from those in England. He says: "Here we have not only the same aggressive, material element as in the United States, but a second fact unknown there, namely, the social authority of Church Orthodoxy derived from the close connection between the Aristocracy (that is, the Rich) and the Clergy. And odd it is to see that, so far as appears on

the surface, the last twenty-five years have produced more of this instead of less."⁵⁹

N1054: Fuller's *Worthies of England*.

N1055: Mr. Emerson notes that "Certain doctrines are offensive to their mind; for example, the metamorphosis or passage of souls. Englishmen hate it. It vexes the common sense." The possibility that he might become a Frenchman or Spaniard might account for this fear. Swedenborg, Mr. Emerson mentions, found the English in a heaven apart.

N1056: From the notebook on England: "Four things they believe in, namely, Shakspeare's genius, commerce, pit-coal, and the steam-engine.

"English Church gets to be an enormous doll with old ladies of both sexes to dress and dandle it."

N1057: Journal, 1848. "At the dinner of the Geological Club, I sat between Sir Henry De la Bèche and Lord Selkirk. When I remarked that I understood the accepted view of the creation of races to be, that many individuals appeared simultaneously, and not one pair only, Lord S. replied, that there is no geological fact which is at variance with the Mosaic history."

N1058: Augustus Pugin, an Englishman of French descent, an admirable architectural draughtsman. He published in 1821 *Specimens of Gothic Architecture selected from various ancient*

⁵⁹ Correspondence between John Sterling and Ralph Waldo Emerson. Boston: Houghton, Mifflin & Co., 1897.

Edifices in England, and later, other important illustrated works of the same sort.

N1059: Thomas Taylor (1758–1835), a remarkable scholar and apostle of Plato and the Neoplatonists. He translated Aristotle, Plato, Proclus, Plotinus, Pausanias, Jamblichus, and Porphyry. Niebuhr in his *Letters* says of him, "Through a singular philosophical mysticism, derived from the Platonist, he became an orthodox polytheist and adherent of the mystical interpretation of the popular religion of the Greeks." In his translation of the *Cratylus* Taylor calls Christianity "a certain most irrational and gigantic impiety."

N1060: English notebook. "The English have no national religion and have imported the Hebrew."

N1061: The Saracens are pressing the little force of the English Crusaders hard, and the battle seems going against them. Richard, having done his utmost, thus makes his *argumentum ad Deum*: "O God! O God, my God, why hast Thou forsaken me? For whom have we foolish Christians, for whom have we English come hither from the farthest part of the earth to bear our arms? Is it not for the God of the Christians? O fie! How good art Thou to the people who now are, for Thy name, given up to the sword: we shall become a portion for foxes. Oh how unwilling should I be to forsake Thee in so forlorn and dreadful a position, were I Thy Lord and Advocate as Thou art mine. In sooth my standards will in future be despised not through my fault, but through Thine; in sooth not through any cowardice in my warfare art Thou Thyself, my King and my God, conquered this day, and not Richard Thy vassal!"

N1062: In his sketch of the Rev. Dr. Ripley, in *Lectures and Biographical Sketches*, Mr. Emerson gives some amusing extracts from the diary of his great-grandfather, the Rev. Joseph Emerson of Malden, on his purchase of a "shay." "The Lord grant it may be a comfort and blessing to my family," says the good man, like Pepys. But accidents and misgivings of conscience, because he deemed these to be chastisements of the Lord for his pride, followed, and in six months he sold this vehicle of wrath, as Pepys would not have done.

N1063: Showing a survival of a trace of the spirit of the English of the twelfth century. The monk Richard of Devizes in his chronicle relates with delight that on the Coronation-day of King Richard, which happened to be on Good Friday, "About the self-same hour that the Son was immolated to the Father, a sacrifice of the Jews to their father the Devil began in all parts of the Kingdom;" and that they "despatched their blood-suckers with blood to hell."

N1064: Mr. Emerson notes this list of the triumphs of English conscience and good sense over national conservatism, in the nineteenth century:—

- 1826. Catholic Emancipation.
- 1832. Reform Bill.
- 1846. Repeal of Corn Laws;
Repeal of Navigation Laws.
- 1834. West Indian Emancipation;
Dissenters Chapels bill;
Unitarians and Quakers in Parliament;
Sugar duties abolished;
Republics acknowledged.

Mr. Pitt said in Parliament in 1780, that, "without a reform in Parliament, it was impossible for any honest man to remain a minister of England."

N1065: John Sterling, a man of brilliant parts and noble character, who had been in his youth and while his health permitted a curate devoted to his people, soon found his growing spirit cramped by the creed of the Church of England. He went through an experience like Emerson's, and they became close friends, through letters. Sterling wrote to his friend in December, 1841: "How remarkable it is that the critical and historical difficulties of the Bible were pointed out by clear-sighted English writers more than a century ago, and thence passed through Voltaire into the whole mind of Continental Europe, and yet that in this country both the facts and the books about them remain utterly unknown, except to a few recluses! The overthrow of our dead Biblical Dogmatism must, however, be preparing, and may be nearer than appears. The great curse is the wretched and seemingly hopeless pedantry of our Monastic Colleges at Oxford and Cambridge."⁶⁰

Six months later he writes more hopefully: "Thought is leaking into this country. Even Strauss sells."

About the time of Mr. Emerson's first visit to England, Newman and Pusey had begun the Anglo-Catholic movement; ten years later Newman had formally retracted his charges against the Church of Rome, and in 1845 had joined that church, returning to England, during the time of Mr. Emerson's second visit, to establish religious houses there.

60 *Correspondence of Emerson and Sterling.*

N1066: Here are some further items from the English notebook:—

"They punish dissent:—they punish education. So late as 1831, marriages performed by Dissenters were illegal, and the children of such marriages bastards. So late as 12 Geo. III., a Catholic priest who married a Catholic and Protestant was liable to the punishment of death; and later to a fine of £500. So late as 59 Geo. III., 23 June, 1819, trial by single combat was abolished.

"'Decent debility,' said Sydney Smith of the clergy."

N1067: George Borrow, the Englishman who lived and wandered with the Gypsies to study them, the author of *The Zincali*, *Lavengro* (partly autobiographical), and *The Romany Rye*. He was for a time in the employ of the British and Foreign Bible Society.

N1068: In conversation at a dinner-party where Mr. Emerson met him, "Macaulay said, he had arrested on its progress to be printed a bill for civilising and Christianising the natives of —— in Africa, appropriating —— thousand pounds, first for an expense of —— pounds for adjusting pipes, etc., on the paddle wheels of steamboat for squirting hot water on the natives," etc.

"A Unitarian," he said, "will presently be shown as a Dodo,—an extinct race."

N1069: In acknowledging *English Traits*, December 2, 1856, Carlyle wrote: "That Chapter on the Church is inimitable; 'the Bishop asking a troublesome gentleman to take wine,'—you should see the kind of grin it awakens here on our best kind of faces. Excellent the manner of that, and the matter too dreadfully true in

every part. I do not much seize your idea in regard to 'Literature,' though I do details of it, and will try again. Glad of that too even in its half state; not 'sorry' at any part of it,—you Sceptic!"

N1070: On his return home Mr. Emerson writes in his journal of the question of his wife: "Lidian asks if I saw the spiritual class. Oh no, I saw the ox and the ass, but rarely the driver."

N1071: This thought of the passing of the Spirit, its newness, its surprise, is found again in the *Poems* in the last lines of "Woodnotes," II., and in "Worship."

XIV. LITERATURE

N1072: As introductory to this chapter this entry may be copied from Mr. Emerson's notebook of 1878: "40 *per cent.* of the English people cannot write their names. One half of one *per cent.* of the Massachusetts people cannot, and these are probably Britons born.

"It is certain that more people speak English correctly in the United States than in Britain."

N1073: "The Englishman," Emerson says in a lecture after his return, "stands in awe of a fact as something final and irreversible, and confines his thoughts and his aspirations to the means of dealing with it to advantage; he does not seek to comprehend it, but only to utilize it for enjoyment or display, at any rate to adapt himself to it; and he values only the faculties that enable him to do this. He admires talent and is careless of ideas. 'The English have no higher heaven than Fate.'"

N1074: Mr. Emerson, though valuing the classics, and most careful in choosing the word that from its composition and association would most accurately give his meaning, sought plain Saxon words to make his thought clear to his lyceum audiences, and in many of his earlier published poems sacrificed music to vigor, as in the line—

Boon Nature yields each day a brag.

Later his ear became finer. His style is remarkably Saxon. If his children brought home the word *commence* from school he bade them forget it and say *begin*.

N1075: Again the speech of the English King, in *Chevy-Chase*, on the fall of Percy, is recalled:—

"I trust I have within my realms
Five hundred as good as he."

N1076: William Camden (1551–1623), who wrote the *Annals of the Reign of Queen Elizabeth*. James Usher (1580–1656), the Irish prelate, author of the *Annales Veteris et Novi Testamenti*. John Selden (1584–1664), "the great Dictator of Learning of the English nation," best known by his *Table-Talk*. Joseph Mede (1586–1628), the theologian who attempted the explanation of the *Book of Revelation* in his *Clavis Apocalyptica*. Thomas Gataker (1574–1654), a divine who edited the writings of Marcus Aurelius and wrote on the Stoics. Richard Hooker (1553–1600), the author of the *Ecclesiastical Polity*. Jeremy Taylor (1613–67), the chaplain of Charles I., wrote the *Liberty of Prophecy*, the *Great Exemplar*,

but especially the *Holy Living and Holy Dying*. Mr. Emerson in "The Problem" calls him

The younger *Golden Lips* or mines,
Taylor, the Shakspeare of divines.

Robert Burton (1576–1640), who wrote the *Anatomy of Melancholy*, which Dr. Johnson said was the only book that ever took him out of bed two hours sooner than he wished to rise, and Byron found the most exciting and instructive medley of quotations and classical anecdotes. Richard Bentley (1662–1742), the head of Cambridge University, remarkable for his critical study of the classics. Brian Walton (1600–61), the editor of the Polyglot Bible from nine languages, and Oriental scholar.

N1077: By comparison with what Mr. Emerson says later in this chapter, and elsewhere through the book and in letters, it is evident that this tint of Platonism refers to English scholars of another age, not to those he met.

N1078: In the journal of 1838–39 Mr. Emerson wrote: "Bacon's perfect law of inquiry after truth was that nothing should be in the globe of matter which was not also in the globe of crystal; that is, nothing should take place as event in life which did not also exist as truth in the mind."

N1079: Mr. Emerson, impatient of the modern writers on metaphysics, waiting in vain for the man who should deal with the worlds of spirit and matter worthily, wished to make his contributions, however fragmentary, towards the grand theme. As early as 1835 he made notes towards this end, beginning thus:

"By the First Philosophy is meant the original laws of the mind. It is the science of what is, in distinction from what appears. It is one mark of them that their enunciation awakens the feeling of the moral sublime, and *great men* are they who believe in them. They resemble great circles in Astronomy, each of which, in what direction soever it is drawn, contains the whole sphere." Mr. Emerson's strength failed him when at length the opportunity seemed to come to give some form and completeness to this work, for which through the years he had made notes, in the invitation to give a course on Philosophy at Harvard University. Many of the notes were already embodied in other lectures; the fragments of the course were collected by Mr. Cabot in the opening paper of the volume called *Natural History of Intellect*.⁶¹

N1080: Bacon quotes here from Plutarch's *Morals* a corrupted form of a saying of Heracleitus. I am indebted to Professor Wright of Harvard University for the following curious account of the steps of the perversion. Heracleitus wrote, αὐὴ ψυχὴ σοφωτάτη καὶ ἀρίστη, "a dry soul is wisest and best," as what is dry is most near to fire and fire is at the top of Heracleitus's upward way. Αὐὴ being an unusual word, a commentator explained it by putting ξηρὴ, a more usual word, as explanatory, beside it, so that now the sentence read αὐὴ (ξηρὴ) ψυχὴ, etc., which might be rendered "a dry (i. e. not moist) soul," etc. Then the original αὐὴ was dropped and ξηρὴ substituted in some versions. But before this was done, while αὐὴ and ξηρὴ stood side by side, some transcriber took αὐὴ for αὐγὴ (light), so the sentence now stood αὐγὴ ξηρὴ ψυχὴ σοφωτάτη καὶ ἀρίστη, "the light is dry; soul is wisest and best," or,

⁶¹ See Cabot's *Memoir of Emerson*, vol. ii. p. 133; also his Prefatory Note to *Natural History of Intellect*.

differently punctuated, "as a dry light the soul is wisest and best." It is the last form that Plutarch quotes.

The "dry light" is also alluded to in "Manners," *Essays, Second Series*, page 140.

N1081: From the *Phædrus*.

N1082: Jan Baptista van Helmont (1577–1644), the eminent Flemish physician, experimenter, and writer, author of the *Ortus* and the *Progressus Medicinæ*, *The Magnetic Cure of Wounds*, *The Image of God in Man*, and other works.

N1083: Mr. Emerson refers to the Chaldæan Oracles, quoted often by Thomas Taylor. In his note-book he says they are "from Zoroaster, or else utterances of the Theurgists under Marcus Antoninus."

N1084: The quotation from Spenser is from "A Hymne in honour of Beautie," the whole stanza being quoted on page 14 of *Essays. Second Series*.

N1085: In a letter to Miss Fuller in 1841, Mr. Emerson speaks of "the joy with which in my boyhood I caught the first hint of the Berkeleyan philosophy, and which I certainly never lost sight of afterwards....I could see that there was a Cause behind every stump and clod, and by the help of some fine words could make every old wagon and wood-pile and stone wall oscillate a little and threaten to dance; nay, give me a fair field, and the selectmen of Concord and the Rev. Pound-me-down himself began to look unstable and vaporous."⁶²

⁶² Cabot's *Memoir of Emerson*, vol. ii. p. 478.

N1086: Dr. Samuel Clarke (1675–1729), a clergyman and remarkable scholar, author of *The Being and Attributes of God*, as well as other religious and scientific works, important in their day. He translated some of Sir Isaac Newton's works into English. Of him Mr. Emerson notes, "'T is curious, that Newton's theory of gravitation was introduced into the teaching of the Universities, by stealth. Sam Clarke taught, in the text, the old Ptolemaic theory; and, in the notes only, explained the new philosophy, which, of course, needed only to be explained in order gradually to supersede the old." James Harrington (1611–77), author of many political treatises, especially the *Oceana*, *The Grounds and Reasons for Monarchy Considered*, and *The Prerogative of Popular Government*.

N1087: As confirming this love of the English, even of their scholars, to feel the solid ground of the understanding beneath their feet, may be quoted the remark of Dr. Paul Weber in his *History of Philosophy*: "English philosophy is to this day almost as empirical and positivistic as in the times of Bacon and Locke."

N1088: Sterling, writing to Emerson in 1841, said that, twenty years earlier, to the English mind "Wordsworth and Coleridge were mystagogues lurking in caverns, and German literature thought of with a good deal less favor than we are now disposed to show towards that of China." Emerson, writing in answer to this and another letter, said: "Your picture of England I was very glad to have. It confirms my own impressions...I think the most intellectual class of my countrymen look to Germany rather than to England for their recent culture, and Coleridge, I suppose, has always had more readers here than in Britain."

N1089: It appears in Mr. Cabot's memoir that Mr. Emerson read Hume—"the Scotch Goliath" he calls him—at the age of twenty, and made probably overmuch of Hume's doubts and objections in spiritual matters, in a letter to his Aunt Mary, with purpose to stir her up to writing a vigorous letter of refutation.

N1090: Mr. Emerson met Hallam at the house of Mr. Milman, the historian, and dined with him later at Lord Ashburton's, "sitting between Mr. Hallam and Lord Northampton." He wrote, "Hallam was very courteous and communicative and has since called on me." In the note-book he records: "Mr. Hallam asked me 'whether Swedenborg were all mad, or partly so.' He knew nothing of Thomas Taylor, nor did Milman, nor any Englishman."

N1091: Mr. Emerson dined with Dickens and Carlyle at Mr. John Forster's. The writings of Dickens did not attract him. He had read in one or two of the earlier books. In 1837 he wrote in his journal:—

"Two or three events, two or three objects, large or small, suffice to genius. Let dulness work with multitudes and magnitudes. The poor Pickwick stuff (into which I have only looked and with no wish for more) teaches this, that prose and parlors and shops and city widows, the tradesman's dinner, and such matters, are as good materials in a skilful hand for interest and art as palaces and revolutions."

He made the following entry in his journal two years later: "I have read *Oliver Twist*, in obedience to the opinions of so many intelligent people as have praised it. The author has an acute eye for costume; he sees the expression of dress, of form, of gait, of personal deformities; of furniture, of the outside and inside of houses; but his eye rests always on surfaces, he has no insight into

character. For want of key to the moral powers, the author is fain to strain all his stage trick of grievance, of bodily terror, of murder and the most approved performances of Remorse. It all avails nothing. There is nothing memorable in the book except the flash, which is got at a police-office, and the dancing of the madman, which strikes a momentary terror. Like Cooper and Hawthorne he has no dramatic talent. The moment he attempts dialogue the improbability of life hardens to wood and stone. And the book begins and ends without a poetic ray, and so perishes in the reading."

I find this mention of Bulwer in the journal for 1842: "*Zanoni*. We must not rail if we read the book. Of all the ministers to luxury these novel-writers are the best. It is a trick, a juggle. We are cheated into laughter or wonder by feats which only oddly combine acts that we do every day. There is no new element, no power, no furtherance. It is only confectionery, not the raising of new corn; and being such, there is no limit to its extension and multiplication....But *Zanoni* pains us, and the author gets no respect from us because he speedily shows us that his view is partial; that this power which he gives to his hero is a toy, and not flowing from its legitimate fountains in the mind, is a power for London, a divine power converted into a highwayman's pistol to rob and kill with."

Mr. Emerson met Thackeray in England, and probably later in Boston. He read only one of his books; of the painful impression left upon him by this he writes in the journal for 1850: "Thackeray's *Vanity Fair* is pathetic in its name, and in his use of the name; an admission it is from a man of fashion in the London of 1850, that poor old puritan Bunyan was right in his perception of the London of 1650. And yet now in Thackeray is the added wisdom of skepticism, that, though this be really so, he must yet live in tolerance of, and

practically in homage and obedience to these illusions. And there is in the book an admission, too, which seems somewhat new in literature, akin to Froude's Formula in the *Nemesis*, that 'Moral deterioration follows on a diminished exchequer;' and State Street thinks it is easy for a rich man to be honourable, but that in failing circumstances, no man can be relied on to keep his integrity."

N1092: Mr. Emerson met Macaulay, "that Niagara of information," as Fanny Kemble used to call him, at least twice, at private houses. Of the table-talk on one of these occasions Mr. Alexander Ireland, in his biographical sketch of Emerson, says: "He witnessed one of Macaulay's brilliant feats in conversation at a dinner where Hallam was one of the guests. The talk was on the question whether the 'additional letters,' lately published by Carlyle, were spurious or genuine. Emerson afterwards, describing the conversation, said:... 'Macaulay overcame everybody at the table, including Hallam, by pouring out with victorious volubility instances of the use of words in a different meaning from that they bore in Cromwell's time, or by citing words which were not in use at all until half a century later. A question, which might have been settled in a few minutes by the consent of a few men of insight, opened a tiresome controversy which lasted during the whole dinner. Macaulay seemed to have the best of it; still, I did not like the arrogance with which he paraded his minute information; but then there was a fire, speed, fury, talent and effrontery in the fellow which were very taking.'"

Mr. Ireland adds, "Carlyle, in speaking of Macaulay, used sometimes to exclaim, 'Flow on, thou Shining River,' following up with his accustomed loud shout of laughter."

N1093: Sir David Brewster, the biographer of Sir Isaac Newton. Brewster was himself a successful investigator in the field of optics, and a writer of distinction.

N1094: Robert Hooke (1635–1703), the eminent mathematician and physicist who disputed with Newton the honor of the discovery of the law of gravitation. Robert Boyle (1626–91), the physical experimenter and learned writer sometimes called “the Christian Philosopher.” Edmund Halley (1656–1742), the distinguished astronomer and mathematician, the friend of Newton, whose *Principia* he published at his own expense.

N1095: Coleridge had died the year after Mr. Emerson’s visit to him, described earlier in this volume. Carlyle, in announcing his death to his friend, had written, “How great a Possibility, how small a realized Result!”

Among Mr. Emerson’s papers is a short printed notice of his own life and works, designed for a handbook of contemporary biography sent by the English editor in 1859 to him for revision and correction. It says, “In 1849 Emerson visited England, receiving a cordial reception from the literary society of London” [Mr. Emerson here added “and rather alarming the religious society of Glasgow”]. The editor alludes to *English Traits* as a work “singularly fair and justly appreciative,” but says that “his influence upon the British mind has been comparatively limited. This circumstance is perhaps accounted for by the fact that he is more an interpreter of Coleridge and Carlyle than an original thinker.” Mr. Emerson’s marginal comment was, “He must be a superficial reader of Emerson who fancies him an interpreter of Coleridge or Carlyle.”

N1096: All Emerson's love for Carlyle was needed to allow for his friend's attitude of despair for his day and hopelessness for his generation. In the early letters Carlyle, while praising each particular work that his friend sent him, was constantly urging on him his doctrine of Silence, sitting still,—doing, not teaching. Fortunately Emerson listened to his Genius rather than to his friend. He writes in his English notebook: "It is droll to hear this talker talking against talkers, and this writer writing against writing. He has such vigor of constitution that he can dispose of poison very well. He is a bacchanal in the strong waters of vituperation."

Shortly before the publication of *English Traits* Emerson wrote to Carlyle: "I say to myself, the high-seeing, austere, and exigent friend whom I elected, and who elected me, twenty years and more ago, finds me heavy and silent, when all the world elects and loves him. Yet I have not changed. I have the same pride in his genius, the same sympathy with the Genius that governs his, the old love with the old limitations, though love and limitation be all untold. And I see well what a piece of Providence he is, how material he is to the times, which must always have a solo Soprano to balance the roar of the orchestra. The solo sings the theme; the orchestra roars antagonistically, but follows. And have I not put him into my Chapter of 'English Spiritual Tendencies,' with all thankfulness to the Eternal Creator,—though the chapter lie unborn in a trunk?"

N1097: In his journal for 1851, Mr. Emerson recalls the high esteem in which he had at first held Wilkinson for ability, power of labor, acute vision, "and especially the power I so value, and so rarely meet, of *expansion*, expansion such as Alcott shines with, but all this spoiled by a certain levity." He then laments his "changing his sphere from Swedenborg's mysticism to French Fourierism." Wilkinson, on his part, in a later criticism of Emerson for his limited

acceptance of Swedenborg, made the amusing charge of narrow and timid Unitarianism.

N1098: In a fragment of a lecture called "Anglo-Saxon" is this passage on the lack of original æsthetic sense:—

"The English race must take rank with the Roman and the Turk as being born for power, but without art. They cannot make a pattern for a pitcher, they cannot build well, or paint, or carve, or dance. Then England has no music. It has never produced a first-rate composer, and accepts only such music as has already been decided to be good in Italy and Germany. They seem to have great delight in these things, but not original appreciation; and value them as showy commodities, which they buy at great prices for pride. But they firmly hold what they have once been taught,—as well the peculiarities of a picture, or style of building, as the rule for breaking a line of battle; and all England thinks as one man, on the merits of the Italian masters, as on the genuineness of the canonical Bible... 'England never did or can look at art otherwise than as a commodity it can buy.' Hogarth and Wilkie and Landseer with their humour and homeliness and veracity are truly national artists. In sculpture, never a quite original genius. The superb scholarship of Flaxman's sculpture is far the best they have had, and, in general, their artists show total want of all object, with great powers of execution. Their drawing has the highest finish but no grandeur."

N1099: Note missing from original text.

N1100: This was written at the time when Science, newly freed from bonds of *a priori* considerations of Theology and Philosophy, was on its guard against other than material considerations, especially in unimaginative England. Mr. Emerson, with his belief that the same laws ruled mind and matter, was impatient of this

attitude and was more interested in the wide views of the German and French *savans*. In John Hunter's work he took great interest. Comparative anatomy, ever since at the museum of the *Jardin des Plantes*, in 1833, he had been startled by the view of the upward series of creation from monad to man, had commanded his respect. Richard Owen, celebrated for his studies in this branch, had shown him the Hunterian Museum of which he was curator, and doubtless explained the ideas of evolution as far as they were then recognized. Mr. Emerson very probably also met Robert Brown, the great botanist and explorer of vegetable physiology.

N1101: He wrote in the notebook: "The people have wide range, but no ascending range in their speculations. An American, like a German, has many platforms of thought. But an Englishman requires to be treated with tenderness if he wishes to climb." John Sterling, his friend, said, "Think if we had a dozen such to stand up for ideas, as Cobden and his friends do for machinery."

N1102: This was before William Morris's day, who not only awakened his people to the hideousness of their expensive furniture and stuffs, but gave them things beautiful and honest, and said, moreover, that if a family could do but one thing to beautify their home, the best would be to make, in the street in front of it, a bonfire of two thirds of the contents.

N1103: Here, as elsewhere in the book, Mr. Emerson only presents one aspect of the case. In his poem "The Harp" he speaks of

Scott, the delight of generous boys,

but he never outgrew his love for the poet and the man. See in *Miscellanies* his remarks at the Scott Centennial Anniversary.

N1104: Before this visit to England, Mr. Emerson wrote much in two papers in the *Dial* (now included in the volume *Natural History of Intellect*) of

Wordsworth, Pan's recording voice,

as he calls him in "The Harp." In a late notebook he said, "I may say of Wordsworth what Cartwright said of Fletcher,—

"What he would write, he was before he writ."

In 1870 Mr. Emerson made this note: "I ought to write a paper on Wordsworth partly from my *Dial* paper, and partly from MSS." Some of the latter may appear in the extracts from the journals. The following comparison of the poets, written in 1868, should, however, appear here:—

"Wordsworth is manly, the manliest poet of his age. His poems record the thoughts and emotions which have occupied his mind, and which he reports because of their reality. He has great skill in rendering them into simple and sometimes happiest poetic speech. Tennyson has incomparable felicity in all poetic forms, and is a brave thoughtful Englishman, exceeds Wordsworth a hundred fold in rhythmic power and variety, but far less manly compass; and Tennyson's main purpose is the rendering, whilst Wordsworth's is just value of the dignity of the thought."

N1105: Of his first meeting with Tennyson he writes:—

"I saw Tennyson first at the house of Coventry Patmore, where we dined together. I was contented with him at once. He is tall and scholastic looking, no dandy, but a great deal of plain strength about him, and, though cultivated, quite unaffected. Quiet, sluggish sense and thought; refined as all English are, and good-humoured. There is in him an air of general superiority that is very satisfactory. He lives with his college set,...and has the air of one who is accustomed to be petted and indulged by those he lives with. Take away Hawthorne's bashfulness, and let him talk easily and fast, and you would have a pretty good Tennyson." Yet, in most other accounts of Tennyson heard by Mr. Emerson, his silence, his devotion to his pipe and a certain dreamy helplessness are dwelt upon.

In the paper "Europe and European Books," written in 1843, reprinted from the *Dial* in *Natural History of Intellect*, may be found Mr. Emerson's feeling about Tennyson's poetry at that time. In the essay on "The Poet" (page 9) Tennyson is criticised. But in the journal of 1871, after some complaint at the sacrifice of natural strength to finish in Tennyson's second volume of poems, he adds: "And yet, tried by one of my tests, it was not found wholly wanting. I mean that it was liberating; it slipped, or caused to slide a little, 'this mortal coil.' The poems of 'Locksley Hall' and 'The Talking Oak,' I bear cheerful witness, both gave me to feel a momentary share of freedom and power."

When he read "Ulysses" he was inclined to "question whether there is taste in England to do justice to the poet." In 1846 he notes: "Tennyson and Browning, though full of talent, remind one of the catbird's knowing music." And again:—

"The office of poetry, I supposed, was Tyrtæan,—consoling, indemnifying; and, of the Uranian, deifying or imparadising. Homer did what he could,—and Callimachus, Pindar, and the Greek tragedians; Horace and Persius;

Dante was faithful, and Milton, Shakspeare and Herbert. But now shall I find my heavenly bread in Tennyson? or in Milnes? in Lowell? or in Longfellow? Yet Wordsworth was mindful of the office."

N1106: Preface to translation of the Bhagavad Gîtâ (1785) by Sir Charles Wilkins.

N1107: John Sterling, the unseen friend and correspondent, who died three years before this visit of Emerson's to England, was eminently one of this first class. Brilliant and faithful, an advancing mind and a poet, he illuminated the lives of his friends, even the sad Carlyle, his biographer, who loved him strangely, though flouting his hopes and purposes.

XV. THE TIMES

N1108: John Baron Somers of Evesham, the eminent lawyer and Whig statesman, Lord Chancellor of England under William and Mary.

N1109: Winthrop Mackworth Praed, the Greek scholar and poet, who was also in Parliament. John Hookham Frere, the diplomat and scholar, one of the founders of the *Quarterly Review*. William Maginn, the versatile Irish contributor to *Blackwood*, the *Quarterly Review*, *Fraser's Magazine*, etc. Theodore Edward Hook, a brilliant writer and society wit, noted for his successful conduct of *John Bull*, a newspaper established in the interest of the King as against that of Queen Caroline. Thomas Hood, the poet, was editor of the *Comic Annual*, the *New Monthly* and Hood's magazines. His "Song of the Shirt" appeared first in *Punch*.

N1110: Fragment of lecture on English Civilization:—

"England never stands for the cause of freedom on the Continent, but only for English trade. She did not stand for the freedom of Schleswig-

Holstein, but for the King of Denmark. She did not stand for the Hungarians, but for Austria. It was accordant that Lord Palmerston, reputed liberal, should favor Louis Napoleon's usurpation. England meantime is liberal, but the power of England is with the aristocracy who never go for liberty unless England itself is threatened."

N1111: *The Times* was founded by John Walter, who had purchased the patent method of "logography," a great improvement in printing. Issued at first as the *London Daily Universal Register*, in 1785, three years later the title became *The Times, or Daily Universal Register*. Walter's son, bearing his father's name, succeeded to the management, under which the journal prospered. The second John Walter died in 1847, and his son John conducted the paper for many years. Of the staff mentioned in the text it may be said that Edward Sterling, the father of John Sterling, was an able man. Thomas Barnes was a vigorous writer on English politics in *The Times*, and was editor for a quarter of a century. Mr. Emerson notes that "Horace Twiss makes the 'parliamentary digest' for £700 a year." John Oxenford was the translator of Eckermann's *Conversations with Goethe*, and was a dramatic critic.

Journal, 1849. "The *Times* newspaper attracts the American in London more and more, until at last he wonders that it does not more pique the curiosity of the English themselves....

"He never sees any person capable of writing these powerful paragraphs; and, though he hears up and down in society now and then some anecdote of a Mr. Bailey or Mr. Mosely who sent his paper to *The Times*, and received in return twenty guineas, with a request that he would write again, and so that he did, in due time, become one of the Staff of the Journal,—yet one never hears among well-informed men as Milnes, Carlyle, Helps, Gregg, Forster, any accounts of this potentate at all adequate to the fact.

"They may well affect not to know or care who wrote it, at the moment when I observe that all they know or say, they read in it."

N1112: Hansard's *Journal of the House of Commons* from 1774.

N1113: The recantation in *Punch* of its ridicule of Lincoln, after his assassination, in the fine poem by Taylor, was valued by Mr. Emerson. He included it in his *Parnassus*.

N1114: *The Times* dared tell the British public in the war of 1812 the astounding news that within the year two of their frigates had been obliged to strike their flags in duels with vessels of the almost ignored American Navy. Captain Mahan quotes this leader in one of his magazine articles. It is one of the few recognitions, in English writings, of the actions at sea in that war.

N1115: In 1863, while our country was struggling for life with foes at home, and the armed intervention of England on behalf of her trade was threatening, Mr. Emerson wrote, and probably spoke, thus: "We are coming (thanks to the war) to a nationality. Put down your foot and say to England, I know your merits and have paid them in the past the homage of ignoring your faults. I see them still. But it is time to say the whole truth,—that you have failed in an Olympian hour, that when the occasion of magnanimity arrived, you had it not,—that you have lost character. Besides; your insularity, your inches are conspicuous, and they are to count against miles. When it comes to divide an estate, the politest men quarrel. Justice is above your aim. You are self-condemned."

XVI. STONEHENGE

N1116: As a contrast of the tempers and teaching of the friends, the motto of Emerson's essay on Art, printed in the *Poems*, might be read.

N1117: He wrote in the notebook on England and America, in 1856: "We read without pain what the English say to the advantage of England to the disparagement of America; for are not we the heir?"

"Percy is but the factor, good my lord."

N1118: Choir Gaur, or Côr Gawr, meaning Giant's circle or temple, is only a British name for Stonehenge, derived from the Saxon Stanhengest.

N1119: Early in the seventeenth century the Jesuits of Antwerp resolved to perpetuate the memory of the saints and martyrs of the Church by collecting and transcribing the records and traditions concerning them, and the work known as the *Acta*

Sanctorum was begun by John Bolland and continued by various hands through two centuries.

N1120: Algernon Herbert ("late of Merton College and the Inner Temple") in his work on Stonehenge, *Cyclops Christianus*, calls attention to the important fact that there is no accurate or approximate description of the structure by Roman authors, as there certainly would have been, had they existed during the Roman occupation. The British Bards, however, in the Triads speak of the Cor Emmrys (circle of Emmrys or Ambrosius) as one of the "three mighty achievements of the Isle of Britain." He says that the native authors declare that "the great Cor was constructed in the latter days of Britain after the Roman Emperors had ceased to govern her," that is, in the fifth century after Christ.

N1121: In the first edition Mr. Emerson quotes Stukeley as follows: "Connected with Stonehenge are an avenue and a *cursus*. The avenue is a narrow road of raised earth, extending 594 yards in a straight line from the grand entrance, then dividing into two branches, which lead, severally, to a row of barrows, and to the *cursus*,—an artificially formed flat tract of ground. This is half a mile northeast from Stonehenge, bounded by banks and ditches, 3036 yards long, by 110 broad."

N1122: In this chapter four similar names are used to signify two places (both in Wiltshire), and Mr. Emerson in his notes fell into some confusion among them. Ambresbury, or Ambresberie, is the old name for Amesbury, which he visited. Abury is the old name for Avebury, and at this place is the largest circle of Druid stones which exists in England.

N1123: Apparently the charm of the nameless stream made the visitor name it for the "sacred river" of *Kubla Khan*.

N1124: The blood of the grim old Presbyterians stirred in the admirer of John Knox, and made him share their dislike for the organ,—

"The kist fu' o' whistles that mak's sic a cleiro."

N1125: Arthur Helps, afterwards knighted, a genial and talented man, who, though busy in the service of the English government, found time for writing many books, the best known of which are *Friends in Council* and *The Spanish Conquest of America*. Of him Mr. Emerson wrote to his wife: "One meets now and then here with wonderfully witty men, all-knowing, who have tried everything and have everything, and are quite superior to letters and science. What could they not if they only would? I saw such a one yesterday, with the odd name, too, of Arthur Helps."

N1126: The friends were daily finding, now that they were together, the truth which Carlyle sadly wrote two years later: "I see what a great deep cleft divides us, in our way of practically looking at this world,—I see also (as probably you do yourself) where the rock-strata, miles deep, unite again; and the two poor souls are at one." Fortunately apart, each for the rest of his life could remember "there is still a brother-soul left to me alive in this world, and a kind thought surviving far over the sea!"⁶³

On the voyage home Mr. Emerson wrote in the cabin some "Sea-weeds" to send to a valued friend in Boston. In these the story of

⁶³ Carlyle-Emerson Correspondence, vol. ii. p. 187.

his quiet presentation to the two good Britons, Carlyle and Helps, of the thoughts that were moving the best people in New England in that day, is told with more vivacity thus: "Two very good men, with whom I spent a Sunday in the country near Winchester lately, asked me if there were any Americans, if there were any who had an American idea? or what is it that thoughtful and superior men with us would have? Certainly I did not retort, after our country fashion, by defying them to show me one mortal Englishman who did not live from hand to mouth, but who saw his way. No, I assured them there were such monsters hard by the setting sun, who believed in a future such as was never a past, but if I should show it to them, they would think French communism solid and practicable in comparison. So I sketched the Boston fanaticism of right and might without bayonets or bishops, every man his own king, and all coöperation necessary and extemporaneous. Of course my men went wild at the denying to society the beautiful right to kill and imprison. But we stood fast for milk and acorns, told them the musket-worship⁶⁴ was perfectly well known to us, that it was an old bankrupt, but that we had never seen a man of sufficient valor and substance quite to carry out the other, which was nevertheless as sure as Copernican astronomy, and all heroism and invention must of course lie on this side. 'T is wonderful how odiously thin and pale this republic dances before blue bloodshot English eyes, but I had some anecdotes to bring some of its traits within their vision, and at last obtained a kind of allowance; but I doubt my tender converts are backsliding before this.—But their question which began the conversation was so dangerous that I thought of no escape but to this extreme and sacred asylum, and having got off for once through the precinct of the temple, I shall

64 Mr. John Forster, at a recent dinner-party, had "called Carlyle's passion 'musket-worship.'"

not venture into such company again, without consulting those same thoughtful Americans, whom their inquiry concerned."

XVII. PERSONAL

N1127: *Macbeth*, Act V., Scene iii.

N1128: He wrote from London:—

...“I attend Mr. Owen’s lectures at the Royal College of Surgeons; Faraday, at the Royal Institution; Lyell, Sedgwick, Buckland, Forbes, I hear at the Geologic Society; and two nights ago I dined with the antiquaries, and discussed Shakspeare with Mr. Collier. Dr. Carpenter has shown me his microscopes, Sir Henry De la Bèche his geologic museum, and I have really owed many valuable hours to the scientific bodies. Now the Picture Galleries are open, and I have begun to see pictures and artists.”

It is interesting to see the eagerness with which Mr. Emerson sought facts from the workers in science, to translate into higher terms. He quotes Owen’s utterances on palæontology in “Poetry and Imagination,” saying that every good reader will recall expressions or passages in works of pure science which have given him the same pleasure he seeks in the poets. In the same essay he finds delight in Faraday’s “spherules of force,” and in “Greatness”

proudly claims for the brave scholar the right "to weigh Plato, judge Laplace, know Newton, Faraday, judge of Darwin, criticise Kant and Swedenborg, and on all these arouse the central courage or insight."⁶⁵

On the opening page of *Natural History of Intellect*, Mr. Emerson says that his desire to enumerate the laws and powers of the intellect was incited by the masterly manner in which these same scientific men had presented those of matter.

N1129: Joanna Baillie, the friend of Scott, authoress of ballads in Scottish dialect and of many dramatic pieces, was at the time of Mr. Emerson's visit in her ninetieth year. Lady Morgan, *née* Owenson in 1783, a bright young Irish lady, early won repute by her songs and tales, especially "The Wild Irish Girl." She married Sir Thomas Charles Morgan, and with him travelled and lived abroad many years, writing many books, and finished her days in London, where she was very popular in society. Mrs. Anna Jameson, the well-known writer on Art. Mrs. Mary Somerville, the active-minded and successful student of physics, physical geography, astronomy and microscopy. Herself a remarkable example of what a woman could accomplish, she was one of the earliest champions of equal opportunities and rights for women.

N1130: The inbred hostility of Wordsworth, as a Borderer, to the Scot, and his traditionary ally the Frenchman, is interesting, recalling the old ballad of the Marches,—

"God send the land deliverance
Frae every reaving, riding Scot!

⁶⁵ *Letters and Social Aims.*

We'll sune hae neither cow nor ewe,
We'll sune hae neither staig nor stot!"

The name starred in the text by Mr. Emerson was *Carlyle*, as appears in the notebook.

N1131: After speaking of the insularity of the English and their unwilling reception of ideas in science from foreign sources, Mr. Emerson notes:—

"So in literature and philosophy,—Plato has no readers in England, except as a Greek book. The expansive, the ideal tendency has no favor, but only the exact, the defining, the experimental. Thomas Taylor, the Platonist, is totally unknown in England. His translation of Plato is found in every public, and often in private libraries, in this country; never in England. I asked repeatedly among literary men for some account of him. But in vain. Poor Taylor in his day had insulted over the materialism and superstition of the times, and the dreadful sterility of times in which he fell, and sadly said: 'There does not appear to be any living author besides myself, who has made the acquisition of the Platonic Philosophy the great business of his life without paying the smallest attention to the accumulation of wealth.' And the modern multitude, which he despised, avenged themselves by forgetting him. Coleridge and Wordsworth slowly and against all opposition made their genius felt. Goethe was received with mean cavilling criticism in the leading journals, like the *Edinburgh* and *Blackwood*, and with supercilious silence by the rest. The German Philosophy has made few steps. The English hate transcendental ideas, like the mysticism of the Eastern philosophy and religion, and one may see it amusingly in the anxiety a late critic shows to absolve Taliessin, the Welsh Bard, from the imputation of such odious doctrines as the transmigration of souls. Materialism is much less offensive."

N1132: Wordsworth's "Happy Warrior"

"Through the heat of conflict keeps the law
In calmness made, and sees what he foresaw."

N1133: With the best intentions on both sides, the meetings with the lights of England were a little disappointing. Mr. Emerson wrote in a letter:—

London, March 20, 1848.

...What shall I say to you of Babylon?...There is nowhere so much wealth of talent and character and social accomplishment; every star outshone by one more dazzling, and you cannot move without coming into the light and fame of new ones. I have seen, I suppose, some good specimens, chiefly of the literary-fashionable and not of the fashionable sort. They have all carried the art of agreeable sensations to a wonderful pitch, they know everything, have everything, they are rich, plain, polite, proud and admirable. But though good for them, it ends in the using. I shall or should soon have enough of this play for my occasion. The seed-corn is oftener found in quite other districts....Tennyson, whom I wish to see more than any other, is in Ireland, and I fear I shall miss him. I saw Wordsworth to very good purpose in Westmoreland, and all the Scottish gods at Edinburgh. Perhaps it is no fault of Britain,—no doubt it is because I grow old and cold,—but no persons here appeal in any manner to the imagination. I think even that there is no person in England from whom I expect more than talent and information. But I am wont to ask very much more of my benefactors,—expansions that amount to new horizons.⁶⁶

66 *Letters of Emerson to a Friend*. Houghton, Mifflin & Co., 1899.

XVIII. RESULT

N1134: In some sheets on English Civilization, evidently from a lecture given on his return, he writes:—

“Very intellectual people and very silent people, inaccessible on every other topic, grew garrulous on politics. ‘Festus’ Bailey I found only entertained by politics. Every man gives the same attention to public affairs as the Prime Minister. The whole British public read the *Times* newspaper with the punctuality with which they eat.”

And again: “‘English principles’ mean monopoly of all kinds, forcing the Colonies, forcing Ireland to buy of England only; suppressing manufactures in Ireland and the Colonies; allowing freedom of conscience, but you must take the oaths to the English Church and State, if you will enter Parliament, the University, the Army, the professions, or the government—freedom of conscience certainly, build what chapel you like, but you must pay your tithe to the Anglican. Lord Eldon resists abolition of Slavery; resists Catholic Emancipation; resists Reform of Parliament; resists Reform in Chancery; resists Jewish franchise; resists abolishing

impressment of seamen, 'which is the life of our navy;' resists abolishing capital punishment for small offences; too speculative to be safe; resists strikes or any attempt on the part of operatives to obtain increase of wages; resists West Indian Emancipation—'English principles' mean with a primary view to the interests of property."

N1135: From the notebook:—

"English Politics. Sir James Graham opened the letters of Mazzini. In 1837 Lord John Russell usurped the Constitutional functions of the Colonial Assemblies in Canada. In 1831 Lord Palmerston pronounced the rights of the Czar over Poland incontestable; in 1849, refused to allow the Roman patriots to land in Malta."

As an instance of the spirit of British trade in dealing with the outside world, he mentions the inscription on the statue of Lord Chatham in the Guildhall in London, which records that, "under his administration, Commerce had been united with and made to flourish by War."

Remembering the brutal element in the Anglo-Saxon stock on both sides of the Atlantic, he writes:—

"In that country as in this, they want great men, and the cause of right can only succeed against this gravitation or materialism by means of immense personalities. But Webster, Calhoun, Clay, Benton, are not found to be philanthropists but attorneys of gross interests."

But Mr. Emerson recognizes their hopeful advance among the other nations.

"They have exceeded the humanity of other governments. Cheap postage they have adopted. Free Trade they have adopted. Reform Bill passed. Emancipation of Negroes, Abolition of Slave Trade. Impeachment of Hastings—Dissenters Bill. Exploring Expeditions—Elgin Marbles; Nineveh excavations: British Museum; the government is gentlemanlike. If any national benefit has been rendered, if arts have been advanced, science served, the government may be relied on to be just and generous to the man who has served them,—Paxton, Fellowes, Stephenson, Franklin, Rowland Hill. The power of England goes to show that domesticity is the tap-root which enables a nation to branch wide and high. They are the most humane of nations. Their rules and usages in War are distinguished by humanity. They spare the conquered. They will not fire on an enemy when they might hit their own men: the French will. They respect towns and private property."

N1136: Here is an instance of the immediate use on another plane of a scientific generalization of John Hunter, which Mr. Emerson had probably heard from Richard Owen,—the *electric word*, as he calls it in the essay on "Poetry and Imagination" in *Letters and Social Aims*.

N1137: François Huber of Geneva, having become blind, devoted himself with his wife to the study of bees and wrote *Nouvelles Observations sur les Abeilles*.

Mr. Emerson felt that the Englishmen, even more than the Americans of his generation, were, for the time, in the bonds of materialism, but that, as he had written in his "Self-Reliance," it was true of them, as of all:—

"If they are honest and do well, presently their neat new pinfold will be too strait and low, will crack, will lean, will rot and vanish, and the immortal

light, all young and joyful, million-orbed, million-colored, will beam over the universe as on the first morning."

XIX. SPEECH AT MANCHESTER

N1138: George Cruikshank, the caricaturist, who used his art not merely to amuse, for he was an eager liberal and reformer. Of his illustrations of Dickens's novels I find this mention in the journal:—

"Alcott told me that, when he saw Cruikshank's drawings, he thought him a fancy caricaturist, but when he went to London, he saw that he drew from nature, without any exaggeration. Selection is his exaggeration."

Mr. Alcott, it is certain, would have known nothing of Cruikshank but for his daughters' delight in Dickens, and their modelling their "make-up" on these pictures in acting scenes from Dickens.

N1139: This was the theme of a lecture, "Natural Aristocracy," which the sight of the contrast of feudal privilege and utter misery in England had impelled him to write there and deliver in London.

N1140: Mr. Emerson, finding life so beautiful that all days were, or should be, holidays, took little interest in these as such.

When any one would remember that the day was the anniversary of some occurrence, he would jestingly say, "Oh, it is always a hundred years from something."

N1141: Mr. Emerson breathed freer as he turned towards his own country. He writes:—

"Boundless freedom of America in the North....The American mind is not written in books, but on the land and in the institutions and inventions."

Of America he wrote from England to Margaret Fuller Ossoli, then in Italy:—

"The goods of that country are original and incommunicable to this—I see that well. It would give me no pleasure to bring valued persons thence and show them to valued persons here, but lively pleasure to show to these last those friends at home in their own place....I leave England with an increased respect for the Englishman. His stuff or substance seems to be the best of the world. I forgive him all his pride. My respect is the more generous that I have no sympathy with him, only an admiration."

From such mentions of *English Traits* as I have come upon, by their own authors, the book, with its praise and blame, appears to have been taken entirely in good part. Dr. Richard Garnett, in his *Life of Emerson*, says:—

"In this book he has matched himself with the English people, and both are upon their trial. Could an idealist display true insight in dealing with so practical a nation? Could so material a civilization stand the criticism of an idealist? England and Emerson both came well out of the ordeal."

THE CONDUCT OF LIFE

THE OPENING pages of the new journal after Mr. Emerson reached his home, in the summer of 1848, after nine months' stay in England, seem to reflect the sense of joyful relief he found in his country, the growing, uncommitted and unbound,—even half-tamed America. In spite of hospitality and kind reception, he had found the brave and truth-speaking English not as open as his countrymen to ideas, to inspiration. He had written, "Alas! the halls of England are musty; the land is full of coal-smoke and carpet-smell: not a breath of mountain air dilates the languishing lungs.... English and Europeans are girded with an iron belt of condition." So, on the clean fly-leaf of the new journal he wrote two fragments of verse for omens: the first from the noble poem "Inspiration" of Henry Thoreau, who, like a younger brother, had manned the wall of his castle during his absence:—

"I hearing get, who had but ears,
And sight, who had but eyes before,
I moments live, who lived but years,
And truth discern, who knew but learning's lore."

Below these lines he wrote the verses of Horace:—

"Hunc solem et stellas et decedentia certis
Tempora momentis, sunt qui formidine nulla
Imbuti spectent."

(*Epistolæ*, l. 6. 3, 4.)

I think that he was pleased by the possibility of construing these words, taken by themselves, in opposite significance, oracle-like; either in obvious praise of the constant man whom nature cannot alarm, or in dispraise of the hopeless spirit destitute of wonder and awe.

He has now, in lecturing, his own people to deal with, not "persons of quality," or English men of letters, and so in one of the early pages is written the story of Edmund Kean's remark when they told him that "the boxes applauded": "The boxes! a fig for the boxes! I tell you *the Pit rose to me*."

Cheered by the sight of the spreading, thriving States with their hopeful vigor, and promise to all poor and oppressed European peoples, he wrote: "America is England seen under a magnifying glass. There can be no famine, no want that can't be supplied, no danger from any excess of European importation of art or learning into a country of such excessive native strength, such immense digestive power. We read without pain what the English say to the advantage of England, for are we not the heir? 'Percy is but the factor, good my lord!' And really what amount of petulant English criticism in journals and pamphlets can offset the eulogy of the swarming annual emigration from the British Isles into the United States?"

Once more at the town-meeting, the evolution of which in early New England, and its importance, he had shown in his Historical

Address at Concord in 1835, he was pleased to see how well the Concord farmers, tradesmen and few professional men managed their affairs. "The American town is the unit of the Republic, as the leaf is of botany, or one vertebra is of the skeleton." He had full faith in the American idea, and wrote: "I wish to cast out the passion for Europe by the passion for America."

But the impatience, whether in letters or in arts, the make shifts and superficiality disturbed him.

"Our people do not get ripened, but, like peaches and grapes of this season, want a fortnight more of sun, and remain crude. In denser-peopled countries more caloric is generated." Then the question occurred, "Does great territory make men diminutive?" "The providing means of living now absorbs them, to the exclusion of the ends. Nothing but the brandy of politics will wake them from brute life. No song of any Muse will they hear. But the adult education must be urged. The education shall not stop with youth, but shall be as vigorously continued into maturity. Proctors we must have to drive the old fellows to school. The Commonwealth shall set its Horace Manns on applying the searching culture suggested in the *Republic* to adults, and so keep them up."

The idealists of the previous decade seemed to have but faintly leavened the lump, for "Anglo-Saxondom" was in the air, had won from Mexico a vast area of old Spanish territory between the Gulf and the Pacific, and was casting its audacious eyes upon Cuba and the Isthmus.

"Our country, right or wrong," was becoming a watchword which found supporters in the North. This "extending the area of Freedom" was serving the purpose of extending that of slavery for the black man, and of political power for his master. Against the strong and masterful men who were winning point after point in Congress for their political supremacy and its unhallowed

institution, the Northern men of conscience counted on Daniel Webster and Charles Sumner as their champions of Freedom. In 1850, Webster, the idol of New England, startled his people by deliberately advising them to "conquer their prejudices" and support the Fugitive-Slave Bill. A few years later, after the passage of the Kansas-Nebraska Bill, their incorruptible Sumner, still fighting against the aggressions of slavery, was struck down in his seat and long disabled by a member of Congress from South Carolina. The outrages of the Border Ruffians in Kansas, countenanced to a great degree by the administration at Washington, startled the North.

Mr. Emerson had come home with love for his country and faith in her. But each succeeding year brought a new disgrace to that Republic which should guide mankind. Slavery, which, when he wrote the "Ode Inscribed to W. H. Channing," had seemed an evil, but remote and local, now lay like a weight upon him when he woke in the morning,—any day the law of his country might require of him, not only to deny a refuge or a couch to the hunted slave, but himself to join in the hunt. The reception of this law by the country, he said, "showed that our prosperity had hurt us, that we could not be shocked by crime,...that the old religion and the sense of right had faded and gone out: that, while we reckoned ourselves a highly cultivated nation, our bellies had run away with our brains, and the principles of culture and progress did not exist."⁶⁷ This was an outcry of shame and dismay, but he never despaired of the Republic, and at the important moments he failed not to speak with all the fire and eloquence that was in him against the blot of shame that lay upon his country. He went to the anti-slavery meetings in Boston and New York, and constantly to those held in his own village. Out of means at that time straitened, he gave most

67 "The Fugitive-Slave Law," 1855, *Miscellanies*.

liberally in help of the Free-State cause in Kansas. John Brown was his guest on at least one of the occasions of his visiting Concord. One of the most interesting of Mr. Emerson's manuscript books is that which is called *Liberty*, in which he gathered, with wide research, opinions of eminent jurists, sayings of statesmen and patriots, and anecdotes, all relating to the history of Liberty, on which he seems to have contemplated writing a paper. In the year in which *The Conduct of Life* was published, at last the awakened conscience of the country chose Lincoln as President. But in the darkest days before this dawn Emerson wrote:—

Journal, 1857. "The politics of Massachusetts are cowardly. O for a Roman breath, and the courage that advances and dictates! When we get an advantage, as in Congress the other day, it is because our adversary has made a fault, and not that we have made a thrust. Why do we not say, We are abolitionists of the most absolute abolition, as every man that is a man must be? Only the Hottentots, only the barbarous or semi-barbarous societies are not. We do not try to alter your laws in Alabama, nor yours in Japan, or the Feejee Islands; but we do not admit them or permit a trace of them here. Nor shall we suffer you to carry your Thuggism north, south, east or west into a single rod of territory which we control. We intend to set and keep a *cordon sanitaire* all around the infected district, and by no means suffer the pestilence to spread."

"It is impossible to be a gentleman, and not be an abolitionist. For a gentle man is one who is fulfilled with all nobleness and imparts it; is the natural defender and raiser of the weak and oppressed; like the Cid."

Throughout that struggle Mr. Emerson was mindful of the value of calmness, and the power of the great laws, "*if not polemically stated*." Such were the times in which he not only prepared for

the press the collection *Nature, Addresses and Lectures* and his *Representative Men*, both written before, and finished *English Traits*, but was reading lectures near home and far abroad in the new States. He gave not only the observations and thoughts on England and France, but also new lectures on the "Conduct of Life," which, thus tested, and refined thereafter, were gathered in this volume. Much of the matter in them was of earlier date, for the course of six lectures by that name were first delivered in Pittsburg, Pennsylvania, in March, 1851, and later given in Boston, and far and wide in lyceums. These trips in the dead of winter, extending yearly into the raw country not far behind the advancing western frontier, on half-built railroads, or canal-boats and untrustworthy steamboats, when ice permitted (he thrice crossed the Mississippi on foot, and once among the grinding ice-cakes in a rowboat), involving long drives over prairie to make connections for lectures almost every night, and the harboring in rudest taverns—were borne for about twenty years with cheerful courage. In Mr. Cabot's memoir may be found some fragments of these rude experiences as told in Mr. Emerson's letters.

Mr. Emerson slighted the discomforts and suffering, only alluding to them briefly and humorously, pardoned the squalor, and admired the courage and vigor and keen wits of the people; indeed, in a sense, sat at their feet as a learner, while he taught them the significance of their lives in simple but high speech, with anecdotes, which, if nothing else, might stick by them and act as a ferment. Valuing for what it was worth the great material achievement of his countrymen, he wrote in his journal at a little later period: "Machinery is good, but mother-wit is better. Telegraph, steam, and balloon and newspapers are like spectacles on the nose of age, but we will give them all gladly to have back again our young eyes."

He must recall their morning dreams to young Americans, dazzled by the shining gold of California or distracted by the manifold projects of developing their vast country.

Beside the important events and the crisis in American politics, in the twelve years between the time of Mr. Emerson's return from England and the publication of *The Conduct of Life*, the following events had happened in his life:—

In 1849, the formation of the "Town and Country Club" in Boston, not of long duration. In March, 1850, the sad shipwreck, within sight of her native shores, of his friend Margaret Fuller, now the Countess d' Ossoli, with her husband and infant child. Mr. Emerson, with two other friends, William Henry Channing and James Freeman Clarke, wrote her memoir. In May, 1852, the Hungarian patriot, Louis Kossuth, was received and spoke in Concord, Mr. Emerson introducing him. In the last months of the following year the loved and honored mother of Mr. Emerson died in his house. In the spring of 1857 he was present at a small meeting of friends to which *The Atlantic Monthly* owed its origin, under the editorship of Lowell. The Saturday Club originated about the same time, giving Mr. Emerson an opportunity he highly prized of meeting once a month his friends and many of the best citizens of the Republic. In August of the next year he passed the happy fortnight, which he has celebrated in his verse, in the primeval forest of the Adirondac Mountains, with Agassiz, Lowell, Jeffries Wyman, William J. Stillman, Judge Hoar, John Holmes and others of his friends. On the 25th of January, 1859, at the centennial anniversary of the birth of Robert Burns, he made a short address which seems to have been one of the most effective speeches that he ever made, long remembered by those who heard it; and on the 2d of December, at the hour of the execution of John Brown, Mr. Emerson was among those who spoke to the small number of

people who gathered in the Concord Town Hall to show respect to the heroic efforts of the old hero on behalf of the bondsmen.

The Conduct of Life was well received, yet not without protest, and sold rapidly. Mr. George W. Cooke in his *Life of Emerson*⁶⁸ mentions that a writer in *The New Englander* criticised "the utter shallowness and flippancy of the judgments Emerson expresses concerning Christianity." The London *Saturday Review* thus commented: "That an American audience likes to hear the dreariest of all dreary platitudes when they are strung together in what is called an oration is a fact attested by credible proof, and must be believed, like any other strange circumstance that rests on that authority. That, being in that state of mind, mystical language should please them is what experience would suggest, if, indeed, experience applies to people who like orations. It is inconceivable that Mr. Emerson should have any claims to any higher reputation than this."

But his writing still seemed to give pleasure to his friend in England, for Carlyle wrote of *The Conduct of Life* in January, 1861:—

..."I read it a great while ago,...with a satisfaction given me by the Books of no other living mortal. I predicted to your English Bookseller a great sale even, reckoning it the best of all your Books....You have grown older, more pungent, piercing:—I never read from you before such lightning-gleams of meaning as are to be found here. The finale of all, that of 'Illusions' falling on us like snow-showers, but again of 'the gods sitting steadfast on their thrones' all the while,—what a *Fiat Lux* is there, into the deeps of a philosophy, which the vulgar has not, which hardly three men living *have*, yet dreamt of! *Well done*, I say; and so let that matter rest."

68 *Ralph Waldo Emerson, his Life, Writings and Philosophy*. Boston: J. R. Osgood & Co., 1881.

FATE

ALTHOUGH THE course on the "Conduct of Life" was read in 1851, the following passage from a letter to Carlyle, two years later, shows that Mr. Emerson was still working on "Fate."

CONCORD, 19 APRIL, 1853.

...What had I, dear wise man, to tell you? What, but that life was still tolerable; still absurdly sweet; still promising, promising, to credulous idleness;—but step of mine taken in a true direction, or clear solution of any the least secret,—none whatever. I scribble always a little,—much less than formerly,—and I did within a year or eighteen months write a chapter on Fate, which—if we all live long enough, that is, you, and I, and the chapter—I hope to send you in fair print. Comfort yourself—as you will—you will survive the reading, and will be a sure proof that the nut is not cracked. For when we find out what Fate is, I suppose, the Sphinx and we are done for; and Sphinx, Œdipus, and world ought, by good rights, to roll down the steep into the sea....

N1142: A fuller form of the motto, without the last four lines, which are rather explanatory than poetical, may be found in the Appendix to the *Poems* among the "Fragments on The Poet."

N1143: A book called *The Spirit of the Age*, by William Hazlitt (senior), was published in 1825; *A New Spirit of the Age*, by R. H. Horne, in 1841.

N1144: In a letter to Miss Margaret Fuller, written in 1841, this sentence occurs: "Gray clouds, short days, moonless nights, a drowsy sense of being dragged easily somewhere by that locomotive Destiny,—which, never seen, we yet know must be hitched on to the cars wherein we sit;—that is all that appears in these November days."

N1145: From a Persian distich by Ali ben Abu Taleb, through the German of Von Hammer Purgstall, rendered thus into English by Mr. Emerson. It is found among the translations in his *Poems*.

N1146: Because so many persons find the English of Chaucer so difficult, Mr. Emerson chose to make several modifications in the spelling to make the verses clear, some of which changes it seemed best to preserve. The passage may be found in the latter part of "The Knight's Tale."

N1147: Johann Heinrich Jung-Stilling, a German mystic and theosophist, an acquaintance interesting to Goethe, who describes his character in his *Autobiography*.

It seems probable that Mr. Emerson by mistake wrote *Robert* for *William* Huntington. The first was a bishop and Orientalist in the seventeenth century. The latter was an eccentric popular preacher

in the eighteenth century, who believed in his own inspiration and also in the direct interposition of God in the affairs of his daily life.

N1148: In the notebook is a quotation from Saadi: "The angel who presides over the store-house of the winds, feels no compunction, though he extinguish the old woman's lamp."

In the Appendix to the *Poems* are some neat little verses about Water, ending,—

Well used, it decketh joy,
Adorneth, doubleth joy:
Ill used, it will destroy,
In perfect time and measure
With a face of golden pleasure
Elegantly destroy.

The poet in "The Titmouse" describes the quiet overpowering onset of Arctic cold to which philosophy is resigning him until the chickadee incites brave resistance.

N1149: Journal, 1852. "History is zoölogy and not a chapter of accidents."

1851. "There is a thick skull; that is fate. The crustacea, the birds, the tortoises are fatalists, yet amelioration must be assumed; their very walls and jails must be believed to be charity and protection; and meanness the preparation of magnificence: as madness is assumed to be the screen of the too much tempted soul."

N1150: Johann Gaspar Spurzheim (1776–1832), the disciple and associate of Gall in expounding the doctrines of phrenology. He

lectured in Boston in 1832, where Mr. Emerson probably heard him. Spurzheim died there in the autumn of that year.

Lambert Adolphe Jaques Quetelet (1796–1874), the Belgian statistician who wrote several remarkable treatises on social and moral as well as vital and political statistics. Among them were those *Sur le théorie des probabilités appliquées aux sciences morales et politiques* (1846) and *Sur la statistique morale et des lois qui le régissent* (1848).

I remember Mr. Emerson's saying somewhat sadly of a spirited schoolboy of good blood, "But he has the hopeless adust complexion," and the subsequent history of the man, of generous traits but cursed by a passionate temperament, justified this foreboding.

N1151:

"Some peculiar mystic grace
Made her only the child of her mother,
And heaped the whole inherited sin
On that huge scape-goat of the race,
All, all upon the brother."

Tennyson, "Maud."

N1152: This theme is handled with characteristic delicacy and charm by Dr. Holmes in his story *The Guardian Angel*.

N1153: Conversely, the vigorous preacher to the Universalist Society in Concord at about this time resigned when his salary was reduced, and in his parting sermon told his flock that they "could not have broadcloth at ninepence a yard," and went into the manufacture of gunpowder.

N1154: This sentence, used elsewhere in the Essays, is a quotation from one of the Oriental writers. Mr. Emerson introduced it into the quatrain "Horoscope" in the *Poems*.

N1155: The saying of King James I. is noted in one of the journals: "Oh ay, I can make him a lord, but I canna make him a gentleman."

N1156: Joseph von Fraunhofer, the German astronomer, was a remarkable optician, and Dr. William B. Carpenter had newly published his work on *The Microscope, its Revelations and Uses*.

The attention of Dr. Holmes was evidently more attracted by the presentation, in the first part of this essay, of the apparent irresistibility of Fate, and did not follow to the hopeful correction of this in the power and triumph of effort which is shown later in this essay and in "The Tragic," in *Natural History of Intellect*. For he comments thus in his biography: "Emerson cautions his reader against the danger of the doctrines which he believed in so fully: 'They who talk much of destiny, their birth-star, etc., are in a lower, dangerous plane, and invite the evils they fear.' But certainly no physiologist, no cattle-breeder, no Calvinistic predestinarian could put his view more vigorously than Emerson, who dearly loves a picturesque statement, has given it in these words, which have a dash of science, a flash of imagination, and a hint of the delicate wit that is one of his characteristics:"—and he then quotes in full the passage of the detection by microscope of the Free-Soiler in embryo.

N1157: Mr. Emerson's favorite lines in the plays of Beaumont and Fletcher were those in the epilogue to *The Honest Man's Fortune*, which he printed in his collection *Parnassus*, especially these:—

"Our acts our angels are, or good or ill,
Our fatal shadows that walk by us still."

N1158: Lorenz Oken of Würtemberg, in 1805, in a work called *Die Zeugung*, brought forward the theory that all organisms, whether vegetable or animal, came from cells, or vesicles, as he called them. Oken was also one of the discoverers of the vertebral relations of the skull.

N1159: "On every side is an ambush laid by the robber troops of circumstance. Hence it is that the horseman of life urges on his courser at headlong speed."—Hafiz.

N1160: This paragraph is the prose version of the "Song of Nature" in the *Poems*.

N1161: The iron aspects of Destiny are hinted at in the "Ode, inscribed to W. H. Channing," in which the influence of the recent reading of Knox's *Races of Men* seems to appear.

N1162: "Everything which pertains to the human species, considered as a whole, belongs to the order of physical facts. The greater the number of individuals, the more does the influence of the individual will disappear, leaving predominance to a series of general facts dependent on causes by which society exists and is preserved."—Quetelet.

N1163: Johann Fust of Mainz, the associate of Gutenberg and Schöffer in the development of printing, in the first half of the fifteenth century.

N1164: These beautifully mottled, smooth shells used to be brought by returning American vessels from Asiatic shores and the South Sea islands. The islanders valued them for adornment, and some kinds served them for money. The orange cowry used to be worn by chiefs in the Friendly Islands.

N1165: Thus he states so strongly the seemingly overwhelming might of Fate that some readers, like Dr. Holmes, hardly recover from the effect of the presentation of this aspect, to see how he brings forward the counterpoise in man; as Byron says of Fate in his *Prometheus*,—

"To which his spirit may oppose
Itself, an equal to all woes."

Elsewhere Mr. Emerson shows how he counts the force of the "minority of one" that looks so slight in this paragraph. In many places in his manuscript and books he celebrates this might, symbolized in physics by the thread of water in a tube, which can balance the ocean. He tells of the founders of religions, then "sees in politics the importance of minorities of one, as of Phocion, Cato, Lafayette, Carnot; silent minorities of one also,—Thoreau, Very, Newcomb, Alcott. For the power is after reality, not after appearance." The same idea appears in "Considerations by the Way" in this volume, and in "Progress of Culture" in *Letters and Social Aims*.

N1166: The Fenris Wolf, one of the evil brood of Loki, in the Norse mythology, after having burst the other bonds, was shamed into allowing himself to be bound by a soft bond which he found himself unable to break, but he was constantly fretting it, and, when it broke, he would devour the sun. In that Day of Doom

the Gods, helped by the heroes, must fight against the powers of Darkness until the New Day should come.

N1167:

This is he men miscall Fate,
Threading dark ways, arriving late,
But ever coming in time to crown
The truth, and hurl wrong-doers down.

"Worship," Poems.

N1168: The poetry, religion and laws of the ancient Welsh people were preserved by the bards in threefold groups called Triads.

N1169: Here he was offsetting spirit against matter. Yet the new science which taught the striving of the lowest creature against environing difficulties, and ascent in the scale towards man, at once commanded his attention. This he celebrated in his verse and prose before many naturalists admitted it. Now, the Evolution doctrine recognizes Effort for one of its most important factors, and chronicles its triumphs over adverse forces.

N1170: Journal, 1851. "The Intellect conquers Fate,—and it is the property of men of insight to be serene." Him whose insight is highest, the poet, Mr. Emerson defines as "the liberator."

Journal. "Fate needs extended eyes,—draw out the tubes of your telescope to the point of largest vision—to see it.

"Fatalism the right formula to be holden; but by a clever person who knows to allow the living instinct. For though that force be

infinitesimal against the universal chemistry, it is of that sublimity that it homœopathically doses the system."

N1171: This is one of the "Chaldæan oracles" ascribed to Zoroaster.

N1172:

But well I know no mountain can,
Zion or Meru, measure with man.

"Monadnoc," *Poems*.

Mr. Emerson once said of his friend Thoreau, "One would as soon think of taking the arm of an oak-tree as Henry's."

N1173: A passage of some length from the journal, from which this paragraph is condensed, is given in the last note to this essay.

N1174: The almost certain misconstruction of this announcement by the multitude on a lower plane has caused the persecution or martyrdom of the greatest souls through the centuries. In "The Method of Nature" Mr. Emerson wrote, "Empedocles undoubtedly spoke a truth of thought when he said 'I am God,' but the moment it was out of his mouth it became a lie to the ear, and the world revenged itself for the seeming arrogance by the good story about his shoe."

One of the sentences below, Mr. Emerson has rendered into verse thus:—

Hold of the Maker, not the Made:
Sit with the Cause, or grim or glad.

N1175: Mr. Emerson used not only books but men "for lustres." It is remarkable how little is recorded of his company in his journals, beyond some observation or habit of thought or manner of some one of them which calls out the comment or the train of thought which he writes down.

N1176: In the last pages of "Success" in *Society and Solitude*, and of "Natural History of Intellect" in the volume of that name, on the text *Quantus amor, tantus animus*, he shows the power of Love against Fate; also in the poem "Cupido" and quatrain "Love."

N1177: Everywhere, as well as in the essay of that name, he teaches the *sovereignty of ethics*. He writes in his journal: "Behold these sacred persons, born of the old simple blood, to whom rectitude is native. See them,—white silver amidst the bronze population,—one, two, three, four, five, six,—I know not how many more, but conspicuous as fire in the night. Each of them can do some deed of the Impossible."

N1178: In the notebook on Fate he classes opposing circumstances as *Horses*:—

"They are all horses on which he rides.

"The material of freedom consists of necessities.

"Of higher breed, of diviner race, are ever the steeds of the soul.

"The oyster hardly moves; the worm crawls; the quadruped walks; man moves on all modes, by legs of horses, by wings of wind, by steam, by gas of balloon, by electricity; and stands already on tip-toe threatening to hunt the eagle in his own element. There is nothing he will not make his footman."

N1179: Mr. Emerson used to tell the story of two bishops who at the worst of the hurricane asked the captain if there was any hope. At his answer, "None but in God," they turned pale, and one said to the other, "And has it come to *that!*"

N1180: This image is taken from Thierry's *History of the Norman Conquest of England*. Mr. Emerson thus versified it in the quatrain "Northman:"—

The gale that wrecked you on the sand,
It helped my rowers to row;
The storm is my best galley-hand
And drives me where I go.

The sentences below suggest a passage in the "Wood-notes," II., in the *Poems*.

N1181: Edward Somerset, Marquis of Worcester (1601–67), the devoted adherent of Charles I. and lord of Raglan Castle, was a remarkable experimenter, and wrote an account of his "Century of Inventions," among which was the use of the power of steam, concerning which he wrote "An Exact and True Definition of the Most Stupendous Water-commanding Engine."

N1182: Compare the "Spiritual Laws" in the *Poems*. Heaven is pictured as

Forging, through swart arms of Offence,
The silver seat of Innocence.

N1183: This chapel has been called "the glory of King's College and of Cambridge University." Freeman says it is the grandest building in the late Perpendicular style, and in spite of the beauty of the windows and the fan-tracery roof "the design is as bold and simple as a Greek temple."

N1184:

But he, the man-child glorious,
Where tarries he the while?
The rainbow shines his harbinger,
The sunset gleams his smile.

.

I travail in pain for him,
My creatures travail and wait;
His couriers come by squadrons,
He comes not to the gate.

"Song of Nature," *Poems*.

N1185: Here recurs the theme of Mr. Emerson's first sermon suggested to him by his Methodist fellow laborer in his uncle's hay-field,—*"Men are always praying, and their prayers are granted; therefore beware for what you pray."* His verse also comes to mind:—

And though thy knees were never bent,
To Heaven thy hourly prayers are sent,
And whether formed for good or ill
Are registered and answered still.

"Prayer," *Poems*, Appendix.

In the journal of 1851, after the death of Margaret Fuller with her husband and child, the relation of events to persons, less easy to see in that case, is thus mentioned: "It fitted exactly,—that shipwreck, thought Ellery [Channing], to the life and genius of the person. 'T was like Socrates' poison, or Christ's Cross, or Shelley's death."

N1186:

Night dreams trace on Memory's wall
Shadows of the thoughts of day,
And thy fortunes, as they fall,
The bias of the will betray.

Quatrain, "Memory," *Poems*.

N1187: Virgil, *Aeneid*, iv. 743.

In spite of Virtue and the Muse,
Nemesis will have her dues,
And all our struggles and our toils
Tighter wind the giant coils.

"Nemesis," *May Day* (1st Edition).

N1188: The following names are celebrated in this connection in the journal: "Mr. Erastus Bigelow, Mr. McElrath, Mr. Lawrence, Mr. Crocker, Mr. Vanderbilt, the old Rotch and Rodman, Jackson, and Lowell, the Dwights at Springfield, Mr. Mills, Mr. Forbes, are each a walking city, and wherever you put them, will build one."

N1189:

Sun and moon must fall amain
Like sower's seeds into his brain,
There quickened to be born again.

"Fragments on The Poet," *Poems*, Appendix.

See also the last sentence in "Man the Reformer" in *Nature, Addresses and Lectures*.

N1190: This recalls the noble passage in Tennyson's *Gareth and Lynette*, where the young knight, seeking Arthur's court, is met at the gate of Camelot by Merlin, who tells him it is enchanted.

"For there is nothing in it as it seems
Saving the King; tho' some there be that hold
The King a shadow, and the city real;"

adding that the Fairy Queens may be still building,

"seeing the city is built
To music, therefore never built at all,
And therefore built for ever."

N1191: When the war for Freedom seemed to be coming to a happy issue, Mr. Emerson said, "Everybody has been wrong in his guess except good women, who never despair of an ideal right."

N1192:

The semigod whom we await

is described in the motto to "Culture," in the *Poems*, in language like that of this paragraph.

N1193: In the summer of 1859, Mr. Emerson sprained his ankle badly on Wachusett Mountain, and was disabled and on crutches all through the summer, his arm also suffering from pressure of his crutch, and his health from indoor confinement. Various misfortunes occurred on the farm during the summer, all sorts of unusual demands came upon him, and to cap the climax his publishers failed; yet he bore all with courage and only allowed his depression to come out in humorous allusions to himself as Mr. Crump with the sprained ankle, who presently will have it that nature and the universe have sprained theirs also.

N1194: *The House of Fame.*

N1195: This thought appears in his poem "Guy."

N1196:

Like vaulters in a circus round,
Who leap from horse to horse, but never touch the ground.

"Fragments on The Poet," *Poems*, Appendix.

N1197:

Θεοῦ θέλοντος καὶ ἐπὶ ῥίπον ἂν πλείοις

Pindar.

Which verse is thus rendered by the translator of the old edition of Plutarch, who quotes it,—

"Were it the will of Heaven, an osier bough
Were vessel safe enough the seas to plough."

N1198:

Thou canst not wave thy staff in air,
Or dip thy paddle in the lake,
But it carves the bow of beauty there,
And the ripples in rhymes the oar forsake.

"Woodnotes," II., *Poems*.

N1199: Mr. Emerson said that the law should always be "stated with that scope for ascension which the nature of things requires," and it is interesting to see that, true to his faith in the affirmative hopeful teaching, however strongly he states the other aspect, this ascension is sure in the end of each essay or lecture.

N1200: It seems well to append to the essay on Fate Mr. Emerson's condensed statements of his reasonings on the subject. The first may very probably be of the date 1852.

"We have shown by straws the way the current sets by race, sex, laws of nature, climate, sea, tables of mortality, statistics.

"Force of natural laws in relation to human wishes.

"T is limitation.

"Limitation of what?

"Of Power.

"Ah! then there is Power.

"We exert power. The very discovery that there is Fate, and that we are thwarted, equally discloses Power. For what is it that is limited? What but power?

And again:—

"I still arrive only at three facts.

"1. The revelation of thought takes us out of servitude into freedom.

"2. So does the sense of right.

"They are exertions of will, a blending of these two, a certain rank choice, a feeling of sovereignty, right growing out of perceiving and owing, it makes the strong will.

"3. Once more. Every command, every oppression proves freedom. Dig in my field. The command implies a servant who may obey or disobey."

The following is from the journal of 1859:—

"Our doctrine must begin with the Necessary and Eternal, and discriminate Fate from the Necessary. There is no limitation about the Eternal. Thought, Will is co-eternal with the world; and as soon as intellect is awaked in any man, it shares so far of the eternity,—is of the maker, not of the made. But Fate is the name we give to the action of that one eternal, all-various necessity on the brute myriads, whether in things, animals, or in men in whom the intellect pure is not yet opened. To such it is only a burning wall which hurts those who run against it.

"The great day in the man is the birth of perception, which instantly throws him on the party of the Eternal. He sees what must be, and that it is not more that which must be, than it is that which should be, or what is best. To be, then, becomes the infinite good, and breath is jubilation. A breath of Will blows through the Universe eternally in the direction of the right or necessary; it is the air which all intellects inhale and exhale, and all things are blown or moved by it in order and orbit.

"The secret of the Will is that it doth what it knows absolutely good to be done, and so is greater than itself, and is divine in doing. Whilst other

choices are of an appetite or of a disease, as an itching skin, or of a thief, or sot, or striker.

"Nature is the memory of the mind, said A. But come how it will, the only men of any account in nature are the three or five we have beheld who have a will. Then we say, here is a man, and men obey him; his body is sweet, and not putrid like others; his words are loaded, and all around him is eventful. Come, then, count your reasons.

"1. The belief in Fate is unwholesome, and can only be good where it teaches the strength of nature to man.

"2. We only value a stroke of will; he alone is happy who has will; the rest are herds. He uses, they are used.

"3. This will derives from the aboriginal nature, is perception of the Eternal Necessity.

"It rests on God himself, and that is its power to shock, that it betrays his presence in this loafer; but it winds through dark channels, and one knows not how it arrived here.

"It is a sharing of the true order of the world, and a push in that interest and direction. It is born freedom in the intellect. On that bright moment when we are born into thought, we are instantaneously uplifted out of the rank we had. Now we are of the maker, not of the made. Now all things have such a look as the horse has which we drive.

"Perception distances this mob which so rubbed against us.

"But is there not another element, or, people who are strong through love alone?"

The essay on "The Tragic," in *Natural History of Intellect*, also deals with the question of Fate.

In conclusion, here are some sentences which may serve as a "practical application" of Emerson's sermon on Faith:—

1852. "Never was anything gained by admitting the omnipotence of limitations.

"The only interest the word Fate ever has for us is when the man hears expressions like these:—

"You come to your fate by the efforts you make to escape it.

"In seeing him or her I met my fate.

"You carry Cæsar and his fate.

"My task is my insurance.

"In my youth I was protected from dangers in a wonderful manner. My eyes were holden that I could not see."

POWER

"IT WAS Watt who told King George III. that he dealt in an article of which kings were said to be fond,—Power." Thus Mr. Emerson begins a chapter on Inspiration in a later volume. But he knew that there were many degrees of power, and the present essay deals with the degrees more like those which Watt had in himself, and those which he had for sale, and does not present all the aspects. In the last pages, where the essay usually ascends, he expressly reserves the higher considerations, saying, "There are sources on which we have not drawn. I know what I abstain from. I adjourn what I have to say on this topic to the chapters on Culture and Worship." But the lower forms of power only symbolize the higher, and to all one law is common. Of the preceding lecture he wrote:—

"Why preach to us the doctrine of Fate? Because under that form we learn the immutability and universality of law."

The doctrines of the conservation and correlation of force were early recognized by him, and their working watched with delight, alike in mind and matter.

Silent rushes the swift Lord
Through ruined systems still restored.

Man had only to open his sluiceways, great or small, to have his share of the beneficent power. The ancient doctrine of the Flowing was akin to this. Man had but to recognize the stream of law, and go with its tide. But "brute force" was hardly a fit word for manifestations in man or nature which were only low forms of the subtle and beautiful Power that the fable of Proteus symbolized to the Greeks. "Our power consists not in abolishing, nor in creating, but in transference merely," Emerson once wrote.

In the verse which serves for motto the range of power in man is limited.

N1201: "My hand of iron," he said, "was not at the extremity of my arm, it was immediately connected with my head."—*Representative Men*.

N1202:

And I, who cower mean and small
In the frequent interval
When wisdom not with me resides,
Worship Toil's wisdom that abides.

"Fragments on The Poet," *Poems*, Appendix.

N1203: In the notebook "Auto" in which Mr. Emerson wrote down a few experiences and thoughts concerning himself, and criticisms, just or amusing, made by others, are several entries to this purpose: "I cannot live as you do. It is only by a most exact husbandry of my resources that I am anybody." And again:

"Insufficient forces. We have experience, reading, relatedness enough,—Oh, yes, and every other weapon, if only we had constitution enough; but as Dr. Warren said in my boyhood, 'You have no *stamina*.'"

N1204:

With the key of the secret he marches faster,
From strength to strength, and for night brings day;
While classes or tribes, too weak to master
The flowing conditions of life, give way.

"Fragments on Life," *Poems*, Appendix.

Journal, 1851. "We think the event severed from the person, and do not see the inevitable tie. It is like the *nudicaulis* plant,—the leaf invariably accompanies it, though the stems are connected underground."

N1205: The Brunels, father and son, were eminent mechanical engineers in England, and living during Mr. Emerson's visits in 1833 and 1848. The elder, among many other great works, won distinction by tunnelling below the Thames, the younger by his great tubular bridges, and the Great Eastern, by far the largest steamship built up to his day.

N1206: "My young friend believed his calling to be musical, yet without jewsharp, catgut or rosin. Yes, but there must be demonstration. Look over the fence yonder in Captain Abel's land. There's a musician for you, who knows how to make men dance for him in all weathers; and all sorts of men, paddies, felons, farmers,

carpenters, painters, yes, and trees and grapes and ice and stone, hot days and cold days. Beat that, Menetrier de Meudon, if you can. Knows how to make men saw, dig, mow and lay stone wall, and how to make trees bear fruit God never gave them, and grapes from France and Spain yield pounds of clusters at his door. He saves every drop of sap as if it were his own blood. His trees are full of brandy, you would think he watered them with wine. See his cows, see his swine, see his horses,—and he, the musician that plays the jig which they all must dance, biped and quadruped and centipede, is the plainest, stupidest looking harlequin in a coat of no colours. But his are the woods and the waters, the hills and meadows. With a stroke of his instrument he danced a thousand tons of gravel from yonder blowing sand-heap on to the bog-meadow beneath us, where now the English grass is waving; with another he terraced the sand-hill and covered it with peaches and grapes; with another he sends his lowing cattle every spring up to Peterboro' to the mountain pastures."—Journal.

N1207: *Primi in proeliis oculi vincuntur.*—Tacitus.

N1208: In "Considerations by the Way," and even in "Worship," in this volume, Mr. Emerson counts health as a foundation-stone: "In laying down the first obvious rules for life... I will say, Get health. No labor, pains, temperance, poverty, nor exercise that can gain it must be grudged. For sickness is a cannibal which eats up all the life and youth it can lay hold of."

N1209: Judge Emmons of Michigan, during Mr. Emerson's lecturing trip there in 1856.

N1210: Returning from California in the spring of 1871,—whither he had gone with a pleasant party, the guests of Mr. John M. Forbes,—Mr. Emerson, with others, called upon Brigham Young in Salt Lake City, and saw and listened to him with interest. His friend, the late Professor James B. Thayer, describes the interview in *A Western Journey with Emerson*.

N1211: Journal, 1857. “‘Somme toute,’ said Mirabeau, ‘il n’y a que les hommes fortement passionnés capable d’aller au grand; il n’y a qu’eux capable de mériter la reconnaissance publique.’

“I fancy the Americans have no passions also, only appetites.”

N1212: In the years during which these lectures were read, before their publication, the spiritless concessions to the slaveholding States, in the interest of trade, were mortifying to the quick conscience of New England. Mr. Emerson, when John Gorham Palfrey, through his opposition to these, had lost his seat in Congress, and was nominated for governor of Massachusetts by the Free-Soilers, had spoken in several places in his behalf, especially denouncing Daniel Webster’s recreancy to the cause of human freedom.

It was at this epoch that Lowell, in his *Biglow Papers*, made Hosea Biglow, his rustic mouthpiece, cry out,—

“Massachusetts,—God forgive her,—
She’s a kneelin’ with the rest!”

N1213: Mr. Emerson always had kindly and respectful relations with the Shakers at Harvard and Sterling near by, but he said he thought that he saw this utterance of his reflected on the faces of some of the worthy elders he met in the cars.

N1214: This picture of Boniface was partly suggested by the traits of a Concord publican, but to make it typical the colors are perhaps heightened, and the misdeeds of the underlings added to those of the chief. On one occasion these losels put up a scurrilous sign in the middle of the village, reflecting on the character of the honorable and excellent Dr. Bartlett, the leading physician, who had been very active in the temperance cause. The people saw it, and laughed or were pained, but it remained undisturbed until Mr. Emerson, coming to the post-office, saw it. He stopped and read the inscription, then beat it with his cane until he broke it down, and went on his way. In the afternoon a new board hung there with a rude picture of a man with hooked nose, tall hat and cane, and the inscription "Rev. R. W. E. knocking down the sign." It stayed there some hours before he found a champion.

N1215: All of which was amusingly set forth in Mr. Lowell's *Biglow Papers* by his Mexican War private, Birdofreedom Sawin.

N1216: The image is from La Fontaine's fable of the Viper and the File.

N1217: See the quatrain "Power" in the *Poems*.

N1218: Here one traces Mr. Emerson's reading, in *Downing on Fruits*, of the Van Mons theory of amelioration of pear-trees: that the best varieties could be produced from thrifty wild stock in a "state of variation."

N1219: Compare the passage in *English Traits* in which he speaks of the men of the Elizabethan period, and the paragraphs in the first part of "Aristocracy" (*Lectures and Biographical Sketches*)

where he speaks of the Gentleman and the "secret homage to reality and love which ought to reside in every man,...the steel hid under gauze and lace, under flowers and spangles."

N1220: Chaldaean Oracle, attributed to Zoroaster.

N1221: This is the theme of his poem "The Day's Ration," and is also found in "Terminus."

N1222: "Power is never far from Necessity" is a saying of Pythagoras noted by Emerson.

N1223: Basil Hall (1788–1844) was bred in the British Navy, in which he rose to the command of a vessel, and afterwards wrote many books, mostly on his travels.

N1224: Mr. Emerson valued highly good reading or recitation of poetry, and not only liked to exercise his children in it, but would practise again and again the delivery of a piece which he was to read in a lecture. When he meant to introduce William Allingham's beautiful poem, "The Touchstone," into a lecture to a class in Boston, he was delighted to find how much better it seemed at each rehearsal.

N1225: This was Mr. William Ellery Channing, whom Mr. Emerson found a most original and entertaining walking companion, with a wonderful eye for beauty.

Journal, November 17, 1849. "Walked over hill and dale with Channing, who found wonders of colour and landscape everywhere, but complained of the want of invention. 'Why, they had frozen water last year; why should they do it again? Therefore

it was so easy to be an artist, because they do the same thing always, and therefore he only wants time to make him perfect in the imitation, and I believe too that *pounding* is one of the secrets.”

N1226: “Democritus of Abdera in Thrace (420 B.C.), the most learned of the Ionian physicists and the head of the ancient and modern materialistic school.”—Weber’s *History of Philosophy*.

N1227: In the poem “Nature,” II., it is told of men:—

What’s most theirs is not their own,
But borrowed in atoms from iron and stone,
And in their vaunted works of Art
The master-stroke is still her part.

N1228: This moral of the Days, though differently drawn, suggests the poem of that name which Mr. Emerson considered perhaps his best.

WEALTH

IN MR. Emerson's lecture called "Boston,"⁶⁹ this sentence occurs: "Wealth is always interesting, since from wealth power cannot be divorced." Hence this chapter, "Wealth," is interposed between "Power" and "Culture:" and power is often the seed of culture, its getting being a kind of education. One learns at least the primary fact, *nothing for nothing*. He wrote in his journal in the autumn of 1838, "Property is somehow intimately related to the properties of man, and so has a sacredness." Of its necessary association, in low or high forms, with man, he tells in the motto to "Compensation:"—

Man's the elm and Wealth the vine;
Stanch and strong the tendrils twine:
Though the frail ringlets thee deceive,
None from its stock that vine can reave.

.

Laurel crowns cleave to deserts,
And power to him who power exerts,

⁶⁹ Included in the volume *Natural History of Intellect*.

Hast not thy share? On wingèd feet,
Lo! it rushes, thee to meet.

In his essay on the kindred theme, "Prudence," he indicates the degrees of proficiency in the knowledge of the world: "One class live to the utility of the symbol, esteeming health and wealth a final good. Another class live above this mark to the beauty of the symbol, as the poet and artist and the naturalist and man of science. A third class live above the beauty of the symbol to the beauty of the thing signified; these are wise men."

The conditions of Mr. Emerson's life were such as he would have chosen. The comparative poverty of the family after his father's death led to the plainest living and simple habits, and to a sense of responsibility and helpfulness for others. It knit the family bond closer, yet, thanks to generous friends and kindred, and to Madam Emerson's good management and exertions, faithfully helped by all her sons, the poverty was neither sordid nor extreme, and the boys were well educated, each, in turn, helping the other. Thus while they received the education of self-help, they duly prized their literary education and made the best of it, and their self-respect grew and their gratitude was awakened.

The accessions of property that came to Mr. Emerson in his early married life were neutralized by losses through an unfortunate investment, through fraud of trusted agents, and always by his own silent and large liberality to "his poor," and to causes that seemed commanding, in which he was nobly seconded by his wife. So in every year of his active life he had no choice but to work hard to keep clear of debt, yet not quite so hard as to distress him or disturb his thoughts. All through his life he exercised a wide but simple hospitality.

When his forces suddenly failed him at the time of the burning of his house in 1872, his wide circle of friends mustered with instant

and Oriental generosity to his aid. The gift was so lovingly and delicately urged upon him by their well-chosen ambassadors, that he really could not refuse, yet he hesitated, saying 'that he had been allowed so far in life to stand on his own feet.' This gift really prolonged his life and saved his peace of mind during the remaining ten years, for he was no longer fit for the lecturing trips on which he depended, and the amount then received from his books was inadequate.

Some of Mr. Emerson's ideas of what the riches of a householder should be occur in the early journals and are printed in the books. Two are given here in the original form:—

1842. "Rich, say you? Are you rich? how rich? rich enough to help anybody? rich enough to succor the friendless, the unfashionable, the eccentric? rich enough to make the Canadian in his wagon, the travelling beggar with his written paper which recommends him to the charitable, the Italian foreigner with his few broken words of English, the ugly lame pauper hunted by overseers from town to town, even the poor insane or half-insane wreck of man or woman, feel the noble exception of your presence and your house from the general bleakness and stoniness; to make such feel that they were greeted with a voice that made them both remember and hope? What is vulgar but to refuse the claim? What is gentle but to allow it?"

And again he thus described his ideal man with a wider charity: "Osman had a humanity so broad and deep that...there was never a poor outcast, eccentric or insane man, some fool with a beard, or a mutilation, or pet madness in his brain, but fled at once to him. That great heart lay there so sunny and hospitable in the centre of the country. And the madness which he harbored he did not share. Is not this to be rich,—this only to be rightly rich?"

Here also is a characteristic estimate of what is wealth: "There is no rich man like the self-reliant: this is royalty, he walks in a long street. Once for all he has abdicated second-thoughts, and asks no leave of others' eyes, and makes lanes and alleys palatial."

N1229: The Michigan Central was then a pioneer railroad in the far West. Among the men whose energy and good heads built it up, and who grew with it, were youths from the shops and farms of Concord and neighboring villages, John W. Brooks, Reuben N. Rice, the Hurd brothers and others. From them Mr. Emerson, on his Western lecturing ventures, heard with pleasure of their good work as business men and citizens, and received kindly furtherance and aid in emergencies.

N1230: Dr. Holmes said that Franklin might have accepted this essay "as having a good sense so like his own that he could hardly tell the difference between them," and quotes this paragraph as an instance.

N1231: Of wealth unearned he wrote in the journal of 1839: "The rich man will presently come to be ashamed of his riches when he sees he has any accidental advantage which takes away all the praise of every good thing he does. The race is run by no skill or strength of his, but by the sinews of his good horse. The serene and beneficent life he leads solves the problem of life for nobody but the rich. His wealth then, if not the earnings of his own sweat, is his back-biter and enemy in all men's ears."

N1232: Mr. Emerson used to quote the passage where Lear's daughters are reducing his retinue of knights. Finally Regan asks, "What need one?" and the old king cries out:—

"O, reason not the need: our basest beggars
Are in the poorest thing superfluous:
Allow not nature more than nature needs,
Man's life is cheap as beast's. Thou art a lady;
If only to go warm were gorgeous,
Why, nature needs not what thou gorgeous wear'st,
Which scarcely keeps thee warm."

King Lear, Act II., Scene 4.

N1233: In Illinois, Mr. Emerson was surprised and interested to learn that the first settlers were not, as might have been supposed, practical men, but visionaries. They took the risk, the hardship and the loss, and a later wave of cautious or worldly-wise people reaped the benefits.

N1234: Baron Denon was the artist and archæologist who accompanied Bonaparte in Egypt, and wrote a book on the country and its antiquities, illustrated by himself. Later the Emperor made him Inspector General of the Museums, and he accompanied Napoleon in his campaigns, selecting the works of art to be carried to Paris. William Beckford (1760–1844) was a romantic author; also a collector and virtuoso. His best known work was *Vathek*. He built Forthill Abbey, and the fairy palace at Cintra referred to in *Childe Harold*. Belzoni (1778–1823), an Italian of humble origin and romantic history, became a successful excavator and explorer of Egyptian tombs and temples, going as far as Assouan and Philæ. Sir John Wilkinson was the author of *Manners and Customs of the Ancient Egyptians*. Austen H. Layard was the great explorer of the Mound of Nimrud and of Babylon, who brought the Assyrian Sculptures to the British Museum. The

Arctic explorations of Dr. Kane, the wanderings of Dr. Livingstone in Africa, and the Egyptian researches of Lepsius are well known.

N1235: Journal, 1838. "All that Shakspeare says of the king, the reader—the humblest boy—feels to be true of himself. So we honor the rich because they have the freedom, power and grace which we feel to be proper to men, proper to us."

N1236: In the latter part of his life Mr. Emerson bought a very small but excellent telescope, with a legacy left him by a near friend.

N1237: He never renounced the hope that he might hear and understand good music, yet I think the fact was, that only singing really interested him, and then only if the singer had the power of rendering the poetry as well as the music of the song.

N1238: Compare the poem "Fate," beginning,

Deep in the man sits fast his fate.

N1239: Soon after the raid of John Brown on Harper's Ferry, the bailiffs of the United States Marshal endeavored to seize Mr. F. B. Sanborn of Concord at his house, at midnight, he having neglected a summons to appear at Washington to testify before a committee of investigation. The townspeople promptly mustered and rescued Mr. Sanborn from his captors. At that time Mr. Emerson wrote in his journal (possibly quoting from some one else) that a house in Concord was worth twice as much as one in another town, now that it was shown that the people would defend each other.

N1240: Journal, 1859. "Among the moral relations of the Subject, a chief one is the fact, that credit will be as is the morality of a community.

"A profession,' said the Welsh bard, 'is calculated for society, a treasure-bag for exile!'"

N1241:

We grant no dukedoms to the few,
We hold like rights, and shall;—
Equal on Sunday in the pew,
On Monday in the mall.

"Boston," *Poems*.

Hast not thy share? On wingèd feet,
Lo! it rushes, thee to meet.

"Compensation," *Poems*.

N1242: The St. Michael's and the Bergamot pears, in the spacious gardens of old Boston, were highly prized in Mr. Emerson's boyhood, but failed in his garden, and everywhere, by the middle of the century, and are now probably extinct.

N1243: It is suggested by Professor John H. Wright that Mr. Emerson may here allude to a verse from Epicharmus, preserved by Xenophon in his *Memorabilia*, II. 1. 20:—

Τῶν πόνων πωλοῦσιν ἡμῖν πάντα τ'ἀγάθ' οἱ θεοί,

Work is the price for which the gods sell us all our blessings.

N1244: The microscope had recently shown the cell as a component of all animal tissues, and it appears that the various shapes of cells, with their nuclei and prolongations, were unpleasantly suggestive of spiders or polyps.

N1245: Wordsworth's description of his Happy Warrior, as one

"Who comprehends his trust, and to the same
Keeps faithful with a singleness of aim,"

expresses a favorite rule of Mr. Emerson.

N1246: There is much to this purpose in "Aristocracy," in *Lectures and Biographical Sketches*, and "Greatness," in *Letters and Social Aims*.

N1247: A characteristically handsome concession in accordance with the doctrine of Compensation.

N1248: Mr. Emerson knew well that his temperament and genius were not adapted to work in every organization, social or other. He wished well to Brook Farm and the societies, but kept wisely free from them, and lived the life to which he was born.

N1249: He was a most unskilful gardener and knew little of the farmer's practical economies, though he admired these and wrought them into his writings. In the early days of his Concord housekeeping he worked in his little vegetable garden, but needed the counsel and help of his good friends, Henry Thoreau and George P. Bradford, whose works somehow prospered better than his. Needing more elbow-room, and desiring an orchard,

cornfield and larger vegetable garden, Mr. Emerson gradually increased the house-lot to nearly ten acres and employed a man to care for them. The tulips, hyacinths, roses, lilies and hollyhocks, which Mrs. Emerson brought from Plymouth and gave freely of to her neighbors, usurped the places in the first garden, and her husband planted apple and pear trees, and thereafter confined his attentions to them. They insured him sun and air for nearly an hour after breakfast before going to his study. Then he found that his real garden, where the wood-gods spoke, was by Walden.

N1250: "A man's money should not follow the direction of his neighbor's money....My expenditure is me. That our expenditure and character are twain is the vice of society."—"Domestic Life," *Society and Solitude*.

The latter pages of "Prudence," in *Essays, First Series*, treat of proper expenditure.

N1251: This, of course, was a main cause of the failure of the community at Fruitlands. The humane objection of Mr. Alcott and his friends to killing cattle or enslaving them for farm work, or robbing the cow of her calf, or befouling the soil with animal manure, reduced farming to spading and hoeing, and to ashes and meadow-muck for dressing, with disastrous result.

N1252: The essay on "Farming," in *Society and Solitude*, originally a Cattle-Show Address in Concord, shows Mr. Emerson's interest in his neighbors' magic. Some years earlier he wrote for the *Dial* a paper on "Agriculture of Massachusetts," which is included in the volume *Natural History of Intellect*. This was the result of a talk with his friend Mr. Edmund Hosmer, a careful farmer of the old school.

N1253: Most householders in the country not bred to farming soon learn, as did Mr. Emerson, a more obvious way of applying this counsel (of Bacon's?), *Impera parendo*, *Command by obeying*, namely, the learning from the hired man, by questionings veiled as much as possible, what ought to be done,—and then ordering him to do it.

The expression used below, that "things themselves refuse to be mismanaged," comes from one of his favorite Latin proverbs, *Res nolunt diu male administrari*.

N1254: In Mr. Cabot's *Memoir of Emerson* (vol. ii., p. 512), a letter is printed in which Mr. Emerson tells of his dining with the elder Stephenson and of being much interested in him.

In the "Woodnotes," II., Mr. Emerson wrote,—

The rain comes when the wind calls;
The river knows the way to the sea;
Without a pilot it runs and falls,
Blessing all lands with its charity.

N1255: The following extract concerning the materialistic spirit and temperament comes from the journal of 1842:—

"It is only a young man who fancies there is anything new in Wall Street. The merchant who figures there so much to his own satisfaction, and to the admiration, or fear, or hatred of younger or weaker competitors, is a very old business. You shall find him, the whole concatenation of his opinions, the same laughter, same knowingness, same unbelief, and the same ability and taste, in Rabelais and Aristophanes. Panurge was good Wall Street. Pyrrhonism and transcendentalism are just as old: and I am persuaded

that, by and by, we shall find them in the chemical elements, as if excess of oxygen makes the sinner and of hydrogen the saint."

N1256: In the latter pages of the shorter essay "Nature," in *Essays, Second Series*, is a passage concerning aimless wealth. In "The Scholar," in *Lectures and Biographical Sketches*, it is told how the proud landlord who has built his palace beseeches Genius, the harmless poor man, "to make it honourable by entering there and eating bread;" and again, as "there was never anything that did not proceed from a thought,...the unmentionable dollar itself has at last a high origin in moral and metaphysical nature." Last, in the essay "Domestic Life," in *Society and Solitude*, it is said that wealth may be welcomed as "the means of freedom and benefit," but that it must keep its humble place, for "these so-called goods are only the shadow of good....We owe to man higher succors than food and fire. *We owe to man, man.*"

CULTURE

MR. EMERSON reserved his words on the higher and highest aspects of Power for this and the succeeding essay. Culture, as the corrective of Wealth and the preparation for Behavior, rightly took its place between the essays thus named.

It is interesting to find in the eleven lines of the motto these favorite beliefs of Emerson; temperament, polarity, the listening, the teachings of solitude and society, reliance on the inspired self, evolution, the flowing, Each and All. Or, to put it differently, he teaches that the perfected man must be, like a compass-needle, delicately responsive to the currents that rule alike in matter and spirit; that he must be open to the influences of Nature and Humanity, and yet, following his proper genius, help on the ascending Creation by the divinity which is in him.

N1257: Mr. Emerson, always urging the individual to remember that he is a special channel for the flow of power or grace from the universal source, has scattered through notebooks much under the headings *Bias* and *Temperament*, often almost seeming equivalent to *Fate*; as, for instance, this passage from the Koran: "If ye hear

that a mountain has changed its place, believe it: but if ye hear that a man has changed his disposition, believe it not." But there is a more cheerful view in such entries as the following: "Was not this Bias a dainty invention whereby the old worn world and every particle of it should be made wholly new material for you?" This thought seems to have been taken as a higher application of that concerning "the dew whereby the old, hard, peaked earth is made new each morning and shining with the last touch of the Artist's hand." (See "Literary Ethics," *Nature, Addresses and Lectures*.)

N1258: Fouché, Napoleon's Minister of Police.

N1259: In the journal for 1841 Mr. Emerson says, "I weary of dealing with people, each cased in his several insanity;" and, speaking of one, of the many who then sought him from afar, whom kindness and respect for his character prevented him from holding at arm's length, adds, "I am not large man enough to treat him firmly and unsympathetically as a patient, and if treated equally and sympathetically as sane, his disease makes him the worst of bores." They would not let the Universal, only the particular mind manifest itself in them.

N1260: With this may be compared the counsel to all persons not to talk of their ailments, to be found in the last pages of "Behavior."

N1261: In "Character," in *Essays, Second Series*, is given the fine answer of Father Taylor, of the Seamen's Bethel in Boston, to the admonitions of a Doctor of Divinity. "My friend," he said, "a man can neither be praised nor insulted."

N1262: Of a fine girl of so independent and original a character that her conventional friends were troubled, he wrote, "O maiden, come into port grandly, or sail with God the seas."

N1263:

Denounce who will, who will deny,
And pile the hills to scale the sky;
Let theist, atheist, pantheist,
Define and wrangle how they list,
Fierce conserver, fierce destroyer,—
But thou, joy-giver and enjoyer,
Unknowing war, unknowing crime,
Gentle Saadi, mind thy rhyme;
Heed not what the brawlers say,
Heed thou only Saadi's lay.

"Saadi," *Poems*.

N1264: In the English notebook, Mr. Emerson wrote, "An American, like a German, has many platforms of thought, but an Englishman requires to be treated with tenderness if he wishes to climb."

N1265: Mr. Emerson's guests, especially the younger ones, remembered how he drew them out in conversation and assumed their intelligence and virtue,—even their superiority. In conversation, as in the essays, he was always ready to ascend to a new floor and hoped that the new-comer might lead the way.

N1266: The methods of the American horse-tamer and trainer, Rarey, were attracting great attention here, and even

more in England, shortly before the publication of this book. And Mr. Emerson read with interest the accounts of these humble applications of great laws.

Journal, 1861. "Yesterday I saw Rarey's exhibition in Boston. What a piece of clean good sense was the whole performance, the teaching and the doing. An attack on the customary nonsense of nations in one particular."

N1267: He called those people who wearied him with their conceits "monotones." "Tea, coffee, music, the press, tobacco, dancing, have been in turn denounced as the sole source of social and political degeneracy," he writes in 1832; and again, "But I dread autobiography, which usurps the largest part, sometimes the whole of the discourse of very worthy persons whom I know."

N1268: "Who is the cultivated man? He who can tell me something of Shakspeare that I did not know, but perceive at once to be true.

"'There is the same difference between one learned and one unlearned,' said Aristotle, 'as between the living and the dead.'"

N1269: The conditions of the early life of Mr. Emerson and his brothers were such as to debar them from "the accomplishments," and he felt their importance, within due bounds, in the bringing up of young people. He himself always had suffered far more than appeared from a sense of awkwardness in company, and "to know how to enter a roomful of people properly," if nothing else, he felt to be worth courses at a dancing-school. The riding of his forefathers' days had given place in his own to travel by stage or chaise, so that he was never proficient, but it appealed to his imagination and also he felt it an admirable "lesson in the

art of power," so he took pains that his children should ride. The quotation is from the remarkable autobiography of Edward Lord Herbert, elder brother of George Herbert the poet, a book which Mr. Emerson valued.

N1270: It was always hard for Mr. Emerson to visit or to take a vacation. Even when he yielded to the urgency of valued friends, his visits were but for a day or two, and then, if any opportunity offered, he would wander off alone to listen to the voice of the woods or of the ocean. His work, he felt, justified his existence, and he must not let slip the gift of each new day. He also felt that he must not defraud his hosts of its gift to them. He said

That each might in his house abide,
Therefore was the world so wide.

N1271:

I travelled and found it at Rome;

.

And it lay on my hearth when I came home.

"Fragments on The Poet," *Poems*, Appendix.

N1272: Mr. Alcott's⁷⁰ virtue and genius were born in him, and he learned little from the world. Yet he, like many other New England youth, travelled in the South peddling, according to the demands of his customers, education, or "Yankee notions" in the Connecticut sense, among the country towns and plantations. An

⁷⁰ A. Bronson Alcott, *his Life and Philosophy*, by F. B. Sanborn and William T. Harris. Boston: Roberts Brothers, 1893.

exceedingly interesting account of these experiences is found in his biography.

N1273: When invited to come to read lectures in England in 1847 he wrote to Carlyle: "This pleasing dream of going to England dances before me sometimes. It would be, I then fancy, that stimulation which my capricious, languid and languescent study needs. At home no man makes any proper demand upon me, and the audience that I address is a handful of men and women too widely scattered than that they can dictate to me that which they are justly entitled to say."

N1274: The anæsthetic effects of sulphuric ether were discovered by Dr. Charles T. Jackson of Boston, the brother of Mrs. Emerson, by experiments upon himself. In 1846, he suggested to Mr. W. T. G. Morton, a dentist who had been his pupil, the value of this agent in surgery. After successfully using it in extraction of teeth, Mr. Morton brought it to the notice of Dr. J. C. Warren of the Massachusetts General Hospital, where the first surgical operations were successfully performed without pain, or consciousness to the patient, Mr. Morton administering the ether.⁷¹

N1275: The need of access to the woods and waters of a quiet country village, yet not too far from the city, led Mr. Emerson to settle in the ancestral town. Yet the building of the Fitchburg Railroad in 1844 was a great boon to him, not only for his travel when lecturing, but for access to the libraries of the Athenæum and Harvard College, and the occasional meeting of stimulating friends at the Town and Country Club, and later the Saturday Club.

⁷¹ See "History of the Discovery of Painless Anæsthesia," by E. W. Emerson, in the *Atlantic Monthly*, Nov., 1896.

N1276: John Aubrey (1625–97), the English antiquary and writer. Among his works were *Letters written by Eminent Persons in the Seventeenth and Eighteenth Centuries*, consisting of memoirs of English poets, and a *Life of Hobbes*, neither published during his lifetime.

N1277: Of Emerson's poet, who, he says,—

Loved harebells nodding on a rock,
A cabin hung with curling smoke,
Ring of axe or hum of wheel
Or gleam which use can paint on steel;—

he goes on to tell,—

Nor loved he less
Stately lords in palaces,
Princely women hard to please,
Fenced by form and ceremony,
Decked by courtly rites and dress
And etiquette of gentillesse.

N1278: The more particularized form of some of these sentences in the journal (1850) may be of interest: "Call yourself preacher, peddler, lecturer, tinman, grocer, scrivener, jobber, or whatever lowest name your business admits, and leave your lovers to find the fine name.... How the curiosity is piqued by anecdotes of a man in plain gray clothes being Rufus King; of General Taylor's slouching farmer dress and averseness to regimentals; of Webster in broad straw hat and fisherman's gear at Marshfield; of Napoleon in plain suit in his glittering levee."

For still the craft of genius is
To mask a king in weeds.

Quatrain, "Poet," *Poems*.

N1279: From "The Tamer Tamed," Beaumont and Fletcher.

N1280: Whilst Mr. Emerson was still held fast in the town as a preacher, away from the country, he wrote (1833): "If a man loves the city, so will his writings love the city; and if a man loves sweet-fern his writings will smell of it." From the car windows he could see his woods on Walden Ledge, and he said, "When I pass them on the way to the city, how they reproach me!"

N1281: From Béranger's *Les Mirmidons, ou les Funérailles d'Achille*.

N1282: Mr. Emerson ate what was set before him with natural appetite, but was simple in his tastes. If he spoke of a dish it was to praise it in an amusing manner, never to find fault with it. He discredited all special rules in diet, believed that a feast or dinner-party was a valuable contrast occasionally to simple fare, which he considered more elegant. He set wine before his guest, and took one glass with him. Discussions on the digestibility of food, he promptly suppressed, and if its composition was mentioned, he broke in with "Oh no! it is made of roses," or "It is a beautiful crystallization."

N1283: At one time there was but one greatcoat among the Emerson boys, and their schoolfellows recognized it, and would cry, "This is Ralph's day! To-morrow it will be Edward's turn!"

N1284: The lines in the "Woodnotes," ll., here come to mind, beginning—

Whoso walketh in solitude,
And inhabiteth the wood,...
Into that forester shall pass,
From these companions, power and grace.

N1285: His rules to the earnest student have been often mentioned: *Room alone. Keep a Journal.*

N1286: In the journal for 1850 this passage uses Tennyson's name where "Curfew" occurs in the essay, but merely in the abstract, with no personal application.

N1287: "I find a mitigation or solace by providing always a good book for my journeys, as Horace, or Martial, or Goethe,—some book which lifts me out of prosaic surroundings, and from which I draw some lasting knowledge. A Greek epigram out of the anthology, a verse of Herrick or Lovelace, are in harmony both with sense and spirit."—"Inspiration," *Letters and Social Aims*.

N1288: This extract, on the opening of the poet's eyes to the universal order and beauty, is from the journal of 1841: "You defy anybody to have things as good as yours. Hafiz defies you to show him or put him in a condition inopportune and ignoble. Take all you will, and leave him but a corner of nature, a lane, a den, a cow-shed, out of cities, far from letters and taste and culture; he promises to win to that second spot the light of moon and stars, the love of men, the smile of beauty, the homage of art. It shall

be painted, and carved, and sung, and celebrated, and visited by pilgrimage in all time to come."

N1289: Anaxagoras, the Ionian philosopher, came to Athens and did much to elevate the religious conceptions of the better class. He taught that God was the Divine Mind, explained the higher meaning of the mythology and opposed superstition, showing that prodigies were to be explained by natural causes. He showed the reason of eclipses. Popular feeling against his heresies caused his condemnation to death, but Pericles had his sentence commuted to banishment to Lampsacus, where he died, poor, but honored.

N1290: Ben Jonson's *Epigram LXV*, "To my Muse."

N1291: See the motto "Heroism" in the *Poems*.

Rose and vine-leaf deck buffoons;
Thunder-clouds are Jove's festoons,
Drooping oft in wreaths of dread,
Lightning-knotted round his head;
The hero is not fed on sweets,
Daily his own heart he eats;
Chambers of the great are jails,
And head-winds right for royal sails.

N1292: Dr. Holmes in his story of *Elsie Venner* dwells much on this necessary ripening of the rude blood through three generations as qualifying for the "Brahmin Caste" of New England. In the journal for 1851, Mr. Emerson made this note:—

"In 'Natural Aristocracy,' or in 'Culture,' it needs to say, that the instinctive belief of mankind in melioration is plainly indicated in the care which each auto- or (alto-) biographer takes to show that the herd came of good blood; came of 'kenned folk;' that his ancestor was a gentleman two hundred years before."

N1293: The doctrines of Amelioration and of Evolution so welcome to Emerson appear in a passage in the journal of 1851, in which he likens man, built up out of material of past animal life, to the sword-blades of Damascus, thus:—

"I wish I could get the fact about horse-shoe nails which, after being hammered and worn and recast and hammered and worn, are made up into Damascus steel, which is thus a result and simmering down and last possibility of iron. I believe the tradition is fabulous, but such in nature are men, made up of monads, each of which has held governance of fish or fowl or worm or fly, and is now promoted to be a particle of man."

The following definition of Culture is from the journal of 1851. A similar passage occurs in "Natural History of Intellect" in the volume of that name.

"Culture, the height of Culture, highest behaviour, consists in the identification of the Ego with the Universe, so that when a man says, I think, I hope, I find,—he might properly say, the human race thinks, hopes and finds,—he states a fact which commands the understandings and affections of all the company, and yet, at the same time, he shall be able continually to keep sight of his biographical Ego. I had an ague, I had a fortune, my father had black hair, etc., as rhetoric, fun or footman to his public *Ego*, without impertinence or even confounding them."

N1294: Mr. Emerson's method of dealing with the problem of Evil in the world, his security of faith that even the Furies and the hells are transient phases in a slow but sure ascension,

Lifting better up to best,

recalls an expression of Mr. Woodbury's, in his excellent little book,⁷² with regard to the different weapons which Carlyle and Emerson used against falsehood, "which they destroyed, the one with lightning and the other with light."

⁷² *Talks with Emerson*, by Charles J. Woodbury. New York: Baker & Taylor Co.

BEHAVIOR

"How near to what is good is what is fair!
Which we no sooner see,
But with the lines and outward air
Our senses taken be."

These lines of Jonson express the charm which the graces had for the solitary New England scholar who believed himself sadly deficient in them. He used these verses as the motto to what a writer in a recent journal has called "his fine essay on Manners, which was the first study for his finer essay on Behavior." The allusion, in the last lines of the motto of this essay, to Endymion, whom sleeping the moon stooped to kiss, leaving the influence of that benediction while life lasted, is a statement of the author's own case. It recalls the opening verses of the "Ode to Beauty," written perhaps ten years earlier.

N1295: George Sand's novel *Consuelo* was one of the few novels read and valued by Mr. Emerson, who alludes to it in the essay on "Books," in *Society and Solitude*, and in *Representative Men*.

Talma was an actor of great dignity and grace.

N1296: In the *Dial*, in 1842, Mr. Emerson printed some verses called "Tact," which, though appearing in the first edition of the *Poems*, were so little poetical that he did not choose to keep them in the latest editions. Two verses are here given:—

What boots it thy virtue?
 What profit thy parts?
 The one thing thou lackest
 Is the art of all arts.

.

This clinches the bargain;
 Sails out of the bay;
 Gets the vote of the senate
 Spite of Webster and Clay.

N1297:

I care not how you are dressed,
 In coarsest weeds or in the best;

.

But whether you charm me,
 Bid my bread feed and my fire warm me.

"Destiny," *Poems*.

N1298: Journal, 1855. "'T is a measure of culture, the number of things taken for granted. When a man begins to speak, the churl will take him up, by disputing his first words, so he cannot come at his scope. The wise man takes all for granted until he sees the parallelism of that which puzzled him with his own view."

Mr. Emerson was constantly annoyed by the discourtesy with which disputatious persons, or those who knew of no plane above that of the Understanding, attacked and baited Mr. Alcott from the outset in the "Conversations," so that he seldom was allowed to present his lofty and Platonic view to advantage. Mr. Alcott had no skill in dispute, even less than his friend, who found so much refreshment in the amplitude and height of his views, as presented in private, that he wished others should give the philosopher a fair hearing. Mr. Alcott's opponents were misled by the name "Conversations," which should have been "Philosophic Utterances."

N1299: Asmodeus, a demon mentioned in the Book of Tobit in the Apocrypha, and in the Talmud. The keeping him out of mischief by setting him to spin sand into ropes is alluded to in several places in Mr. Emerson's work, as in "Politics" and "Resources." In a fragment of verse he likens his own task of weaving his thoughts into a coherent tissue for an essay to that of this spirit.

The Asmodean feat is mine,
To spin my sand-heap into twine.

As for the "monotones," his fatigue found expression thus in the journal for 1855:—

"We are forced to treat a great part of mankind like crazy persons. We readily discover their mania and humor it, so that conversation soon becomes a tiresome effort. We humor a democrat, a whig, a rich man, an antiquary, a woman, a slaveholder and so on. All Dr.—'s opinions are incipient insanities, and not very incipient either."

And again of his troublesome guests, who sulked when not exclusively allowed the floor at a social gathering:—

"How I hate these past and future birds who frown and attitudinize in cheerful parlors."

N1300: The lecture on "Aristocracy" in *Lectures and Biographical Sketches*, though dealing with Natural Aristocracy, has interest in this connection.

N1301: John Quincy Adams is, without doubt, described in this passage. A very similar account of his appearance on public occasions is given by Mr. John T. Morse, Jr., in his biography of the younger Adams.

N1302: The Emir Abd-el-Kader, whose energy and courage made him for sixteen years a terror to the French army in Algiers, was finally captured in 1847. He became the friend of General Daumas, who edited an exceedingly interesting book entitled *Les Chevaux du Sahara*, in which he recorded what the Emir told him of the Arab horse, the tradition of his origin, the texts from the Koran concerning him, his breeding, treatment and performance, and also of the customs and modes of thought and action of the Arabs of the Desert. Mr. Emerson took great pleasure in this book.

N1303:

With beams December planets dart
His cold eye truth and conduct scanned.

Quatrain "S. H.," *Poems*.

N1304: In each of the poems on The Initial, The Dæmonic and The Celestial Loves are remarkable passages on the eyes and their powers. In the motto to the next essay in this volume it is said that the sentiment of worship, "miscalled Fate,"

greeted in another's eyes
Disconcerts with glad surprise.

N1305: Mr. Emerson's eyes were of a clear, rather dark blue. He looked his guest kindly and searchingly in the eyes on his arrival, but, in talking with him, he looked fixedly rather beside than at him, while answering his questions not directly, but suggestively. His look was not too personal to others. In lecturing, he kept his eyes for the most part on his manuscript, but, especially in a speech on some important public issue, he emphasized the strong sentences and made them far more telling by his steadfast forward look or sudden fearless glance.

N1306: The book of Winckelmann on Greek Art was often referred to by Mr. Emerson. Johann Caspar Lavater, the Swiss mystic, wrote a remarkable work on Physiognomy in men and animals, in which he pushed his theories to a ludicrous extreme. His *Physiognomische Fragmente zur Beförderung der Menschenkenntniss und Menschenliebe* was published in 1775–78.

N1307: "A man's attire, and excessive laughter, and gait, shew what he is."—Apocrypha, Ecclesiasticus xix. 30.

N1308: Louis de Rouvroi, Duke of Saint-Simon (1675–1755), a writer of interesting *Mémoires*, which because of their bold and satirical character did not obtain full publication until 1829. Jean

François Paul de Gondi, Cardinal de Retz (1614–79), a man of loose morals, but much ability, became Cardinal, and Archbishop of Paris. He had many vicissitudes of fortune, being an opponent of Richelieu and Mazarin, and had to take refuge in Spain for some years. His *Mémoires* cover an interesting period. Pierre Louis, Count Roederer (1754–1835), a man of letters who was a statesman of remarkable intelligence and address, which saved him, although of the moderate party, in the French Revolution, throughout which he was very active. Under Napoleon he occupied places of importance, but after the return of the Bourbons he devoted himself to literature. Among his writings are the *Chronique de Cinquante Fours* and *Mémoires pour servir à l'histoire de la Société polie en France*.

N1309: "What talent had this second Charles, that he could hold his place among the Wrens, Hooks, Newtons, Flamsteeds, Halleys, Bentleys, Pettys, Coventrys that clustered in his 'Royal Society,' and atone for the harpies and dragons and all unclean beasts which masqueraded in titles around him?"

During his lecturing expeditions Mr. Emerson enjoyed the opportunity of seeing and hearing the speech of men of affairs. He wrote, perhaps in 1852:—

"I am greatly pleased with the merchants. In railway cars and hotels it is common to meet only the successful class and so we have favorable specimens, but these discover more manly power of all kinds than scholars; behave a great deal better, converse better, and have independent and sufficient manners."

Yet he sees his compensations as a scholar, for a different aspect of the same subject is given in an earlier journal (1845):

"Geniality, yes, very important, but so is substance. The entrance of a scholar put a whole insurance office to flight. Every elegant loafer steals out when *he* comes in. He deplores this Medusa-masque which scares every one from his side. The merchant he admires. See how long their conversation lasts in the rail-car! What can they have to say, that is still so fresh and so much? Yes. But they are unhappy as soon as they are alone—and he is unhappy as soon as he is not alone."

N1310: Fuseli was banished from Switzerland for some political indiscretion. His drawing was praised by Sir Joshua Reynolds, and in time he became professor of painting in the Academy. He wrote a *Life* of Reynolds. James Northcote, a pupil of Reynolds, became a portrait painter. His disposition and manners made him unpopular.

N1311: From *Pericles and Aspasia*, by Walter Savage Landor.

N1312: This, without doubt, was the speech of Mr. Emerson's eccentric aunt, Mary Moody Emerson. His account of her is included in *Lectures and Biographical Sketches*.

N1313: Journal, 1841. "Be calm, sit still in your chair, though the company be dull and unworthy. Are you not there? There then is the choir of your friends; for subtle *influences* are always arriving at you from them, and you represent them, do you not? to all who stand here.

"It is not a word that 'I am a gentleman, and the king is no more,' but is a fact expressed in every word between the king and a gentleman."

N1314: Jean Jacques Champollion-Figeac, the archæologist and successful expounder of Egyptian hieroglyphics.

N1315: Franz Heinrich Jacobi, the German philosopher and correspondent of Goethe.

N1316: Journal, 1852. "We tell our children and ourselves not to regard other people's opinion, but to respect themselves, and we send them to school or to company and they meet (as we have so often met) some *animosus infans*, some companion rammed with life, whose manners tyrannize over them. They have no weapon of defence against this weapon; a pound will weigh down an ounce in spite of all precepts. A quality of a different kind is yet a counterpoise: as a gas is a vacuum to every other gas."

N1317: Journal, 1850. "My prayer to women would be, when the bell rings, when visitors arrive, sit like statues."

N1318: Compare the passage in "The Celestial Love" beginning—

For this is Love's nobility,—
Not to scatter bread and gold.

N1319: "Hear what the morning says and believe that," was one of Mr. Emerson's finest utterances. There is a passage on morning influences in "Inspiration," in connection with Goethe's poem "Musagetes," in *Letters and Social Aims*.

N1320: A positive rule which Mr. Emerson taught by constant example was, Never talk about yourself: that is, your personal self; as far as you are universal and ideal it is permitted.

N1321: Journal, 1845. "There are persons who are always in fashion; and style and fashion and aristocracy bends itself to them, denies itself to be possessed of them."

WORSHIP

THE SUGGESTION or request has more than once been made that the essays of Emerson on Worship, The Over-Soul, The Sovereignty of Ethics, Spiritual Laws and Immortality be collected into one volume as a "religious work." This has never been done, for such grouping seemed inappropriate to the history of the writer and the character of his works. Although his conduct of public worship and his thoughts on revealed or natural religion, delivered from the pulpit, had caused doubt or alarm to those to whom faith or custom made certain forms or doctrines seem essential, a few years after he resigned his charge they heard kindred thoughts with increasing interest and pleasure in his week-day courses on "The Philosophy of History," "Human Culture" and "Human Life." As the great laws, alike for matter and spirit, everywhere prevail, it became his office to show, as he said in an early verse, that

In the darkest, meanest things
There alway, alway something sings.

So, whatever the title of the lecture or essay might be, whether it dealt with farming or politics, education or poetry or aristocracy, the ascension from simple every-day matters, from symbol to meaning, was sure to be found somewhere. Even dark Nemesis is made beneficent. In the first essay in this volume Mr. Emerson said, "But to see how fate slides into freedom and freedom into fate, observe how far the roots of every creature run, or find if you can a point where there is no thread of connection.... This knot of nature is so well tied that nobody was ever cunning enough to find the two ends."

This doctrine of Unity he also presents in an astronomic image in "Uriel" and elsewhere:—

Line in Nature is not found,
Unit and Universe are round.
In vain produced, all rays return,
Evil will bless and ice will burn.

So subjects as diverse as Fate, Power, Wealth, Culture and Behavior, Emerson could not present quite apart from one another, but as parts of a wondrous tissue. More than that, Deity says, as in "Brahma:"—

They reckon ill who leave me out,—

and the workings of Spirit appear in all,—the Universal Mind or Over-Soul of which each human being is a channel. "Worship" therefore fitly follows the others, and its motto tells of man's inalienable inheritance of God.

N1322: Ralph Cudworth (1617–88), an English philosophic divine. His principal work was *The True Intellectual System of the Universe*, with purpose to establish belief in human liberty as against fatalism. He also wrote a *Treatise concerning Eternal and Immutable Morality*.

While a student at Harvard College Mr. Emerson read Cudworth with great pleasure, because by this author he was introduced to the teachings of Plato.

N1323: Mr. Emerson said one should not think about one's example in good deeds, "but act always from the simplest motive." The celestial bodies and their ordered motion were a source of inspiration to him.

With aim like yours
I watch your course,
Who never break your lawful dance
By error or intemperance.
O birds of ether without wings!
O heavenly ships without a sail!
O fire of fire! O best of things!
O mariners who never fail!
Sail swiftly through your amber vault,
An animated law, a presence to exalt.

"The Poet," *Poems*, Appendix.

N1324: Young, *Night Thoughts*.

N1325: In his later years Mr. Emerson was pleased with Bret Harte's first stories in *The Luck of Roaring Camp*; and glad to know of the young author, like Seyd in his own "Beauty," that

In dens of passion and pits of woe
He saw strong Eros struggling through,
To sun the dark and solve the curse.

N1326: Mr. Emerson made visits to the Shakers of Harvard and Shirley once and again, and had friendly and respectful relations with their elders, with whom he occasionally sat and talked in the cars on their way to Boston.

N1327: In some sheets on the New Religion, which perhaps were in "Worship" when first delivered, is the following passage, a part of which was later used in "The Preacher" (*Lectures and Biographical Sketches*):—

"I see movement, I hear aspirations, but I see not how the Great God prepares to satisfy the heart in the new order of things. No church, no state, emerges. When we have extricated ourselves from all the embarrassments of the social problem, the oracle does not yet emit any light on the *mode* of individual life. A thousand negatives it utters, clear and strong on all sides; but the sacred affirmative, it hides in the deepest abyss. We do not see that heroic resolutions will save men from those tides which a most fatal moon heaps and levels in the moral emotive and intellectual nature. It looks as if there was much doubt, much waiting, to be endured by the best,—the heavy hours. Perhaps there must be austere elections and determinations before any clear vision of the way is given. Yet eternal joy and a light heart dwell within the muse for ever and ever, and the austerity of her true lovers can never be harsh or moping."

N1328: *Iliad*, xxi. 455.

N1329: Both of these stories of King Olaf's methods of convincing his subjects of the beauty of the Christian religion are from the Saga of King Olaf Trygvesson in volume one of Laing's *Heimskringla*. The incident of Raud the Strong is told in Longfellow's fine rendering of the Olaf Saga in *Tales of a Wayside Inn*.

N1330: "Mathen" means moths or worms. The extract is from "Merlin" in Ellis's *Early English Metrical Romances*, but Mr. Emerson in some degree modified the old spelling.

N1331: From *The Legend of Good Women*. In *English Traits* Mr. Emerson quotes the monk's story of King Richard's prayer, as showing the British spirit.

N1332: With disgust tempered by his sense of humor, Mr. Emerson, on his return from church one Sunday in 1837, wrote:—

"The pagan theology of our churches treats Heaven as an inevitable evil which, as there is no help against, the best way is to put the best face on the matter we can. 'From whence,' said the good preacher in his prayer, 'we shall not be able to return.' Truth will out."

N1333: Probably alluding to some communities then recently established in the Middle States, in which Free Love was one of the articles of faith.

N1334: The "spiritual" manifestations in the shape of knockings had invaded Concord at this time. Of their chief exponent, a humble maker of pocket-books in Concord, Mr. Emerson used to say, "Mr. M—is a great wag." Judge Hoar remarked to a lady, who

was suggesting that there might prove to be something in these manifestations, "But you will admit, my dear lady, that this treasure, if such it be, is vouchsafed to us in earthen vessels."

Mr. Thoreau wrote, in his disgust, that his neighbors in Concord believed in spirits that the very bullfrogs in their meadows would blackball, that no respectable junk-bottle would condescend to hold for one moment; and said that if he could be made to believe in such a heaven as the Spiritualist believed in, he "would take stock in the first Total Annihilation Company that offered."

Mr. Emerson's aversion to low peeping and prying into what was wisely veiled is shown in one of his earlier lectures, "Demonology," printed in *Lectures and Biographical Sketches*.

N1335: This phrase, which, at the time these lectures were read, was much in the mouths of the brave opponents of human slavery, then propped by the law of the land, is thus alluded to by Mr. Emerson in his journal: "The worst symptom I have noticed in our politics lately is the attempt to make a gibe out of Seward's appeal to a higher law than the Constitution, and Webster has taken part in it. I have seen him [Seward] snubbed as 'Higher-Law Seward.'" In Mr. Emerson's lecture on the "Fugitive-Slave Law," read in New York on March 7, 1854, he says of Webster, "He did as immoral men usually do, made very low bows to the Christian Church, and went through all the Sunday decorums, but when allusion was made to the question of duty and the sanctions of morality, he very frankly said at Albany, 'Some higher law, something existing somewhere between here and the third heaven,—I do not know where.' And, if the reporters say true, this wretched atheism found some laughter in the company."

N1336: In the first series of the *Biglow Papers*, Mr. Lowell made an important and witty attack on the aggressive imperialism of that day, with its watchwords as to “our Destiny,” and the “Anglo-Saxon idea” (recently revived by public speakers). His rustic private from Massachusetts in the Mexican War begins to see through the politicians’ oratory, and writes home,—

“Ef these creeturs
Thet stick an Anglosaxon mask onto State-prison feeturs
Should come to Jaalam Centre fer to argify an’ spout on ‘t,
The gals ‘ould count the silver spoons the minnit they cleared out on ‘t.”

N1337: Attributing the lack of faith to a mere surface view, Mr. Emerson wrote at about this period in a lecture on Character, “Given the insight, and a man will find as many beauties and heroes and strokes of genius close by him as Dante or Shakspeare beheld.... You find the times and places mean—stretch a few threads over an Æolian harp and put it in the window, and listen to what it says of the times and of the heart of Nature. You shall not believe the miracle of Nature is less, the chemical power worn out. Watch the waking morning, or the enchantments of the sunset!”

N1338: Here he brings forward his belief, comforting and inspiring, in the Universal Mind, the Over-Soul, found in the old religions of Asia, its Christian expression being in the words, “In Him we live and move and have our being.”

In his Oration at Waterville in 1841, Mr. Emerson had said, “Not thanks, not prayer seem quite the highest or trust name for our communication with the infinite,—but glad and conspiring reception,—reception that becomes giving in its turn, as the receiver is only the All-Giver in part and in infancy. I cannot,—nor

can any man,—speak precisely of things so sublime, but it seems to me the wit of man, his strength, his grace, his tendency, his art, is the grace and the presence of God. It is beyond explanation. When all is said and done, the rapt saint is found the only logician. Not exhortation, not argument becomes our lips, but pæans of joy and praise. But not of adulation: we are too nearly related in the deep of the mind to that we honor. It is God in us which checks the language of petition by a grander thought. In the bottom of the heart it is said: 'I am, and by me, O child! this fair body and world of thine stands and grows. I am: all things are mine: and all mine are thine.'"

In the journal for 1845 he wrote, "On great questions of thought the company become aware of their unity, aware that the thought rises to an equal height in all bosoms, that all have a spiritual property in what was said as well as the sayer."

The word *ecstasy* in the next sentence in the text bears its exact classical meaning of the soul taking a *station outside* its lower personality; as Galahad, seeing that it was written on the *Siege Perilous* at the Round Table, that who should sit therein should lose himself, at once sat in it, crying,—

"If I lose myself, I save myself!"

N1339:

See thou bring not to field or stone
 The fancies found in books;
 Leave authors' eyes and fetch your own,
 To brave the landscape's looks.

"Waldeinsamkeit," *Poems*.

N1340: "What anthropomorphists we are in this, that we cannot let moral distinctions be, but must mould them into human shape! 'Mere morality' means—not put into a personal master of morals."—"Sovereignty of Ethics," *Lectures and Biographical Sketches*.

N1341: This passage recalls that in which Thoreau speaks of "the charm of Nature's demeanor towards us; strict conscientiousness and disregard of us when we have ceased to have regard for ourselves. So she can never offend us. How true she is, and never swerves. In her most genial moment her laws are as steadfastly and relentlessly fulfilled, though the Decalogue is rhymed and set to sweetest music, as in her sternest."

N1342: Mr. Emerson wrote in "Nature:"—

"In the uttermost meaning of the words, thought is devout and devotion is thought. Deep calls unto deep."

For the religion of his fathers in their day Mr. Emerson had great respect. He said of the old Puritanism, in his sketch of Dr. Ripley, that, however in its last days it declined into formalism, in the heyday of its strength it had planted and liberated America. To this purpose is the following, from a stray sheet: "Religion has failed; yes, the religion of another man has failed to save me. But it has saved him. We speak of the past with pity and reprobation, but through the enormities, evils, and temptations of the past, saints and heroes have slipped into heaven. There is no spot but has been a battlefield. There is no religion, no church, no sect, no year of history, but has served men to rise by, to scale the walls of heaven and feast with angels. Our fathers are saved; the same

conflicts have always stood as now with slight shiftings of scene and costume."

N1343: This thought is found in the poem which serves as motto to "Fate" in this volume. With this may be compared the lines, in the Appendix to the *Poems*, about the crowning grace that befalls the Poet,—

The purging of his eye
To see the people of the sky.

N1344: *Quantus amor, tantus animus*, is the motto of one of the journals. "Love is the solution of mine and thine," he wrote in an early essay. The omnipresent working of the god Love in a higher sense than the Greek conception is celebrated in the poem "Eros."

N1345: Celestial motion, and polarity everywhere, were constantly used as symbols by Mr. Emerson, as in "Compensation:"—

The lonely Earth amid the balls
That hurry through the eternal halls,
A makeweight flying to the void,
Supplemental asteroid, Or compensatory spark,
Shoots across the neutral dark.

And in "The Sphinx:"—

The journeying atoms,
Primordial wholes,
Firmly draw, firmly drive,
By their animate poles.

N1346: In "Circles" he says that all nature is "the rapid efflux of goodness executing and organizing itself."

N1347: This quality of Napoleon is dwelt upon in *Representative Men*.

N1348: The epilogue to Beaumont and Fletcher's play, *An Honest Man's Fortune*, was admired by Mr. Emerson, especially the lines,—

"Our acts our angels are, or good or ill,
Our fatal shadows that walk by us still."

It is printed in his collection of verse, *Parnassus*.

N1349: Probably from the Vishnu Purana.

N1350: Ἀεὶ γὰρ εὖ πίπτουσιν οἱ Διὸς κύβοι, The dice of Zeus always fall aright, is a fragment from a lost play of Sophocles.

N1351: Mr. Emerson embodied his thoughts on man's debt to the safeguards against sin in a little poem, written early, called "Grace." His friend Rev. William H. Channing made use of it in his portion of the memoir of Margaret Fuller Ossoli (the joint work of himself, Rev. James Freeman Clarke and Mr. Emerson), crediting it there to George Herbert. When the manuscript came to Mr. Emerson, he wrote to Mr. Channing, saying that the verses, to which he had done the unspeakable honor of attributing them to Herbert, were his own, and asked him to omit them. They are printed in the Appendix to the *Poems*.

N1352:

Every thought is public,
Every nook is wide;
Thy gossips spread each whisper,
And the gods from side to side.

"Hush," Quatrain, *Poems*.

N1353: Journal, 1851. "To every reproach I know but one answer, namely, to go again to my own work. 'But you neglect your relations.' Yes, too true; then I will work the harder. 'But you have no genius.' Yes; then I will work the harder. 'But you have no virtues.' Yes; then I will work the harder. 'But you have detached yourself and acquired the aversation of all decent people: you must regain some position and relation!' Yes, I will work the harder."

N1354: Journal. "I have no knowledge of trade. There is not a sciolist who cannot shut my mouth and my understanding by strings of facts that seem to prove the wisdom of tariffs. But my faith in freedom of trade, as the rule, returns always. If the Creator has made oranges, coffee and pineapples in Cuba and refused them to Massachusetts, I cannot see why we should put a fine on the Cubans for bringing these to us,—a fine so heavy as to enable Massachusetts men to build costly palm-houses and glass conservatories under which to coax these poor plants to ripen under our hard skies, and thus discourage the poor planter from sending them to gladden the very cottages here. We punish the planter there and punish the consumer here for adding these benefits to life. Tax opium, tax poisons, tax brandy, gin, wine, hasheesh, tobacco and whatever articles of pure luxury, but not healthy and delicious food."

N1355: "We say, Dear God, the life of man is not by man, it is consentaneous and far-related. It came with the sun and nature, it is crescive and vegetative, and it is with it as with the sun and the grass. The powers that I want will be supplied, as I am supplied, and the philosophy of trust is sustained by all the oracles of the universe."—Sheet from an old lecture.

N1356: Filippo Neri (1515–95), a Florentine priest remarkable for his energy and humanity, guided by good sense and humor, with marked executive ability. He was the founder of the fraternity called the Most Sacred Trinity of the Pilgrims and the Convalescents, for the help of both these classes of persons. He also founded and was long the governor of the Congregation of the Oratory, a community of secular priests. In 1622 he was canonized.

N1357: "Character makes flesh and blood comely and alive, adorns wrinkles and silver hairs."—Lecture on "Character," 1842.

N1358: In the journal for 1842 this passage ends thus: "I will speak the truth also in my secret heart, or think *the truth* against what is called God."

N1359: "The astronomers are very eager to know whether the moon has an atmosphere: I am only concerned that every man have one."—"Aristocracy," *Lectures and Biographical Sketches*.

N1360:

Chambers of the great are jails,
And head-winds right for royal sails.

"Heroism," *Poems*.

Journal, 1830. "We are to be so humble as to be of the greatest possible service to all men. We are to be always accessible to truth, as the proud are not. Yet every sin are we to scorn with an imperial superiority. Then to keep an independence of all men—dazzling men and bad men—how hard! It needs this great equilibrium, the relation to God which sets all right."

N1361: Benedict is of course mythical, but there is much biography and autobiography in the picture. "Guy," and the forester in "Woodnotes," I., in the *Poems* may be brought to mind by some of the sentences.

N1362: "From God appeal to the God of God" [truth], he said, in the lecture "Character" in 1842. The beautiful poem of William Allingham called "The Touchstone" is called to mind here. It was a favorite of Mr. Emerson's and is included in his *Parnassus*.

N1363: Journal, 1844. "Once 'the rose of Sharon perfumed our graves,' as Behmen said; but now if a man dies, it is like a grave dug in the snow; it is a ghastly fact abhorrent to nature, and we never mention it. Death is as natural as life, and should be sweet and graceful."

N1364: Journal. "What is the Fall, what Sin, what Death, with this eternal Soul under us originating benefit for evermore?"

N1365: While still the minister of the Second Church, Mr. Emerson made the following entry in the book which he called "Sermons and Journal:"—

"May 3d, 1828. It is proposed as a question whether the business of the preacher is not simply to hunt out and to exhibit the analogies between Moral and Material nature in such manner as to have a bearing upon practice."

In his course given in Boston in the winter of 1836–37, in Lecture VI., "Religion," he said:—

"The man of this age must be matriculated in the university of sciences and tendencies flowing from all past periods. He must not be one who can be surprised and shipwrecked by every bold and subtle word which malignant and acute men may utter in his hearing; but should be taught all skepticisms and unbeliefs, and made the destroyer of all card houses and paper walls, and the sifter of all opinions, by being put face to face from his infancy with Reality.

"A man who has accustomed himself to look at all his circumstance as very mutable; to carry his possessions, his relation to persons and even his opinions in his hand, and in all these to pierce to the principle and moral law, and everywhere to find that; has put himself out of the reach of all skepticism; and it seems as if whatever is most affecting and sublime in our intercourse, in our happiness, and in our losses tended steadily to uplift us to a life so extraordinary, one might say superhuman."

N1366: In "Self-Reliance" is this sentence, indicating the attitude receptive of the great Self, the Over-Soul, which befits the worshipping human being:—

"We lie in the lap of immense intelligence, which makes us receivers of its truth and organs of its activity. When we discern justice, when we discern truth, we do nothing of ourselves, but allow a passage to its beams."

CONSIDERATIONS BY THE WAY

AMONG THE persons who attended Mr. Emerson's courses of lectures were many who were attracted by his personality, or by friendship, or by his growing fame. Some among these would have found it hard to follow his thoughts' subtile thread, connecting his periods, or ascend to its higher levels. To these there would have been comfort in a lecture like the present, not professing to deal with an abstract theme,—Fate or Illusion or the like,—but, below the clouds, with the day and its chances, esteemed "good" or "evil," yet all helpful in the end, human, and with a tone of cheerful health.

Merlin, the Cymrian bard and enchanter in the legends, still had a charm for this poet and seer of the latter days, and all the fragmentary remains of the songs of the Bards Mr. Emerson read with keen interest. The power of the poet, because a transmitter of divine truth, often in veiled form, yet

"Clothing the palpable and the familiar
With golden exhalations of the dawn,"

was the one beneficent magic for him.

In his second volume of poems, *May Day*, appeared the "Song of Merlin," which, though a paraphrase of some of the Bardic Fragments, and probably with no connection with the motto of this chapter, might precede it.

Of Merlin wise I learned a song,—
Sing it low, or sing it loud,
It is mightier than the strong,
And punishes the proud.
I sing it to the surging crowd,—
Good men it will calm and cheer,
Bad men it will chain and cage.
In the heart of the Music peals a strain
Which only angels hear;
Whether it waken joy or rage,
Hushed myriads hark in vain,
Yet they who hear it shed their age,
And take their youth again.

In the motto poem Merlin gives wise counsels to the son of the great chieftain Cyndyllan: The world is as open and fresh for you as for Adam; man's hope lies in the better future; do not swaddle yourself with tradition or clog yourself with wealth; live close to nature for health and cheer; show this secret joyfully to others; your own spot of earth is best for you, and all things, including love, are there for you; in your work, if rightly chosen, is such joy that you will ask little time for play, but friendship implies eternity.

N1367: When you learn to steer by the compass of the Over-Soul, and that "every wave is charmed," you are ready to "come into port bravely or sail with God the seas."

N1368: Amusement, as such, had little attraction for Mr. Emerson, for his thought and reading and work called him, and his joy was in the study of nature and man. A day was a sacred gift, and to be accounted for by each person by some honest work of hand or brain or heart. For a person to devote a fresh morning to a novel or to a game seemed to him unworthy trifling with life. To go to the wood or the shore, especially if alone, was another matter: it might be an act of devotion, or a search for knowledge or inspiration.

"How dull it is to pause, to make an end,
To rust unburnished, not to shine in use!
As though to breathe were life! Life piled on life
Were all too little."

Tennyson, "Ulysses."

N1369: Of this sentence, and of the next paragraph, Dr. Holmes says, in his *Ralph Waldo Emerson*,

"Here we have the doctrine of the 'saving remnant' which we have since recognized in Mr. Matthew Arnold's well-remembered lecture.... After reading what Emerson says about 'the Masses' one is tempted to ask whether a philosopher can ever have 'a constituency' and be elected to Congress. Certainly the essay...would not make a very promising campaign document."

N1370: Here, after his wont, leaving the modifications to another paragraph or essay, Mr. Emerson gave his statement full swing. The bad politics of the day, and the stooping of public men to court the multitude which they should enlighten and lead, no doubt gave heat to the utterance. None the less he had faith in the Republic and in true democracy reconcilable with "natural aristocracy." To give man his true dignity and scope he must be taken out of the herd that follows the bell-wether. His own work in life was to teach man his worth and possibilities, and that Mr. Emerson sincerely believed in these was shown by his daily attitude towards humble neighbors, or young people, or servants. Moreover, the service was reciprocal, for he said he found that every man could teach him something. His harshness is only for the man who sacrifices his manhood for the mass. Later in the essay he says that if a man is, he is wanted; that he is here is proof that he ought to be. "When I see the doors by which God enters into the mind; that there is no sot or fop, ruffian or pedant into whom thoughts do not enter by passages which the individual never left open, I can expect any revolution in character."—"Education," *Lectures and Biographical Sketches*.

N1371: In the preceding decade the influence of Fourier, Saint-Simon and others had given rise to many experiments in communistic life. Mr. Emerson had no faith in these. Solitude and self-help were a man's best instructors and might fit him to "leaven the lump" of society.

N1372:

Unit and Universe are round:
In vain produced, all rays return,

Evil will bless and ice will burn.

"Uriel," *Poems*.

N1373:

"But who, if he be called upon to face
Some awful moment to which Heaven has joined
Great issues, good or bad for human kind,
Is happy as a lover, and attired
With sudden brightness like a man inspired."

Wordsworth, "Character of the Happy Warrior."

N1374:

The Cossack eats Poland
Like stolen fruit;
Her last noble is ruined,
Her last poet mute:
Straight, into double band
The victors divide;
Half for freedom strike and stand;—
The astonished Muse finds thousands at her side.

"Ode, inscribed to W. H. Channing," *Poems*.

N1375: In the poem "Monadnoc" is a passage on the contrast of the rude population around with the uplifting grandeur of the mountain, but the poet presently finds that

The World-soul knows his own affair,
Forelooking, when he would prepare
For the next ages men of mould.

N1376: Chaldæan oracle, attributed to Zoroaster.

N1377: Shakspeare, *Measure for Measure*, Act V., Scene 1.

N1378: Compare "The Park" in the *Poems*.

N1379: In his journal of 1833 Mr. Emerson said that his brother "Charles's *naïf* censure last night provoked me to show him a fact apparently entirely new to him, that my entire success, such as it is, is composed wholly of particular failures, every public work of mine of the least importance having been, probably without exception, noted at the time as a failure."

In the poem "Spiritual Laws" it is said,—

The living Heaven...

.

Quarrying man's rejected hours,

Builds therewith eternal towers;

.

Grows by decays,

And, by the famous might that lurks

In reaction and recoil,

Makes flame to freeze and ice to boil;

Forging, through swart arms of Offence,

The silver seat of Innocence.

N1380: In the journal for 1856 these tests are more strikingly given. "Culture. Set a dog on him; set a highwayman on him; set a woman on him; try him with money. King Alfred, King Richard, Cromwell, George Borrow even, might stand these tests."

N1381: In the motto to one of the early essays, Mr. Emerson, after enumerating the alarming Experiences, humanity's disguised friends, says,—

Little man, least of all,
Among the legs of his guardians tall,
Walked about with puzzled look.
Him by the hand dear Nature took,
Dearest Nature, strong and kind,
Whispered, "Darling, never mind!
To-morrow they will wear another face,
The founder thou; these are thy race!"

"Experience," *Poems*.

N1382: Some persons have supposed that Mr. Emerson's apparent want of sympathy with sickness was due to his having never known it. It is true that from the time he came to Concord his health was almost uniformly good, and he bore well severe exposure in his winter lecturing. But in his youth he had much suffering and interruption to his studies from rheumatism, bad eyes and especially a persistent and threatening cough, on account of which he had to spend the winter of 1827 in the South. By good fortune and timely good sense and a certain toughness of constitution he came through his period of weakness, but his quiet courage and patience were well tested. In the Appendix to the *Poems* is a juvenile scrap, written while ill at St. Augustine, beginning,—

I bear in youth the sad infirmities
That use to undo the limb and sense of age.

In his view, to be sick was not the crime, except in so far as it resulted from broken laws, but to misbehave when sick and give way to selfishness and fear. Though hard for him to understand or reconcile himself to sickness, he was tender to sufferers from acute illness. Nervous troubles he could hardly understand or pardon.

N1383: In stanza v. of the "Fragments on The Poet" (see *Poems*, Appendix), beginning with lines which occur in the motto to this chapter, the joy and blessing of the poet's lot remote from strife is told, as also in "Saadi."

The proverb from Holland with which the next paragraph opens was often in Mr. Emerson's mouth, as to the preservative effect of beauty to all composition.

N1384: While studying at Divinity Hall in November, 1828, Mr. Emerson wrote: "Don't you see you are the Universe to yourself? You carry your fortunes in your own hand. Change of place won't mend the matter. You will weave the same web at Pernambuco as at Boston, if you have only learned to make *one* texture."

N1385:

If Thought unlock her mysteries,
If Friendship on me smile,
I walk in marble galleries,
I walk with kings the while.

"Walden," *Poems*, Appendix.

N1386: The two consecutive texts in the Proverbs of King Solomon—

"Answer not a fool according to his folly, lest thou also be like unto him.

"Answer a fool according to his folly, lest he be wise in his own conceit"—

seem to have been in Mr. Emerson's memory. He sometimes spoke very amusingly of the evidence in the Scriptures that the fools must have been prevalent and insistent in Ancient Judæa, as shown by the eager bitterness with which, when the fool is mentioned, the subject on hand is dropped for the moment to dwell on this calamitous interruption to the peace and pursuits of the righteous.

N1387: The Muse gave the poet an example of how truth should be spoken, impersonally and coldly, for she,—

When she spread her dearest spells,

Feigned to speak to some one else.

I was free to overhear,

Or I might at will forbear;

Yet mark me well, that idle word

Thus at random overheard

Was the symphony of spheres," etc.

"Fragments on The Poet," *Poems*, Appendix.

Elsewhere Mr. Emerson said, "Truth ceased to be truth when polemically stated."

N1388:

My careful heart was free again,

O friend, my bosom said,

Through thee alone the sky is arched,

Through thee the rose is red;

All things through thee take nobler form,
And look beyond the earth,
The mill-round of our fate appears
A sun-path in thy worth.

"Friendship," *Poems*.

N1389: The motto of this chapter ends with urging friendship as an argument for immortality. Like Immortality, Mr. Emerson says in his essay on "Friendship," "it is too good to be believed." In the Appendix to the *Poems* is printed the following verse, called Eros, from the *Dial*:—

They put their finger on their lip,
The Powers above;
The seas their islands clip,
The moons in ocean dip,
They love, but name not love.

N1390: This "convenient distance" was a carefully chosen word, two edged. For a man whose work specially called him to solitude, yet who needed and valued society, that distance had to be nicely graded.

N1391: He thought out the other party's point of view so naturally and justly that he was always loved or respected by those about him.

N1392:

And though thy knees were never bent,
To Heaven thy hourly prayers are sent,

And, whether formed for good or ill,
Are registered and answered still.

"Prayer," *Poems*, Appendix.

N1393:

All the forms are fugitive
But the substances survive.

N1394: Jeremiah xlv. 5.

N1395:

And ye shall succor men;
'T is nobleness to serve;
Help them who cannot help again:
Beware from right to swerve.

.

I cause from every creature
His proper good to flow:
As much as he is and doeth,
So much he shall bestow.

"Boston Hymn," *Poems*.

BEAUTY

THE BOYISH writings of Emerson show little evidence of love of nature. City-bred and precociously steeped in classic English and Latin, and with mates of similar tastes who had neither guns nor boats, and hardly fishing-rods—he attended nature’s school late and irregularly. The early verses “Peter’s Field” (*Poems*, Appendix) show how to the imaginations of the Emerson brothers in the birch-girt sites of the Indian villages on the bluffs above Concord River

The fields of Thessaly grew green,
Old gods forsook the skies.

All was imputed classicism. The journals of the undergraduate and the young divine show little real sense of beauty until Love, the awakener, came. The poems to Ellen when absent show that now to him, as to other lovers, the world was new. Soon after her death he shook off the Hebraism which he found a bond, and, remembering his early intuition that

Man in the bush with God may meet,

made his home in the country for the rest of his life. How he found the ancient Earth freshened with the dew, as if just from the Creator's hand each morning, all new and undescribed, he has told in "Literary Ethics," and that the wonder and charm that each day brought to the eye stood for a spiritual reality which it was for man to interpret.

The sense of beauty, once awakened, of course grew through life. Of natural beauty he had a keen sense. Thoreau showed him the secrets of the Concord region. William Ellery Channing, a humorist and a poet, if he had not an artist's hand, nor always an artist's ear, had an artist's eye, and cultivated Emerson's in their walks. Two very near friends, Mr. Samuel Gray Ward and Miss Caroline Sturgis, and also Horatio Greenough the sculptor, were helpful to his appreciation of ancient and modern art, but the work of the Greeks, by its simplicity and repose, commanded his untutored admiration from the first.

In the Motto, Seyd (or Saadi, of which name it is another version, and by one of these names Mr. Emerson usually calls his ideal Poet), following luring and evanescent Beauty, finds that there is nothing so low but that in it the purged eye may find a trace of her; for she pervades the universe, and is synonymous with Love, the highest Wisdom. This trinity Emerson everywhere celebrates.

Thus in the "Ode to Beauty," he wrote:—

All that's good and great with thee
Works in close conspiracy;
Thou hast bribed the dark and lonely
To report thy features only.

N1396: Thoreau stood absolved from this charge. To the keen eye of the naturalist he added an artist's delicate sense of color, and the poet's thought. He "knew what to do with his facts," and he saw, like his friend, almost conscious life and virtue in tree or flower.

N1397: Mr. Emerson took much pleasure in the book on birds of the more human Nuttall.

N1398: Mr. Emerson could pardon much to men whose eager minds led them to speculations on matter and its laws far beyond what they could prove, and even fanciful, like Paracelsus, Van Helmont, Swedenborg, Lavater, Hahnemann, Oken, Gall and Spurzheim.

N1399: Among his fragmentary verses were these lines:—

The tremulous battery Earth
Responds to the touch of man;
It thrills to the antipodes,
From Boston to Japan.

N1400: "He believes in miracle, in the perpetual openness of the human mind to new influx of light and power; he believes in inspiration, and in ecstasy."—"The Transcendentalist," *Nature, Addresses and Lectures*, p. 335.

"Miracle?" he wrote in the journal, "It is all miracle!"

N1401:

The south-winds are quick-witted,

The schools are sad and slow,
The masters quite omitted
The lore we care to know.

"April," *Poems*.

N1402: A good instance of Mr. Emerson's exact and classical use of a word is this of "humor" primarily for *moisture*, or *sap*, as we might say, and incidentally in its more ordinary modern meaning.

N1403: In contrast to the *memento mori*, garnishing alike the grave-stones and sermons, in Mr. Emerson's youth, he adopted Goethe's brave motto, *Think on living*, and saw no coming death. Nor to his mind was getting a livelihood more than a preparatory step to life.

N1404: Johann Joachim Winckelmann (1717–68), the Prussian student of ancient art, and founder of archæology, attracted the attention, by his work *Reflections on Greek Art*, of the Elector of Saxony, who pensioned him and sent him to Rome to study. His taste and attainments there procured him consideration and furtherance in his researches, and he passed the rest of his life in Italy. His *History of Ancient Art* was his important work. It was much valued by Mr. Emerson.

N1405: Mr. Emerson regularly attended church during the first years of his residence in Concord. One day when the preaching was bad he wrote in the journal for 1838: "At church I saw that beautiful child —, and my fine, natural, manly neighbor who brought the bread and wine to the communicants with so clear an eye and excellent face and manners. That was all I saw that looked like God at church."

N1406: In the "Poet" (*Poems*, Appendix) is a passage which evidently refers to his own home in youth:—

Beside him sat enduring love,
Upon him noble eyes did rest,
Which, for the Genius that there strove,
The follies bore that it invest.
They spoke not, for their earnest sense
Outran the craft of eloquence.

N1407: The demon (δαίμων), or genius presiding over the life of a man, is alluded to in Plato's *Laws*, the *Phædo*, the *Cratylus* and elsewhere. In the *Symposium* Love is spoken of as a great spirit (δαίμων), "like all that is spiritual, intermediate between the divine and mortal for God mingles not with man, and through this power all the intercourse and speech of God with man, whether awake or asleep, is carried on." The Neoplatonists speak of the demons. See in the poem "Dæmonic Love" the lines concerning them, and also, in the "Fragments on Life" in the Appendix, these, which are very like the expressions in the text here:—

To and fro the Genius flies,
A light which plays and hovers
Over the maiden's head
And dips sometimes as low as to her eyes.
Of her faults I take no note,
Fault and folly are not mine;
Comes the Genius,—all 's forgot,
Replunged again into that upper sphere
He scatters wide and wild its lustres here.

N1408: Mr. Emerson, in his notes on Beauty, quotes this definition by Herrick:—

"Beauty no other thing is than a beam
Flashed out between a middle and extreme."

N1409: Compare the poem "Cupido."

N1410: Journal. "Goethe said, 'The beautiful is a manifestation of secret laws of Nature, which, but for this appearance, had been forever concealed from us.'"

N1411: His ideal poet, Seyd, rejoiced in

Ring of axe or hum of wheel
Or gleam which use can paint on steel.

"Fragments on the Poet," *Poems*, Appendix.

N1412: The onward and upward *Flowing* in creation appears through all Emerson's writings. He delighted to trace the doctrine in the myths of Asia or of Greece, or its modern forms in the writings of the anatomists, or to see its workings in art-galleries, or city drawing-rooms, Concord woods or Western settlements.

Onward and on, the eternal Pan,
Who layeth the world's incessant plan,
Halteth never in one shape,
But forever doth escape,
Like wave or flame, into new forms
Of gem and air, of plants and worms.

.

The world is the ring of his spells.

"Woodnotes," II., *Poems*.

N1413: The canon of Art, that *transitions require attention*, based on Nature's methods, alike in the race and the individual, is here used in the minor morals of taste, as elsewhere to show good out of evil.

N1414: In the notes on Beauty Mr. Emerson quotes the line of Keats in *Hyperion*:—

"For 't is the eternal law
That first in beauty should be first in might."

N1415:

To clothe the fiery thought
In simple words succeeds,
For still the craft of genius is
To mask a king in weeds.

Quatrain, "Poet."

N1416: Yet Nature always outranked Art with Emerson, and he wrote, "You admire your Etruscan vase, and with reason, but I also have a cup and cover that pleases me better, to wit, the Earth and Sky."

N1417: "Best of all is the admonition that comes to me from a demand of beauty, so naturally made, wheresoever her eye rests, that our ways of life, our indolences, indulgences and want of heroic action are shamed. Yet I love the reproof. When that

which is so fair and noble passes, I am enlarged, my thoughts grow spacious, the chambers of the brain, the lobes of the heart are bigger. How am I cheered by traits of that *vis superba formæ*."

N1418: Mr. Emerson found this remarkable story in a German book, published in Darmstadt in 1835, called *Letters to Johann Heinrich Merck, from Goethe, Herder, Wieland and others*. Among these is a letter from Sömmering to Merck, dated at Mainz, November 29, 1786, in which this enthusiastic collector asks, "Is there not in the library of your Prince the 'Paule-graphie, ou description des beautés de Paule de Viguier, par M. Minut, Baron de Casteras.' Inquire for it again. Do you know that I possess the hand of this Paule?"⁷³ Bear in mind that I cannot yet get any information where the book can be found. It is not in Paris, Leipsic or Göttingen. The book, from the pen of an ardent admirer, appeared in Lyons—only a few copies—and is not here [Darmstadt]. The renowned beauty, however, was really such an object of universal wonder, bewitching charm, virtue and refinement, that, according to the report of a woman who was her contemporary," etc.—here follow the words translated by Mr. Emerson in his paragraph about her.

The story of this sixteenth-century beauty whose body, unlike Helen's, seems to have been a fitting case for her soul, is so remarkable and little known that it should be given here. It is derived from the encyclopædia of Larousse.

Paule de Viguier, baroness of Fontenille, generally known under the name of La Belle, a celebrated Frenchwoman born at Toulouse 1518, died there 1610. Her father and mother were of noble old Languedoc families. Through her charming face, the graces of her mind, and her moral virtues she greatly interested

⁷³ The hand alluded to was 268 years old.

her contemporaries. When in 1533 Francis I. visited Toulouse, they chose Paule to speak for them to him. He passed before the tower of Arnould-Bernard, when from its top he saw the beautiful fourteen-year-old girl descend by means of a machine. She was clothed in white, wreathed with flowers, a rose-garland on her head over her curls, and her exquisite figure, girdled with blue, recalled the Greek statues then found in Italy. She made a poetic speech and then offered the keys of the city to Francis, who could not keep from a cry of admiration. He gave her the surname of Belle-Paule, by which she is always known.

Among her many lovers she chose Philippe de Laroche, baron of Fontenille, but her family made her marry the Sire de Baynaquet, counsellor of Parliament. After two years she became a widow and then married Philippe and was entirely happy. In 1563 she was at the height of her beauty, which lasted till old age. Catherine de' Medici in the tour of the provinces had Paule presented to her and said that she surpassed her reputation. The Constable of Montmorency said: "La baronne est une des merveilles de l'univers. C'est l'honneur de Toulouse et de son siècle." She received the most distinguished men of her day, was studious, and wrote elegant and graceful verses.

Her townsmen thought Paule the first of the four marvels of Toulouse: witness this bit of patois:—

"La belle Paoula, San Sarni,
Lou Bazaclé, Mathali."

The beautiful Paule, the church of St. Sernin, the mill of Bazaclé and the musician Mathali. Her chronicles say that every one followed when she went out. Then she stayed in, and they formed crowds under her windows. Finally the fathers of the city had to interfere

in the interest of public safety. They required her to walk in public with her face bare two days a week.

She was nearly a centenarian when she died and was buried in the church of the Augustines. The most curious monument of her is a book by Gabriel de Minut, Baron of Casteras, Seneschal of Rouerque. Its title was "De la beauté, discours divers pris aux deux belles façons de parler, des-quelles le grec et l'hébreu usent, l'hébreu Job, et le grec Calon k' Agathon, voulant signifier ce qui est naturellement beau, et naturellement bon; avec la *Paulegraphie*, un description des beautés d'une dame toulousaine nommée La Belle Paule." This book is rare to-day. It was dedicated to Catherine de' Medici, published in Lyons (1587 in 8vo) by Charlotte de Minut, sister of the author, "très-indigne abbesse du pauvre monastère de Sainte Claire de Toulouse."

N1419: See the poem "Thine Eyes Still Shined."

N1420: In the chapter "Manners," in the second series of Essays, is a passage which it pleased Mr. Emerson to put in Oriental guise, as a supposed description of the Persian beauty Lilla, which is suggested by this part of "Beauty." Also the following is from a loose sheet probably from this lecture: "The life of man is environed with beauty and, as in his habitation, so in more affecting manner, in the face and form of his race. We cannot see the effect of human beauty without suspecting for it a deeper origin than simply a material one—nor the overpowering influence of form without assurance that something higher than form is the cause. The lover invokes flowers, gems, winds, stars, angels, gods; whatsoever the imagination or religion can suggest, unites itself with this personal image in his heart. In the mind is an instinctive connection between external grace and whatsoever is most profound in human nature.

I will venture to add, in confirmation of the ancient sentence that Beauty is the flower of Virtue, that in the impression which beauty makes on us what is finest is moral. The most piquant attraction of a long descended maiden is the imputation of an immaculate innocence, a sort of wild virtue, savage and fragrant as the violets, and when we see such a charm in a crowded drawing-room the imagination is surprised and captivated at meeting the Divinity amidst flowers and trifles. A beautiful person has somewhat universal in her expression, and draws all eyes and hearts into a feeling, not of the desire of appropriation, but somewhat far higher."

N1421:

Dearest, where thy shadow falls,
Beauty sits and Music calls;
Where thy form and favor come,
All good creatures have their home.

"Translations," *Poems*.

N1422:

"Faultily faultless, icily regular, splendidly null,
Dead perfection, no more,"—

begins the unconscious lover of Maud in Tennyson's poem, but then goes on to discover redeeming irregularities of feature which have begun to enthrall him.

As the daguerreotypist at Providence told Mr. Emerson, symmetry is the exception, asymmetry the rule. In the busts of Mr. Emerson by French and by Morse the differences in his face as

seen from the right or left side are marked and interesting, one giving the aspect of the man in solitude or in a public character and one that of friendship or domestic relations.

N1423: Bertrand du Guesclin, the great Constable of France, who, after the death of Edward III., won back for his country most of the possessions which England had held.

Cardinal de Retz had also the detraction from his personal appearance. In some sheets, probably once part of this lecture, Mr. Emerson speaks thus of the posthumous consolations of the ugly:—

"I noticed lately that however highly we value all personal felicities and advantages, yet, in biography, we read with equal interest, that the man was ugly, or that he was poor, or awkward, etc. Of Cardinal De Retz, Tallemant des Réaux writes, 'Un petit homme noir, qui n'y voyait que de fort près, laid, et maladroit de ses mains en toutes choses.' Cromwell's warts do him no harm with the most fastidious reader of history."

N1424: It is told of George Fuller, whose paintings have a charm of the south wind, which, as Mr. Emerson says,—

With a net of shining haze
Tints the human countenance
With a color of romance,—

that, when some one asked him why he did not get a prettier model for his Gypsy Girl, he cried out, "God strike me dead when I paint anything *pretty*!"

N1425: From a lecture, 1866: "Beauty unequally bestowed;—Yes, but the highest beauty is that of expression, and the same man is handsome or ugly as he gives utterance to good or bad feeling. I noticed, the other day, that when a man whom I had always remarked as a handsome person, was venting democratic politics, his whole expression changed, and became mean and paltry. That is, nature distributed vulgar beauty unequally, as if she did not value it; but the most precious beauty she put in our own hands, that of expression."

"What pity that beauty is not the rule—since everybody might have been handsome as well as not. Or, if the moral laws must have their revenge, like Indians, for every violation, what pity that everybody is not promoted on the battlefield, as our generals are, by a good action. My servant squints and steals: I persuade her to better behaviour; she restores the long-lost trinket, and, at the same moment, the strabismus should be healed."

Journal, 1839. "Beauty dwells also in the Will. You plant a tree for your son, or for mankind in the next age. Decline also the low suggestion, stablish the lofty purpose in the moment when it flits so evanescently by, and you plant bodily beauty for the next age.—Who saw you do the mean act? Ah, brother! your manners saw you and they shall always report it to men."

N1426: Mr. Emerson was no landscape-gardener, but he found unlooked-for adornments to his pasture:—

The sun athwart the cloud thought it no sin
To use my land to put his rainbows in.

N1427: In the "Ode to Beauty" we have this passage in verse:—

Thou gliding through the sea of form,
Like the lightning through the storm,
Somewhat not to be possessed,
Somewhat not to be caressed,
No feet so fleet could ever find,
No perfect form could ever bind:
Thou eternal fugitive,
Hovering over all that live.

N1428: From Sir Walter Scott's "Dying Bard."

N1429: In "Each and All" this is better told in verse.

N1430: "I saw a hand whose beauty seemed to me to express Hope and Purity, and as that hand goes working, grasping, beckoning on, in the daily life of its owner, some of this high virtue, I think, will pass out of it."

N1431: The Poet (in the unfinished verses of that name in the Appendix of the *Poems*), when his inspiration is coming on him, cries,—

How all things sparkle!
The dust is alive,
To the birth they arrive:
I snuff the breath of my morning afar,
I see the pale lustres condense to a star.

Dr. Holmes, in spite of the humor of the passage about the momentary glamour of even the stove, the pepper-pot, and the shoe-box, cannot but regard it as almost indicating momentary

mental aberration, certainly as being unsafe reading for would-be poets of the late Nineteenth Century School, and sure to cost Emerson readers among solid men of Boston. But he adds that, had the reader "seen the lecturer's smile as he delivered one of his playful statements of a runaway truth, fact unhorsed by the imagination, sometimes by wit or humor, he would have found a meaning in his words which the featureless printed page could never show him." Dr. Holmes holds his friend to account for neglecting the poet's and artist's duty of *Selection*, and draws the line at the poet's imagination allowing itself to

Give to barrows, trays and pans

Grace and glimmer of romance;

and protests at Emerson's finding that

In the mud and scum of things

There alway, alway something sings.

N1432: "I seek beauty in the arts and in song, and in emotion, for itself, and suddenly I find it to be sword and shield. For dwelling there in its depths I find myself above the region of Fear, and unassailable, like a god at the Olympian tables."

Thus Emerson's celebration of Beauty is, like the Psalms of King David, a Song of Degrees:—

Journal, 1850. "The artist now should draw men together by praising nature, show them the joy of naturalists in famous Indian glens,—natural botanic gardens,—in the profusion of new genera, that they could only relieve themselves by cries of joy; then the joy of the conchologist in his *Helix pulcherrima*, whose elegant white pattern becomes invisible in water, visible again when dry. Let him

unroll the earth and sky and show the splendour of colour and of form; then let him, on the top of this delight, add a finer, by disclosing the secrets of intellectual law; tell them a secret that will drive them crazy; and things that require no system to make them pertinent, but make everything else impertinent. I think, give me the memory to tell of, or the imagination; and I could win the ear of reasonable people, and make them think common daylight was worth something. Afterwards let him whisper in their ear the moral laws

"More fair than heaven's broad pathway paved with stars
Which Dion learned to measure with delight."

There was the problem to solve of the presence everywhere, alike in the household, or flitting before him in the wood-path, of this

Lavish, lavish Promiser
Nigh persuading gods to err.

"Why do we seek this lurking Beauty in skies, in poems, in drawings? Ah, because then we are safe, then we neither sicken nor die. I think we fly to Beauty as an asylum from the terrors of finite nature. We are made immortal by this kiss.

"We are immortal, at once, by the contemplation of beauty. Strange, strange that the door to it should thus perversely be through the prudent, the punctual, the frugal, the careful. And, that the adorers of Beauty, musicians, painters, Byrons, Shelleys, Keatses, and such like men, should turn themselves out of doors, out of sympathies and out of themselves!"

In the chapter on Beauty in his first book, *Nature*, Mr. Emerson had already arrived at the thought ever afterwards a part of his joyful faith:—

"Beauty, in its largest and profoundest sense, is one expression for the universe. God is the all-fair. Truth, and goodness, and beauty are but different faces of the same All."

ILLUSIONS

THE ESSAY that stands before that on Illusion ends by pointing to the snowy summits of Beauty above its blossoming plains as "the first stair on the scale to the temple of the Mind."

In the last essay in the volume there is a certain austerity for which its name hardly prepares the reader. It is not the charm of the Illusions, nor yet their office as teachers of the advancing soul, but the necessity of recognizing them and seeing through them that is urged.

The hero is not fed on sweets,
Daily his own heart he eats.

Hence in the motto, in which the doctrine of the Flowing, coming from the ancient East, appears, the waves of the river through which the mortal must pass are hated and accursed as well as adored.

As a boy in college, Emerson probably owed to Plato his first notion of the shadowy and deceptive character of events and experiences, especially to the image of the Cave in the *Republic*.

The thoughts of Plato led him in later years to their remote source in the Hindoo Scriptures, whose influence threw new light for him upon the Bible of his youth, widening its significance.

Under whatever name,—Brahma or Jove or Jehovah or God,—the Eternal Spirit living and creating and informing Man and Nature was what he taught in the doctrine of the Over-Soul.

In Mr. Emerson's note-book called *Orientalist* he wrote:—

"In the history of intellect no more important fact than the Hindoo theology, teaching that the beatitudes or Supreme Good is to be obtained through science; namely, by perception of the real and unreal, setting aside matter, and qualities and affections, or emotions and persons and actions as *Maïas* or illusions, and thus arriving at the contemplation of the one Eternal Life and Cause and a perpetual approach and assimilation to Him; thus escaping new births or transmigration.

"The highest object of their religion was to restore that bond by which their own self (atman) was linked to the Eternal *Self* (paramatman); to recover that unity which had been clouded and obscured by the magical illusions of reality, by the so-called *Maïa* of Creation."

All through the Poems this doctrine of the Illusions may be traced in many forms. The

Illusions like the tints of pearl,
Or changing colors of the sky,
Or ribbons of a dancing-girl
That mend her beauty to the eye,

are more often spoken of for their charm than as dangerous beguilers, but this essay is in the sterner vein of the seeker for truth, and one sees a more serious mood of the author in "the sad-eyed

boy whose eyes lack the requisite refractions to clothe the show in due glory, and who is afflicted with a tendency to trace home the glittering miscellany of fruits and flowers to one root."

But in the end of the essay the due ascension comes, though with less joy than usual. The Law is seen as permanent, the "substance that survives," though "all the forms are fugitive," and the Law is Truth, which is Goodness and Beauty. The last part of the motto to the chapter says that when this is seen, not only power, but immortality (endurance) is won.

N1433: Here was an instance of "finding what we look for—what we carry with us." As is shown in the opening sentence of the next paragraph, the element of his Puritan ancestry in Emerson's composition entered its protest at the false starlight, yet it is quite evident from what follows that to find in the black bowels of the earth a hint and echo of the starry heaven really pleased him, for he carried away the image and it became the motive or introduction to this essay.

N1434: Journal, 1860. "'T is trite enough, but now and then it is seen with explaining light, that nature is a mere mirror, and shows to each man only his own quality.

"Illusions, color is illusion, you say; but how know I that the rock and mountain are more real than its hue and gleam?"

N1435: In the paper in the *Dial*, "Europe and European Books," Mr. Emerson said, "Children delight in fairy tales. Nature is described in them as the servant of man, which they feel ought to be true."

N1436:

Scott, the delight of generous boys.

"The Harp," *Poems*.

In the chapter on "Books," in *Society and Solitude*, our debt, from childhood to age, to imaginative books is dwelt upon.

N1437: D'Alembert (1717–83), the mathematician and physicist, held, with Diderot and other philosophical precursors of the Evolutionists, the view of the ceaseless interchange of substance and perpetual circulation of life.

N1438: Yoganidra is in the Hindoo Mythology the personification of illusion, also called Maya or Mahamaya.

The allusion to the Greek fable of Proteus changing from one alarming, disconcerting or slippery form to another, to escape the mortal who would learn the truth from his wisdom, is more readily understood than that to Momus, the God of Folly and Laughter. But Momus mocked at all the Gods save Venus, and was sometimes represented with malign features, yet holding the mask of a beautiful youth. In the Younger Edda of Snorri Sturleson is the story, better rendered the Delusion of Gylfi than "the Mocking." He was a wise king of Sweden, who, wondering what was the wisdom of the Æsir (gods), whereby all that they did was well, went to Asgard to find out, disguised as an ancient man. But the Æsir knew of his journey ere he came, and received him with illusions. A stranger received him courteously and showed him into a vast and wondrous hall, opening into other halls, where were people variously employed, and many things which seemed to him incredible. Here also were three gods in the likeness of

great chieftains sitting on their thrones. Gylfi asked his guide if there were among them a sagacious man, and was told that if, in talk with them, he did not hold his own, it would be the worse for him. The questions and answers form a theme of the Younger Edda.

N1439: Journal, 1856. "Men had rather be deceived than not; witness the secure road to riches of Barnum and the quacks.

"All is riddle, and the key to a riddle is another riddle. Intellect is a Thaumaturgist impatient of your pet finalities. He sees that every atom carries the whole of Nature, that every fact is bipolar."

Alway it asketh, asketh;
And each answer is a lie.

"The Sphinx," *Poems*.

N1440: Compare the poem "Xenophanes," and, in "Threnody,"—

Blood is blood which circulates,
Life is life which generates,
And many-seeming life is one.

N1441: This was a saying of Mr. Emerson's friend William Ellery Channing, that, whatever you asked for at a confectioner's, they brought you only one thing, *but there were two kinds of it*.

N1442: In "Self-Reliance" Mr. Emerson confesses, "with shame," to the same fault: "Though I sometimes succumb and give the dollar, it is a wicked dollar which by and by I shall have the manhood to withhold."

N1443: Exactly opposite Mr. Emerson's house, and but fifty paces from his study, was the "East Primary Schoolhouse." Before and after the morning and afternoon sessions and at the two recesses, for forty years, the throng of treble- but strong-voiced boys and girls played in the road before his gate, and, sometimes unasked, came for horse-chestnuts and apples in their seasons. On the whole, very good terms were kept with the little neighbors, whom Mrs. Emerson occasionally' invited to her garden, giving flowers and plants. On New Year's Day she invited the school to visit her, and she gave each scholar a little present and some candy and apples, and urged them to be kind to animals and birds. Then the children wished her A Happy New Year and sang their little songs.

N1444: Journal, 1866. "The maiden has no guess what the youth sees in her. It is not in her, but in his eyes, which rain on her the tints and forms and grace of Eden; as the Sun, deluging the landscape with his beams, makes the world he smiles upon."

N1445: In the chapter on Napoleon in *Representative Men*, this other aspect of the Conqueror, and the question to his skeptical and materialistic officers about the stars, recommend him to the author.

N1446: Mr. Emerson, when consulted by young people of serious mind, himself followed the example of the oracles, the prophets and of Nature, and answered only indirectly and by suggestion. "The Gods speak by indirection," he wrote: "the aid we can give each other is only incidental and indirect."

N1447: See the passage in "The Poet" (*Poems*, Appendix), beginning,—

Beside his hut and shading oak,
Thus to himself the poet spoke.

N1448: Journal, 1863. "The youth longs for a friend: when he forms a friendship, he fills up the unknown parts of his friend's character with all virtues of man. The lover idealizes the maid, in like manner. The virtues and graces which they thus attribute, but fail to find in their chosen companions, belong to man and woman, and are therefore legitimately required, but are only really ripened, here one and there the other, distributed in scattered individuals in a wide population. But this illusion is constant, a siren song in the ears of every susceptible youth.

.

"The capital illusion of love is to make the cosmical beauty, or moral, or material, or even sexual excellence to be so suggested by one person, as to give him or her the benefit of all. '*Puella minima pars sui*.'"

N1449: In the *Poems* the Sphinx says to man,

"So take thy quest through nature,
It through thousand natures ply:
Ask on, thou clothed eternity;
Time is the false reply."

N1450:

And what if Trade sow cities

Like shells along the shore,
 And thatch with towns the prairie broad
 With railways ironed o'er?
 They are but sailing foam-bells
 Along Thought's causing stream,
 And take their shape and sun-color
 From him that sends the dream.

"The World-Soul," *Poems*.

N1451: In the poem "Hamatreya," a paraphrase of a passage in the Vishnu Purana, the Earth sings:—

Mine and yours;
 Mine, not yours.

. . . .

They called me theirs
 Who so controlled me;

. . . .

How am I theirs,
 If they cannot hold me,
 But I hold them?

N1452:

From blue mount and headland dim
 Friendly hands stretch forth to him,
 Him they beckon, him advise
 Of heavenlier prosperities...
 Than the wine-fed feasters know.

"Fragments on The Poet," *Poems*, Appendix.

N1453: Something is said of Dreams in the essay on Demonology, in *Lectures and Biographical Sketches*.

N1454: "The illusion of a firm earth is more useful and more composing than any narcotic."

N1455: Heracleitus, in the end of the sixth century B.C., taught in his work on *Nature* that all bodies were transformations of one and the same element, which he held to be fire in alternations of kindling and extinguishing. Rest was a delusion. All things flow, πάντα ῥεῖ.

Xenophanes of Colophon settled in Elea. He taught that there was one God, all eye, all ear, all-knowing, who bears us in his bosom.

Diogenes of Apollonia, a disciple of Anaximenes, taught that the one original element, air, was the source of life and the essence of bodies. Intelligence was an attribute of air. He wrote, "It is obvious that the principle we assume is both great and mighty and elemental and undying and of great knowledge."

N1456: The whole passage from the Vishnu Purana is interesting: "Thou art all bodies. This thy illusion beguiles all who are ignorant of the true nature, the fools who imagine soul to be in that which is not spirit. The notions that 'I am—this is mine,' which influence mankind, are but delusions of the mother of the world, originating in thy active agency. Those men who, attentive to their spiritual duties, worship thee, traverse all this illusion and obtain spiritual freedom....It is the sport of thy fascinations that induces men to glorify thee to obtain the continuance of their race or the annihilation of their enemies instead of eternal liberation. Dispel, O Lord of all creatures, the conceit of knowledge which proceeds from ignorance."

N1457: It has been said of Mr. Emerson that, however high he held his head among the clouds, his feet never left firm ground. That was the moral law, the law that his fathers had taught, the sovereignty of ethics,—

The rules to men made evident
By Him who built the Day,
The columns of the firmament
Not firmer based than they.

N1458: There is in portions of the last paragraph some suggestion of a passage in the *Phædo* of Plato:—

"And were we not saying long ago that the soul, when using the body as an instrument of perception, that is to say, when using the sense of sight, or hearing, or some other sense (for the meaning of perceiving through the body is perceiving through the senses),—were we not saying that the soul too is then dragged by the body into the region of the changeable, and wanders and is confused; the world spins round her, and she is like a drunkard when under their influence....But when returning into herself she reflects; then she passes into the realm of purity, and eternity, and immortality, and unchangeableness, which are her kindred, and with them she ever lives, when she is by herself and is not let or hindered; then she ceases from her erring ways, and, being in communion with the unchanging, is unchanging. And this state of the soul is called wisdom."

SOCIETY AND SOLITUDE

IT MAY be well to recall some of the outward events which occurred and conditions which existed during the decade intervening between the publication of *The Conduct of Life* and of Mr. Emerson's next volume of essays, *Society and Solitude*, which did not appear until 1870. In those years a crisis in which the life or death of the United States hung long in what seemed a doubtful issue had been safely passed. Statesmen, "practical" politicians who ridiculed the higher law which the scholars and simple folk believed in, and merchants who strove to silence them for the sake of trade, were suddenly overwhelmed by the logic of events.

Destiny sat by and said,
'Pang for pang your seed shall pay,
Hide in false peace your coward head,
I bring round the harvest day.'

This triumph of Right to

Redress the eternal scales

brought to Emerson relief and joy; but he had not, like Jonah, sat still watching for the destruction of the wicked. Before the war, in speaking for the slave, he had steadily braved unpopularity, and once or twice perhaps danger; yet, seeing the distress that sudden loss of slave property would cause in the South, had urged compensation when few Northern abolitionists could make allowance for the unfortunate condition into which the slaveholders were born, but regarded them only as criminals. He wished to deliver the white man from his curse even more than the negro. When after Lincoln's inauguration the issue was forced by the slaveholding interest, Mr. Emerson could not bear arms, but did better service to his country after his kind. Through the long, cruel conflict he strove, not only in special patriotic meetings, but in his lectures on the great and permanent themes, to keep the hearts of his hearers up and lift their standard higher. Many of these essays, as lectures, had exordiums fit for the day. "Civilization" is but a part of a lecture given at the Smithsonian Institution in Washington, in January, 1862, called "Civilization at a Pinch," in which the duty of the hour, Emancipation, was urged. The "Boston Hymn" a year later celebrated its proclamation, and "Voluntaries" was a proud dirge for Colonel Robert Shaw and his officers and soldiers killed on the slopes of Fort Wagner.

But the war made great demands on the resources of those who stayed at home, as taxes and prices rose, and the "hard times" outlasted the four years of actual hostilities. Strictest economies and increased work were required to meet them. Mr. Emerson derived little income from his books, and lecturing was his main resource. Fortunately the awakened heart and mind of the people demanded encouragement and instruction. Not only the lyceums of the older States, where his voice had long been heard, wished

to hear his word of hope, but calls came from the new country beyond the Mississippi.

Mr. Emerson's name was now widely known. Many guests from both sides of the ocean came to his door. His children had grown up, and in 1865 his younger daughter was happily married to a brave soldier whose release from a Southern prison came just in time to enable him to be present at the closing scene of the war. Mr. Emerson's delight in children appears in the lecture on Domestic Life and, though it was written in 1859, it very possibly was improved before printing because of the birth of his grandchildren.

In 1866 Harvard College invited him, after twenty-nine years, again to deliver the Phi Beta Kappa Oration. Next year he was chosen an Overseer, and in 1870 was asked to deliver a course on Philosophy there.

In this decade two near friends were taken from him by death, Henry Thoreau and Mrs. Sarah Ripley. In 1860 Theodore Parker, respected and valued by Mr. Emerson, died, and for several years thereafter he was frequently called by Mr. Parker's Society to speak to them on Sundays at the Music Hall and on week-days at their "Fraternity Lectures."

To one who heard Emerson lecture, the printed essays recall the spoken word and the speaker's presence. They were all thus first tested on the average American audience in town and country. The earlier addresses show more of the priest, the later of the lecturer who was also a poet, though the characteristics only vary in proportion.

The testimony of two of the hearers may be adduced. Mr. John Albee in his "Emerson as an Essayist"⁷⁴ says:—

⁷⁴ *Remembrances of Emerson*, by John Albee.

"Most of them were prepared for public delivery. Some profess to detect this in their style. I should never discover it, had I not heard some of them and since been unable to forget the tones of voice, the manner and the total effect of the delivery. For it certainly cannot be discovered by any resemblances to writing that we do know was prepared for public delivery, which has for its prevailing qualities nothing in the least like the qualities of Emerson's page.

"The old lecture platform witnessed every sort of performance with an impartial eye. It listened to eloquence, to nonsense and to thought; it was not greatly moved by any; it was, perhaps, made a little more eager for the next lecture, which might demolish the ideas of the last. The audiences had their favorites, usually the more eloquent speakers. But it is painful to recall and still more so to read what went under the name of eloquence in Emerson's day; that which was selected for school-readers, spouted by collegians and admired by everybody."

Lowell said in an article in the *Nation*:—

"I have heard some great speakers, and some accomplished orators, but never any that so moved and persuaded men as he. There is a kind of undertone in that rich baritone of his that sweeps our minds from their foothold into deep waters with a drift we cannot and would not resist. And how artfully (for Emerson is a long-studied artist in these things) does the deliberate utterance, that seems waiting for the first word, seem to admit us partners in the labor of thought, and make us feel as if the glance of humor were a sudden suggestion; as if the perfect phrase lying written there on the desk were as unexpected to him as to us!"

Two extracts from Mr. Emerson's letters to Carlyle may be here introduced to bring up the picture of the raw young country in

those days, as seen through the hopeful eyes of the New England idealist.

28 July, 1851: "'The Far West' is the right name for these verdant deserts. On all the shores interminable silent forest. If you land, there is prairie beyond prairie, forest behind forest, sites of nations, no nations. The raw bullion of nature; what we call 'moral' value not yet stamped on it. But in a thousand miles the immense material values will show twenty or fifty Californias; that a good ciphering head will make one where he is. Thus at Pittsburg, on the Ohio, the Iron City, whither, from want of railroads, few Yankees have penetrated, every acre of land has three or four bottoms: first of rich soil; then nine feet of bituminous coal; a little lower fourteen feet of coal; then iron, or salt; salt springs, with a valuable oil called petroleum floating on their surface. Yet this acre sells for the price of any tillage acre in Massachusetts; and, in a year, the railroads will reach it, east and west. I came home by the great Northern Lakes and Niagara."

19 April, 1853: "I went lately to St. Louis and saw the Mississippi again. The powers of the River, the insatiate craving for nations of men to reap and cure its harvests, the conditions it imposes,—for it yields to no engineering,—are interesting enough. The Prairie exists to yield the greatest possible quantity of adipocere. For corn makes pig, pig is the export of all the land, and you shall see the instant dependence of aristocracy and civility on the fat four-legs. Workingmen, ability to do the work of the River, abounded. Nothing higher was to be thought of. America is incomplete. Room for us all, since it has not ended, nor given sign of ending, in bard or hero. 'T is a wild democracy, the riot of mediocrities, and none of your selfish Italies and Englands, when an age sublimates into a genius."

In a letter written to Carlyle in the end of January, 1870, Mr. Emerson gives the following account of the making of this volume: "I received your first letter with pure joy, but in the midst of extreme inefficiency. I had suddenly yielded to a proposition of Fields & Co. to manufacture a book for a given day. The book was planned and going on passably, when it was found better to divide the matter, and separate and postpone the purely literary portion (criticism chiefly), and therefore to modify and swell the elected part. The attempt proved more difficult than I had believed. Meantime the publication day was announced and the printer at the door. Then came your letter in the shortening days. When I drudged to keep my word, *invita Minerva*, I could not write in my book and I could not write a letter. To-morrow and many morrows made things worse, for we have indifferent health in the house, and, as it chanced, unusual strain of affairs—which always come when they should not.... But I will leave the bad month, which I hope will not match itself in my lifetime. Only 't is pathetic and remorseful to me that any purpose of yours, especially a purpose so inspired, should find me imbecile."

The "purely literary portion" mentioned as omitted from the book probably refers to the "Poetry and Criticism" and "Persian Poetry," which were included in the next volume, *Letters and Social Aims*.

When the volume reached England it brought back this response from his old friend:—

April 6th, 1870.

The "little Book" I read here,...with great attention, clear assent for most part, and admiring recognition. It seems to me you are all your old self here, and something more. A calm insight, piercing to the very centre; a beautiful sympathy, a beautiful epic humor; a soul peaceably irrefragable

in this loud-jangling world, of which it sees the ugliness, but notices only the huge new opulences (still so anarchic); knows the electric telegraph, with all its vulgar botherations and impertinences, accurately for what it is, and ditto ditto the oldest eternal Theologies of men. All this belongs to the Highest Class of thought (you may depend upon it); and again seemed to me as, in several respects, the one perfectly Human Voice I had heard among my fellow creatures for a long time. And then the "style," the treatment and expression,—yes, it is inimitable, best,—Emersonian throughout. Such brevity, simplicity, softness, homely grace; with such a penetrating meaning, soft enough, but irresistible, going down to the depths and up to the heights, as silent electricity goes. You have done very well; and many will know it ever better by degrees. Only one thing farther I will note: How you go as if altogether on the "Over-Soul," the Ideal, the Perfect or Universal and Eternal in this life of ours; and take so little heed of the frightful quantities of friction and perverse impediment there everywhere are; the reflections upon which in my own poor life made me now and then very sad, as I read you. Ah me, ah me; what a vista it is, mournful, beautiful, unfathomable as Eternity itself, these last fifty years of Time to me.

All or nearly all the essays included in this book existed in some form as lectures in 1858 or 1859. What is known of their first delivery will be told in the notes to each essay. Yet they underwent much change during the long period of rehearsal, and sheets from them often did duty in other lectures, before the final crystallization.

N1459: One may guess that this humorist interpreted the Medusa as a Memory because, though her face was calm, it was ever encircled by snakes. This passage may be a parable in which are figured "those infinite compunctions which embitter in mature life the remembrances of budding joy, and cover every beloved

name. Everything is beautiful seen from the point of the intellect, or as truth. But all is sour if seen as experience."⁷⁵

Mr. Emerson believed himself so unfitted for society, in his younger years, that his memories were mortifications, and he turned his face resolutely away from them. He felt the want of animal spirits. He early wrote: "There is no more indifferent companion, Heaven knows, in ordinary society than myself. I profoundly pity my right and left hand men. But do not blame my dulness. As soon as I have done my studies I collapse. 'T is my hygeia and natural restorative."

In those days he was not strong, and perhaps memories of his awkwardness in his parochial duties distressed him.

Journal, 1835. "Is it because I am such a bigot to my own whims, that I distrust the ability of a man who insists much on the advantage to be derived from literary *conversazioni*. Above is wisdom, above is happiness. Society nowadays makes us low-spirited, hopeless; above is heaven."

In Concord woods he found healing for body, and oracles for the soul. The following is an extract from a lecture called "Country Life," given in 1857:—

"The place where a thoughtful man in the country feels the joy of eminent domain is his wood-lot. If he suffer from accident or low spirits, his spirits rise when he enters it. I could not find it in my heart to chide the citizen who should ruin himself to buy a patch of heavy oak-timber. A walk in the woods is the consolation of mortal men. I think no pursuit has more breath of immortality in it."

75 "Love," *Essays, First Series*, p. 171.

N1460: But the wood-life had no exemption from the law of Compensation. The virtue that there came in to him must go out from him, the messages be delivered. In family, village and public life he did his part and reaped his reward.

Journal, 1840. "Would it not be a good cipher for the seal of the Lonely Society which forms so fast in these days,—Two porcupines meeting, with all their spines erect, and the motto, 'We converse at the quills' end'?"

N1461: During Mr. Emerson's ministry in Boston in 1828 he wrote in his journal, "A wise man in certain society is a magnet among shavings."

Of the Poet he later wrote,—

In cities he was low and mean;
The mountain waters washed him clean
And by the sea-waves he was strong.

"Fragments on the Poet," *Poems*, Appendix.

N1462: Of himself Mr. Emerson would say, "My doom and my strength is to be solitary."

N1463: In a lecture on Society, in the course in Boston, 1836–37, he said: "A man should live among those with whom he can act naturally, who permit and provoke the expression of all his thoughts and emotions. Yet the course of events does steadily thwart any attempt at very dainty and select fellowship, and he who would live as a man in the world must not wait too proudly for the presence of the gifted and the good. The unlike mind can teach him much."

N1464: The soul's solitude may be read in his parable, the fragment on Nature,—

Atom from atom yawns as far
As moon from earth or star from star.

Journal, 1835. "T is very strange how much we owe the perception of the absolute solitude of the spirit to the affections. I sit alone, and cannot arouse myself to thoughts. I go and sit with my friend and in the endeavour to explain my thought to him or her, I lay bare the awful mystery to myself as never before, and start at the total loneliness and infinity of one man."

In the lecture on Society above mentioned he wrote with regard to the societies which claimed his aid:—

"Philanthropic association aims to increase the efficiency of individuals by organization. But the gain of power is much less than it seems, since each brings only a mechanical aid; does not apply to the enterprise the infinite force of one man; and in some proportion to the material growth is the spiritual decay."

N1465: Now comes the counter-statement. In a lecture on Private Life, in the course of 1839–40 on the Present Age, Mr. Emerson said, "Nothing but God is self-dependent. Man is powerful only by the multitude of his affinities."

Mr. Emerson writes in his journal of 1852:—

"Of Francis Potter Aubrey says, "T was pity that such a delicate inventive wit should be staked in an obscure corner from whence men rarely emerge to higher preferment, but contract a moss on them, like an old pale in an

orchard, for want of ingenious conversations, which is a great want even to the deepest thinking men; as Mr. Hobbes hath often said to me."

The new home in Concord after Mr. Emerson's marriage, its hospitalities and the new friends who visited him there, altered his half-resolves to be a hermit, "since it was from eternity a settled thing that he and society were to be nothing to each other."

N1466: The rapidly increasing demand through the country for instruction by the serious lyceum-lecture justified this statement. Mr. Emerson, remembering that "the light of the public square tests the statue," saw the value of testing his lectures on self-made men and brave women and earnest youths struggling for an education.

N1467: The allusion here is to a happy experience, always remembered with pleasure. On his journey to Florida for health, when a student, Mr. Emerson fell in with Achille Murat, the son of Napoleon's great leader of cavalry, afterwards king of Naples. The son was a man of thought and of great charm, then a planter at Tallahassee. He and Mr. Emerson exchanged some thoughtful letters, but never met again. Apropos of the first part of the paragraph is the following extract:—

Journal, 1862. "In manners, how impossible to overcome an unlucky temperament, unless by living with the well-bred from the start!

.

"Intellectual men pass for vulgar, and are timid and heavy with the elegant; but exhibit the best style if the elegant are intellectual. But the dancers' violin, or Beethoven's music even, degrades them instantly in manners, if they are not also musical.

"Laws of society, a forever engaging topic. At Sir Wm. Molesworth's house, I asked Milnes to get me safely out: he behaved very well. An impassive temperament is a great fortune. *Que de choses dont je peux me passer!* even dancing and music, if I had that."

N1468: The heights of an austere nobility in friendship and love are pictured in the end of the poems "Rhea" and "The Celestial Love." The poem "Friendship" is more human and no less noble.

N1469: Mr. Emerson used to say, "Whom God hath put asunder let not man join together."

N1470:

If Love his moment overstay,
Hatred's swift repulsions play.

"The Visit," Poems.

N1471: The balancing necessity of these complementary conditions is set forth in a stray sheet, perhaps from the course on the Present Age, in 1839–40:—

"We have a double consciousness. We go to school, we learn to read, write, cipher and trade. We have talents, arts, success; we buy and sell, have wives, children, possessions, humours; we unfold and earn and prosper and possess.

"But there is another element in us which does not learn or study or make gain, or value these things at all. It broods on all that is done, but does not; it makes no progress; is as wise at our earliest remembrance, as it

is now. Others may come and go, fetch and carry, travel and govern. It lies in the sun and broods on the world."

Yet in turn Thought must become Action to justify itself. The following is from the lecture "Morals," given in 1859:

"Meantime let no man imagine that the ends of the soul can be attained by intellectual exercises. Contemplation is an office of man, but contemplation is not man. Let him obey the melodious voice of Duty, which vibrates through the universe, calling him always to act. The moral sentiment so profound, and which seems the nearest vision we have of the face of the Creator, reveals itself still in actions. The heart in us is orphan and forlorn until it finds virtue. Beside a duty, beside humility, beside courage, self-denial, and laborious love, how cold and dreary seem to us the gifts of mere genius. Go and deal with persons who are just and benevolent, not in the vulgar and moderate sense, but religiously so, and you feel at home, though in another land or another world."

Mr. Emerson elsewhere thus summarized his conclusion: "A man must ride alternately on the horses of his public and private nature,—

"Like vaulters in a circus round
Who leap from horse to horse but never touch the ground."

CIVILIZATION

IN APRIL, 1861, Mr. Emerson began a course of lectures on Life and Literature at the Meionaon in Boston. He had probably prepared the lecture on Civilization in much the same form that it is printed here. But the outbreak of the Rebellion turned all thought on the crisis in the life of the Nation. Four days before this lecture was delivered he had seen the young men of Concord mustered in arms on the village green and, with the prayers of their townsfolk, march to the defence of constitutional liberty.

It seemed a fated day for Concord, the Nineteenth of April, for this was the third time in her history that her sons had been summoned for that duty on that day. The news of the attack of the Baltimore mob on the Sixth Massachusetts Regiment on that same day had also come, and again, as at Concord Bridge, a soldier from Acton was the first victim of the war. With a lapse towards barbarism threatening the country, and yet a new hope springing up with the awakening of the North, the lecture written in less stirring days had to be remodelled for the hour. Mr. Emerson named it "Civilization at a Pinch." This was, without doubt, the basis for the lecture which, with the addition of an earnest appeal to the

Administration for emancipation of the slaves, was read by him before the Smithsonian Institution at Washington in January, 1862. Under the title there used, "American Civilization," it was printed in the *Atlantic Monthly* for April, 1862. It was afterwards separated into the essay here printed, treating of the general theme, only referring to the times in the last paragraph, and the appeal for the political exigency of the hour, "American Civilization," included in the *Miscellanies*.

N1472: The civilized man in the best sense is described in the poem which serves also as motto for "Culture" and bears that name, beginning,—

Can rules or tutors educate
The semigod whom we await?

N1473: Less well known than that of Cadmus in the mythology, the inventor of the alphabet, is the name of Pytheas, the Massilian Greek who, in the fourth century B.C., first explored the shores of Northern Europe and described them and the midnight sun. He discovered the inclination of the ecliptic, the circuit of the Pole-star and the relation of the tides to the moon. Manco Capac, according to tradition, was the first of the Incas, the son of the sun, and gave to the savage Peruvians the arts of life.

N1474:

Rich are the sea-gods:—who gives gifts but they?
They grope the sea for pearls, but more than pearls;
They pluck Force thence and give it to the wise.
For every wave is wealth to Dædalus,

Wealth to the cunning artist who can work
This matchless strength.

"Sea-Shore," *Poems*.

N1475: By comparing this paragraph with the ending of "The Adirondacs" in the *Poems*, when, after the celebration of the wild forest life, and the men it breeds, Civilization yet receives its dues, the date of the composition can be fixed. For in the summer of 1858 Mr. Emerson enjoyed with his friends, yet, as ever, much alone, two weeks in the primæval woods around Follansbee Pond. William J. Stillman, the all-accomplished captain of the party, has told its story in his *Autobiography*.⁷⁶ His excellent painting of the forest camp and the company is in the Concord Public Library.

N1476: Journal, 1854. "Roads, the wafer on letters, and the position of woman are good tests of civilization." Until the second half of the century envelopes were little used, and the letter-sheet was folded and sealed with one wafer.

N1477: Dr. Thomas Brown, physician and philosopher, wrote *An Inquiry into the Relation of Cause and Effect*, supporting Hume's Theory of Causation.

N1478: Dr. Holmes in his book on Emerson thus refers to this evident quotation from memory by his friend from his poem "The Steamboat": "My attention was called to one paragraph for a reason which my reader will readily understand and, I trust, look upon good-naturedly." He quotes the passage, including the lines of verse, and goes on, "I cannot be wrong, it seems to me, in

⁷⁶ *The Autobiography of a Journalist*. Houghton, Mifflin & Co., 1901.

supposing these two lines to be an incorrect version of these two from a poem of my own called 'The Steamboat':—

"The beating of her restless heart
Still sounding through the storm.'

"It is never safe to quote poetry from memory, at least while the writer lives, for he is ready to 'cavil on the ninth part of a hair,' where his verses are concerned. But extreme accuracy was not one of Emerson's special gifts, and vanity whispers to the misrepresented versifier that

"'T is better to be quoted wrong
Than to be quoted not at all."

N1479: In the poem "Voluntaries," the second stanza, the greater favor of Freedom for the Northman is told.

N1480:

He planted where the Deluge ploughed,
His hired hands were wind and cloud.

"Fragments on the Poet," *Poems*, Appendix.

N1481: Again Dr. Holmes's charming book must be quoted with regard to this passage: "This Essay of Emerson's is irradiated by a single precept that is worthy to stand by the side of that which Juvenal says came from heaven. How could the man in whose thought such a meteoric expression suddenly announced itself fail to recognize it as divine? It is not strange that he repeats it on the page next the one where we first see it. Not having any

golden letters to print it in, I will underscore it for italics, and doubly underscore it in the second extract for small capitals." And he did so.

N1482: From the poem of Samuel Daniel "To the Countess of Cumberland." There is a passage to this purpose on page 307 of "Circles," in the first series of Essays.

N1483: The wife of Colonel John Hutchinson.

N1484:

But he, the man-child glorious,—
Where tarries he the while?

"Song of Nature," *Poems*.

N1485: Journal, 1847. "Civilization is symbolized (how wittily) by a cake, in the hierological cipher of the Egyptians."

N1486: A proper perspective of the important and the unimportant in life was early taught to her sons by Madam Emerson. To her oldest son William, who wrote to her at the age of thirteen about his college room, his mother answered:—

MY DEAR SON,—

You did right to give me so early a proof of your affection as to write to me the first week of your college life. Everything respecting you is doubtless interesting to me, but your domestic arrangements the least of anything, as these make no part of the man or the character any further than he learns humility from his dependence on such trifles as *convenient accommodations* for his happiness. You, I trust, will rise superior to these

little things, for, though small indeed, they consume much time that might be appropriated to better purpose and far nobler pursuits. What most excites my solicitude is your moral improvement and your progress in virtue....Let your whole life reflect honor on the name you bear....Should Paul plant and Apollos water, it is God alone who can give the increase.

N1487: This concluding passage alone in the essay retains the impress of the feeling, due to the long reign of bad politics, of a doubtful issue to the great struggle just begun. Hence Emerson's word of warning to his countrymen was plain and strong.

N1488: The journal for 1864 has the following memorandum:—

"In my paper on Civilization I omitted an important trait, namely, the increased respect for human life. The difference between the oriental nations, on one side, and Europe and America, on the other, lies mainly herein. The Japanese in France are astonished, 't is said, at the vast apparatus and extent of a capital trial:...Remember General Scott's maxim, too, about the sacrifice of one life more than necessity requires."

And in the first months of the war, relieved by the clearing of the moral atmosphere of the country, Mr. Emerson gladly noted:—

"War civilizes; for it forces individuals and tribes to combine, and act with larger views, and under the best heads, and keeps the population together, producing the effect of cities; for camps are wandering cities."

ART

MR. EMERSON'S first lecture on Art seems to have been that given in Boston in December, 1836, in the course on the Philosophy of History. In that and the succeeding lecture Art and Literature were compared.

"Art delights in carrying thought into action. Literature is the conversion of action into thought. The architect executes his dream in stone. The poet enchants you by idealizing your life and fortunes. In both the highest charm comes from that which is inevitable in the work, a divine necessity overpowering individual effort, and expressing the thought of mankind in the time and place." The chapter on Art in the first series of Essays contains part of that lecture.

The present essay is, with a few slight changes, mostly verbal, the paper called "Thoughts on Art," printed in the *Dial* by Mr. Emerson in January, 1841. It is probable that it was essentially the second lecture in the course on Life and Literature given in Boston in April, 1861. It possibly contained some passages from a lecture on Art and Criticism, given in a course at Freeman Place Chapel in Boston in the spring of 1859.

Mr. Emerson had never received any instruction in art. The heads which he carelessly drew on the margins and fly-leaves of early journals show that he had a good eye and some native skill of hand. His poems everywhere show that, for him

Ever the spell of beauty came
And turned the drowsy world to flame.
By lake and stream and gleaming hall
And modest copse and forest tall,
Where'er he went, the magic guide Kept its place by the poet's side.

But he could express beauty only in life and words.

Journal, 1841. "I frequently find the best part of my ride in the Concord coach from my house to Winthrop Place to be in Prince Street, Charter Street, Ann Street and the like places at the North End of Boston. The *deshabille* of both men and women, their unrestrained attitudes and manners make pictures greatly more interesting than the clean-shaved and silk-robed procession in Washington and Tremont streets. I often see that the attitudes of both men and women engaged in hard work are more picturesque than any which art and study could contrive, for the Heart is in these first. I say picturesque, because when I pass these groups I instantly know whence all the fine pictures I have seen had their origin; I feel the painter in me; these are the traits which make us feel the force and eloquence of form and the sting of color. But the painter is only *in* me, and does not come to the fingers' ends."

In Greek sculpture he delighted, for its calm and temperate beauty. After this he cared most for the work of Michel Angelo in the Sistine Chapel, and Raphael's works, especially his Transfiguration.

He read what Goethe had to say on Art, and took pleasure in Vasari's Lives and Winckelmann's writings on Ancient Art, and read Ruskin and Haydon. Fergusson's and Garbett's works on Architecture were studied by him.

He wrote to a friend in 1839: "There are fewer painters than poets. Ten men can awaken me by words to new hope and fruitful musing for one that can achieve the miracle of forms. Besides, I think the pleasure of the poem lasts me longer."

It is hard to realize that Art, except for portrait painting, was little more than a name in America in the first half of the nineteenth century. What opportunities Boston offered may be learned from Mr. Emerson's own account in the *Memoirs of Margaret Fuller Ossoli*:—

"There are persons to whom a gallery is everywhere a home. In this country the antique is known only by plaster casts and by drawings. The Boston Athenæum,—on whose sunny roof and beautiful chambers may the benedictions of centuries of students rest with mine!—added to its library in 1823 a small but excellent museum of the antique sculpture in plaster;—the selection being dictated, it is said, by no less an adviser than Canova. The Apollo, Laocoön, the Venuses, Diana, the head of the Phidian Jove, Bacchus, Antinoüs, the Torso Hercules, the Discobolus, the Gladiator Borghese, the Apollino,—all these, and more, the sumptuous gift of Augustus Thorndike. It is much that one man should have power to confer on so many, who never saw him, a benefit so pure and enduring.

"To these were soon added a heroic line of antique busts, and at last, by Horatio Greenough, the Night and Day of Michel Angelo. Here was old Greece and old Italy brought bodily to New England, and a verification given to all our dreams and readings. It was easy to collect from the drawing-rooms of the city a respectable picture-gallery for a summer exhibition. This was also done, and a new pleasure was invented for the

studious, and a new home for the solitary. The Brimmer Donation, in 1838, added a costly series of engravings, chiefly of the French and Italian museums, and the drawings of Guercino, Salvator Rosa and other masters."

N1489: Through this chapter and that on the same theme in the first book of Essays, what is best in the useful and the fine arts is shown to be that part which is inevitable, the working through the artist of the Universal Soul. In connection with this opening paragraph may be read the last page in the essay on Fate in *Conduct of Life*, where comes in the consoling doctrine of "the Beautiful Necessity" offsetting the drag of temperament and race.

N1490: Two other of his definitions may here be given:—

1851. "To describe adequately is the high power and one of the highest enjoyments of man. This is Art."

1863. "My definition of Art is the inspiration of a just design working through all the details. Art is the path of the Creator to his work."

N1491: Mr. Emerson expounds, better than in either of the essays on Art, the divine necessity of the best art in his early poem "The Problem."

N1492: Mr. Emerson might have mentioned in connection with Smeaton's (the third) Eddystone Lighthouse, that the first, built by Winstanley on that terrible reef, was, at the top, a whimsical and almost pagoda-like structure, unable long to resist the upward dash of the seas.

N1493: In one of the fragments in the Appendix to the Poems he makes Nature say,—

He lives not who can refuse me;
All my force saith, Come and use me.

N1494: In his second poem on Nature Mr. Emerson wrote:—

And what they call their city way
Is not their way, but hers,
And what they say they made to-day,
They learned of the oaks and firs.

.

What's most theirs is not their own,
But borrowed in atoms from iron and stone,
And in their vaunted works of Art
The master-stroke is still her part.

N1495: This consideration is the theme of the poem "Each and All."

N1496: Homer said of the ten years' war around Troy,—

"Thus the gods fated and such ruin wove
That song might flourish for posterity."

N1497: "Thus to him, to this schoolboy under the bending dome of day, is suggested that he and it proceed from one root; one is leaf and one is flower; relation, sympathy, stirring in every vein... He shall see that Nature is the opposite of the soul, answering to it part for part. One is seal and one is print. Its beauty is the beauty of his own mind."—"The American Scholar," *Nature, Addresses and Lectures*.

N1498: "The Genius of the Hour sets his ineffaceable seal on the work, and gives it an inexpressible charm for the imagination. As far as the spiritual character of the period overpowers the artist and finds expression in his work, so far will it retain a certain grandeur, and will represent to future beholders the Unknown, the Inevitable, the Divine."—"Art," *Essays, First Series*.

N1499: Journal, 1835. "The Arts languish now because all their scope is exhibition; when they originated it was to serve the Gods. The Catholic Religion has turned them to continual account in its service. Now they are mere flourishes. Is it strange they perish?

"Poetry to be sterling must be more than a show, must have or be an earnest meaning. Chaucer, Wordsworth,—per contra, Moore and Byron."

N1500: The following is from some loose sheets on Beauty (1866?):—

"Beauty was never locked up in Vaticans. It is there, but it is not less here. The seat of beauty is in the truth and health of the Soul. It is the incessant creation of the spirit of man, whenever bad affections and falsehoods do not paralyze his plastic power; places and materials are indifferent to it, and subject to it; a beautiful soul dwells always in a beautiful world."

N1501: The following extract is from Mr. Emerson's journal in Florence, in April, 1834:—

"I revisited the Tribune this morning to see the Venus and the Fornarina and the rest of that attractive company. I reserve my admiration as much as I can: I make a continual effort not to be pleased except by that which ought to please me, and I walked coolly round and round the marble lady,

but, when I planted myself at the iron gate which leads into the chamber of Dutch paintings, and looked at the statue, I saw and felt that mankind had had good reason for their preference."

"There is anything but time in my idea of the antique." From a lecture on Art and Criticism, 1839.

N1502: The first sentence of this paragraph is thus rendered in his poem "The Rhodora":—

If eyes were made for seeing,
Then Beauty is its own excuse for being;—

and the ideas of the remaining portion of this passage are found in "The Problem":—

The hand that rounded Peter's dome
And groined the aisles of Christian Rome
Wrought in a sad sincerity;
Himself from God he could not free;

.

For out of Thought's interior sphere
These wonders rose to upper air.

N1503: Also compare, in *Essays, First Series*, page 17 in "History," and several passages in "Art."

How astonished Art may
Mimic in slow structures, stone by stone,

.

The frolic architecture of the snow,—

is told by Mr. Emerson in his poem "The Snow-Storm."

N1504: Here followed in the original lecture as printed in the *Dial* the paragraphs on the Gothic churches in "History," pp. 20, 21, in the *Essays, First Series*.

N1505:

Whilst love and terror laid the tiles.

"The Problem," *Poems*.

Journal, 1848. "I believe in the admirableness of art. I expect it to be miraculous, and find it so. The combinations of the Gothic building are not now attainable, and the Phidian friezes with reason affect us as the forest does."

I copy from a later journal, as appropriate here, the definition of Beauty by Mr. Emerson's friend, Mr. James Elliot Cabot: "*The complete incarnation of spirit*, which is the definition of Beauty, demands equally that there be no point it does not inhabit, and none in which it abides."

N1506: Journal, 1863. "The measure in art and in intellect is one: To what end? Is it yours to do? Are you bound by character and conviction to that part you take?...But the forsaking the design to produce effects by showy details is the ruin of any work. Then begins shallowness of effect; intellectual bankruptcy of the artist. All goes wrong. Artist and public corrupt each other."

N1507: Here Mr. Emerson states again the doctrine of the Trinity, older than the Christian Church. It appears in many places in his writings, especially in "The Transcendentalist," page 354, in *Nature, Addresses and Lectures*, and in "The Poet," page 6, in the second series of Essays.

John Sterling, the friend and correspondent of Carlyle and Emerson, wrote a noble poem on Greek Art, under the title of "Dædalus." It is included in Mr. Emerson's *Parnassus*. Some lines from it might fitly end this chapter:—

"Ever thy phantoms arise before us,
Our loftier brothers, but one in blood;
By bed and table they lord it o'er us,
With looks of beauty and words of good.
Calmly they show us mankind victorious
O'er all that's aimless, blind and base;
Their presence has made our nature glorious,
Unveiling our night's illumined face."

ELOQUENCE

IN FEBRUARY, 1847, Mr. Emerson gave a lecture on Eloquence before the Boston Mercantile Library Association. It seems to have been much the same as the present essay. Just three years earlier, after reading his lecture on *The Young American* before the same body, he wrote in his journal as follows:—

February, 1844.

When I address a large assembly, as last Wednesday, I am always apprised that an opportunity is there; not for reading to them, as I do, lively miscellanies, but for painting in fire my thought, and being agitated to agitate. One must dedicate himself to it and think with his audience in his mind, so as to keep the perspective and symmetry of the oration, and enter into all the easily forgotten secrets of a great nocturnal assembly and their relation to the speaker.

But it would be fine music and in the present well rewarded; that is, he should have his audience at his devotion, and all other fames would hush before his. Now, eloquence is merely fabulous. When we talk of it we draw on our fancy. It is one of many things which I should like to do, but it requires a seven years' wooing.

Eloquence, in boyhood and youth, had been his idol. He had used every opportunity to hear the finished speakers of that day, when rhetoric and oratory were more prized than now. In those days apparently the great body of the students at Cambridge voluntarily went to hear the Seniors declaim. The florid and fervid oratory of the young Southerners had a great charm for the Northern boys. The young Emerson himself took the Boylston prize for speaking. Writing to his Aunt Mary, at the age of twenty, concerning his choice of the ministry as a profession, he said: "I inherit from my sire a formality of manners and speech, but I derive from him or his patriotic parent a passionate love for the strains of eloquence. I burn after the *aliquid immensum infinitumque* which Cicero desired. What we ardently love, we burn to imitate. But the most prodigious genius, a seraph's eloquence, will shamefully defeat its own end, if it has not first won the heart of the defender to the cause he defends." In those days he expressed the hope that he might "put on eloquence like a robe."

After leaving the ministry, on his return from Europe to the new life, he resolved to "say, at public lectures and the like, those things which I have meditated for their own sake, and not for the first time with a view to that occasion." He charged himself to make his writings "as pure of all dross as if thou wert to speak to sages and demigods." Before he learned from his experience in country lyceums how to interest and quicken uncultivated hearers without lowering the thought, an acquaintance prescribed for him "a course of mobs to correct my quaintness and transcendentalism. And I might have found it as good for me as a water-cure for paralyzed stomachs." In the lyceum he drew a lesson from this story of antiquity: "When Anaximander sang, the boys derided him, whereupon he said, 'We must learn to sing better for the boys.'"

In the years between 1840 and 1850 Mr. Emerson's growing desire to express himself in poetry began to be fulfilled. He gave a lecture in London in 1848 before the Portman Square Literary and Scientific Institution, in the exordium of which he said, "I have ventured to name my topic 'Poetry and Eloquence,' though what I have to say is chiefly on the last. There is much that is common to the two." The best prose should be poetic, but the highest eloquence should be a poem.

The present lecture naturally follows that on Art, Eloquence, including Poetry, being the art that the author most loved.

The subject was not easily exhausted, and Mr. Emerson wrote another lecture, which was read in Chicago in 1867. This last is included in the volume *Letters and Social Aims*.

N1508: Plato, *Republic*, Book 1. At town-meetings and other public gatherings Mr. Emerson seldom spoke unless the call was urgent. He felt his unfitness for debate or extempore speech; but he listened and watched the disputants with great interest and often admiration.

N1509: Among Mr. Emerson's notes on Eloquence he wrote as a sort of motto some lines from the ancient version of "Thomas the Rhymer," called "Thomas of Ersseldoune," a legend that was a favorite with him.

The Queen of Elfland says to Thomas at parting,—

"Fare wele, Thomas, I wend my waye,

I may no lengere stande with the:'

'Gyff me a tokynyng, lady gaye,

That I may saye I spake with the.'

"To harpe or carpe whereso thou gose,

Thomas, thou sall hafe the chose sothely:
 And he saide, 'Harpyng kepe I none,
 For tonge is chefe of minstrelsye."

N1510: See Plutarch's "Lives of the Ten Orators" in the *Morals*. Antiphon of Rhamnus in Attica (480–411 B.C.), was the first of the Ten Attic Orators to introduce the new rhetoric into politics. He was a leader in the Revolution of the Four Hundred, and when they fell was put to death.

N1511:

"But now the blood of twenty thousand men
 Did triumph in my face."

Shakspeare, *Richard II.*, Act III., Scene 2.

N1512:

"Un jour, sous sa fenêtre
 Passe un entreterrement:
 Le cortège et le prêtre
 Entendent l' instrument.
 Ils sautent; la prière
 Cede aux joyeux accords;
 Et, jusqu'à cimetière
 On danse autour du corps."

Béranger, "Ménétrier de Meudon."

N1513: In writing in his journal the resolve to give his best thoughts to all classes of hearers he said, "And be no whit ashamed if not one, yea, not one in the assembly, should give sign

of intelligence. Is it not pleasant to you—unexpected wisdom? depth of sentiment in middle life? persons that in the thick of the crowd are true kings and gentlemen without the harness and envy of the throne?”

N1514: Yet with all the pleasure he took in the torrent of Celtic eloquence when Kate, the housemaid, described accidents that befel her, he praises in the essay on *The Superlative* the cautious understatement of the Yankee.

N1515: Colonel Thomas Wentworth Higginson relates that he heard Mr. Emerson speak thus in praise of Southern eloquence, to the content of students from that section, in the audience; a content that was lessened when he went on, “The negro too is eloquent.”

N1516: Knowing how children learn through stories, Mr. Emerson when a teacher wrote out many good anecdotes from Plutarch and other sources for his scholars, which are still preserved.

N1517: The ballad of Glenkindie, the minstrel, is in Professor Child’s collection of English and Scottish Ballads.

N1518: Mr. Emerson had this description of Ulysses from the *Iliad* (Book III. 191) written out for declamation, perhaps for his own speaking when in college. He gave it to his son for this purpose, but he was much disturbed when some one corrected the last sentence to the form here given. His own mistranslation or “acting version” was far more effective and majestic in his delivery: “But when he sent his great voice forth from his breast, and words fell like to the winter snows, not then would any mortal have wished

to contend with Ulysses, *and we rejoice not, beholding the son of Laertes here.*"

N1519: Journal, 1856. "I last night remembered what fools a few sounding sentences made of me and my mates at Cambridge, as in Lee's and John Everett's orations....I still remember a sentence in Carter Lee's oration: 'And there was a band of heroes, and round their mountains was a wreath of light, and, in the midst, on the mountain-top, stood Liberty feeding her eagle.'"

N1520: Daniel Webster.

N1521: "My hand of iron," said Napoleon, "was not at the extremity of my arm, it was immediately connected with my head."

N1522: In "Natural Aristocracy" (in *Lectures and Biographical Sketches*) the power of a commanding personality is set forth at length.

N1523: All this paragraph, as far as the quotation from Pepys's *Diary*, Mr. Emerson took from his note-book of 1830.

N1524: The Rev. Joseph Stevens Buckminster, born in 1784, ordained pastor of Brattle Street Church in Boston before he was twenty-one years old, who died at the age of twenty-eight. He was a cultivated, thoughtful and eloquent man. He preached the funeral sermon of Mr. Emerson's father, the Rev. William Emerson.

N1525: From his youth upward Mr. Emerson lost no opportunity of hearing Daniel Webster speak. In his Phi Beta Kappa Poem in 1834 he introduced a description of Webster's commanding

personality and in praise of his gifts and services. This passage may be found in the Appendix to the *Poems*. In 1843, when Mr. Webster was retained in an important case in Concord, Mr. Emerson wrote in his journal:—

“Mr. Webster loses nothing by comparison with brilliant men in the legal profession; he is as much before them as before the ordinary lawyer. At least, I thought he appeared, among these best lawyers of the Suffolk Bar, like a schoolmaster among his boys. His wonderful organization, the perfection of his elocution, and all that thereto belongs, voice, accent, intonation, attitude, manner, are such as one cannot hope to see again in a century: then he is so thoroughly simple and wise in his rhetoric. Understanding language and the use of the positive degree, all his words tell, and his rhetoric is perfect, so homely, so fit, so strong. Then he manages his matter so well, he hugs his fact so close, and will not let it go, and never indulges in a weak flourish, though he knows perfectly well how to make such exordiums and episodes and perorations as may give perspective to his harangue without in the least embarrassing his plan or confounding his transitions. What is small he shows as small, and makes the great great. In speech he sometimes roars and his words are like blows of an axe.”

N1526: In his poem “The Adirondacs” Mr. Emerson celebrates the skill and powers of the guides, to the disadvantage of the gentlemen.

N1527: Mr. Emerson honored Lord Mansfield for his decision in the case of Somerset the slave, and contrasted him in his journals with the Boston judges who gave the decision under the Fugitive Slave Law returning Sims and Burns to bondage. Mr. Emerson here and elsewhere shows his liking for the word “common-sense,” in its larger sense, being almost an equivalent for the “universal mind”

found everywhere in his writings. In the journal of 1836–37, after speaking of the mob, he says:—

“A contrast is seen in the effect of eloquence, the power which one man in an age possesses of uniting men by addressing the common soul of them all: if, ignorantly or wilfully, he seeks to uphold a falsehood, his inspiration and, ere long, his weight with men is lost; instead of leading the whole man, he leads only appetites and passions.”

N1528: This definition of the eloquent man suggests the definition of eloquence in the essay of that name in the next volume: “Eloquence is the power to translate a truth into language perfectly intelligible to the person to whom you speak.”

N1529: This passage refers to the Rev. Edward Taylor, the pastor of the Seamen’s Bethel at the North End in Boston, whose rugged and searching eloquence Mr. Emerson greatly admired.

Journal, 1845. “What an eloquence Taylor suggests! Ah, could he guide those grand sea-horses of his with which he caracoles on the waves of the sunny ocean. But no, he is drawn up and down the ocean currents by the strong sea-monsters only on that condition, that he shall not guide.”

N1530: See the last part of stanza i. of the “Voluntaries” in the *Poems*.

N1531:

One who having nectar drank
Into blissful orgies sank;
He takes no mark of night or day,

He cannot go, he cannot stay,
He would, yet would not, counsel keep,
But, like a walker in his sleep
With staring eye that seeth none,
Ridiculously up and down
Seeks how he may fitly tell
The heart-o'erlading miracle.

"The Poet," *Poems*, Appendix.

N1532:

"As in a theatre, the eyes of men,
After a well-graced actor leaves the stage,
Are idly bent on him that enters next,
Thinking his prattle to be tedious."

Shakspeare, *Richard II.*, Act V., Scene 2.

N1533: When Mr. Emerson, a young divinity student, was writing his first sermon, he thus cautioned himself: "Take care, take care that your sermon is not a recitation; that it is a sermon to Mr. A and Mr. B and Mr. C."

A few years after leaving the ministry he came home distressed at the preaching he heard on Sunday morning:—

"At church to-day I felt how unequal is this match of words against things. Cease, O thou unauthorized talker, to prate of consolation, and resignation, and spiritual joys in neat and balanced sentences. For I know these men who sit below and on hearing of these *words* look up. Hush quickly! for care and calamity are *things* to them....O speak things then, or hold thy tongue."

N1534: Mr. Emerson used to say laughingly, "Eloquence is dog-cheap at an Anti-Slavery meeting."

N1535: Evidently Theodore Parker was in Mr. Emerson's mind here. Mr. Lowell's remarkable description of Mr. Parker's omniscient pugnacity in his *Fable for Critics* might be read in this connection.

N1536: Mr. Emerson, in writing to his revered friend the Rev. Henry Ware, after the Divinity School Address, had said as to arguments by which he might justify his position, "I do not know what arguments mean in reference to any expression of a thought." On another occasion he said, "Truth ceases to be such when polemically stated." He ignored attacks and left the thought to make its way. This is the counsel given in his poem "Saadi."

N1537:

The rules to men made evident
By Him who built the day,
The columns of the firmament
Not firmer based than they.

"Fragments on the Poet," *Poems*, Appendix.

The speech of John Brown before receiving his death-sentence is an example of eloquence based on the great principles. In the essay on this subject in *Letters and Social Aims*, Mr. Emerson speaks of it, classing it as one of "the two best specimens of eloquence we have had in this country."

N1538: Mr. Emerson acted on the counsel he gave to the American Scholar in the Phi Beta Kappa Address, in 1837: "Let him

not quit his belief that a popgun is a popgun, though the ancient and honorable of the earth affirm it to be the crack of doom."—*Nature, Addresses and Lectures*, p. 102.

N1539: Arnold Ludwig Heeren was a writer whose works on ancient history and civilization, particularly of Greece, translated by George Bancroft, interested Mr. Emerson.

N1540: The reference here is to Kurroglou the Kurd, a robber-minstrel. Mr. Emerson was greatly interested in the romantic story of him and his horse Kyrat, told in *Specimens of Ancient Persian Poetry* by Chodzko. Kurroglou is the hero of Longfellow's poem "The Leap of Roushan Beg."

N1541: The following note from the journal of 1850 is appropriate:—

"And let it be well considered in eloquence, that what we praise and allow is only relatively good, and that perhaps a person is there present who, if he would, could unsettle all that we have just now agreed on. We have fallen into a poor, beggarly way of living, and our orators are of the same poverty, and deal in rags and cold. The imagination, the great awakening power, the morals, the great creator of genius and men, are not addressed. But though the orators and poets are of this jejune rule of three faction, the capacities remain. The child asks you for a story and is thankful for the poorest. It is not poor to him, but a symbol all radiant with meaning. The man asks you for leave to be a poet and to paint things as they ought to be for a few hours. The youth asks for a poem. The stupidest wish to go to the theatre. We must have idolatries, mythologies, some swing and verge for the eternal and creative power lying coiled and cramped here, driving us to insanity and crime if it do not find vent."

DOMESTIC LIFE

MR. EMERSON seems to have first treated this subject in a lecture called "Home" in the course on Human Life given in Boston in the winter of 1838–39. A passage from this lecture survives in the present essay and another in that on Education, in *Lectures and Biographical Sketches*. Probably the same, with suitable changes for an English audience, was the lecture called "Domestic Life," one of the three given in Exeter Hall.

The lecture in its present form was read to Mr. Parker's Society in the Music Hall in Boston, November 13, 1859.

Mr. Emerson was an eminently domestic man, more so than might be inferred from his writings, unless perhaps where in them he speaks of little children. In his home he was loved and loving, a good householder, if a poor farmer. His housekeeping was simple but hospitable. He was esteemed by his neighbors, and, though he served himself by preference, was cared for by servants with affectionate respect.

But by force of character and will he succeeded in keeping to his task and avoiding domestic entanglement, although his study

was close by the front door and separated but by thin doors from the parlor.

To show the good school of domesticity in which Mr. Emerson was reared, this picture of the home after his father's death may be given. The letter was written to his Aunt Mary when Ralph was not quite ten years old.

Boston, April 16, 1813.

DEAR AUNT,—...I mean now to give you an account of what I do commonly in one day, if that is what you mean by giving an account of one single day in my life. Friday, 9th, I choose for the day of telling what I did. In the Morning I rose, as I commonly do, about five minutes before six. I then help Wm. in making the fire, after which I set the table for Prayers. I then call Mamma about quarter after six. We spell as we did before you went away. I confess I often feel an angry passion start in one corner of my heart when one of my Brothers gets above me, which I think sometimes they do by unfair means, after which we eat our breakfast; then I have from about quarter after seven to play or read. I think I am rather inclined to the former. I then go to school where I hope I can say I study more than I did a little while ago. I am in another book called Virgil, and our class are even with another which came to the Latin School one year before us. After attending this school I go to Mr. Webb's private school where I write and cipher. I go to this place at eleven and stay till one o'clock.⁷⁷ After I come home I eat my dinner and at two o'clock I resume my studies at the Latin School where I do the same except in studying grammar. After I come home I do Mamma her little errands if she has any; then I bring in my wood to supply the breakfast-room. I then have some time to play and eat my supper. After that we say our hymns or chapters, and then take our turns in reading Rollin, as we did before you went.⁷⁸ We retire to bed at

⁷⁷ He did not think it worth while to mention to his aunt that he found it pleasanter to spend these two hours on the Common until Discovery and Retribution overtook him.

⁷⁸ An abridged translation in five volumes of the *Histoire Ancienne* by Charles Rollin (1661–1741).

different times. I go at a little after eight, and retire to my private devotions, and then close my eyes in sleep, and there end the toils of the day.

From Mr. Emerson's note-book:—

"On the back of Alexander's portrait of my mother, taken in 1825, at the age of 57, Edward B. E., who ordered the picture, wrote,—

"Feminae, uxoris, viduae, matris optima, laudata, benedicta vita pulchra, similitudo tam similis pretiosa. Ipsa mulier ad coelum ibit: umbra picta inter amicos, Deo volente, numquam inter inimicos, quia tales non sunt, vivis descriptionem sine errore mortalis quondam, tunc angeli dabit.

"Charles C. E. proposes an improved reading of the second sentence:—

"Ipsa mulier in coelum ibit: umbra picta inter amicos, Deo volente, non unquam, cum tales nulli sint, inter inimicos, errore purae mortalis quondam, tunc animae beatæ imaginem servabit."

N1542: "The babe in arms is a channel through which the energies we call fate, love and reason visibly stream."—"Considerations by the Way," *Conduct of Life*.

Pliny's charming and condensed description of a baby was noted by Mr. Emerson before he had children of his own: *Flens animal, cæteris imperaturum*, a crying creature which will give the law to others.

N1543: The last three sentences were written soon after the birth of Mr. Emerson's first child, Waldo, who died when five years old.

N1544: Mr. Thoreau served as horse and in every other way as delightful friend and companion to the children of his friend.

N1545: The following is from an early journal:—

"Blessed is the child: the unconscious is ever the act of God himself. Nobody can reflect upon his unconscious period, or any particular word or act in it, with regret or contempt. Bard or hero cannot look down upon the word or gesture of a child: it is as great as they."

N1546: Dr. Holmes wrote: "'Domestic Life' begins with a picture of childhood so charming that it sweetens all the good counsel which follows like honey round the rim of the goblet which holds some tonic draught."

N1547: In the early poem "Peter's Field," only published after Mr. Emerson's death, in the Appendix to the *Poems*, he told of the enchanted wood which the oaks and hemlocks behind the Ripley Hill in Concord seemed to him and his brothers.

N1548: "We rightly speak of the guardian angels of children. How superior in their security from infusions of evil persons, from vulgarity and second thought! They shed their own abundant beauty on the objects they behold. Therefore they are not at the mercy of such poor educators as we adults. If we huff and chide them, they soon come not to mind it, and get a self-reliance; and if we indulge them to folly, they learn the limitation elsewhere."—"Uses of Great Men," *Representative Men*.

N1549: Journal, 1842. "I was a little chubby boy trundling a hoop in Chauncy Place and spouting poetry from Scott and Campbell at the Latin School. But Time, the little gray man, has taken out of his vest pocket a great awkward house (in a corner of which I sit and write of him), some acres of land, several full grown and several

very young persons, and seated them close beside me; then he has taken that chubbiness and that hoop quite away (to be sure he has left the declamation and the poetry) and here left a long lean person threatening soon to be a little gray man like himself."

N1550: A similar amusing passage is in the essay on Beauty (*Conduct of Life*, p. 298): "But our bodies do not fit us, but caricature and satirize us," etc.

N1551: "There are not in the world at any one time more than a dozen persons who read and understand Plato,—never enough to pay for an edition of his works; yet to every generation these come duly down, for the sake of those few persons, as if God brought them in his hand."—"Spiritual Laws," *Essays, First Series*, p. 154.

N1552:

"None is so wasteful as the scraping dame;
She loseth three for one, her soul, rest, fame."

Herbert, "The Church Porch."

N1553:

'T is the day of the chattel,
Web to weave, and corn to grind;
Things are in the saddle,
And ride mankind.

"Ode," inscribed to W. H. Channing, *Poems*.

N1554: Journal, 1850. "Hear what the morning says and believe that. The house is full of noise and contradicts all that the morning hints."

Also a passage on the unworthiness of much of our daily employment is called to mind in "Lecture on the Times," *Nature, Addresses and Lectures*.

N1555: In the concluding verses of "The Celestial Love" in the *Poems* this aspect of our debt to our kind is treated. In the journal of 1842, speaking of the self-denying ordinances of the reformers in abjuring flesh and wine and civic responsibilities, he concludes, "By none of these ways can he free himself, no, nor by paying his debts with money; only by obedience to his own genius, only by the fresh activity in the way constitutional to him, does an angel seem to arise and lead him by the hand out of all wards of the prison."

N1556: His house gave hospitality, simple but comfortable, to the bodies of the many who came, but even more to the ideas. Sometimes the person did not come, only the earnest question or thought, and an answer giving light or refreshment returned. Mr. Emerson said, "I will assume that a stranger is judicious and benevolent. If he is, I will thereby keep him so. If he is not, it will tend to instruct him."

N1557:

Thou shalt make thy house
The temple of a nation's vows.
Spirits of a higher strain
Who sought thee once shall seek again.

I detected many a god
Forth already on the road,
Ancestors of beauty come
In thy breast to make a home.

"Fragments on Life," *Poems*, Appendix.

N1558: On his return to his own country in 1848, from the conventional life and fixed standards of England, he felt the relief and the opportunity, and wrote:—

"The dinner, the wine, the homes of England look attractive to the traveller, but they are the poor utmost that liberal wealth can perform. Alas! the halls of England are musty, the land is full of coal-smoke and carpet-smell: not a breath of mountain air dilates the languishing lungs."

N1559: "The household is a school of power. There, within the door, learn the tragi-comedy of human life. Here is the sincere thing, the wondrous composition for which day and night go round. In that routine are the sacred relations, the passions that bind and sever. Here is poverty and all the wisdom its hated necessities can teach, here labor drudges, here affections glow, here the secrets of character are told, the guards of man, the guards of woman, the compensations which, like angels of justice, pay every debt: the opium of custom, whereof all drink and many go mad. Here is Economy, and Glee, and Hospitality, and Ceremony, and Frankness, and Calamity, and Death, and Hope."—"Education," *Lectures and Biographical Sketches*.

N1560: This picture of the home of Mr. Emerson's childhood is well supplemented by those in Mr. Cabot's *Memoir*, vol. i. chapter i., and in the pleasant little book written by his cousin, the Rev.

David Greene Haskins.⁷⁹ The book of another kinsman, George Barrell Emerson, the distinguished teacher and a much valued friend, contains this account of the Emerson household:—

“The longing for a home led me to apply to a very noble lady whom I had long known, and to beg her to let me become one of her family. She granted my request in the kindest manner possible. She was the widow of Rev. William Emerson, and among her sons I found William, whom I had long known and loved, the best reader, and with the sweetest voice I ever heard, and a pleasant talker; Ralph Waldo, whom I had known and admired, and whom all the world now knows almost as well as I do; Edward Bliss, the most modest and genial, the most beautiful and the most graceful speaker, a universal favorite; and Charles Chauncy, bright and ready, full of sense, ambitious of distinction, and capable of it.”⁸⁰

Of the religious atmosphere in that home Mr. Emerson thus speaks in his journal of 1837: “I cannot hear the young men whose theological instruction is exclusively owed to Cambridge and to public institutions without feeling how much happier was my star, which rained on me influences of ancestral religion. The depth of the religious sentiment which I knew in my Aunt Mary, imbuing all her genius and derived to her from such hoarded family traditions, from so many godly lives and godly deaths of sainted kindred, at Concord, at Malden, York, was itself a culture, an education. I heard with awe her tales.”

79 *Ralph Waldo Emerson; his Maternal Ancestors, with some Reminiscences of him.* Boston: Cupples, Upham & Co., 1887.

80 *Reminiscences of an Old Teacher.* Boston: Alfred Mudge & Son, 1878.

N1561: In former editions this name has been printed Genelas, but I can learn of no authority for any other spelling than Venelas. The name does not appear in the common English ballad on the same theme, "The Boy and the Mantle." Venelas appears in the "Fabliau du Mantel mantillé" in the Collection by Montaignon and Raynaud, and the *Archæologia Cambrensis*, 3d series, vol. ix.

N1562: "We give up the past to the objector, and yet we hope. We grant that human life is mean, but how did we find out that it was mean?"—"The Over-Soul," *Essays, First Series*, p. 267.

See also on the last page of "Poetry and Imagination," in *Letters and Social Aims*, "The grandeur of our life exists in spite of us," etc. Also the lines in "Woodnotes," II., beginning,—

And thou shalt say to the Most High,
"Godhead! all this astronomy," etc.

N1563: The idealized friend appears in the poem "Friendship," the motto of that essay:—

O friend, my bosom said,
Through thee alone the sky is arched,
Through thee the rose is red;
All things through thee take nobler form
And look beyond the earth,
The mill-round of our fate appears
A sun-path in thy worth.

N1564: Quoted by Plutarch in the essay "Of Brotherly Love" in the *Morals*.

N1565:

If Thought unlock her mysteries,
If Friendship on me smile,
I walk in marble galleries,
I talk with kings the while.

"Walden," *Poems*, Appendix.

N1566:

Let statue, picture, park and hall,
Ballad, flag and festival,
The past restore, the day adorn,
And make to-morrow a new morn.
So shall the drudge in dusty frock
Spy behind the city clock
Retinues of airy kings,
Skirts of angels, starry wings,
His fathers shining in bright fables,
His children fed at heavenly tables.

"Art," *Poems*.

N1567: Mr. Emerson once said of Gibbon, after praising his power of labor and his stately writing, that the trouble with the man was "that he had no shrine," a man's most needful possession.

N1568:

God only knew how Saadi dined;
Roses he ate, and drank the wind.

"Fragments on the Poet," *Poems*, Appendix.

FARMING

THIS ESSAY, originally called "The Man with the Hoe," was the oration delivered by Mr. Emerson at the annual exhibition of the Middlesex Agricultural Society—"Cattle-show" in the vernacular—September 29, 1858. His townsman, John S. Keyes, Esquire, the sheriff of Middlesex and the president of the Society, invited him to give the address, knowing well that Mr. Emerson would present the larger and nobler view of their occupation to the farmers and gardeners of the county. For Concord, then a shire-town, was mainly agricultural, its lands still in the hands of the descendants of the early settlers. The two ministers, three doctors, six lawyers, two manufacturers, and the shop-keepers were all gardeners also, as were even the few residents who did business in Boston. So was Mr. Emerson, though in his essay on Prudence he admitted that "whoever sees my garden discovers that I must have some other garden." His poem "My Garden" tells of the latter, which yielded abundantly, but, that he had a right to talk to farmers as one of them, witness the printed Report of the Agricultural Society of 1858, which contains not only the Address in its first form, but the recommendation that R. W. Emerson and

O. Farnsworth each receive \$1.00 as a gratuity for single dishes of pears; better yet, R. W. Emerson is awarded third premium of \$3.00 for Sage grapes. His neighbors, the Concord farmers, returned his salute with courtesy and respect when they met him on the roads or in their wood-lots, and most of them liked to hear him read one or more lectures in the Lyceum each winter, as did the people of the villages around. Mr. Emerson once said that his farming, "like the annual ploughing of the Emperor of China, had a certain emblematic air," but he knew how to find emblems and parables in the field, and proved in his lecturing that common people loved symbols. His neighbors gathered in their crops, but he, unknown to them, had reaped a harvest in their fields of which he tells in his poem "The Apology." This was his best crop, for he was unhandy with the spade. While his garden was small, he worked it with advice and help of his good friends George Bradford and Henry Thoreau, but as his farm increased, it was managed for a time by Mr. Edmund Hosmer. Of this neighbor Mr. Emerson gave a pleasant account in the *Dial* paper "Agriculture of Massachusetts," included in the volume *Natural History of Intellect*. After 1850 the ten-acre farm was managed and worked for him in succession by two excellent and devoted Irishmen, who left him free from its care to mind his own affairs as the interpreter.

In the journal of 1838 he wrote:—

"If my garden had only made me acquainted with the muck-worm, the bugs, the grasses and the swamp of plenty in August, I should willingly pay a free tuition. But every process is lucrative to me far beyond its economy."

In the essay on Wealth in *Conduct of Life* is the amusing account of how the weeds insidiously betrayed Mr. Emerson into the loss of his morning, and in *Nature, Addresses and Lectures* the advantages

and to some extent the drawbacks of farming are set forth in the early pages of "The American Scholar," and "Man the Reformer," pp. 237–242.

The exordium of the Cattle-show Address was as follows:—

"Mr. President, Ladies and Gentlemen:—I suppose there is no anniversary that meets from all parties a more entire good will than this rural festival. Town and country, trader and manufacturer, clerk and layman, sailor and soldier, men and women, all have an equal stake in the prosperity of the farmer. It is well with all when it is well with him. He has no enemy, and all are loud in his praise. Every wise State has favored him, and the best men have held him highest. Cato said, when it was said that such or such a man was a good husbandman, it was looked upon as the very highest compliment. Of all the rewards given by the Romans to great public benefactors, the most valued and the rarest bestowed was the crown of grass, given only by the acclamation of the army for the preservation of the army by the valor of one man. Since the dependence, not of the whole army, but of the whole state, rests on the tiller of the ground, the *arval* crown, the crown of grass, should be more rightfully awarded to the farmer. Let us then look at the condition of the farmer, or the Man with the Hoe, at his strength and weakness, at his aids and servants, at his greater and lesser means, and his share in the great future which opens before the people of this country."

N1569: In the autumn following his Address to the Divinity Students in 1838, Mr. Emerson had been so much denounced for his dangerous heresies that it almost seemed to him that his lecture courses, on which he largely depended for support, might not be attended. He evidently began to consider man's primitive means of support, for he wrote in the journal of September 30, immediately in connection with some entries, suggested by the attacks made upon him:—

"It seems as if a man should learn to fish, to plant or to hunt that he might be secure if he were cast out from society and not be painful to his friends and fellow men."

While planting his potatoes this comforting thought occurred: "A great fact of much import to the new philosophical opinions is the garden discovery that a potato put into a hole, in six weeks becomes ten. This is the miracle of the multiplication of loaves."

And again, May, 1839: "I think we ought to have manual labor, each man. Why else this rapid impoverishing which brings every man continually to the presence of the fact that bread is by the sweat of the face."

N1570: It should be remembered that this address was written at the period when the old New England farming had not yet quite passed into the new. The farmer and his boys were still working together on many farms, and the mother and daughters doing dairy and household work. The farmer was less of a trader than he must be now to succeed, for he and his family mainly lived off the farm. The machine-farming was but beginning, and most farm-work, and even marketing, was done at the pace of the ox, and the horse was only beginning to supersede him. To offset this, the working-day was often sixteen hours long. The bread was still often made of rye and Indian meal, and vegetables, fruit, pork and beef raised on the farm, with cider for drink, made the principal diet. Grocery bills were partly paid in produce, and there was little cash for clothing, household adornment and amusement. The Irishman, whose industry and frugal living has since made him master of half of our farms, was a hired laborer newly come, and the Scandinavian had not arrived.

N1571: The unfitness of the amateur farmers of Brook Farm and Fruitlands was in Mr. Emerson's mind.

N1572:

What prizes the town and the tower?
Only what the pine-tree yields;
Sinew that subdued the fields;
The wild-eyed boy, who in the woods
Chants his hymn to hills and floods,
Whom the city's poisoning spleen
Made not pale, or fat, or lean.

"Woodnotes," II., *Poems*.

N1573: Thoreau's plan, by which he became a truly rich man, was to diminish his wants instead of increasing his income.

N1574: In the Cattle-show Address, to these servants were added "the winds that have blown in the interminable succession of years before he was born." The paragraph suggests several passages in the *Poems*, as that in the "Song of Nature" beginning

Time and Thought were my surveyors,—

and in the "Fragments on Nature," where she says:—

He lives not who can refuse me;
All my force saith, Come and use me.

N1575:

No ray is dimmed, no atom worn,
My oldest force is good as new,
And the fresh rose on yonder thorn
Gives back the bending heavens in dew.

"Song of Nature."

N1576: "They do not believe, what is true, that one half of the weight of the rocks which compose the crust of the globe,...of the houses, of the stones of the pavement, of the soils we cultivate, and much more than half by weight of all living animals and plants, consists of oxygen."—Cattle-show Address.

Ever the Rock of Ages melts
Into the mineral air,
To be the quarry whence to build
Thought and its mansions fair.

"Fragments on Life," *Poems*.

N1577: This passage suggests the lines in the second "Woodnotes" beginning

Onward and on, the eternal Pan.

The concluding portion of the paragraph is found in metrical form in the little poem "Pan" among the "Fragments on Nature."

This whole theme of the farmer's servants is treated in a few lines in the poem "Guy."

N1578:

Put in, drive home the sightless wedges
And split to flakes the crystal ledges.

"Fragments on Nature," *Poems*.

In the Address the paragraph is concluded as follows:—

"Water, the daily miracle—a substance as explosive as gunpowder—the electric force contained in a drop of water being equal in amount to that which is discharged from a thunder-cloud. I quote from the exact Faraday."

Then follows a passage about the farmer's doubtful competence to control these majestic forces:—

"His servants are sometimes too strong for him. His tools are too sharp. But this inequality finds its remedy in practice. Experience gradually teaches him, and he is thoughtful. The farmer hates innovation; he hates the hoe till he tries it, preferring to scratch with a stick; he will walk till he has tried the railway car; but the oldest foggy among us, now that the Atlantic Cable is laid to London, will not send a man to swim across with his letter in his mouth."

N1579: It may be interesting to see this passage in the garb in which it was presented to the Middlesex farmers.

"Plant a fruit-tree by the roadside and it will not produce, although it receives many hints, from projected stones and sticks, that fruit is desired to come down, and though it has been swallowed crude into the robust bowels of small boys. But draw a low fence about it to keep out the cow and pig, and for thirty, forty, perhaps a hundred years, it ripens peacefully

its delicate fruit,—every pear, every nectarine, every cluster of grapes inviting you to have its picture taken, before being sent to the Horticultural Fair."

Apropos of orchards, I will give here two allusions to apples from the journals:—

1848. "I have planted a Pumpkin-sweeting near my summer house,—I believe out of agreeable recollections of that fruit in my childhood at Newton. It grew in Mr. Greenough's pasture, and I thought it solid sunshine.

"Ere boyhood with quick glance had ceased to spy
The doubtful apple 'mid the yellow leaves."

1853. "The Newtown Pippins, Gentlemen, are they not the Newton Pippins? or, is not this the very pippin that demonstrated to Sir Isaac Newton the fall of the world, not the fall of Adam, but of the moon to the earth, and universal gravity. Well, here they are, a barrel of them; every one of them good to show gravitation, and good to eat; every one as sound as the moon. What will you give me for a barrel of moons?"

N1580: From "The Mower against Gardens" by Andrew Marvell (1621–1678).

N1581: Henry Charles Carey, a remarkable student and writer on Political Economy. In 1836 he published *The Harmony of the World, as exhibited in the Laws which regulate the Increase of Population and of the Means of Sustenance, and in the Identity of the Interests of the Sovereign and the Subject, the Landlord and the Tenant, the Capitalist and the Workman, the Master and the Slave.*

In support of Mr. Carey's theory it may be said that the Great Meadows of Concord, Bedford, Sudbury and Wayland, bare of trees and waving with coarse grass, are said to have been the bait which lured the first settlers here. They hoped thus to have fertile fields without the long and arduous work of clearing primæval forest. But neither they nor their descendants have ever been able to get anything better than meadow-hay of poor quality from them.

N1582: Mr. Emerson, in the Historical Discourse which he gave in Concord in 1835, at the celebration of the two hundredth year of the settlement of the town, gave an amusing if piteous account of the sufferings of the first settlers. See *Miscellanies*.

N1583: This sentence recalls Mr. Emerson's wise treatment of his children if they cried at table. He always quietly sent the unhappy one to see whether the front gate were latched, or whether there were perhaps a rain-cloud coming. He knew that the change of scene and the quiet face of Nature would calm the child, who returned and duly reported, wondering why the fear of cows getting in, or a storm coming, had so suddenly come over his father.

N1584: The following picture of the Nine-Acre Corner farms along the river, and of the old-time Concord farmers, is from the journal of 1848:—

"The cranberry meadow yonder is that where Darius Hubbard picked one hundred bushels in one season worth 200 dollars, and no labor whatever is bestowed on the crop, not so much as to mow the grass or cut down the bushes. Much more interesting is the wood-lot, which yields its gentle

rent of six per cent. without any care or thought when the owner sleeps or travels, and fears no enemy but fire. But E. declares that the railroad has proved too strong for all our farmers and has corrupted them like a war, or the incursion of another race;—has made them all amateurs, given the young men an air their fathers never had; they look as if they might be railroad agents any day. We shall never see Cyrus Hubbard or Ephraim Wheeler or Grass-and-oats or Oats-and-grass, old Barrett or Hosmer, in the next generation. These old Saxons have the look of pine-trees and apple-trees, and might be the sons got between the two; conscientious labourers with a science born with them from out the sap-vessels of these savage sires. This savagery is natural to man, and polished England cannot do without it."

The Cattle-show Address concluded thus:—

"I congratulate the farmer of Massachusetts on his advantages. I congratulate him that he is set down in a good place, where the soil and climate yield a larger Flora than any other. A greater variety of important plants grow here than in any southern or northern latitude. We are on the northern boundary of many tropical trees, and on the southern boundary of the arctic plants. We can raise almost all crops, and if we lack the orange and palm, we have the apple and peach and pear. In Illinois, it is often said, although it is more the voice of their scorn than of their pity, that they reckon it a singular leading of Divine Providence that Massachusetts was settled before the prairie was known, else it would never have been settled. But the Massachusetts farmer may console himself that if he has not as rich a soil, he has the advantage of a market at his own door, the manufactory in the same town. I congratulate you, then, on the advantage of your position. Next, I congratulate you on the new territory which you have discovered, and not annexed but subnexed to Middlesex and to Massachusetts. I congratulate you at being born at a happy time, when

the old slow ways of culture must go out with the sharp stick and the bow and arrow, when the steam-engine is in full use, and new plants and new culture are daily brought forward. I congratulate you on the fact that the year that has just witnessed the successful employment of new machines, of the mower and reaper, on the plains and prairies, has also witnessed the laying of the Atlantic Cable. The Cable is laid, and the courage of man is confirmed. All that used to look like vagary and castle-building is to be solid sense henceforth. Who shall ever dare to say impossible again? Henceforth, if a thing is really desirable, it is in that degree really practicable, and the farm you have dreamed of—go instantly and begin to make it. I congratulate you, lastly, on the new political economy which takes off the crape from farms and towns and nations, and lets in the light on all we do and all we gain, and teaches that whatever is really good and useful for one man to do, is good and useful for all."

WORKS AND DAYS

THE LECTURE "Works and Days" appears to have been first given in Cincinnati and probably other cities and towns in 1857. It followed "Country Life" as the second lecture in the course called the *Natural Method of Mental Philosophy* in the spring of the following year. It opened then with the following passage:—

"One of the oldest remains of literature is the poem of Hesiod, called *Works and Days*. It is not much read in these times crowded with books and manifold spiritual influences; but it has had its day, and has furnished its share of the general culture; in as much as passages from it have passed into the public mind, and make part of the proverbs of mankind. I borrow from it only its title, to offer from this text a lesson to this day and hour."

N1585: Sir Charles Bell quotes Galen as saying, "Did man possess the natural armor of the brutes, he would no longer work as an artificer, nor protect himself with a breastplate, nor fashion a sword or spear, nor invent a bridle to mount the horse and hunt the lion. Neither would he follow the arts of peace, construct the

pipe and lyre, erect houses, place altars, inscribe laws and through letters commune with the wisdom of antiquity."

N1586: This was Thoreau's experience with some of those who helped him in his land-surveying. He could verify their work by pacing.

N1587: At the time when this lecture was written the vast undertaking of connecting by submarine cable the Old World with the New excited the hopes of civilized mankind. The apparent triumph of human wit and hands over stupendous difficulties was celebrated by Mr. Emerson in his poem "The Adirondacs," for it was there that the good news reached him, but that was in August, 1858, more than a year after this lecture was written. It was, of course, adapted to the times when later delivered, and, when the essay was published as part of this volume, the Atlantic Cable had been in successful operation nearly five years.

N1588:

My paths lead out
The exodus of nations: I disperse
Men to all shores that front the hoary main.

"Sea-Shore," *Poems*.

N1589: This paragraph from the lecture here followed in the essay:—

"Vulgar progress is in extending yourself, claiming and fencing a great deal of land; conquering and counting by continents and by millions. True progress is in making the most of that you have; in disclosing the arsenal

of powers that belong to an acre of ground; in unlocking the irresistible faculties that belong to a cultivated man; that control over mankind which belongs to him who controls himself; the knowledge of all men which belongs to self-knowledge; the inevitable radiation of centrality."

Mr. Emerson was speaking in high and general themes, but their special application to the hour was the moral he would point. He was impatient of the leading orators who in those dark days before the war were praising the patriots of "seventy-six;" yet showing themselves apostates to their great principles, applicable as ever to the problems of 1858. An omitted sheet, from the lecture, runs as follows: "Greatness is to live in the present, to magnify the present, to know its duties and carry up the present knot of affairs over Greece, or Rome, or Palestine. But we live as these paltry politicians live; we are absurdly historical: we neglect the plain duty of the moment, to honor the memory of some dead duty,—of some dead body in some dead moment. We praise Washington, but perform Lord North. We keep the fourth of July, and our eyes always nailed on mouldering escutcheons. I dreamed I stood in a city of beheaded men, where the decapitated trunks continued to walk."

N1590:

It cannot conquer folly,—
Time-and-space-conquering steam,—
And the light-outspeeding telegraph
Bears nothing on its beam.

"The World-Soul," *Poems*.

N1591:

"Wealth is the conjurer's devil,
Whom when he thinks he hath, the devil hath him."

George Herbert, "The Church Porch."

N1592: Mr. Emerson, like others, was feeling the "hard times" of the great financial panic of 1857.

N1593: His poem "Days" Mr. Emerson once spoke of as the one which he thought the best. It is not unlikely that he meant it for the purpose for which it is used in this edition, as motto to this essay, but, as he was hurried in preparing the book, could not write mottoes for all and so omitted any. The editor has, however, ventured to supply them from the poems or fragments of verse.

N1594: Dr. Holmes, in his interesting chapter on Emerson's poems, quotes this prose sentence from the "Works and Days," and then says, "Now see the thought in full dress," and gives the poem "Days," adding the comment, "Cinderella at the fireside, and Cinderella at the prince's ball!"

This image of the masquerading days appears also in "May-Day," and in a youthful poem, never printed, and also in several essays or lectures; for instance: "The Times are the Masquerade of the Eternities, trivial to the dull, tokens of noble and majestic agents to the wise;...the quarry out of which the genius of to-day is building up the Future."

N1595: In the original form this sentence ran: "One must look long before he finds the Timæus weather; but at last the high, cold, silent morning arrives, the early dawn," etc.

N1596:

Yet whirl the glowing wheels once more,
And mix the bowl again;
Seethe, Fate! the ancient elements,
Heat, cold, wet, dry, and peace and pain.

Let war and trade and creeds and song
Blend, ripen race on race,
The sunburnt world a man shall breed
Of all the zones and countless days.

"Song of Nature," *Poems*.

N1597: Milton, *Paradise Lost*, IV. 477.

N1598: "The young mortal enters the hall of the firmament...
On the instant, and incessantly, fall snowstorms of illusions," etc.—
"Illusions," *Conduct of Life*.

N1599: Compare the poem "Xenophanes."

N1600:

Who bides at home, nor looks abroad,
Carries the eagles and masters the sword.

"Destiny," *Poems*.

N1601: This sentence suggests the ending of the second
"Woodnotes."

N1602:

Shines the last age, the next with hope is seen,
 To-day slinks poorly off unmarked between:
 Future or Past no richer secret folds,
 O friendless Present, than thy bosom holds.

"Heri, Cras, Hodie," *Poems, Quatrains.*

N1603: Letter to Marshal Saint Cyr.

N1604: In the lecture this sentence follows: "Beware of affronting the Genius who has covered up under these low haunts your private passage to the council-chamber of the great Gods."

N1605: Compare the opening passage of the first essay in this volume.

N1606: In the lecture, here follows, "Some mellow, satisfying seasons we have in the woods in cool summer days."

N1607:

τοῖος γὰρ νόος ἐστὶν ἐπιχθονίων ἀνθρώπων,
 οἷον ἐπ' ἡμᾶρ ἄγῃσι πατὴρ ἀνδρῶν τε θεῶν τε.

Odyssey, XVIII. 136, 137.

This passage has been much discussed by scholars, but the view as held at present gives it a different signification from that given in the essay, viz.: *The mind of men on earth is like the day which the Father of gods and men brings to them.*

N1608: The elder Pliny's dedication of his Natural History to Titus Vespasian: "I have included in thirty-six books 20,000 topics, all worthy of attention,...and to these I have made considerable additions of things which were either not known to my predecessors or which have been lately discovered. Nor can I doubt but that there still remain many things which I have omitted; for I am a mere mortal, and one that has many occupations. I have, therefore, been obliged to compose this work at interrupted intervals, indeed during the night, so that you will find that I have not been idle even during this period. The day I devote to you, exactly portioning out my sleep to the necessity of my health, and contenting myself with this reward, *that while we are musing on these subjects* (according to the remark of Varro) *we are adding to the length of our lives*; for life properly consists in being awake."

N1609: Here follow, in the original, the words "Beauty is at home."

N1610:

Blessed is he, who, playing deep, yet haply asks not why,
Too busied in the crowded hour to fear to live or die.

Quatrain, "Nature," *Poems*.

N1611: A part of the song of the White Lady of Avenel in Sir Walter Scott's novel, *The Abbot*.

N1612: In the essay "Aristocracy" (*Lectures and Biographical Sketches*), such is said to have been the practice of the Caliph Ali.

N1613: When the lecture was first given, this was Mr. Emerson's word for the hour to his countrymen: "This country has its proper glory, though now shrouded and unknown. We will let it shine. Let us set American free will against Asiatic fate; the American wilderness of capabilities and idealistic tendency, against the adamantine grooves of law and custom in which European thought travels.

"In my judgment the best use of Europe to our people is, its warnings to us, or we go to Europe to be Americanized."

BOOKS

THAT THE value which Mr. Emerson set on books was a trait that had long characterized the family, the following extract from the will of his ancestor, the founder of Concord, will show:—

"I, Peter Bulkeley,...give to my son Edward certain books in my library; 1. Tarnovius on the Minor Prophets. 2. Piscator's Commentary. 3. Dr. Owen against the Arminians. 4. Dr. Willet on Exodus & Leviticus. 5. English Annotations. 6. Mr. Ainsworth's notes on 5 Books of Moses.

"To my son Eliazur, a hundred acres of land lying at the near end of the great meadow & 20 acres at the far end."

In 1835, when Mr. Emerson had just come back to the ancestral town to live there the life of a scholar, he wrote in his journal a sentence which he later turned for amusement into a rude rhyme:—

When shall I be tired of reading?

When the moon is tired of waxing and waning,

When the cloud is tired of raining,

When the sea of ebbing and flowing,

When the grass is weary of growing,

When the planets tire of going,
And when Death is sick of feeding,
Then shall I be tired of reading.

It may be interesting to young people living in the twentieth century to see a letter advising a course of reading which Mr. Emerson wrote when he was twenty-eight years old to Miss Elizabeth Tucker of Derry, New Hampshire, a young girl "in her teens," who was a cousin of his first wife.

Boston, 1 Feb., 1832.

My Dear Cousin,—If it were not true that it is never too late to do right, I should be quite ashamed to send my list of books at such a long distance behind my promise. When I spent so pleasant a day at your house, I thought it would be very easy, and I knew it would be very pleasant, for me to make out a scheme of study for your vacation as soon as I got home. But what to select out of so great a company of leather-jackets and so deserving—and then a crowd of things to be done—and withal a Quaker habit of never doing things till their necessary time, in the hope of doing them better, has postponed my letter from day to day and week to week. But so you must never do, my dear Cousin. But for fear you should quite forget your wise adviser, and should be a grown lady and so I should lose the honor of having had any part in your education, I hasten to send you my poor thoughts upon what is good to be read. I make no pretensions to give you a complete course, but only select a few good books of my acquaintance—such as I think you will like, and such as will serve you.

One more preliminary word. Never mind any silly people that try to sneer you out of the love of reading. People are fast outgrowing the old prejudice that a lady ought not to be acquainted with books. It is the display that disgusts; the knowledge that you get from them never

disgusts anybody, but is all useful, and has comforted how many hours that would otherwise have been long, dull and lonely.

First then you must keep one or two books for the soul always by you, for monitors and angels, lest this world of trifles should run away with you. Such a book is Thomas à Kempis's *Imitation of Christ*, written by a German monk near four hundred years ago, and needs only a little allowance for a Roman Catholic's opinions, to make it express the religious sentiments of every good mind. Then there is a little book I value very much, Scougal's *Life of God in the Soul of Man*. Taylor's *Holy Dying* is a good book. Its author was called the "Shakspeare of divines." *Selections from Fénelon*, by Mrs. Follen. *Ware on the Formation of the Christian Character*. Sir Thomas Browne's *Religion of a Physician*. This is a beautiful work lately republished in this town. Young's *Night Thoughts*. A friend whom I value very much told Ellen always to keep Young upon her table. But I suppose you will think here are Sunday books enough. Now for History. The American Society for the Diffusion of Useful Knowledge are publishing Müller's *Universal History* in four duodecimo volumes. It is very much the best of all the General histories and is very easily read. They have yet only printed the first volume. The sketches of Rome and of Greece in it are excellent. Then the most important modern history to be read perhaps is Robertson's *Charles V.*, which is an account of Europe in the most interesting period. I would skip the first volume, which is a general view of Europe, and read the two last. Then you might take up Hume, say at the reign of Elizabeth, which would continue pretty well the line of events. The best history of Europe during the French Revolution is Scott's *Life of Napoleon*. For the American history, as you happen to live at Derry, N. H., I would read Dr. Belknap's *History of the State*. It is not only a very good book itself, but will give you a pretty good idea of all the States, their story is so much alike. Morton's *New England Memorial* is a little book and a pleasing account of the Forefathers. Milman's *History of the Jews* in the *Family Library* is a very good book.

But what is far more soothing, and never painful, like the history of man, is Natural History in its various parts. The first volume of the *American Library of Useful Knowledge* (and you must make the Social Library in Derry subscribe for that book) contains *Mr. Brougham's Discourse* upon the advantage and prospects of Science, which is excellent, and Mr. Herschel's, which is better. The same Mr. Herschel, son of the famous astronomer, is about to publish a discourse on astronomy which is expected with great interest. Then there is a beautiful book on American birds by Mr. Nuttall (*N's Ornithology*) that every one who lives in the country ought to read. I suppose you have read at school *Conversations on Chemistry*. The *Conversations on Vegetable Physiology* are just as good. With this class of books I will put the *Account of Polar Expeditions*, a volume of the *Family Library*.

I suppose to such a formidable list I must add a novel or two, or you would think me very unkind. So I really hope you will read *De Vere* by the author of *Tremaine*, and as much Walter Scott and Miss Edgeworth as you please. For Poetry read Milton; if the *Paradise Lost* tires you, it is so stately, try the minor Poems. *Comus*, if the Mythology does not make it sound strange, is a beautiful poem and makes one holy to read it. Read Bryant's poems. I know you will love them, and Cowper and Thomson, and perhaps (a very large perhaps) Wordsworth.

If you do not like poetry, which I suppose you do, the best way to learn is to write some.

Now I do not suppose that you will read all these books in a short time, or perhaps at any time, and some of them very probably you have read. I only wanted to fulfil your command, and speak a good word for some valued acquaintance of mine. The best of all ways to make one's reading valuable is to write about it, and so I hope my Cousin Elizabeth has a blank-book where she keeps some record of her thoughts. And if you think my letter very long, why you must bear in mind that once I was a schoolmaster, and I am so proud of my new scholar as to keep her long at my lecture.

Make my respectful remembrances to your mother and father and my compliments to your sister.

Your affectionate cousin,
R. W. EMERSON.

Of himself he wrote in 1859: "I am a natural reader and only a writer in the absence of natural writers. In a true time I should never have written."

In his Phi Beta Kappa Address (in *Nature, Addresses and Lectures*) Mr. Emerson pointed out to the American Scholar the right and the wrong use of books and said, "Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times." Only in the intervals of direct illumination he may resort to their reflected light. And in "Nominalist and Realist" (*Essays, Second Series*) he admits that sometimes he reads even Plato "for the lustres," "for a mechanical help to the fancy and the imagination." He told a youthful writer "only to read to start his team." But in his journal of 1867, after saying that in proportion to your reality of life and perception will be your difficulty of finding yourself expressed in others' words or deeds, he interrupts himself,— "and yet—and yet—when the visions of my books come over me as I sit writing, when the remembrance of some poet comes, I accept it with pure joy, and quit my thinking as sad lumbering work; and hasten to my little heaven, if it is then accessible, as angels might."

N1614: Mr. Emerson begins this estimate of books in the "low tone" which he often commends, avoiding superstition concerning them, and this gives opportunity for ascension in the treatment of the theme. In a note-book called *Literature*, under the heading "Skeptical," he wrote: "We must not inquire too curiously into the absolute value of literature. Enough that it amuses and exercises us."

At least it leaves us where we were. It names things, but does not add things." But in a lecture "Some Good Books" he decides the matter more cheerfully, and after "value of literature" the passage goes on thus,—“yet books are to us angels of entertainment, sympathy and provocation. These silent wise, these tractable prophets and singers, who now and then cast their moonlight illumination over solitude, weariness and fallen fortunes.”

N1615: Cornelius Agrippa (1486–1535), a German scholar, alchemist and reputed magician, who wrote on *The Uncertainty and Vanity of the Sciences*, and on *Occult Philosophy*. His magic mirror, in which he showed to the Earl of Surrey his lady-love beyond the seas, is told of in song in Scott's *Lay of the Last Minstrel*. In the same poem the “book of spells,” borrowed from the grave at Melrose Abbey of the wizard Michael Scott, plays an important part. Michael Scott lived in the thirteenth century, and had great fame on the Continent as well as in Scotland. He is mentioned by Dante.

N1616: The following account of the effect of a sentence from one of Emerson's books on a Virginian youth is best given in his own language: “Fresh from college, now from every career planned by parent or friend I had recoiled: some indefinable impediment barred each usual path.... Utterly miserable, self-accused amid sorrowful faces, with no outlook but to be the fettered master of slaves, I was wont to shun the world, with a gun for an apology.... So came I on a day [to the banks of the Rappahannock] and reclined on the grass reading in a magazine [*Blackwood's*] casually brought.... The church-bells across the river smote upon a heart discordant with them, at discord with itself. Nature had no meaning, life no promise and no aim. Listlessly turning to the printed page,

one sentence caught my eye and held it; one sentence quoted from Emerson, which changed my world and me. A sentence only! I do not repeat it: it might not bear to others what it bore to me: its searching, subtle revelation defies any analysis I can make of its words. All I know is that it was the touch of flame I needed. That day my gun was laid aside to resume no more."⁸¹

The author, who under the new influence sacrificed his inheritance of slaves, and even his father's blessing, and later, place and influence as a clergyman because of his advocacy of human liberty, said to the editor, "But for the reading of that extract from Emerson in a critique in *Blackwood* on 'Six American Books,' I should be lying in a rebel's grave to-day."

An Austrian writer on Reading and Culture⁸² in his preface says, "It will be noticed how strongly Ralph Waldo Emerson has influenced my entire conception of the matters treated."

N1617: The following sentence seems to have been in this lecture as first delivered: "And Plutarch: if the world's library were burning, I should fly to save that, with our Bible and Shakspeare and Plato."

N1618: When in Mr. Emerson's later years a book-agent was impertinently recommending to him some new work, he was moved to say, "Young man, it is not for you to tell me what to read. I read for other people." He wrote in his journal, "In college days Warren Burton used to come to my room, and said he did not like

⁸¹ *Emerson at Home and Abroad*, by Moncure Daniel Conway. Boston: J. R. Osgood & Co., 1882.

⁸² *Ueber Lesen und Bildung*, von Anton E. Schönbach. Gratz, 1882.

to read and did not remember what he read, but what I read or quoted to him he remembered, and never forgot."

N1619: Johann Albert Fabricius, the German scholar (1668–1736), author of the *Bibliotheca Latina, Græca, and Ecclesiastica*, and *Bibliographia Antiquaria*. John Selden (1584–1654), called "the great dictator of learning of the English nation," though the author of many learned books, is best known by his *Table-Talk*. Giovanni Pico, Count of Mirandola (1463–1494), an Italian of very extraordinary acquirements in languages and philosophy. Joseph Justus Scaliger (1540–1609), son of a remarkable scholar, though Italian by birth, was educated in France. He became professor of Belles-lettres at Leyden, and surpassed his father in erudition. Antonio Magliabechi (1633–1714), a Florentine who, though a goldsmith's apprentice, became so eager a scholar that he was appointed by Cosmo III. his librarian. In this capacity he brought to notice many valuable but neglected manuscripts, and he bequeathed to Florence the important library which he had collected. Pierre Bayle (1647–1706), a French scholar remarkable for his courage and liberality, which virtues cost him in succession his professorships at Sedan and Rotterdam. His noted work is the *Dictionnaire historique et critique*.

N1620: Professor Herman Grimm in his first letter to Mr. Emerson, whose writings, then newly read, had greatly stirred him, said, "Everywhere I seem to find my own thoughts,—even the words in which I would prefer to have expressed them;" and later, "You write so that every one reading your words must think you had thought of him alone."

N1621: Journal, 1851. "One should dignify and entertain and signalize each journey or adventure by carrying to it a literary masterpiece, and making thorough acquaintance with that, on the way, as, the *Figaro* of Beaumarchais; the *Nuova Vita* of Dante; the *Bride of Corinth* of Goethe; the 47th Proposition of Euclid; ode of Horace or of Hafiz, and so on; *Clouds* of Aristophanes, a Trilogy of Æschylus."

N1622: This suggests the advice to the Artist in the quatrain of that name.

Quit the hut, frequent the palace,
Reck not what the people say;
For still, where'er the trees grow biggest,
Huntsmen find the easiest way.

N1623: Shakspeare, *Taming of the Shrew*, Act I., Sc. I.

N1624: Mr. Emerson wrote thus of his pleasure in Greek mythology and poetry, in the journal of 1855:—

"A convertible proverb, *It is Greek to him*. These Eastern story-tellers whose oily tongues turn day into night and night into day, who lap their hearers in a sweet drunkenness of fancy, so that they forget the taste of meat!"

N1625: Mr. Emerson said to a young scholar, "I am glad you have so many of the Greek Tragedies. Read them largely and swiftly in translation to get their movement and flow; and then a little in the original every day. For the Greek is the fountain of language. The Latin has a definite shore-line, but the Greek is without bounds."

N1626: "Read in Plato and you shall find Christian dogmas, and not only so, but stumble on our evangelical phrases."—"Quotation and Originality," *Letters and Social Aims*.

N1627: Mr. Emerson's estimate of Plato may be read in full in *Representative Men* and of Plutarch in the essay of that name in *Lectures and Biographical Sketches*.

N1628: Mr. Emerson himself never enjoyed Aristophanes, but read the comedies for such light as they gave on the age and country. *Journal*, 1865. "I am delighted to-day, in reading Schwegeler's account of Socrates, to have justice done to Aristophanes. The rogue gets his dues."

N1629: In a lecture given in Boston in 1861, called "Some Good Books," Mr. Emerson said:—

"What vitality has the Platonic Philosophy! I remember I expected a revival in the churches to be caused by reading Jamblichus....

"When I read Proclus, I am astonished with the vigor and breadth of his performance. Here is an Atlantic strength which is everywhere equal to itself, and dares great attempts, because of the life with which it feels itself filled. Such a sense as dwells in these purple deeps of Proclus transforms every page into a slab of marble, and the book seems monumental. They suggest what magnificent dreams and projects! They show what literature should be. Rarely, rarely does the Imagination awake."

But in these authors, especially Proclus, he read rather for stimulation than continuously. "I think the Platonists may be read for sentences, though the reader fails to grasp the argument of the paragraph or chapter. He may yet obtain gleams and glimpses of a more excellent illumination from their genius, outvaluing the most distinct information he owes to other books.

For I hold that the grandeur of the impression the stars and heavenly bodies make on us, is surely more valuable than our exact perception of a tub or a table on the ground."

N1630: Thomas Taylor, the enthusiastic translator of the Neo-Platonists, was a remarkable character, a high-minded Greek Pagan in London. Mr. Emerson spoke of him as "a Greek born out of time and dropped on the ridicule of a blind and frivolous age." When he was in England in 1848 he was surprised to find how little was known of Taylor and his works by the cultivated men whom he met.

Mr. Charles J. Woodbury,⁸³ in his faithful and remarkable report of various conversations with Mr. Emerson at about the time this lecture was given, quotes him as saying of Plato, "He lifts man toward the divine, and I like it when I hear that a man reads Plato. I want to meet that man. For no man of self-conceit can go through Plato."

N1631: Jamblichus of Chalcis, the pupil of Porphyry, succeeded him as the head of the Neo-Platonic school of Syria in the fourth century B.C. His writings combine the religious philosophies of the Greeks and Orientals.

N1632: Journal, 1845. "Gibbon has a strength rare with such finish. He built a pyramid, and then enamelled it."

Mr. Emerson wrote in 1839 to his young cousin, David Greene Haskins (later an Episcopal clergyman and Doctor of Divinity), a letter about Gibbon in which, after praising his devotion to his work, he expresses disgust at his "worst fault! the dirt he has

⁸³ *Talks with Ralph Waldo Emerson*, Baker and Taylor Co., 1890.

defiled his notes with," but adds, "You must give this evil man his due and make it felt what condemnation his noble labor and perseverance cast upon scholars who have libraries which they never read, upon scholars who chide Gibbon, but are unable even to name his dignified studies, his original authorities, his great plan, and great execution of it."⁸⁴

N1633: Note-book on Literature: "Dante's *Vita Nuova* reads like the book of Genesis, as if written before literature, whilst truth yet existed. A few incidents are sufficient, and are displayed with Oriental amplitude and leisure. It is the Bible of love." And again of Dante: "He was free imagination, all wings, yet wrote like Euclid."

N1634: In acknowledging Herman Grimm's gift of his *Life of Michelangelo* Mr. Emerson wrote in 1861:⁸⁵

"MY DEAR FRIEND,—...The book is a treasure,—in the hero, the treatment, the frank criticism, the judicial opinions, and—what I value most—the interior convictions of the writer bravely imparted....The book has research, method and daylight....You step from stone to stone and advance ever....Goethe and Michel Angelo deserve your fine speeches, and are not perilous for a long time. One may absorb great amounts of these with impunity; but we must watch the face of our proper Guardian, and if his eye dims a little, drop our trusted companions as profane."

N1635: A passage in the oration delivered at Dartmouth College in 1838 seems to show that Mr. Emerson in his youth had

⁸⁴ *Ralph Waldo Emerson; his Maternal Ancestors; with some Reminiscences of him.* By David Greene Haskins, D. D. Boston: Cupples, Upham & Co., 1887.

⁸⁵ *Correspondence between Ralph Waldo Emerson and Herman Grimm.* Boston: Houghton, Mifflin & Co., 1903.

been much moved by Robertson's account of Charles V. (*Nature, Addresses and Lectures*, p. 162.)

N1636: Note-book. "Spenser seems to delight in his art for his own skill's sake. In the *Muiopotmos* see the security and ostentation with which he draws out and refines his description of a butterfly's back and wings, of a spider's thread and spinning, of the butterfly's cruise among the flowers,—

"'Bathing his tender feet in the dew which yet on them does lie.'

It is all like the working of an exquisite loom which unweariedly yields fine webs for exhibition and defiance of all spinners."

N1637: Mr. Emerson quotes from Cowley: "He (Ben Jonson) esteemeth John Donne to be the first poet in the world in some things. His verses of the 'Lost Chaine' he hath by heart; and that passage 'The Calm'

"'That dust and feathers do not stir,
All was so quiet.'

He affirmeth Donne to have written all his best pieces ere he was twenty-five years old."

N1638: Journal. "Lord Bacon's method in his books is of the understanding, but his sentences are lighted by ideas."

In *English Traits* Mr. Emerson has much to say of Bacon (p. 238ff.).

N1639: Mr. Emerson was asked to write the Preface to the American edition of the *Gulistan* (Rose-garden) of Saadi, the

translation of Francis Gladwin, with a preface by James Ross (Boston: Ticknor and Fields, 1865). In it he said: "Saadi, though he has not the lyric flights of Hafiz, has wit, practical sense, and just moral sentiment....He is the poet of friendship, love, self-devotion and serenity. There is a uniform force in his page, and conspicuously a tone of cheerfulness which has almost made his name a synonyme for grace....He inspires in the reader a good hope. What a contrast between the cynical tone of Byron and the benevolent wisdom of Saadi!"

N1640: See the essay on Poetry and Imagination in *Letters and Social Aims*.

N1641: For Mr. Emerson novels had little attraction. Mythology and epics, and heroic tradition and biography, took their place for him. He found no pleasure in Dickens or Thackeray. The *Waverley* Novels delighted him as a youth, and of "Scott, the delight of generous boys," he had grateful remembrance. He read Disraeli's novels with some interest, but little real liking. George Sand's *Consuelo* gave him much pleasure, and he alludes to it several times in his writings, especially in the chapter on Goethe in *Representative Men*. He read little of Balzac or Dumas. Charles Reade's *Christie Johnstone* and *Peg Woffington* he read and praised. The *Jane Eyre* of Miss Brontë, mentioned farther on, he read with some interest.

N1642: The poem "The Park" seems to be the expression of this mood.

N1643: Firdusi, "The Gardener" (940-1020), under the encouragement and patronage of the Sultan Mahmoud, composed

an epic poem of great length, but renowned for its beauty, the *Shah Nameh*, the mythology and history of Persia from the earliest times.

N1644: The *Dial* magazine did much to introduce American readers to the ethical and religious writings of China, India, Persia and Arabia, in its selections called "Ethnical Scriptures"; also to the writings of the Neo-Platonists.

N1645: These notes on "Books" may properly end with two rules for reading given to scholars: I. *Read Proudly*; II. *As long as you feel the voracity of reading, read in God's name!*

CLUBS

ALTHOUGH MR. Emerson bade the scholar go apart for oracles, and knew that his work must be done in solitude, he found that, as a corrective, he must seek company and be

"Kindly man moving among his kind"

to be helpful to them; also for material to show the working of the laws.

He was always more than willing to join in the formation of a club of men of varied gifts and powers. It is interesting to remember that his father had been one of the founders of a literary club in Boston, whose members were the contributors and supporters of the Anthology magazine, of which Rev. William Emerson was editor. The magazine did not survive him.

In 1836, Rev. William Ellery Channing, D. D., seems to have suggested to Mr. George Ripley the desirability of bringing together for help and counsel the persons of serious and advancing minds in Boston and its neighborhood in those days. Mr. Alcott, who was greatly interested, kept record in his journals of the

meetings of this company, at first called the Symposium, later the Transcendental Club. Among the members were George Ripley, Convers Francis, Frederic H. Hedge, James Freeman Clarke, Cyrus A. Bartol, William Henry Channing, John S. Dwight, Theodore Parker,—all ministers,—Orestes A. Brownson, A. Bronson Alcott and R. W. Emerson. Two ladies, Margaret Fuller and Elizabeth P. Peabody, and possibly others, were admitted.

Mr. Emerson in his chapter called "Historic Notes of Life and Letters in New England," in *Lectures and Biographical Sketches*, speaks of the *Dial* magazine as perhaps the most important result of these very informal meetings, which continued until about 1840. Perhaps eight years later a new attempt was made to supply the want of a literary club. Mrs. Ednah Cheney says,⁸⁶ "A certain almost forgotten institution, the Town and Country Club, where Concord and Boston were expected to meet and exchange the wisdom of the world and Nature, was established by Mr. Alcott about 1848, and Mr. Emerson and others heartily joined in the scheme." Mrs. Cheney tells elsewhere of the grievance that the club decided against the admission of women, influenced by Mr. Emerson's urgency on this subject, though it appears that they were admitted to its open meetings. Mr. George W. Cooke says in his book on Emerson: "The Town and Country Club was mainly organized by the efforts of Alcott. Emerson gave it its name, and he read before it the first essay to which it listened, on Books and Reading. This was May 2, 1849. Among its members were Garrison, Parker, W. H. Channing, W. E. Channing [of Concord], Alcott, Phillips, Hedge, Howe, King, Lowell, Weiss, Whipple, Higginson, Very, Pillsbury and Thoreau." It may well be doubted whether Thoreau joined,

⁸⁶ "Emerson and Boston" in *The Genius and Character of Emerson*. Boston: J. R. Osgood & Co., 1885.

though Mr. Emerson would have been sure to have urged his doing so.

In his own village Mr. Emerson belonged to a club of a very different kind, the Social Circle, lineal descendant of the Committee of Safety during the Revolution, its avowed purposes being, "to cultivate the social affections" and "for the diffusion of useful communications among its members." He was chosen a member in 1840 and continued one until his death. Of his appreciation of this club he wrote, in 1844, to a friend in Boston, a man of culture and of affairs: "Much the best society I have ever known is a club in Concord called the Social Circle, consisting always of twenty-five of our citizens, doctor, lawyer, farmer, trader, miller, mechanic, etc., solidest of men, who yield the solidest of gossip. Harvard University is a wafer compared to the solid land which my friends represent. I do not like to be absent from home on Tuesday evenings in winter." This club still exists, and organized the celebration of the Centenary of his birth.

As different from the Social Circle as well might be in membership and method, and in conversation, was the Saturday Club, from which he derived great pleasure for eighteen years, but his infirmity of memory prevented his attendance during the last years of his life.

I copy from his note book the membership before 1858: "*Saturday Club*, 1856–7. L. Agassiz, R. H. Dana, Jr., J. L. Motley, H. W. Longfellow, J. S. Dwight, E. R. Hoar, S. G. Ward, J. R. Lowell, B. Peirce, E. P. Whipple, H. Woodman, R. W. Emerson. 1857. O. W. Holmes, C. C. Felton, J. E. Cabot."⁸⁷

To these were added during the first ten years of the Club's existence the names of Prescott, Whittier, Hawthorne, Thomas G.

87 There appears to be a mistake here, for on the printed list of members the name of Mr. Cabot does not appear until 1861.

Appleton, John M. Forbes, Charles Eliot Norton, Dr. Howe, Rev. Frederic H. Hedge, Estes Howe, Charles Sumner, Henry James, Sr., Martin Brimmer, James T. Fields, S. W. Rowse, Governor Andrew and Dr. Jeffries Wyman.

Dr. Holmes's account of this monthly gathering of friends, eminent in so many walks of life, is as follows:—

"At about the same time there grew up in Boston a literary association, which became at last well known as the 'Saturday Club,' the members dining together on the last Saturday of every month.

"The Magazine and the Club have existed and flourished to the present day. They have often been erroneously thought to have some organic connection, and the 'Atlantic Club' has been spoken of as if there, was, or had been, such an institution, but it never existed.

"Emerson was a member of the Saturday Club from the first; in reality before it existed as an empirical fact, and when it was only a platonic idea. The Club seems to have shaped itself around him as a nucleus of crystallization, two or three friends of his having first formed the habit of meeting him at dinner at 'Parker's,' the 'Will's Coffee-House' of Boston. This little group gathered others to itself and grew into a club, as Rome grew into a city, almost without knowing how. During its first decade the Saturday Club brought together, as members or as visitors, many distinguished persons. At one end of the table sat Longfellow, florid, quiet, benignant, soft-voiced, a most agreeable rather than a brilliant talker, but a man upon whom it was always pleasant to look,—whose silence was better than many another man's conversation. At the other end of the table sat Agassiz, robust, sanguine, animated, full of talk, boy-like in his laughter. The stranger who should have asked who were the men ranged along the sides of the table would have heard in answer the names of Hawthorne, Motley, Dana, Lowell, Whipple, Peirce, the distinguished mathematician, Judge Hoar, eminent at the bar and in the cabinet, Dwight, the leading musical

critic of Boston for a whole generation, Sumner, the academic champion of freedom, Andrew, 'the great War Governor' of Massachusetts, Dr. Howe, the philanthropist, William Hunt, the painter, with others not unworthy of such company. And with these, generally near the Longfellow end of the table, sat Emerson, talking in low tones and carefully measured utterances to his neighbor, or listening, and recording any stray word worth remembering on his mental phonograph. Emerson was a very regular attendant at the meetings of the Saturday Club, and continued to dine at its table, until within a year or two of his death.

"Unfortunately the Club had no Boswell, and its golden hours passed unrecorded."

Although there is no question of the profit in health and pleasure that Mr. Emerson found in the Club, proved by his regular attendance, and the happy report which he made of the meetings to his family, sometimes his belief of his unfitness for social gatherings weighed on him:—

Journal. "Most of my values are widely variable: My estimate of America, etc.; estimate of my mental means and resources is all or nothing,—in happy hours, life looking infinitely rich; and sterile at others. My value of my Club is as elastic as steam or gunpowder,—so great now, so little anon;" and it must have been when the pressure was low that he wrote in the journal of 1861: "I know the hollowness and superstition of a dinner, yet a certain health and good repair of social status comes of the habitude and well-informed chat there, which have great market value, though none to my solitude."

The quality of mind and the manners, friendly, simple yet reserved, of his friend James Elliot Cabot—I think Mr. Emerson said of him "Cabot is a Greek"—were very attractive to him. It is probably of Mr. Cabot that he wrote in the journal of 1869:—

"At my club, I suppose I behave very ill in securing always, if I can, a place by a valued friend, and, though I suppose (though I have never heard it) that I offend by this selection, sometimes too visible, my reason is, that I, who see in ordinary, rarely, select society, must make the best use of this opportunity, having, at the same time, the feeling that

"I could be happy with either,
Were the other dear charmer away."

The mortification that Mr. Emerson felt, and the annoyance which he believed his increasing loss of memory for words occasioned his friends, led to infrequent attendance as he grew older. But the club celebrated his return from Europe and Egypt, to which countries his friends had sent him for his health after the burning of his house. Mr. Richard H. Dana wrote of this occasion:⁸⁸

"1873 [May 31, Saturday]. Our club dined to-day,—the largest number we ever sat down, partly as the last of the season to which many come, but chiefly to welcome Emerson, on his return from Europe and Egypt....It was really rather a brilliant gathering....Emerson looks years younger for his European tour, and is in good spirits. Even his hair has come back, which had nearly left his head last summer."

This lecture "Clubs" seems to have first been delivered in Boston as the third in a course at Freeman Place Chapel in the spring of 1859, but before its publication, like most of the later lectures, it underwent great modifications. A portion of the essay occurred in the lecture "Table-Talk," given in December, 1864, as one of the Parker Fraternity week-day course.

⁸⁸ *Richard Henry Dana, a Biography*. By Charles Francis Adams. Boston: Houghton, Mifflin & Co., 1890.

It is interesting to see how the last paragraph in the preceding essay leads to the subject of the present one. The mottoes are from the poems "Mithridates" and "Saadi," and, like the others in this volume, have been supplied by the editor.

N1646: Mr. Emerson used to recommend as good treatment for a confirmed dyspeptic an occasional feast in good company, with wine.

N1647:

Love wakes anew this throbbing heart,
And we are never old.

"The World-Soul," *Poems*.

N1648: In "The Mind-Curer," in his charming little book *Prose Idylls*, Mr. John Albee gives, without naming him, an account of Mr. Emerson's healing and preventive counsels for the perplexities and troubles of youth.

N1649: This, "the natural method" of acquiring knowledge, Mr. Emerson dwells upon very pleasantly in the essay on Education in *Lectures and Biographical Sketches*.

N1650: It seems well to introduce here some passages from the lecture in early form:—

"There are two benefits, I said, in conversation; one, to detach our own thought, or find out what we know; the other, to find out what our companions know. There are great difficulties in both attempts.

"We have found insuperable obstacles in the attempt to obtain the knowledge which others possess, and were willing enough to impart. Barriers of society, barriers of language, inadequacy of the channels of communication, all choked up and disused.

"Each man has facts I am looking for, and, though I talk with him, I cannot get at them, for want of the clew. I do not know enough to ask the right question. It seems to me he does not know what to do with his facts. It seems to me that I know, if I could only have them. But I cannot have society on my own terms. If I want his facts, I must use his keys,—his keys, that is, his arrangements and ends. I want his facts for quite another use than he does. He uses them in his affairs, for profit, for power; I want them only to see how they fortify views and plans of mine. I have thoughts, which, wanting these examples, have no body. As the Indian said, 'I have no land to put my words on. Yet my words are true.' Here is all Boston, all railroads, all manufactures and commerce, in the head of this merchant. What would I not give for a peep at his rows and files and systems of facts? Here is a philologist who knows all languages. Here is the king of chemists. Here is all anatomy, fossil and contemporary, in the mind of this zoölogist. All electro-magnetism in the next man; all geology in the third; all mechanism in the fourth; all American history in a fifth; and I cannot, with all my avarice of these facts, come at any fragment of all their experience. I would fain see their picture-books, as they see them.—This was the very promise which mesmerism made to the imagination of mankind. Now, said the adept, if I could cast a spell on this man, and see his pictures, by myself, without his intervention,—I see them, and not he report them;—and having learned that lesson, turn the spell on another, lift the cover of another hive, see the cells, and suck the honey;—then another; and so without limit;—they were not the poorer, and I were rich indeed. This was the expedient of mesmerism, by way of suction-pump, to draw the most unwilling and valuable mass of experience from every extraordinary individual at pleasure. With what joy we began to put the experiment in practice. The

eyes of the man who saw through the earth the ingots of gold that were lying a rod or two under the surface, or of the diver who comes suddenly down full on a bed of pearl-oysters, all pearl, were not to be compared to his, which put him in possession of men. Here was a diving-bell, but it dived into *men*. (He was the thought-vampire.) He became at once ten, twenty, a hundred men, as he stood gorged with knowledges, and turning his fierce eyes on the multitude of masters, in all departments of human skill, and hesitating on which mass of action and adventure to turn his all-commanding introspection.

"There lies the gold, and there it has slept, and will sleep, unless you can manage the collisions of discourse, or the fires of love, or the rasping of ambition, to overcome the strong cohesion and detach the sparkling atom to the day."

N1651: In writing these sentences Mr. Emerson was recalling the memory of his relation to his brother Charles. At the time of his death, in 1836, he wrote: "My brother, my friend, my ornament, my joy and pride, has fallen by the wayside,—or rather has risen out of this dust....I have felt in him the inestimable advantage, when God allows it, of finding a brother and a friend in one." In writing of the "valuable companion in a ship's cabin" he had in mind his happy but short companionship with Achille Murat on his Southern journey in 1827.

N1652: In his second poem "Merlin" the harmonious rhyme of things in Nature or the mind is celebrated, and in the chapter "Language" in the essay "Nature" in the first volume of the works, Mr. Emerson teaches that Natural History, to be truly valuable, must be married to human history, of which it is but a symbol. The relation seen, it becomes poetry.

N1653:

"Mark what another says; for many are
Full of themselves, and answer their own notion."

George Herbert, "The Church Porch."

N1654:

Amid the Muses, left thee deaf and dumb,
Amid the gladiators, halt and numb.

"Terminus," *Poems*.

N1655: This picture is perhaps a "composite" including Lowell, but an extract from the manuscript book called *Gulistan*, in which Mr. Emerson wrote about his friends, makes it probable that Dr. Holmes was in his mind.

"By his perfect finish, cabinet finish, gem finish, gem carved with a microscope on the carver's eye, and which perfection appears in every conversation, and in his part in a business debate, or at a college dinner-table as well as in his songs,—he resembles Fontenelle and Galiani, and Moore, though richer than either of them. Wonderful fertility and aptness of illustration. He is an illustrated magazine with twenty thousand accurate engravings.... His undersize might perhaps be suggested by his writings to one who had never seen him. It is compensated by the consummateness, as of a hummingbird, or of a flower, which defies the microscope to find a defect in Nature's favorite."

The tribute to another member may well be here given: "I call Longfellow the Perpetual Secretary of the Academy of American Poets,—remembering what Napoleon said of Cuvier: 'The

Perpetual Secretary must be enabled to receive at dinner all the learned foreigners who visit the Capital.' Fate gave him the 6000 francs which Napoleon assigned to the office of Cuvier....March 29, 1869. Longfellow said at the Saturday Club yesterday on the question of admitting a new member not agreeable to some existing member,—'I am sure there is no man living who could be admitted who would drive me away.'"

N1656: The following is from stray sheets of the lecture "Clubs": "Masters in any art like to meet masters. Mutual respect is a joyful tribute, honored and honoring; conversation,—I have no book or pleasure in life comparable to it. When that result is happily found, we can spare all omens, prophecies, legends, for we see and know that which these obscurely announce."

N1657: "The Banquet of The Seven Wise Men," Plutarch's *Morals*.

N1658: Zertusht is another name for Zoroaster, used in the *Desatir* or *Sacred Writings of the Persian Prophets*.

N1659: Mr. Emerson's reading of this death-word of the Jotun was startling to his hearers.

N1660: This story was told of Dr. Samuel L. Dana, the chemist noted for his studies and improvements in chemistry as applied in the factories at Waltham and Lowell.

N1661: Pierre Augustin Caron de Beaumarchais (1732–1799), whose address and ambition and eloquence succeeded in advancing him from a watchmaker's apprentice to the nobility.

His dramatic successes were *Le Barbier de Séville* and *Le Mariage de Figaro*. It was the latter that was frowned on by the Court. His eloquence in persuading the King of France to send us aid during the Revolution should be gratefully remembered by Americans.

N1662: Mr. Emerson rejoiced in his friends,—Carlyle, Sterling, Alcott, Thoreau, Channing, Hawthorne, Margaret Fuller,—and found them all better than their writings.

N1663: He held in much honor his sturdy neighbors on the farms, and never ceased to

Worship toil's wisdom that abides.

One of these helpful and kindly men—the same for whose marriage Mr. Emerson had performed the ceremony on first coming to Concord, Mr. Alcott being the witness, and who, as deputy-sheriff, had arrested and imprisoned Alcott and Thoreau for refusal to pay taxes, yet cared for them kindly, and had in vain offered to pay Thoreau's tax before seizing him—said of Mr. Emerson to a mutual friend: "Now it's remarkable how many persons go to see Mr. Emerson. Some of 'em come from Europe, I hear. Well, I suppose there's a good many things that he knows that I don't know anything about, and I *know* there's a lot o' things that I know a damn' sight more about than he does."

N1664: Mr. Emerson himself always preferred the independence of a hotel or country tavern on his lecturing journeys to taxing private hospitality or taking its chances. He gave letters of introduction sparingly, but did not use them himself, writing his own from the inn, when in England, to the person he desired to

meet, thus allowing him to judge from the letter whether he was willing to receive the visitor.

N1665: From the lecture "Clubs":—

"What is material, is, to secure men of culture whose experience has large range, and who have seen low extremes in life, such as the ordinary routine of respectable society excludes from the knowledge of gentlemen, for there are heroes among beggars and jockeys."

N1666: Mr. John T. Morse, Jr., gives an account of the Saturday Club, and quotes Dr. Holmes on this point:—

"Some outsiders furnished still another name for this much-entitled Club. They called it 'The Mutual Admiration Society,' and sometimes laughed a little, as though the designation were a trifle derogatory. Yet the brethren within the pale were nowise disturbed by this witticism. 'If there was not,' says Holmes, 'a certain amount of "mutual admiration" among some of those I have mentioned, it was a great pity, and implied a defect in the nature of men who were otherwise largely endowed.' Possibly one or two of these gentlemen might have been criticised for admiring *themselves*, but it did seem hard to blame them for being sufficiently intelligent and generous to admire each other. Would the scoffers have been better pleased to see them openly abusing or slyly depreciating each other? There are enough such spectacles elsewhere in literature."⁸⁹

N1667: Robert Herrick's "Ode to Ben Jonson."

89 *Life and Letters of Oliver Wendell Holmes*, by John T. Morse, Jr. Boston: Houghton, Mifflin & Co., 1896.

N1668: Lecture sheets: "Homer said, 'When two men meet, one apprehends sooner than the other.' But it is because one man thinks well, that the other thinks better, for they mutually excite each other, each attempting to cap the other's thought."

N1669: Mr. Emerson said that Nature's rule in conversing with man was "One to one, my dear."

Two sheets, the "salvage" of the lecture "Clubs," may be added in conclusion:—

"When I was in London, I fell in with the literary executor of Jeremy Bentham, who carried me to Bentham's house, and showed me, with much veneration, the apartments in which the philosopher lived. Especially his library, and the closet adjoining, in which Bentham was wont to receive his guests. He made me remark that there were but two chairs in the apartment, as it was his invariable rule to receive but one person at a time. Every distinguished person in Europe, he said, had been here at some time, including Talleyrand....

"But at all events it [conversation] must be sought and conducted as a religious rite. I think we all have owed some of the best hours and some of the grandest promises of our being to conversation, when all frivolous and disturbing accidents were removed, and the imagination was free to play, and, in happy hour, men emulated each other and provoked each other to read the deep secrets of Nature."

COURAGE

THE LECTURE "Courage" was given in Boston at the Music Hall to Mr. Parker's Society in November, 1859. These were days of great excitement both in the North and South, for the brave but desperate attempt of John Brown to seize the United States Arsenal at Harper's Ferry, arm the slaves, who, he supposed, would flock to him, and lead them quickly along the Appalachian chain to Canada, had failed, and its leader, wounded, was on trial for his life in Virginia. This event had precipitated the issue between slavery and freedom, and begun to open the eyes of Northern people to the uselessness and unworthiness of their long submission to Southern dictation in hope of preserving the Union, and with it a Southern market. However little the method of action of Brown in this raid commended itself to the best people of the North, their cheeks burned that such a condition of affairs existed as should drive men to treason simply for humanity's sake. John Brown's simple courage entrenched on the teaching of Jesus to "remember them that are in bonds as bound with them," contrasted with the shameful attitude of Government in half supporting Border Ruffianism in Kansas, stung tender consciences, and was working

a sudden reaction in public opinion. Yet conservatism of what was then called the "Old Hunker" type was so strong among the aristocracy of Beacon Street, the business men of State Street, and the negro-hating and ruffianly element of the Democracy, that open speaking on behalf of Brown had its dangers. Mr. Cabot in his Memoir says: "It does not appear that Emerson was acquainted in advance with Brown's Virginia plot, but in this lecture, which was delivered while Brown was under sentence of death, he spoke of him as 'that new saint than whom none purer or more brave was ever led by love of men into conflict and death,—the new saint awaiting his martyrdom, and who, if he shall suffer, will make the gallows glorious like the cross.'" It is certain that Mr. Emerson did *not* know of the project. But the motive and the heroism made him think better of his countrymen in that sad time. John Brown had been his guest in the days of the Kansas struggle, and he knew the quality and the quiet force of the man.

In the eleven years between the delivery of the lecture and its publication as an essay it underwent many changes, passages written during the shame and anger of the dark days before the war disappearing when the essay took on its more classic form, and some proud memories of that great struggle taking their place.

Dr. Holmes says of his friend's right to speak on the theme: "All that Emerson has to say about Courage is worth listening to, for he was a truly brave man in that sphere of action where there are more cowards than are found on the battlefield. He spoke his convictions fearlessly; he carried the spear of Ithuriel, but he wore no breastplate save that which protects him

"Whose armor is his honest thought,
And simple truth his utmost skill."

Margaret Fuller quoted Mr. Emerson as saying, "Careful of health, Careless of life, should be our motto."

N1670: Journal, 1850. "The secret of Culture is to interest a man more in his public than in his private capacity."

N1671: Speaking of the Persians, in his preface to Gladioni's translation of the *Gulistan* of Saadi, Mr. Emerson said, "Hatem Tai is their type of hospitality, who, when the Greek Emperor sent to pray him to bestow on him his incomparable horse, received the messenger with honor, and, having no meat in his tent, killed the horse for his banquet, before yet he knew the object of the visit."

N1672: Another version of the paragraph was as follows:—

"Disinterestedness on the score of self, a purpose so sincere and generous that it cannot be tempted aside by any prospects of private advantage; like Aristides in the public treasury, poor when he entered it, poorer when he left it, like Chatham, to whom his scornful magnanimity," etc.

N1673: "It is delightful to see that the one serious and formidable thing in nature is Will."—Miscellaneous sheets of "Courage."

It was this power in Wendell Phillips that Mr. Emerson chiefly admired,—"the steel hid under gauze and spangles;" that, with all the elegance and perfect finish of his speech and manner, he was not seen at his best until hostile dissent broke forth among his audience.

N1674: These manly words for the hour in 1859 were omitted from the essay when the cloud was lifted:—

"The politics of Massachusetts are cowardly. We have a snappish criticism which watches and contradicts the opposite party, but we want will that advances and dictates. When we get an advantage, as in Congress the other day, it is because our adversary has made a fault, and not that we have made a thrust. Why do we not say, We are abolitionists of the most absolute abolition, as every man must be? Only the Hottentots, only the barbarous or semi-barbarous societies, are not. We do not try to alter your laws in Alabama, nor yours in Japan, or the Fee-jee Islands; but we do not admit them, or permit a trace of them here, nor shall we suffer you to carry your thuggism north, south, east or west, into a single rod of territory which we control. We intend to set and keep a *cordon sanitaire*, all around the infected district, and by no means suffer the pestilence to spread."

N1675: This was the question asked in the Concord Town Hall by John Brown on one of his visits, seeking aid for the Free-State cause in Kansas.

N1676: This was the good old George Minot, a man of the hoe and the shot-gun. It was he who, seeing Mr. Emerson pause, in thought, in the road before his house, said to his nephew, "Charley, that man ain't like other men. He's like Enoch; he walks with God and talks with his angels."

The end of the paragraph suggests the passage in "Heroism" (*Essays, First Series*, p. 249), in which is said, "Our culture must not omit the arming of the man."

N1677: I give here more recent striking testimony which would have delighted Mr. Emerson.

An officer of the Army of the Potomac, after speaking of the ordinary duties of a campaign, for which "the merely staple quality of courage will usually suffice," said, "But when the exigencies

of the service require a call for volunteers to attempt some desperate deed whose failure would smell like murder, and whose success would seem nearly as fatal, then comes an opportunity for the 'born' soldier. At this time there will arise, . . . even from the purlieu of the non-combatants,—the meek-eyed denizens of the commissariat, from hospital or wagon-trains,—men who will offer their lives so freely and so inexplicably that one is led to suspect they have waited for the occasion." He quotes also the words of one who had cared for the wounded, about "the woman's mouth so often found upon the face of the youth whose courage made sure martyrdom."⁹⁰

N1678: A similar story is told of Mr. Emerson's grandfather William Emerson, the patriotic young minister of Concord, who afterwards, a chaplain in the American army, died of fever near Ticonderoga.

A citizen of Rutland, Vermont, told the father of Professor Butler of Madison, Wisconsin (who told the editor), that, when a young man, he worked in Concord, and in the spring of 1775 enlisted in the Minute-Men. When on the morning of the 19th of April he stood in line among the village soldiers on the Common, and saw the British column advancing glittering in arms, he felt that if he did not run he should die of fear. But at that moment the minister laid his hand on his shoulder and said, "Don't be afraid, Harry; God is on our side," and after that his mortal fear passed away.

N1679: Mr. Emerson hurried with his neighbors to save the sacred woods, when afire, wielding his appropriate weapon, a pine bough.

⁹⁰ Colonel S. R. Elliott in "The Courage of a Soldier." *Atlantic Monthly*, February, 1893, p. 239.

N1680: The following passage to the purpose is from a stray sheet of "Courage."

"People wrap themselves up in disguises, and the sincere man is hard to reach. A man is concealed in his nation, concealed in his party, concealed in his fortune, and estate, concealed in his office, in his profession, concealed in his body at last, and it is hard to find out his pure nature and will.

"They speak and act in each of these relations after the use and wont of those conditions. They talk as Americans, as Republicans, as men of position, men of business, and at last, as men of such appetite, decorum and habit are expected to talk,—each cunningly hiding under these wearisome common-places the character and flavor which is his peculiar gift from the author of his being, and which is all that can really make him interesting and valuable to us. Of course, he only half acts,—talks with his lips and not from his heart,—touches with fingers, and not with his strength. Bishop Latimer tells us, that his father taught him, when a boy, not to shoot with his arms but to lay his body to the bow."

N1681: In the early years of his Concord life, Mr. Emerson made in his journal, on returning from church, the entry on which the sentence in the essay is founded:—

"I delight in our pretty church music and to hear that poor slip of a girl, without education, without thought, yet show this fine instinct in her singing, so that every note of her song sounds to me like an adventure and a victory in the '*ton-welt*'; and whilst all the choir beside stay fast by their leader and the bass-viol, this angel voice goes choosing, choosing on, and with the precision of genius keeps its faithful road and floods the house with melody."

N1682: This was Professor Andrews Norton of Harvard University.

N1683: From Robert Herrick's poem "Hesperides."

N1684: This passage from the original lecture has been omitted:—

"A curious example is the recent history of the Southern States. The Southerners reckon the Yankees to be less brave than they. Yet the reign of terror is in the South. It is not to be believed that there was no minority in the South during the year 1856. Yet not a mutter or peep was heard with the exception of the explicit demonstration of Mr. Botts of Virginia and Mr. Davis of Maryland. Every gentleman in Carolina was mute as a fish. Is it to be believed that Cassius Clay is the only man in Kentucky of his opinion?

"But I do not wish to make odious, least of all, unfounded distinctions. There are reigns of terror as well in the North as in the South, and we have no right to boast so long as our love of trade, or preference of peace to justice, or the frivolity which loves comfort at any cost withholds our vote and voice. It is perfectly certain that when a million or half a million of citizens in good earnest wish a thing done, they will fast enough find governors and judges and members of Congress to put it through all the forms; and if the laws of Massachusetts are not just and heroic, it is not the fault of the United States, but of ourselves."

N1685: Among the scattered sheets that remain of "Courage" as delivered at various times, is one headed "The Aristocracy," in which this echo of 1859 remains: "Governor Wise and Mr. Mason no doubt have some right to their places. It is some superiority of working brain that put them there, and the aristocrats in every society. But when they come to deal with Brown they find that he

speaks their own speech,—has whatever courage and directness they have and a great deal more of the same, so that they feel themselves timorous little fellows in his hand; he out-sees, out-thinks, out-acts them, and they are forced to shuffle and stammer in their turn. They painfully feel this, that he is their governor and superior, and the only alternative is to kneel to him, if they are truly noble, or else (if they wish to keep their places) to put this fact, which they know, out of sight of other people as fast as they can. Quick, drums and trumpets, strike up! Quick, judges and juries, silence him, by sentence and execution of sentence, and hide in the ground this alarming fact. For, if everything comes to its right place, he goes up and we down."

N1686:

"And slow, as in a dream of bliss,
The speechless sufferer turns to kiss
Her shadow, as it falls
Upon the darkening walls."

Longfellow, "Santa Filomena."

After the quotation of Napoleon's words, the text runs as follows in one of the manuscript sheets: "So is it with the hero. No misgivings, no hesitations, but perfect continuity of nerve, so that what he thinks he enacts.

"The vulgar mind is embarrassed by petty considerations; does not penetrate to the end of the action, but stops short at an obstacle; sees the enmities it provokes; the loss of day-wages."

N1687: Here followed in the lecture the allusion to John Brown, whose execution took place on the second day of December, a little more than three weeks later:—

“Look nearer at the ungathered relics of those who have gone to languish in prison or to die in rescuing others or rescuing themselves from chains in Slave States, or look at that new saint, than whom none purer or more brave ever was led by love of men into conflict and death, the new saint awaiting his martyrdom, and who, if he shall suffer, will make the gallows glorious like the cross.”

N1688: Sheet from lecture: “It is very certain that, of two men of whom each follows his own thought, he whose thought is deepest will be the strongest character. Always one man more than another represents the will of Divine Providence to the period, and the more serious the occasion, the more it tests and searches men. A holiday general may lead a holiday procession, but vanishes unaccountably into obscurity in the heroic times.”

This tribute to the moral courage of the people of England may be here given:—

“The English nation have the common credit of being more individual, more outspoken, and downright, than we are. Each man of them is, very likely, narrow and committed to opinions of no great liberality or dignity, but, such as they are, he heartily stands for them; silent or loud, he is content to be known to all the world as their champion; they grow to him; he is enraged, he curses and swears for them. In the house of lords, the patrician states his opinion, very clumsily and drearily perhaps, but at least not looking for your ballot and approbation, rather with an air that says, Such is my opinion, and who the devil are you?”

N1689: These passages from the lecture should be given in conclusion:—

"Whence does all power come? We are embosomed in the spiritual world. Yet none ever saw angel or spirit. Whence does our knowledge of it come? Only from men; the only Revealer of the divine mind is through the thoughts of a man.

"The statistics show you the whole world under the dominion of fate or circumstance or brute laws of chemistry. Life instantly contravenes or supervenes the low chemistry by higher. Thought resists and commands Nature by higher truth, and gives Nature a master....

"Life is a medley, but the centre is great and eternal, and we must be real. We must know that it is as we are, and therefore the absurd accuses us. We must go for character, personal relations, poverty and honor.

"And wisdom is justified of her children. Valor pays rents as well as land. A little measure is always a great error. The noble course begets love and confidence, and has a late and sure reward. It suggests counsels proportionate to the end, broad measures, humane conduct."

N1690: The lady was Miss Elizabeth Hoar, who should have been, but for his untimely death, the wife of Charles Emerson. To Mr. Emerson she was a sister indeed, and her frequent presence illuminated the house for all of his family. The story of George Nidiver was told by her brother Edward, who had lived for several years in California. Mr. Emerson was so pleased with it that he obtained leave to print it with the essay in 1870. Before his death he learned that some one in California, reading the essay, found the poem, and knowing George Nidiver, took it to the old hunter, who was astonished and pleased to find that his act of generous impulse, when a youth, was known and celebrated on the other side of the continent a quarter of a century after its occurrence.

SUCCESS

IN THE autumn of 1833, when he had laid aside, with his gown, the profession for which he was bred, and at the age of thirty was facing an unknown future as a scholar and public speaker, Mr. Emerson wrote in his diary:—

"Were it not heroic venture in me to insist on being a popular speaker and run full tilt against the Fortune who, with such beautiful consistency, shows evermore her back?

"Charles's *naïf* censure last night provoked me to show him a fact apparently entirely new to him, that my entire success, such as it is, is composed wholly of particular failures, every public work of mine of the least importance having been, probably without exception, noted at the time as a failure. The only success (agreeably to common ideas) has been in the country, and there founded on the false notion that here was a Boston preacher. I will take Mrs. Barbauld's line for my motto [of a brook],—

"And the more falls I get, move faster on."

In one of the earlier journals Mr. Emerson wrote of Osman, by which name he there called his ideal man:—

"I will add to the portrait of Osman that he was never interrupted by success. He had never to look after his fame and his compliments, his claps and editions."

In the middle of December, 1858, Mr. Emerson lectured on Success at Hartford, and in March, 1859, opened his course at the Freeman Place Chapel in Boston with "The Law of Success." These lectures were, without doubt, essentially the same as the present essay.

N1691: It was known that Giotto had visited a fellow artist by the circle that he drew, as a visiting-card. Strassburg Cathedral bears witness to the mastery of Erwin of Steinbach. The feat of Olaf Trygvesson is told by Longfellow in his version of the Saga of King Olaf, in the "Tales of a Wayside Inn." Ojeda was a Spanish cavalier who sailed with Columbus, and later with Vespucci. To Bernini St. Peter's church in Rome owes its colonnade and the bronze canopy over the tomb of the Saint.

N1692: With Mr. Emerson's love for the heavenly bodies, in their splendor, their majestic courses, and more for what these signified, it is safe to believe that he attributes to the words of Columbus a higher and oracular sense.

N1693: It is obvious that the writer of *Uncle Tom's Cabin*, Mrs. Stowe, is referred to in this passage, and Jenny Lind, whose beautiful singing had a few years earlier delighted the people of two continents. Margaret Fuller had, for her sympathy and zeal in the cause of the Italian patriots, been put in charge of a hospital at Rome a few years before this essay was written, and before its

publication the Civil War had called many devoted women to the military hospitals and to the schools for the newly freed negroes.

N1694: This verse, which Mr. Emerson liked to repeat to his children, and which serves for the motto of one of his journals, came from the rude but interesting Danish ballad translated by George Borrow. It describes the Berserker madness of the hero from whom it takes its name.

N1695: This passage from the journal of 1859 gives the offset to the lower view:—

“Power even is not known to the pure. Power indicates weakness and opposition. Health exists and unfolds in the rose, in the sea, in the circular and endless astronomy. The electricity is not less present in my body and my joy, for twenty years, that I never saw or suspected it, than in the twenty-first, when I drew by art a spark from my knuckle.”

N1696: Of the monotones, both of the aggressive reform and mystic type, Mr. Emerson had all too much experience, yet was always good-natured to them. The remark of his friend. Mr. Channing on the conversation of one of the latter type amused him,—“*Biographie universelle de moi-même.*”

N1697: Mr. Emerson had the strength and the skill to save himself for his own large mission in spite of the importunities that beset him to engage in causes, and yet kept the respect and good will of their advocates, and often helped bravely, but as a volunteer.

N1698: Henry James, Jr., in one of his novels speaks of "the over-modelled American face."

N1699:

For thought, and not praise,—
Thought is the wages
For which I sell days.

"Fragments on The Poet," *Poems*, Appendix.

N1700: "Commerce...is an apt illustration of the intellectual quality of the process of creating values, as much as is inventing, planting or manufacturing."—From a sheet of the lecture.

N1701: The sentence about Alfred is followed in the lecture by this comment: "Good fortune is another name for perception and good will."

N1702: Many an author, especially among Mr. Emerson's friends, was a gainer by "imputed righteousness," to borrow the phrase from the Church. His good will and his teeming mind sometimes read values into their work.

Lecture sheets: "Then for sensibility, I must add, that the great happiness of some of the best moments of life has been the enjoyment of books and works of art and science. And as Marcus Antoninus said, 'What matters it who found the truth, whether thyself or another, and where had been thy own intellect, if greater had not lived?' And, though I hate to be in any manner wanting to the claims of stern and manly Intellect, I must say, that the delight in the superior powers of others is one of the best gifts of God."

N1703: Journal. "What's a book? Everything or nothing. The eye that sees it is all. What is the heaven's majestic roof fretted with golden fire to one man, but a foul and pestilent congregation of vapors? Well, a book is to a paddy a fair page smutted over with black marks; to a boy, a goodly collection of words he can read; to a half-wise man, it is a lesson which he wholly accepts or wholly rejects; but a sage shall see in it secrets yet unrevealed; shall weigh, as he reads, the author's mind; shall see the predominance of ideas which the writer could not extricate himself from, and oversee. *The Belfast Town and County Almanack* may be read by a sage; and wasteful as it would be in me to read Anti-Masonic or Jackson papers, yet whoso pierces through them to the deep Idea they embody, may well read them."

N1704: The motto of "Culture," printed in the *Poems*, is on this theme.

N1705: This sentence is a bit of autobiography.

N1706:

Wilt thou not ope thy heart to know
What rainbows teach, and sunsets show?

"Threnody," *Poems*.

Still, still the secret presses;
The nearing clouds draw down;
The crimson morning flames into
The fopperies of the town.

"The World-Soul."

N1707: In the book in which Mr. Emerson wrote verses after 1850, this passage appears in poetic form:—

October woods wherein
The boy's dream comes to pass,
And Nature squanders on the boy her pomp,
And crowns him with a more than royal crown,
And unimagined splendor waits his steps.
The gazing urchin walks through tents of gold,
Through crimson chambers, porphyry and pearl,
Pavilion on pavilion garlanded,
Incensed, and starred with light and airs and shapes
Beyond the best conceit of pomp or power.

N1708: Wordsworth's Ode, "Intimations of Immortality from Recollections of Early Childhood." The first line of the quotation should be

"Though nothing can bring back the hour."

N1709: "Concord, 11 October, 1839. At Waltham, last Sunday, on the hill near the old meeting-house, I heard music so soft that I fancied it was a piano-forte in some neighboring farm-house; but on listening more attentively I found it was the church-bells in Boston, nine miles distant, which were playing for me this soft tune."

N1710: This passage suggests his poem "Each and All."

N1711: Of Nature's traits he wrote,—

She paints with white and red the moors
To draw the nations out of doors.

N1712: In the autumn of 1834, immediately after his return from Europe, Mr. Emerson began his new life as a lecturer by giving two lectures before the Society of Natural History in Boston. In the Introductory Lecture he urged the fitness for men of the study of Nature, and the second lecture was "On the Relation of Man to the Globe," calling attention to the relation of use, but also to the relation of beauty.

N1713:

Tell men what they knew before;
Paint the prospect from their door.

"Fragments on Life," *Poems*, Appendix.

N1714: Here followed in the lecture the words,—

"The deeper you bore, the farther you get away from the cause."

N1715: Compare the quatrain called "Casella" in the *Poems*.

N1716: These thoughts and images occur in "The Over-Soul" (*Essays, First Series*, p. 293), and in the *Poems* in "Manners" and the lines in "Saadi":—

Nor scour the seas, nor sift mankind,
A poet or a friend to find:
Behold, he watches at the door!
Behold his shadow on the floor!

and in the "Fragments on Life" in the verses beginning

Love asks nought his brother cannot give.

N1717: Mr. Sanborn engaged a learned German, Dr. Solger, to give a course of lectures on History at his private school, and Mr. Emerson, with other residents of Concord, attended them. This incident appears to have been the fruit that he carried away from the course.

N1718: Mr. Charles Lane is here spoken of, one of the English gentlemen who returned with Mr. Alcott from England in 1844, bent upon trying in New England the experiment of a loftier and simpler method of living. The short-lived Fruitlands Community was the result.

N1719: This paragraph in the lecture began, "The only Muse I know of is health, which is the timing, symmetry and coördination of all the faculties so that the nimble senses catch reports from things which in ordinary hours they do not render."

N1720: Pons Capdueil, a Provençal gentleman in the twelfth century, skilled in all the accomplishments of a knight and minstrel.

N1721: Couture, the eminent French painter, of the last generation, wrote, "You, painter, you are born to make men love and understand Earth's beauties, and not to startle us....Dare to be yourself—there is light....Soften your heart. Before all things be humble."

N1722: This page on what is positive and abiding, from an old lecture, seems here appropriate:—

"We find stability central amidst all this dismaying whirl. Life looks so petty and frivolous around us, men so rude and incapable, victims of vanity, victims of appetite, scorners and corrupters of each other, and nothing so high and sacred but you shall find mobs of ferocious and ignorant men ready to tear and trample it down for some paltry bribe, were it only a bottle of brandy; and their leaders, for a bribe only a little less paltry, hounding them on. We see the historic culture of the most enlightened populations threatened by barbaric masses. We see empires subverted and the historic progress of civilization threatened. We see religious systems on which nations have been reared, pass away. The religion of one age is the literary entertainment of the next. Judaism, Stoicism, Mahometism, Buddhism, all discredited and ending. Nay, the venerable and beautiful traditions of Christianity, in which we were educated, losing their hold on human belief, day by day; but central in the whirl a faith abides, which does not pass, a central doctrine which Judaism, Stoicism, Mahometism, Buddhism, Christianity, all teach."

N1723: The test here mentioned, namely, the state of mind in which the new prophet or revelation leaves you, Mr. Emerson mentions in connection with so-called "Spiritualism" in the essay on Demonology in *Lectures and Biographical Sketches*.

In the lecture "Success" the following anecdote was at this point introduced: "When Campbell heard Joseph Gerald defend himself in the court in Edinburgh, he said to the stranger next him, 'By Heaven, sir, that is a great man!' 'Yes, sir,' he answered, 'he is not only a great man himself, but he makes every other man feel great who listens to him.'"

N1724: Mr. Emerson notes, in his journal, of Socrates, that he was more afraid of himself than of the people of Athens. At the end of this paragraph in the lecture "Success" followed this sentence: "I value a man's trust in his fortune, when it is a hearing of voices that call him to his task. When he is conscious of a work laid on him to do, and that Nature cannot afford to lose him until it is done."

N1725: In the lecture Mr. Emerson wrote "the picture of the crucifixion" instead of "some sacred subjects," and at the end of the sentence he added: "and so dead Romeos, and smothered princes; Nature does not so. Nature lays the ground-plan," etc.

N1726: "Like Byron," which stood in the lecture, is here omitted.

N1727: Wordsworth, "Poems dedicated to National Independence."

N1728: From the Manuscripts: "Be an opener of doors to those who come after you, and don't try to make the Universe a blind alley."

N1729: This passage is a fragment from the lost tragedy *Philoctetes* of Euripides.

OLD AGE

WHEN BOYHOOD and first youth had gone, and to the coming on of care and toil ill health was added, the young Emerson wrote,—

I bear in youth the sad infirmities

That use to undo the limb and strength of Age.

But a less impatient temper than that of his ardent brothers enabled him to pass through those critical years and emerge even from grief and disappointment to the cheerful courage of his new life. Thereafter he had nothing to do with Time, except to choose wisely the gift from each of the long procession of sacred Days. He used to tell that, when he was a growing boy, his uncle asked him how it was that the young people did not like him, while their elders did. "Now," he said, "the case is reversed: the old people distrust and dislike me, while the young come to me."

And with courage and work, his eyes open to beauty, manifest or hidden, his ears open for the words of the Spirit, he did not seem to grow old, except in increasing mellowness of the affections and

an afternoon serenity. The accidents of age befel him, but such mild complaint as he made of them was always humorous. Care and anxiety on pecuniary matters were there, but he kept them under. About the year 1870 his power of work, his memory and bodily strength began to fail, yet this was noticed by few until after the exposure and shock occasioned by the burning of his house two years later. The general muster of loving friends, near or far, to his aid, and their gift of restored house and freedom from anxiety, prolonged his life several years. His working power was gone, but he was happy. As he hints in the essay, the affections had their turn when the intellectual forces ebbed. He wrote his serene recognition of Age in his poem "Terminus," a portion of which serves for a motto of this chapter. In 1864, about the time that the poem was written, he wrote in his diary, "Within I do not find wrinkles and used heart, but unspent youth."

He wrote in his journal, of the increasing difficulty of composition and arrangement,—

1864. "I have heard that the engineers in the locomotives grow nervously vigilant with every year on the road until the employment is intolerable to them: and I think writing is more and more a terror to old scribes."

And again:—

1864. "The grief of old age is, that now, only in rare moments and by happiest combinations or consent of the elements, do I attain those enlargements which once were a daily gift."

Yet serene enjoyment of Nature, his friends and family remained:—

He had to the full, in the words of Shakspeare,—

"That which should accompany old age,
As honour, love, obedience, troops of friends."

It does not appear exactly when and where the lecture on Old Age was first read, but the reference to the Phi Beta Kappa speech of the venerable ex-President of Harvard University, Josiah Quincy, in June, 1861, and the publication of "Old Age" in the January number of the *Atlantic Monthly* in 1862, fix the date sufficiently closely. The exordium of the lecture, evidently written during the anxious pause, after the defeat of Bull Run, of the war in Virginia, is as follows:—

"I hope I shall not shock the sentiment of the assembly when I say, that I have nothing to offer you this evening relating to war and its works; that, while I sympathize, as every good-hearted man must, with this concentrated curiosity on the public affairs, which listening with over-strained ear to every click of the telegraph, and hearing a cannon in every out-door sound, makes every liberal study impertinent, I feel that our sanity requires some balance to this fever-heat; some diversion back to old studies and traditions which respect our permanent social welfare. The country which reads nothing but newspapers all day, can surely afford to leave the army bulletins out of its church and lyceum for an evening hour. I shall therefore risk to offer you a topic, the coldest and most remote from these heats, nay, perhaps more repulsive to the American than to any other national temperament."

N1730: "The babe in arms is a channel through which the energies we call fate, love and reason visibly stream."—"Considerations by the Way," *Conduct of Life*.

On the day of the birth of his second daughter, Mr. Emerson wrote in his journal:—

Nov. 22, 1841. "There came into the house a young maiden, but she seemed to be more than a thousand years old. She came into the house naked and helpless, but she had for her defence

more than the strength of millions. She brought into the day the manners of the Night."

N1731: This is a version of lines quoted, but not credited, by Mr. Emerson in "The Over-Soul," of which I have in vain sought for the author. It is said that Spirit

"Can crowd eternity into an hour
Or stretch an hour into eternity."

N1732: In his notes upon himself Mr. Emerson wrote, "My only secret was that all men were my masters. I thought each who talked with me older than I."

N1733: "I find it a great and fatal difference whether I court the Muse, or the Muse courts me. That is the ugly disparity between age and youth."—Manuscript of "Old Age."

N1734: In Tennyson's "Tithonus," the old and weary man says to Aurora, his divine mistress,—

"I ask'd thee, 'Give me immortality.'
Then didst thou grant mine asking with a smile,
Like wealthy men who care not how they give.
But thy strong Hours indignant work'd their wills,
And beat me down and marr'd and wasted me,
And tho' they could not end me, left me maimed
To dwell in presence of immortal youth,
Immortal age beside immortal youth,
And all I was, in ashes."

N1735: "Presque tous les bons ouvriers vivent longtemps: c'est qu'ils accomplissent une loi de la Providence."—Béranger.

N1736: In connection with the mention of this great man, this quotation from a letter written in his old age is copied from Mr. Emerson's journal:—

"Humboldt in 1843 congratulates his friend Karl Ritter, on the appearance of Zimmermann's map of the Upper Nile. 'If, he says, 'a life prolonged to an advanced period, brings with it several inconveniences to the individual, there is a compensation in the delight of being able to compare older states of knowledge with that which now exists, and to see great advances in knowledge develop themselves under our eyes in departments which had long slept in inactivity, with the exception perhaps of attempts by hypercriticism to render previous acquisitions doubtful. This enjoyment has fallen to our share in our geographical studies.'"

N1737: In the journals written near Mr. Emerson's sixtieth year he good-naturedly treats the semi-comic aspects and compensations, as thus:—

"My humorous friend told me that old age was cheap: Time drew out his teeth gratis, and a suction-plate would last him as long as he lived; he does not go to the hair-dresser, for Time cut off his hair; and he had lived so long, and bought so many clothes, that he should not need to buy any more.

"N. said in the car to a chance companion—'Yes, but I am an old man and can't do so or so.' Instead of the indignant denial he expected, the stranger replied, 'Yes, you are an old man and that makes a difference.' Vain was his use of the dodge of old men, giving themselves for ten years older than they are; the companion quietly accepted it as true."

In the journal of 1864 I find this entry:—

"The following page should have been printed in *Society and Solitude*, in the chapter called 'Old Age.'

"Old age brings along with its uglinesses the comfort that you will soon be out of it,—which ought to be a substantial relief to such discontented pendulums as we are. To be out of the war, out of debt, out of the drouth, out of the blues, out of the dentist's hands, out of the second thoughts, mortifications and remorse that inflict such twinges and shooting pains,—out of the next winter, and the high prices, and company below your ambition,—surely these are soothing hints. And harbinger of this, what an alleviator is sleep, which muzzles all these dogs for me every day? Old age—'T is proposed to call an indignation-meeting."

N1738: A similar passage is in the first pages of the essay on Culture in *Conduct of Life*.

N1739: "In his consciousness of deserving success, the caliph Ali constantly neglected the ordinary means of attaining it; and to the grand interests, a superficial success is of no account."—"Aristocracy," *Lectures and Biographical Sketches*.

N1740:

And,—fault of novel germs,—
Mature the unfallen fruit.

"Terminus," *Poems*.

N1741: The little white star-flower of our May woods, resembling an anemone.

N1742: This must have been Dr. John Snelling Popkin, Eliot Professor of Greek Literature at Harvard College, a graduate of 1792.

N1743: Virgil, *Aeneid*, Book IV. 654.

N1744: Another view is taken in the Earth-Song in his poem "Hamatreya."

N1745: George Whitefield (1714–1770), the English clergyman of humble origin, but devoted to religion from early youth. He studied at Oxford and formed a friendship with Wesley, and became, after his ordination, a preacher of extraordinary eloquence and power, addressing gatherings of thousands of people in the open air. He visited New England seven times, and preached with great effect, both in the North and the Southern States.

N1746: Quisque amat, nulla est condicione senex.

N1747: The following extracts show Mr. Emerson's calm philosophy.

Journal, 1864. "Let us not parade our rags; let us not, moved by vanity, tear our hair at the corners of streets, or in the sitting-room, but, as age and infirmity steal on us, contentedly resign the front seat and the games to these bright children, our better representatives; nor expect compliments or inquiries, much less gifts or love, any longer (which to expect is ridiculous), and not at all wondering why our friends do not come to us, much more wondering when they do, decently withdraw ourselves into modest and solitary resignation and rest."

Mr. Emerson's thought concerning old age in 1840 was borne out by his life to the end:—

"Old age...I see no need of it. Whilst we converse with what is above us we do not grow old, but grow young. Infancy, youth, receptive, aspiring, with religious eye looking upward, counts itself nothing and abandons itself to the instruction flowing in from all sides. But the man and woman of seventy assume to know all, throw up their hope, renounce aspiration, accept the actual for the necessary, and talk down to the young....Is it possible a man should not grow old? I will not answer for this crazy body. It seems a ship which carries him through the waves of this world and whose timbers contract barnacles and dry-rot, and will not serve for a second course. But I refuse to admit this appeal to the old people we know as valid against a good hope. For do we know one who is an organ of the Holy Ghost?"

LETTERS AND SOCIAL AIMS

THE FIVE years which intervened between the publication of *Society and Solitude* and *Letters and Social Aims* brought events unlooked for along with those of the ordinary routine of Mr. Emerson's life. He once said that there was no time of his life when the offer of a professorship of rhetoric and oratory, even from the smallest country college, would not have been tempting to him. But now, as he neared his threescore years and ten, he received an invitation to give, at Cambridge, a course of University lectures on Philosophy. This was the more gratifying because it would give a fit occasion to fill out his notes variously called the *Natural History of Reason* or *Natural History of the Intellect* or *Philosophy for the People*, and would be a spur to him to this, which Mr. Cabot thinks that he "regarded as the chief task of his life." In the spring of 1870 he gave sixteen lectures to students of the University and outsiders who came for the course. This required an amount of work for which he was really unequal. The ordering of his thoughts, and the endeavor to fill out the gaps in their statement, and obtain coherence of what he called "infinitely repellent particles" were

always the difficult part of the preparation of a lecture, and this was increased when a course on a special subject was undertaken.

In the winter immediately preceding this course he had, as usual, made his lecturing journey through the West. In the summer his constitution began to show the effect of the unusual strain. But that year he contributed the preface to Mr. Goodwin's revised translation of Plutarch's *Morals*, and in the following winter (1871) repeated his course at the University. He had been dissatisfied with his work of the previous year, and endeavored to amend it and make some changes in the course, but two lectures a week given with much anxiety told seriously on his strength. In the spring his old friend Mr. John M Forbes came to the rescue and succeeded in inducing him to be one of a pleasant party, all his guests, on an excursion to California. This rest came just at the needed moment. Mr. Emerson enjoyed the trip and the excellent company. The groves of giant pines and sequoias perhaps pleased him more than any of the sights. Professor James B. Thayer was one of the party, and has told their story pleasantly, especially recording Mr. Emerson's words and actions.⁹¹ In the summer Mr Emerson spoke at the Historical Society on the centennial anniversary of the birth of Walter Scott.

He had not planned to go westward to lecture that winter, but could not refuse the request to go and speak at Chicago after the great fire which nearly destroyed that city. In the winter of 1872 he spoke on Books and Reading at Howard University in Washington, and gave a series of readings in Boston of prose and poetry with comments of his own. These, which cost him little effort and gave great pleasure to the company of new and old friends who attended them, were arranged for him by the kindness of Mr.

⁹¹ *A Western Journey with Emerson* Boston: Little, Brown & Co, 1884

James T. Fields and of Colonel William H. Forbes, Mr. Emerson's son-in-law.

The volume promised in England occupied Mr. Emerson's time in summer until the fire which nearly destroyed his house in July, 1872. Then followed a disabling weakness with some fever, which did not, however, send him to his bed; but meantime the many friends near and far who had insisted upon rebuilding his house, with affectionate urgency determined for him that he should go abroad with his daughter for needed rest and recreation to the shores of the Mediterranean. He passed through England and France, making short stay, but at Paris greatly enjoying the society of Mr. Lowell; then went to Italy and joined a party who went up the Nile as far as Philæ. He was far from well and cared little for travel, yet he mildly enjoyed the Biblical scene. "Egypt has been good and gentle to us, if a little soporific," he wrote; and again, "The people, whether in the boat or out of it, are a perpetual study for the excellence and grace of their forms and motions." He saw with pleasure in Florence, on his return, Herman Grimm and his wife, the daughter of Goethe's young friend Bettina; in Paris, Renan, Taine, Tourgueneff; then passing to England in better health gladly met again his old friend Carlyle, and also Max Müller, Ruskin, Browning, Gladstone and many others, though he was rather passive and not very strong. He joyfully sailed for home, arriving there in May, 1873, and welcomed by his townsfolk, was conducted to his restored house.

In October he made the address at the opening of the Concord Free Public Library, and in December read his poem "Boston" at the celebration in Faneuil Hall of the Boston Tea-Party. His health was now restored, but his power of work was gone and his memory failing, and thereafter, with the exception of the little work which he accomplished on the papers in the present volume,

he wrote nothing (hardly even letters) except with some difficulty the short address that he made at the unveiling of French's statue of the Minute-Man at the old North Bridge, on the one hundredth anniversary of Concord Fight.

POETRY AND IMAGINATION

IN 1841 Mr. Emerson gave a lecture called "The Poet" in the course on The Times, in Boston, some passages of which occur in this essay. It probably also contains some leaves from the lecture "Poetry and Eloquence," given in Boston in 1847, and in England in 1848. To the lecture called "Poetry and English Poetry," given in Philadelphia in 1854, it owes almost all of the "Introductory" matter (except, I think, the remarkable sentence about John Hunter); the passages in "Imagination" about the world being anthropomorphized, and defining Fancy and Imagination, with a few other sentences; the paragraph in "Veracity" beginning "For poetry is faith;" that in "Creation" beginning "The poet is enamoured of thoughts and laws," and the sentence concerning the necessity of the poet's thought, which he did not make, but which "made him, and the sun and the stars;" also several passages in "Melody, Rhyme, Form." In 1861 Mr. Emerson gave a course in Boston on Life and Literature, and one of the lectures, which is not preserved, was called "Poetry and Criticism in England and America." It is probable that many sheets that did duty in the courses on the Natural History of the Intellect, at Cambridge, may have been used in the essay, which

seems to have been brought by Mr. Emerson to its present size and form when, under the final title "Poetry and Imagination," he read it, as two lectures, at Chickering Hall in April, 1872.

N1748: It is interesting to see Mr. Emerson's appreciation of firm ground under foot before he takes his flight, and his respect for "saving common sense" as a needed foundation for uncommon sense.

N1749: The rhyme of the new doctrine of Evolution with the ancient one of "The Flowing," taught by Heracleitus, was much to Mr. Emerson's purpose in this chapter.

Onward and on, the eternal Pan,
Who layeth the world's incessant plan,
Halteth never in one shape,
But forever doth escape,
Like wave or flame, into new forms
Of gem, and air, of plants, and worms.

"Woodnotes," II, *Poems*.

N1750: Here follows, in the lecture of 1854, the sentence, "The man finds his own sense written in the drollest variety of disguises all over Nature."

N1751: This passage is much fuller in the early lecture:—

"Whilst common sense draws water, bakes bread, builds houses, keeps shop, and always on the assumption that everything else is a blunder,—in the performing these very works, men are compelled by a certain tyranny which springs up on their own thoughts, to believe in something else. For

their thoughts have an order and method and beliefs of their own, very different from the order which this common sense uses.

"Common sense says, One thing at a time; stick to your fact; keep your cake from burning!—and, meantime, the cake is burning to cinder, whilst the boy's thoughts, to be sure, are running on war, kingdoms, on poetry, on beauty, and the divine life."

N1752: These words are from the song of the White Lady of Avenel,—

"Swim we merrily, the moon shines bright,"—

in Sir Walter Scott's novel *The Monastery*.

N1753: Mr. Moncure D Conway in his very interesting book, *Emerson at Home and Abroad*, says that Mr. Emerson's "essay on this subject [Poetry], published in 1876, was read to a small company in Divinity College twenty-three years before," in Mr. Conway's room. He then quotes the paragraph about "the electric word" of John Hunter, "*arrested and progressive development*," and also the paragraph which follows it, from the essay, believing them to have been part of it when read in Cambridge in 1853, to show that Mr. Emerson, from hints of Hunter, accepted the Evolution doctrine five years before Charles Darwin published the *Origin of Species*. Mr. Conway explains Mr. Emerson's reference to Darwin by supposing him to refer to the poem of Erasmus Darwin, the father.

Being much interested in this question, I have carefully examined the remains of the 1854 lecture, and, while the Introductory part is almost identical with that of the essay, the paragraph beginning "The electric word" is not there, while the one preceding it is, as

well as that following it, beginning "The hardest chemist." Of course it is possible that the sheet is lost, but I believe that Mr. Emerson inserted the paragraph about Hunter later. In the Biographical Sketch in the first volume of this edition I have dwelt at some length upon Mr. Emerson's early interest and pleasure in the Evolution beliefs of the ancient philosophers, and the daring guesses and demonstrations of the scientific men of the eighteenth and nineteenth centuries.

N1754: Mr. Emerson had visited the Hunterian Museum of Anatomy in London under the guidance of his friend Richard Owen, its curator. In the early pages of the chapter "Natural History of Intellect," in the volume of that name, is a reference to the strange thoughts and sympathies which the sight of the arrangement of inorganic and organic specimens in advancing series had aroused in him, when he visited the *Jardin des Plantes* in Paris, in 1833.

N1755: Mr. Conway, in searching Hunter's works for the "electric word" mentioned by Mr. Emerson, found this note, to the same purpose as the sentence in this paragraph:—

"If we were capable of following the increase of number of the parts of the most perfect animal as they were first formed in succession, from the very first to its state of full perfection, we should probably be able to compare it to some one of the incomplete animals, of every order of animals of the creation, being at no stage different from some of those inferior orders; or, in other words, if we were to take a series of animals, from the more imperfect to the perfect, we should probably find an imperfect animal corresponding with some stage of the most perfect."

N1756:

Ever the Rock of Ages melts
 Into the mineral air,
To be the quarry whence to build
 Thought and its mansions fair

"Fragments on Life," *Poems*.

The chapter on Language in "Nature" (*Nature, Addresses and Lectures*) treats of its symbolism.

N1757:

"The privetes of mannes herte
Thei speke and sounen in his Ere
As thogh thei lowde wyndes were."

Gower, "Confessio Amantis."

N1758: Dr Holmes said of Mr. Emerson:—

"His gift was insight: he saw the germ through its envelop; the particular in the light of the universal; the fact in connection with the principle; the phenomenon as related to the law; all this not by the slow and sure process of science, but by the sudden and searching flashes of imaginative double vision. He had neither the patience nor the method of the inductive reasoner; he passed from one thought to another not by logical steps but by airy flights, which left no footprints. This mode of intellectual action when found united with natural sagacity becomes poetry, philosophy, wisdom, or prophecy in its various forms of manifestation. Without that gift of natural sagacity (*odoratio quædam venatica*),—a good scent for

truth and beauty,—it appears as extravagance, whimsicality, eccentricity, or insanity, according to its degree of aberration. Emerson was eminently sane for an idealist. He carried the same sagacity into the ideal world that Franklin showed in the affairs of common life."

N1759: Journal. "In good society, say among the angels in heaven, is not everything spoken by indirection and nothing quite straight as it befel?"

Delicate omens traced in air
To the lone bard their witness bear,
The birds brought auguries on their wings
And carolled undeceiving things.

See also "Demonology" in *Lectures and Biographical Sketches*.

N1760: The pine-tree sings in the "Woodnotes" the parable of "the rushing metamorphosis" in the verses beginning,—

Hearken! Hearken!
If thou wouldst know the mystic song
Chanted when the sphere was young.

N1761: This paragraph is from the lecture on The Poet in the course on The Times given in 1841.

N1762: In one of the Arthurian legends, perhaps in Caxton's version of the *Morte d' Arthur*, which Mr. Emerson valued highly, he was pleased with the symbol that each Knight at the Round Table when the Sangreal was near, found before him "whatsoever kind of meat liked him best."

N1763:

Giddy with motion Nature reels,
Sun, moon, man, undulate and stream,
The mountains flow, the solids seem.

"The Poet," *Poems*, Appendix.

In Mr. Emerson's autobiographic notes he says, "The Ideal world I might have learned to treat as cloud-land, had I not known Alcott, who is a native of that country, and makes it as solid as Massachusetts to me."

N1764: This alchemy of the mind on the "brute reports" of the senses is celebrated in the verses in the Appendix to the *Poems*, beginning,—

Let me go where'er I will
I hear a sky-born music still.

N1765: "One class live to the utility of the symbol, esteeming health and wealth a final good. Another class live above this mark to the beauty of the symbol, as the poet and artist and the naturalist and man of science. A third class live above the beauty of the symbol to the beauty of the thing signified; these are wise men"—"Prudence," *Essays, First Series*.

Journal, 1866. "Learn from the great artist whose blood beats in our veins, whose taste is upspringing in our own perception of beauty, the laws by which our hands should work, that we may build Vaticans, or paint prophets, or sing Iliads, in fit continuation

of the architecture of the Andes, the colors of the sky, and the poem of life."

N1766: Mr. Emerson always heard with impatience the praise of the poems of Shelley, with the exception of a very few which he included in his collection, *Parnassus*.

N1767: This sentence was followed in the lecture by the words, "They like yet better the stars themselves, they like the landscape, the wells of water, the mountain, the plain, sunshine and night, for in these they obscurely feel the flowings also of their thought."

N1768: "There are no days in life so memorable as those which vibrated to some stroke of the imagination"—"Beauty," *Conduct of Life*.

"The day of days, the great day of the feast of life, is that in which the inward eye opens to the Unity in things, to the omnipresence of law...This beatitude dips from on high down on us and we see it is not in us so much as we are in it"—"Fate," *Conduct of Life*.

N1769: These lines are from a hymn, by the English authoress Helen Maria Williams (1762–1827), beginning,—

"My God, all Nature owns thy sway."

N1770: Here follow in the lecture the words, "Who sees things after a true scale, sees them as God sees them in order and beauty."

N1771: In the lecture this passage followed:—

"All becomes poetry when we look from within and are using all as if the mind made it. All becomes prosaic when seen from the point of common sense as if the world existed for material good, or as if matter were a finality...

"All this, because poetry is science, is the breath of the same spirit by which nature lives, and the poet is a better logician than the anatomist. His sayings are wise, and to the purpose, and not those of unpoetic men. He sees each fact as an inevitable step in the path of the creator. He is the right classifier, seeing things grouped, and following the grand way of nature. And never did any science originate, but by a poetic perception. 'A great natural philosopher without this gift is impossible.' The schoolmen think they are logical, and the poet to be whimsical, illogical. Do they think there is any chance or choice in what he sees and says? He knows that he did not make his thought; no, his thought made him and made the sun and stars also. And it is because his memory is too strong for him, does not hold him to routine and lists of words, that he is still capable of seeing. For a wise surrender to the current of nature, a noble passion which will not let us halt, but hurries us into the stream of things, makes us truly know. [Passion is logical, and I note that the vine, symbol of Bacchus, which intoxicates the world, is the most geometrical of all plants.] And was not this the meaning of Socrates, who preferred artists because they truly knew?"

N1772:

"We are led to believe a lie
When we see with, not through, the eye,
Which was born in a night to perish in a night,
When the soul slept in beams of light."

William Blake, *Songs of Innocence*.

N1773: Here Mr. Emerson's preference for sculpture over painting appears.

N1774: Among some fragmentary verses printed in the Appendix to the *Poems*, under the title of "May Morning," are these:—

When the purple flame shoots up,
And Love ascends his throne,
I cannot hear your songs, O birds,
For the witchery of my own.

And every human heart
Still keeps that golden day
And rings the bells of jubilee
On its own First of May.

N1775: Compare in "The Poet," in the Appendix to the *Poems*, the verses beginning,—

The gods talk in the breath of the woods,
They talk in the shaken pine.

N1776: He elsewhere quotes Plato as saying, "The man who is master of himself knocks in vain at the door of Poetry."

N1777: In the lecture the following passage belonged here, an earlier version:—

"The Poet adopts in every action the method of Nature, the most direct; believing, that, in the nature of everything, its own check will appear, and save the absurdity of artificial checks...

"The Poet, thus beholding laws, is believer and lover. The world to him is virgin soil. (And the men mean well: it is never too late to do right.) He affirms the applicability of the ideal law to this moment, and to the present knot of affairs. But [parties, lawyers, and] men of the world invariably dispute such an application, as romantic and dangerous. They admit the general truth, but they and their affairs always constitute an exception."

N1778: The latter pages of "The Conservative," in *Nature, Addresses and Lectures*, treat of the attitude towards the problems of his day of the man who follows his ideals.

In Lowell's "Fable for Critics" a gentleman taking issue with Phœbus on the subject of American Slavery, begins,—

"At slavery in the abstract my whole soul rebels,
I am as strongly opposed to 't as any one else'
'Ay, no doubt, but whenever I've happened to meet
With a wrong or a crime, it is always concrete,'
Answered Phœbus severely."

N1779:

Εἷς οἰωνὸς ἄριστος, ἀμύνεσθαι περὶ πάτρης.

Iliad XII., 243.

N1780:

Ἄλλ' ἀκewμεθα θᾶσσιν· ἀκεσταί τοι φρένες ἐσθλῶν.

Iliad XIII, 115.

N1781: When Mr. Emerson read Aytoun's lines in "The Burial-March of Dundee,"—

"See, above his glorious body
Lies the royal banner's fold:
See, his valiant blood is mingled
With its crimson and its gold,"—

he smiled and said, "The upholsterer!"

What parts, what gems, what colors shine,—
Ah, but I miss the grand design.

"Fragments on The Poet," *Poems*, Appendix.

N1782: Mr. Emerson once spoke of the tariff as a good subject to test an American poet on.

N1783: Pons Capdueil, a baron of Provence in the twelfth century, excelled in all the accomplishments of a knight and especially as a troubadour. His romantic love for Azalais, Countess of Auvergne, gives the principal interest to his story. After her death he joined Philip Augustus of France and Richard of England in the Third Crusade, in which he perished.

N1784: "But if I should count the English poets who have contributed to the Bible of existing England and America, sentences of guidance or consolation, which are still glowing and effective,—how few! Milton, Shakspeare, Spenser, Herbert, Jonson, Donne, Dryden, Pope, Young, Cowper, Burns, Wordsworth: what disparity in the names! but these are the authors.

"But how shall I find my daily bread in the reigning poets? Where is great design in modern English poetry? Where with the exception of Wordsworth? Tennyson is richly endowed precisely in points where Wordsworth wanted. Since Milton there was no finer ear, nor more command of the keys of language. But he wants a subject. He has climbed no mount of vision and brought its secrets down."

N1785:

Whatsoever hap befalls
In his vision's narrow walls
He is here to testify.

"Fragments on Life," *Poems*, Appendix.

See thou bring not to field or stone
The fancies found in books;
Leave authors' eyes, and fetch your own,
To brave the landscape's looks.

"Waldeinsamkeit," *Poems*.

N1786: This is the second axiom of Fourier, the French socialist whose writings were at the root of the attempts in America to establish Brook Farm and some other communities. The first axiom was, *The series distributes the harmonies of the world* (i.e. all the harmonies of the universe grow out of a regular and uniform order), and the third was, *Analogy is Universal*.

N1787: In the lecture this quotation from the Oriental scriptures ends, "thou mayest obtain *by propitiating Vishnu*;" then Mr. Emerson erased this and substituted "by keeping the law of

thy members and the law of thy mind." Whether he originated this interpretation of what would propitiate Vishnu, or found it in another translation, or a note, does not appear.

N1788: The editor would be grateful if any reader could give the source whence these lines came.

N1789: Niebuhr, *Letters*, etc, vol. lii.

N1790: Mr. Emerson seems to have found dreams very interesting. Much is said of them in the essay on Demonology in *Lectures and Biographical Sketches*.

N1791: This paragraph recalls several lines of his poem "Each and All."

N1792: Dr. Holmes has written a chapter on the Physiology of Versification.

N1793: This thought of the rhyming harmonies everywhere in man and Nature Mr. Emerson made the theme of his second poem "Merlin".

N1794: The Poet, in Mr. Emerson's early poem of that name, which appears in the Appendix to the *Poems*,—

Through man and woman and sea and star
Saw the dance of Nature forward and far,
Through worlds and races and terms and times
Saw musical order and pairing rhymes.

N1795: Journal. "Spenser seems to delight in his art for his own skill's sake. In the *Muiopotmos*, see the security and ostentation with which he draws out and refines his description of a butterfly's back and wings, of a spider's thread and spinning, of the butterfly's cruise among the flowers,—'bathing his tender feet in the dew which yet on them does lie,'—it is all like the working of an exquisite loom which unweariedly yields fine webs for exhibition and defiance of all spinners."

N1796: Mr. Emerson found Thomas Taylor's renderings of Plato and the Neo-platonists, and his comments, stimulating reading in small doses. This was a case where he "read for lustres," for grandeur of imagery and scope rather than for argument. In *English Traits* he says he told Wordsworth that it was not creditable that no one in all the country knew anything of this remarkable man, while in every American library his translations were found.

N1797: It would seem as if this passage must have inspired the striking picture by Elihu Vedder of the ancient Arab listening at the mouth of the Sphinx.

N1798: This paragraph was part of the lecture on The Poet given in 1841. On an early visit to the White Mountains he had heard a horn blown with such charming echo among the silent hills that it was remembered always as one of the most romantic experiences of his life, and is referred to in several of the essays.

N1799: Dr Holmes in his *Life of Emerson*, apropos of his poetry, discusses in a charming manner the relation of poetry to prose.

N1800: The following passage seems to have formed a part of "The Poet" given in 1841:—

"Cowley, and Donne's poems afford, as life does, the chance of wisdom (richest instruction) amid (frivolous and) familiar objects; the loose and the grand, religion and mirth, stand in surprising neighborhood, and, like the words of great men, without cant."

N1801: From Beaumont and Fletcher's play *The Nice Valour*, Act III, Scene 3.

N1802: The "Invocation" comes from D. W. Nash's "Taliesin, or the Bards and Druids of Britain, a Translation of the Remains of the Earliest Welsh Bards and an Examination of the Bardic Mysteries" London: John Russell Smith, 1858.

N1803: Heimskringla, vol i.

N1804: Before this paragraph the following passages occurred in the lecture, on the question of poetry at home:—

"The question is often asked, Why no poet appears in America? Other nations in their early expanding periods, in their war for existence, have shot forth the flowers of verse, and created a mythology which continued to charm the imagination of after-men. But we have all manner of ability, except this: we are brave, victorious, we legislate, trade, plant, build, sail, and combine as well as many others, but we have no imagination, no constructive mind, no affirmative books; we have plenty of criticism, elegant history; all the forms of respectable imitation; but no poet, no affirmer, no grand guiding mind, who intoxicates his countrymen with happy hopes,—makes them self-respecting, with faith that rests in their

own minds, and is not imported from abroad;—and, first of all, our lives are impoverished and unpoeted, that is, inhuman. The answer is, for the time, to be found in the preoccupation of all men. The work of half the world to be done: and it is the hard condition of Nature, that, where one faculty is excessive, it lames all the rest. We are the men of practice, the men of our hand, and, for the time, our brain loses in range what it gains in special skill. The genius of civilization, except while it is new, is antagonistic to sentiment, utilitarian, expensive...

"Taught by England, nay, begotten by England, the American mind has learned to call great small, and small things great; tasteless expense, arts of comfort and the putting as many impediments as we can between the man and his objects, we have learned; and our arts and our books and our characters betray the taming of the imagination.

"Yet there is an elasticity in the American mind which may redeem us, and the effect of popular institutions in continually sending back the enervated families into the realities of Nature and of toil may serve the highest medical benefit."

After this, in the lecture, the paragraph here headed "Morals" began thus:—

"But if we deal truly, and with a frankness suitable to a great nation, we should say that we are sometimes apprised that there is," etc.

N1805: This passage is more strikingly expressed in the journal for 1851:—

"There is something,—our brothers over the sea do not know it or own it; Scott, Southey, Hallam and Dickens could all deny and blaspheme it,—which is setting them all aside, and the world also, and planting itself for ever and ever."

N1806: These lines are from Ben Jonson's "Forest," XII., towards the end of the "Epistle to the Countess of Rutland."

N1807: Towards the middle of the address "Literary Ethics," in *Nature, Addresses and Lectures*, is a passage, which the present one suggests, as to the freshness and newness of Nature still undescribed in spite of Homer, Shakspeare, Milton or Chaucer.

N1808: From *Counterparts*, by Elizabeth S. Sheppard, one of the few novels that interested Mr. Emerson.

N1809: Journal, 1851. "One listens to the magnifying of Goethe's poem by his critic, and replies, 'Yes, it is good if you all agree to come in and be pleased;' and you fall into another company and mood, and like it not. It is so with Wordsworth. But to Shakspeare alone God granted the power to dispense with the humours of his company. They must needs all take his. He is always good; and Goethe knew it and said, 'It is as idle to compare Tieck to me as me to Shakspeare.' I looked through the first part of *Faust* to-day and find it a little too modern," etc.

N1810: Wordsworth, *Poems dedicated to National Independence*, part I., sonnet xvi.

N1811: "Only that is poetry which cleanses and mans me."—From the manuscript lecture.

N1812:

The gallant child where'er he came
Threw to each fact a tuneful name.
The things whereon he cast his eyes

Could not the nations rebaptize,
Nor Time's snows hide the names he set,
Nor last posterity forget.

"The Poet," *Poems*, Appendix.

SOCIAL AIMS

THIS ESSAY seems to be almost identical with the second lecture, given in December, 1864, of a course on American Life read before the Parker Fraternity. It was preceded by "Education" and followed by "Resources." A portion of a lecture called "Table-Talk," which was largely drawn upon later for the essay on Clubs, appears in this, and probably also some sheets from the lecture on Manners in the same course.

N1813: In his first volume of Poems, published in 1846, Mr. Emerson included some verses which he did not care to keep in later editions. The subject and title was Tact, and one or two verses, as to the purpose here, may be given.

What boots it, thy virtue,
What profit thy parts,
While one thing thou lackest,—
The art of all arts?

.

This clinches the bargain;

Sails out of the bay;
 Gets the vote of the senate,
 Spite of Webster and Clay.

Has for genius no mercy,
 For speeches no heed;
 It lurks in the eye-beam,
 It leaps to its deed.

Church, market and tavern,
 Bed, board, it will sway.
 It has no to-morrow;
 It ends with to-day.

N1814: This quality he saw with admiration in his brother Edward,—the “brother of the brief but blazing star,”—and the words about the supplicating eye recall a passage in the poem “In Memoriam E. B. E.”:—

All inborn power that could
 Consist with homage to the good
 Flamed from his martial eye;

His from youth the leader's look
 Gave the law which others took,
 And never poor beseeching glance
 Shamed that sculptured countenance.

N1815: “Infancy conforms to nobody; all conform to it; so that one babe commonly makes four or five out of the adults who prattle and play with it. So God has armed youth and puberty and

manhood no less with its own piquancy and charm, and made it enviable and gracious and its claims not to be put by, if it will stand by itself."—"Self-Reliance," *Essays, First Series*.

N1816: One morning Mr. Emerson watched from the window the departure of a little guest perhaps nine years old, her farewell, her graceful seating herself in the sleigh, signing to the driver that she was ready, and her charming parting salute and smiles as she moved away. He was delighted with the natural manners, but said pityingly words to this effect: "Look at that child; see her perfect *aplomb*. How easy it is to her to be a queen!" then, indicating another little guest in the next room, "And this poor little thing is destined to be a creep-mouse all her days."

N1817:

If Thought unlock her mysteries,
If Friendship on me smile,
I walk in marble galleries,
I talk with kings the while.

"Walden," *Poems*, Appendix.

N1818: There is an interesting quotation to this purpose from Balzac's *Théorie de la démarche*, in "Behavior," *Conduct of Life*.

N1819: There is in the essay "The Conservative," in *Nature, Addresses and Lectures*, a statement, from the conservative's point of view of the beneficence of "this institution of *credit*, which is as universal as honesty and promise in the human countenance".

N1820: "We must be as courteous to a man as we are to a picture, which we are willing to give the advantage of a good light."—"Behavior," *Conduct of Life*.

N1821:

"In clothes, cheap handsomenesse doth bear the bell.

Wisdom's a trimmer thing than shop e'er gave.

Say not then, This with that lace will do well;

But, This with my discretion will be brave.

Much curiousnesse is a perpetual wooing,

Nothing with labour, folly long a-doing."

George Herbert, "The Church Porch."

N1822: See in *Essays, First Series*, the chapter on Friendship and its motto, whence come these lines:—

All things through thee take nobler form

And look beyond the earth,

The mill-round of our fate appears

A sun-path in thy worth.

N1823: In one of the sheets remaining from the old lecture is this passage: "Conversation too has its ethics of prudence and morals. It requires a quiet but firm self-control. You shall not be leaky. There are people to whom nothing can be confided, because their vanity to tell what they know has all the effect of treachery. You shall not be leaky nor ridden, and you shall not be opinionative."

N1824: A passage from the lecture carries this thought a little farther:—

“God forbid I should complain of being excluded by this or that man or circle, from this or that privilege. On the contrary, the most absolute submission on my part attends it. For do I not know, that those parties are all eager to invite high merit to this privilege, and that, on the instant when that merit is demonstrated by me or by any, they will fly to greet it, will open every door to it, and bear it on their arms with joy unfeigned?”

N1825: In the lecture, written not long after Mr. Emerson's visit to Washington during the war, this sentence here followed: “I was made sensible of this at Washington, if I had not already suspected it.” When we remember Mr. Emerson's poem “The Visit,” a lesson on this subject from sad experiences, the modesty of his statement is apparent.

N1826: Mr. Emerson's practice was to surprise and lift people by “taking them by their best handle.”

N1827: Mr. Emerson wrote in his note-book (date uncertain) of woman: “She is not to write, or fight, or build, or compose scores; she does all by inspiring man to do all. The poet finds her eyes anticipating all his ode; the sculptor, his god; the architect, his house. She looks it. She is the requiring genius.”

N1828: The thirst for other people's facts to interpret their higher meaning was one of Mr. Emerson's strong traits. This fragment, perhaps from “Clubs” or “Table-Talk,” is kindred to the subject:—

"Do you not see that we all can count our incomes and our family expenses, but very few of us have a head for analytic geometry? All of us know the melody of speech, but few have a fine musical ear. All of us understand justice, but few have a taste for theology. Theology is the rhetoric or the technical distribution of Conscience."

His faith, from his experience of life, that success can always be drawn out of failures, appears in the end of the paragraph in the text.

N1829: Mr. Emerson, writing to his friend John Sterling, tells of the pleasure his letter gave as a whole, rather than in the things said: "These were opinions, but the tone was the man."

"The eyes of men converse as much as their tongues, with the advantage that the ocular dialect needs no dictionary, but is understood all the world over."—"Behavior," *Conduct of Life*.

N1830: In this sentence Mr. Emerson refers to his friend Thoreau, but what follows only expresses the feeling of disappointment sometimes felt in their intercourse in later days, not always, and not in Thoreau's youth. Mr. Emerson hated argument, dialectic. Thoreau's Scotch ancestry on his mother's side (Dunbar) asserted itself in love of fence for itself, as a game when he met a foeman worthy of his steel. So they came to enjoy each other's writings more than society, yet they always honored and esteemed each other, in spite of this temperamental bar to full enjoyment of each other's company indoors. But Mr. Emerson delighted to be led, as if by Pan himself, to the groves and glades in their best days, and to have their secrets shown.

N1831:

"Laugh not too much, the wittie man laughs least:
For wit is newes only to ignorance."

Herbert, "The Church Porch."

In the notes to the essay on The Comic will be found an extract from Mr. Emerson's journal when abroad in 1848, an outcry of weariness at the boisterous laughter and heavy joking that he had heard in England.

N1832: His own view was that it was better not to apologize in words, not to soil the new day with "sour remnants of yesterday," but to make amends for yesterday's fault by increased kindness or service.

N1833: The counsel for keeping the family meetings at table sweet, and keeping silence as to your ailments and griefs is even better given in the last paragraphs of "Behavior" in *Conduct of Life*. An absolutely forbidden subject was the expense, and even the compounding, of food.

The following sentences on Beauty, written in 1866, are appropriate to the subject of home life:—

"It is peremptory for good living in houses in a cultivated age, that the beautiful should never be out of thought. It is not more important that you should provide bread for the table, than that it should be put there and used in a comely manner. You have often a right to be angry with servants, but you must carry your anger, and chide without offence to beauty. Else, you have quarrelled with yourself as well as with them."

N1834: In "Works and Days," in *Society and Solitude*, is advice against standing on tiptoe or mounting on stilts.

N1835: The question of Wealth is broadly discussed in *Conduct of Life*, and that of an Aristocracy of Nature, not inheritance, in the respective essays on these subjects, in *Lectures and Biographical Sketches*.

The verses in the second poem "Woodnotes" tell of the natural rotation of lord and peasant in city and country.

This stray passage from the lecture manuscript may well end the paragraph: "The way to wealth of every kind is plainly along the upper road, and not by State Street. Convert yourself into wealth, and you shall buy kings. Sordid calculations convert you into punk and abhorrence."

N1836: This is the beginning of a passage from the journal of November, 1863, telling of Mr. Emerson's pride in the admirable management of a difficult town-meeting held for the purpose of considering the filling out of Concord's quota of soldiers. The rest of the passage is printed early in the next essay, "Eloquence."

N1837: It is pleasant to be able to give, in connection with this praise of a good American, the expressions that preceded and followed it in Mr. Emerson's journal. "October 12th, 1864. Returned from Naushon, whither I went on Saturday, 8th, with Professor ——— of Oxford University [and three other guests]. Mr. Forbes at Naushon is the only 'Squire' in Massachusetts, and no nobleman ever understood or performed his duties better. I divided my admiration between the landscape of Naushon and him. He is an American to be proud of. I said, Never was such force, [here follows the passage in the text of the essay as

far as "opened the eyes of the person he talked with without contradicting him;" it then proceeds,] I have been proud of my countrymen, but I think this is a good country that can breed such a creature as John M. Forbes. There was something dramatic in the conversation on Monday night between Professor ———, Forbes and ——— chiefly; the Englishman being evidently alarmed at the near prospect of America's standing in the identical position soon in which England now and lately has stood to us, and playing the same part towards her. Forbes, a year ago, was in Liverpool and London entreating them to respect their own neutrality, and disallow the piracy and the blockade-running, and hard measure to us in their colonial ports, etc. And now, so soon, the parts were entirely reversed, and Professor ——— was showing us the power and irritability of England, and the certainty that war would follow if we should build and arm a ship in one of our ports, send her out to sea, and *at sea* sell her to their enemy, which would be a proceeding strictly in accordance with her present proclaimed law of nations...When the American Government urged England to make a new treaty to adjust and correct this anomalous rule, the English Government refused, and 't is only ignorance that has prevented the Rebel Confederacy from availing themselves of it. I came away saying to myself of J. M. F.,—How little this man suspects with his sympathy for men and his respect for literary and scientific people, that he is not likely ever to meet a man who is superior to himself."

It should be here recorded of this Boston merchant so little given to publicity, that until he was an old man his name was almost never seen in the papers, nor did he appear prominent on public occasions; that while carrying on his great business interests, he was always a wise and active citizen of America. He did his best to make North and South understand each other before the

war. When it came, he did invaluable service to his country. He provided vessels with trusty captains to carry the troops quickly southward; he did much to recruit, organize and equip white, and, later, black regiments; he gave important and valued counsel to the secretaries of State, of the Navy, and of the Treasury; he strengthened the hands of his friend Governor Andrew, and eased his burdens in every possible way. In the darkest days of the war he was sent by President Lincoln with Mr. Aspinwall to England, on four days' notice, to place an American loan, and to do what was possible to excite proper sympathy for the United States at that important crisis, but especially to have the cruisers, which were then being built for the Confederacy to prey on our commerce, prevented from sailing.

N1838: The following passage probably belonged here in the lecture. "This democratic opening of all avenues to all is a wonderful purger of the atmosphere, a solvent of conceit. The illusions in which the English aristocracy live amount to insanity. The comedy of Beaumarchais does not exaggerate the pretensions which these people actually make in perfect good faith. Lord Bristol plainly believes that it is very kind of him to exist, and that the Government owes him unceasing thanks. He does nothing for it. And that is the humor of them all. That immensity of Condescension in a fat old fribble does not appear at Washington except in men very long distinguished."

N1839: Mr. Emerson's love for the positive degree in life and literature appears in the essay on the Superlative in *Lectures and Biographical Sketches*.

N1840: The quotation is from Ernest Renan.

N1841: Perhaps this fragment from the manuscript may properly come here: "The few stout and sincere persons whom each one of us knows, recommend the country and the planet to us. 'T is not a bad world this, we say, as long as we know twenty shining creatures who are walking about in it. Is it the thirty millions of America or is it your own ten or twelve friends that encourage your heart from day to day?."

ELOQUENCE

MR. EMERSON'S love of eloquence from boyhood up, his eagerness to avail himself of any chance that offered to hear a master of speech, and his love of anecdotes of orators have been mentioned in the notes to the essay on Eloquence in the volume called *Society and Solitude*.

Concerning his own delivery, though it was original and admirable, and his voice was an instrument of unexpected and varied power, he was modest, and he always read his discourses and could not trust himself to extempore speech. So what he wrote in his journal of his ability in practical affairs he would perhaps have accepted as applicable to himself as an orator: "I am probably all the better spectator that I am so indifferent an actor. Some who have heard or read my reports misjudged me as being a good actor in the scene which I could so well describe....In this both they and I must be acquiescent and take our fortune."

This essay appears first as a lecture read at Chicago in 1867. On later occasions when it was read in Boston and elsewhere, Mr. Emerson introduced several examples of eloquence, among them: I. The opening words of the speech of Lafayette in the

Representative Chamber at Paris when he learned that, in two hours, Napoleon, returning defeated from Waterloo, planned to abolish it; a speech which would have been Lafayette's death-warrant had the Representatives not supported him. II. The conclusion of Hon. Samuel Dexter's defence of Selfridge, charged with murder for shooting young Austin, who undertook to horsewhip him in State Street, Boston, because of aspersions on his father's character printed by Selfridge, during a political controversy. III. The Earl of Caernarvon's speech in the House of Lords on the proposal to impeach the Earl of Danby.

N1842: In spite of the constant invective of his friend Carlyle against stump oratory, Mr. Emerson saw the use of it in the new country as well as of the academic style that obtained near the universities:—
